Both witnesses are well qualified experts in their profession, but it was developed in the course of cross-examination that Dr. Wanenmacher has had relatively little experience with the aquifer-type storage reservoir, the kind with which this case is primarily concerned. On the other hand, the evidence shows that Dr. Katz has had considerable operating experience with the particular reservoirs under consideration and, consequently, the Examiner is inclined to attribute more weight to his testimony than that of Dr. Wanenmacher.

Staff Counsel, while not offering any testimony on the matter, likewise concludes that the Applicant is presently using its storage facilities in a prudent manner and, by reference to the files of the Commission, demonstrated in his brief that the Applicant has steadily expanded its storage capabilities since August 1955 when the first withdrawals from Herscher-Galesville were made.

It is the finding of the Examiner that the Applicant's present storage facilities are being operated at maximum safe capacity and that its firm requirements cannot be satisfied from such source.

Financing

Mr. Wayne Simpson, Vice President in charge of Finance, testified that the estimated cost of the Applicant's proposed expansion is $8,077,000, and that short term loans from banks and Peoples have been received at 4.5 percent interest to finance the construction of such facilities upon an interim basis. He also stated that a first mortgage bond issue in the amount of $25,000,000 will be subsequently offered to the public as a means of permanently financing the instant construction as well as facilities embraced in other certificate applications.

Staff Counsel asserts, however, that since the facilities involved in this proceeding have been completed and are in service, a specific plan for permanent financing is required, and if a certificate is issued herein, it should be conditioned upon the Applicant's submitting a satisfactory permanent financing plan to the Commission.

The Coal Interests do not question the ability of the Applicant to finance the subject facilities either upon a short term or permanent basis.

The Examiner is satisfied that the short term financing arrangements made by the Applicant with its parent company and the four Chicago banks listed by Witness Simpson, are sufficient to carry the expansion program contemplated by this proceeding until such time as the Applicant deems appropriate to market securities for a permanent financing plan. Since the opportune time for a bond issue is a matter of judgment resting with the Applicant, no useful purpose is served by imposing a condition which may have the effect of impairing its ability to issue securities at what it may consider to be a propitious juncture.[5]

Gas Reserves

Staff Counsel, while admitting that the Applicant has an active gas procurement program, takes the position that the application is deficient because no evidence was presented relative to past and estimated future peak day total gas requirements including company use and unaccounted for gas; the contract demands of its customers; the estimated peak day total gas deliveries in future years and the Applicant's ability to sustain maximum day deliveries.

---

[5] *The Wall Street Journal* of August 26, 1964, announced an offering of $25 million 4½ percent first mortgage bonds by the Applicant for the purpose of retiring short term obligations and financing the 1964 expansion projects.

The record, however, contains ample evidence both historical and prospective to establish a *prima facie* showing that the Applicant has an adequate gas supply to support the instant expansion. Exhibits 5 and 6 and the testimony offered by the witnesses in connection therewith stand uncontroverted. In the absence of any affirmative evidence to the contrary, Staff Counsel's contention that the Applicant's supply of gas may be inadequate to meet its obligations, is rejected.

Economic Feasibility

Applicant's Exhibits 11 and 12 and the testimony in support thereof conclusively show that the incremental revenues to be received from the added service supplied through the facilities proposed in this expansion are substantially greater than the incremental cost of service assignable to such facilities. Exhibit 12 shows an incremental rate of return in excess of 27 percent in each of the first three years of operation so that there can be no burden placed on any customer of Natural since over-all system unit costs would be reduced.

Coal Intervenors do not doubt that the revenues to be received under this expansion will return Natural's ". . . cost and a handsome return." Staff Counsel questions economic feasibility solely on the basis that Applicant's market estimates are not supported. In view of the Examiner's finding *supra* that there is an adequate market showing of the need for additional gas, it is found that the project is economically feasible.

Impact Upon Coal

The Coal Interests, in addition to their concern for the welfare of the ultimate non-industrial gas consumers, allege that the coal industry will be seriously injured by the increased sale of valley gas for boiler fuel if the instant pipeline expansion is authorized.

Considerable testimony and a number of exhibits were put into evidence by the Coal Interests purporting to demonstrate the validity of such adverse expectations.

There is no doubt that the coal processors have suffered a substantial loss of business since World II through the loss of the home heating market and the dieselization of the railroads. On the other hand, there has been a steady increase in the consumption of coal by the electric utility industry both nationwide and in the State of Illinois.[6] Technology, for good or evil, has likewise had an impact upon coal mining and mechanization has substantially reduced mine personnel and the number of operating mines. This is a stark fact of economic life and unquestionably it has had serious repercussions throughout the bituminous coal industry.

The record in this case does not, in the opinion of the Examiner, support the Coal Interests' theory of a malign conspiracy upon the part of the Commission and the Applicant to give an unfair advantage to the pipeline by sanction of the existing rate structure.

While the sales of interruptible gas in this case are all subject to the approval of either the Illinois or Indiana State Commissions, the Federal Power Commission does recognize that industrial sales that return something more than incremental costs are a necessary and beneficial adjunct to both the pipeline and its ultimate firm consumers. In Opinion No. 441, ***Michigan Wisconsin Pipe Line Company,*** Docket No. CP64–109, the Commission certificated a direct sale of some six million Mcf per year for boiler fuel, finding that, although opposed to the use of gas for the generation of electric power, it was in the public interest to approve a sale which would result in substantial rate reductions to the utility's customers and dispose of gas which might not otherwise be sold at all. This is not to say, however, that the Commission generally sanctions the use of a premium fuel for the steam generation of electricity as it has historically dealt with such certification on a case-by-case basis.[7]

---

[6] The Coal Interests state at page 28 of their brief that "The present and future health of the midwestern bituminous coal industry lies in the electric utility market."

It is the Examiner's finding that the expansion involved in this proceeding does not prejudice coal's competitive position in the Chicago utility market. On the contrary, the contracts between the coal producers and Commonwealth Edison indicate a progressive improvement in the market share of bituminous coal as revealed by the following table:

COMMONWEALTH EDISON COMPANIES

Fuel consumption in equivalent tons of coal

Year	Coal	Gas	Total	Percent gas
1954	8, 508, 615	2, 028, 900	10, 537, 515	19. 3
1955	9, 972, 016	1, 577, 260	11, 549, 276	13. 7
1956	9, 950, 688	1, 682, 390	11, 633, 078	14. 5
1957	10, 032, 407	1, 697, 600	11, 730, 007	14. 5
1958	9, 206, 950	1, 721, 075	10, 928, 025	15. 8
1959	8, 974, 631	2, 304, 110	11, 278, 741	20. 4
1960	10, 126, 045	1, 447, 454	11, 573, 499	12. 5
1961	10, 828, 743	1, 222, 000	12, 050, 743	10. 1
1962	10, 879, 958	1, 765, 897	12, 645, 855	14. 0
1963	11, 697, 416	2, 022, 163	13, 719, 579	14. 7
1964	13, 099, 000	1, 592, 000	14, 691, 000	10. 8
1965	14, 169, 000	1, 169, 000	15, 338, 000	7. 6
1966	15, 825, 000	871, 000	16, 696, 000	5. 2

Data for the years 1954 to 1962, inclusive, taken from Exhibit 51, Schedule 2.
Data for the year 1963 calculated from Commonwealth's FPC Forms #1.
Data for the years 1964 to 1966, inclusive, as shown in Exhibit 105.

From 1954 to 1963, inclusive, the consumption of gas in Commonwealth's electric generating stations never exceeded the equivalent of 2,304,110 tons (1959). In the same period (See: Exhibit 41) Natural's flow gas capacity increased by 820,000 Mcf per day from 1,014,000 Mcf per day to 1,834,000 Mcf per day. It is obvious that the increase in flow gas did not result in the dumping of gas for the generation of electric energy by Commonwealth.

An examination of the individual contracts[8] between Commonwealth Edison

---

[7] *National Coal Associations, et al.* v. *F.P.C.*, 247 F. 2d 86.

[8] *Coal producer contracts with Commonwealth Edison showing requirements and minimum deliveries for 1966:*

Exhibit No.	Vendor	Contract dated	Contract tonnage		Commonwealth Edison's requirements 1966 (tons)
			Maximum	Minimum	
110	Truax Traer Coal Co.	6-11-59	1, 250, 000	750, 000	750, 000
112	do	3-13-64	500, 000	200, 000	200, 000
114	The United Electric Coal Co.	6-15-62	2, 250, 000	1, 750, 000	1, 625, 000
115	Peabody Coal Co.	11-29-63		1, 000, 000	1, 115, 000
116	Southwestern Ill. Coal Co.	1-29-63	4, 400, 000	[1] 3, 600, 000	3, 575, 000
117	Peabody Coal Co.	1- 1-63		1, 750, 000	1, 897, 000
118	do	1- 1-59		[2] 2, 000, 000	5, 148, 000
	Subtotal			[3] 11, 050, 000	14, 310, 000
	Uncommitted requirements				1, 515, 000
	Total as shown on Ex. 105				15, 825, 000

[1] Minimum contract quantity increased to this figure on 10-1-66.

[2] This appears to be a "cost of service" type contract guaranteeing Peabody total cost of operations for Commonwealth's coal requirements.

[3] Contract minimum quantity is equal to 69.8 percent of total requirements.

and the various coal producers for the year 1966 shows that the collective minimum tonnage guaranteed deliveries within the contract terms is approximately 11,050,000 tons (this figure is comparable with the 1962 deliveries by all producers to Commonwealth Edison as shown in Exhibit 51, Schedule 5, in the amount of 11,447,222 tons) and that the total coal requirements are approximately 15,825,000. Thus, to all intents and purposes, the present market position of coal is assured.

The Coal Interests have also charged that the Applicant has not made a forthright presentation of all the pertinent data and information for a full and complete understanding of the proposed project. In particular, they point to the absence of a "policy" witness for management who could explain the reasons prompting the submission of the amended application, the lack of cost of service data and the absence of any management witnesses competent to testify upon storage matters.

Section 157.14(a)(16) of the Regulations pursuant to the Natural Gas Act requires that a system estimate of revenue and sales be filed and, in addition, if enlargement or extension of facilities is involved, an estimate of the revenue attributable solely to the proposed facilities shall be stated separately, and the basis and data used in such computations shall be clearly shown.

These requirements have been met in Exhibits 11 and 12 and the testimony of Witness Poole and only in the instance of a new or change in rate is an allocated cost of service study required to substantiate such rates. Since there is no proposed change in the Applicant's rate, no cost of service analysis, as contemplated by Section 157.14(a)(18) is, therefore, necessary.

The burden of proving the feasibility of meeting the Applicant's market requirements from storage rather than pipeline expansion is directly upon the Coal Interests and the Applicant is under no obligation to furnish knowledgeable witnesses for the convenience of the intervenor.

The Examiner, however, permitted the Coal Interests considerable latitude in cross-examination with respect to the matter of storage—although the subject was not related to the Applicant's direct presentation—in order that some appraisal might be made of the feasibility of the suggested alternative. The fact that such cross-examination did not establish the Coal Intervenors' position certainly cannot be charged against the Applicant.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it has been found and concluded, in addition to the findings and conclusions heretofore stated,[9] that:

(1) The Applicant, a Delaware corporation having its principal place of business at Chicago, Illinois, is engaged in the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed facilities of the Applicant as more fully set forth in its amended Application and the evidence of record in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by the

---

[9] Proposed findings not specifically adopted herein are rejected.

Applicant are subject to the requirements of Section 7(c) of the Natural Gas Act.

(3) The Applicant is able and willing to do the acts and perform the services proposed, and to conform to the provisions of the Natural Gas Act as amended and the rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal or upon its own motion, as provided by its Rules of Practice and Procedure that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

AMES W. WILLIAMS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-220

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 15, 1965)

On January 21, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-220 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing an increase in firm deliveries of natural gas through its Peoples Division to the Brockway Glass Company, Inc. (Brockway) for use in Brockway's glass manufacturing plant located near Rosemount, Minnesota, all as more fully set forth in the application.

Applicant proposes to increase firm deliveries to Brockway by 300 Mcf per day, from 1,600 Mcf to 1,900 Mcf.[1] No additional facilities are required and no increase in Peoples' contract demand is needed since the present quantity is sufficient to meet the increased delivery.

---

[1] Delivery of up to 1,600 Mcf per day of firm gas by Applicant to Brockway was authorized by Commission order issued January 19, 1962, in Docket No. CP61-332, 27 FPC 91.

A temporary certificate authorizing the increased firm volume of 300 Mcf per day was issued by the Commission by letter dated February 12, 1965.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The proposed increased delivery of natural gas by Applicant through its Peoples Division to Brockway Glass Company, Inc., as hereinbefore described and as more fully described in the application in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The certificate hereinafter granted should not entitle Brockway Glass Company, Inc., to whom firm deliveries are thereby authorized, to any priorities or rights to additional gas for meeting any future increase in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Northern Natural Gas Company, authorizing the increased delivery of natural gas through its Peoples Division to Brockway Glass Company, Inc., as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above shall not entitle Brockway Glass Company, Inc., to whom firm deliveries are authorized therein, to any priorities or rights to additional gas for meeting any future increase in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable

Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ST. MICHAELS UTILITIES COMMISSION, AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND), AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7117; DELAWARE POWER & LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, DOCKET NO. E-7137; CITY OF DOVER, DELAWARE v. DELAWARE POWER & LIGHT COMPANY, DOCKET NO. E-7175

ORDER DENYING MOTIONS OF DOVER, DELAWARE AND ST. MICHAELS, MARYLAND FOR ORDERS GRANTING INTERIM RATE REDUCTIONS, OMITTING THE INTERMEDIATE DECISION PROCEDURE AND GRANTING ORAL ARGUMENT BEFORE THE COMMISSION

(Issued March 15, 1965)

Complainants Dover, Delaware and St. Michaels, Maryland, at the conclusion of the hearing in these proceedings on February 9, 1965, moved orally on the record for (1) an interim order reducing the wholesale rates and charges of Delaware Power & Light Company and its corporate affiliate, The Eastern Shore Public Service Company of Maryland and waiver of the intermediate decision procedure with respect to certain issues for purposes of accomplishing the interim rate reductions; (2) waiver of the intermediate decision procedure for all purposes if the interim rate reductions are denied; and (3) opportunity for oral argument before the Commission in support of the motions and relief requested.

These motions referred to the Commission on February 17, 1965, by the Presiding Examiner, are supported by staff counsel and opposed by Delaware Power & Light Company, its corporate affiliate, and Intervenor rural electric cooperatives, Accomac-Northampton Electric Cooperative, Choptank Electric Cooperative, Inc., and Delaware Electric Cooperative, Inc. Memoranda setting forth the respective positions of these parties in summary fashion were filed February 15, 1965 (Delaware Power & Light Company and its affiliates), February 17, 1965 (Dover, Delaware; St. Michaels, Maryland; Intervenor Cooperatives and Commission staff).

We believe that the issues presented in those proceedings are sufficiently novel and complex so that we would be assisted by a decision of the Presiding Examiner submitted in accordance with our customary Intermediate Decision Procedure. Accordingly, we are denying the motions of St. Michaels and Dover.

The examiner has set April 30, 1965, as the date by which the last briefs must be filed. We are impressed by the substantial length of time which has already elapsed since these proceedings were initiated. It is our hope that the Presiding Examiner will grant no further extensions of time, will dispense with any oral argument before him and will expedite the preparation of his intermediate decision.

The Commission orders:

The motions of Dover, Delaware and St. Michaels, Maryland be and hereby are denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65–177

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 15, 1965)

On December 17, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP65–177 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale, on a firm basis, of an additional peak day requirement of 1,224 Mcf of natural gas to Lowell Gas Company, Lowell, Massachusetts, an existing customer, all as more fully set forth in the application.

Applicant proposes to render the additional service through the utilization of a portion of the remaining unallocated capacity authorized in Docket No. CP64–165 by Commission order issued July 13, 1964, 32 FPC 114. No construction of additional facilities is proposed in the instant application.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed sale and delivery of natural gas by Applicant to Lowell Gas Company, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Tennessee Gas Transmission Company, authorizing the sale and delivery of natural gas to Lowell Gas Company, as hereinbefore described and as more fully described in the application in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65-180

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 15, 1965)

On December 18, 1964, Transwestern Pipeline Company (Applicant) filed in Docket No. CP65-180 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and operation of routine field facilities to enable Applicant to take into its certificated main line pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and existing supplies of natural gas in various producing areas generally coextensive with its system.

The total cost of the facilities covered by this application will not exceed a maximum of $1,200,000, with no single project to exceed a cost of $300,000, which costs are proposed to be financed with funds made available from company operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 328 issued August 10, 1959 (22 FPC 391, 402).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,200,000, with no single project to exceed a cost of $300,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,200,000, with no single project to exceed a cost of $300,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP65-117

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 15, 1965)

On October 29, 1964, Trunkline Gas Company (Applicant), filed in Docket No. CP65-117 an application as supplemented on January 12, 1965, and February 11, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant proposes to increase its firm sales of natural gas to Consumers Power Company (Consumers) from 225,000 Mcf per day to 275,000 Mcf per day. Applicant proposes to make available 25,000 Mcf per day on April 1, 1965, and an additional 25,000 Mcf per day on November 1, 1965, pursuant to a letter agreement between the parties, dated July 2, 1964, amending their letter agreement dated October 29, 1963.

Applicant seeks further authorization to construct and operate 3,000 additional horsepower at its mainline compressor stations No. 57, Pollock, Louisiana; No. 75, Shaw, Mississippi; No. 93, Dyersburg, Tennessee; and No. 112, Johnsonville, Illinois; and to construct and operate 6,000 additional horsepower at its mainline stations No. 66, Epps, Louisiana, and No. 84, Independence, Mississippi; and to construct and operate 5,400 additional horsepower at its Station No. 103, Joppa, Illinois; 2,100 additional horsepower at Station No. 210, Kaplan, Louisiana; and 6,000 horsepower at a new compressor station to be designated Station No. 128, Ambia, Indiana. Applicant also seeks authorization to construct and operate one additional river crossing at the Red River, Rapides Parish, Louisiana. This crossing will consist of two 24-inch O.D. lines.

Estimated cost of the proposed facilities is $16,140,000, since the second supplement to its application indicates that $700,000 for gathering facilities, a part of the original application, is to be excluded from this docket. These facilities will be financed initially from funds on hand and short-term bank loans, which subsequently will be replaced with permanent financing through the sale of long-term securities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

Applicant states that it has adequate gas supplies to meet the estimated requirements of its expanded system.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the application, as supplemented, and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) The facilities hereinbefore described, as more fully set forth in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Trunkline Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as set forth in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC UTILITIES AND LICENSEES—TRANSMISSION LINE STATISTICS IN ANNUAL REPORT FPC FORM NO. 1, DOCKET NO. R-270

ORDER NO. 294

SUSPENDING CERTAIN INSTRUCTIONS AND PRESCRIBING OTHERS FOR USE DURING THE REPORTING YEAR 1964

(Issued March 16, 1965)*

The schedule "Transmission Line Statistics" on page 442 of the annual report F.P.C. Form No. 1, provides for the furnishing of information with respect to each transmission line operated by the public utility or licensee required to make the report by § 141.1(b) of the Regulations Under the Federal Power Act.

Members of the industry affected, acting through the Public Utility Committee of the Advisory Council on Federal Reports and relayed to us by the Bureau of the Budget, have requested that the individual listing of transmission lines required by the schedule be modified to require individual listing only of the lines having the two highest representative voltages used and that all other lines be reported in group totals only.

The Commission has always welcomed suggested changes in its regulations or reporting requirements and has adopted them when it has been found to do so is in the public interest. Accordingly, we have reviewed the requested change in the light of our needs for the detailed information and the burden it imposes upon the respondents.

---

*Published in the Federal Register on March 20, 1965 (30 F.R. 3707).

In the light of this consideration we have determined to adopt, on a trial basis, for the reporting year 1964, a modification of the suggested change. We are of the view that rather than limiting the individual listings to the companies' lines having the two highest representative voltage which would result in wide differences among the types of line various companies would be required to report on in detail, we should limit the requirement for the individual listing of each line to those having a voltage of 132 kilovolts or greater. This, we believe, will give us the necessary information on the lines which make up the backbone of each utility's transmission system while at the same time eliminating much of the burden imposed by the existing requirements.

The Commission finds:

(1) The amendment to Annual Report FPC Form No. 1 herein adopted is necessary and appropriate for the purposes of the Federal Power Act.

(2) Since the amendment relieves affected parties of an existing requirement, it is unnecessary to comply with the notice and effective date provisions of section 4 of the Administrative Procedure Act.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 304, 309 and 311 thereof (49 Stat. 855, 858, 859; 16 U.S.C. 825c, 825h, 825j), *orders:*

(A) Effective for the reporting year 1964 only, Annual Report FPC Form No. 1, required by § 141.1(b), Subchapter D, Chapter I of Title 18, Code of Federal Regulations, to be filed by public utilities and licensees, subject to the jurisdiction of the Federal Power Commission, is amended by amending instruction paragraphs 1. and 3. to the schedule "Transmission Line Statistics", on page 442 of the said Form No. 1 to read as follows:

> "Transmission Line Statistics
>
> 1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Transmission lines below these voltages may be reported in group totals only for each voltage.
>
> * * * * * * *
>
> 3. Data may be reported by individual lines for all voltages if so required by a state commission."
>
> [Secs. 304, 309, 311, 49 Stat. 855, 858, 859; 16 U.S.C. 825c, 825h, 825j]

(B) This amendment shall be effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NOS. G-2047 AND G-10699

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 16, 1965)

On August 14, 1962, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket Nos. G-2047 and G-10699 an application, as supplemented on June 17, 1963 and December 28, 1964, to amend the Commission's orders issued October

23, 1953, in Docket No. G-2047, 12 FPC 686, and July 9, 1959, in Docket No. G-10699, 22 FPC 19, to authorize Applicant to increase by 6,000 Mcf per day its interruptible deliveries of natural gas to National Distillers & Chemical Corporation (National Distillers) for industrial use by the latter as fuel in its plants near Tuscola, Illinois, during the period September 16 through April 15 of each year, all as more fully set forth in the application, as supplemented, in this proceeding.

In Docket No. G-2047 Applicant was authorized, among other things, to deliver to National Distillers, on an interruptible basis, 7,000 Mcf of fuel gas per day from September 16 through April 15 and 24,000 Mcf of fuel gas per day from April 16 through September 15. In Docket No. G-10699 Applicant was authorized, among other things, to deliver to National Distillers, on an interruptible basis, 5,000 Mcf of fuel gas per day. Combined daily deliveries of natural gas authorized in both dockets are 12,000 Mcf from September 16 through April 15 and 29,000 Mcf from April 16 through September 15.

Applicant states that it has entered into an agreement, dated July 1, 1962, with National Distillers combining the service authorized in the subject dockets. Said agreement provides for the sale of 18,000 Mcf per day of fuel gas from September 16 through April 15 of each year and 29,000 Mcf per day of fuel gas from April 16 through September 15 of each year, all on an interruptible basis. In effect the agreement provides for an increase in deliveries of 6,000 Mcf per day from September 16 through April 15 above the combined presently authorized deliveries in Docket Nos. G-2047 and G-10699.

Further, Applicant requests that all deliveries of gas to National Distillers presently authorized in Docket Nos. G-2047 and G-10699, as well as the additional 6,000 Mcf winter deliveries herein proposed, be authorized in Docket No. G-2047 and that the authorization to deliver gas to National Distillers in Docket No. G-10699 be deleted.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 15, 1965, (30 F.R. 557). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's orders, issued October 23, 1953, in Docket No. G-2047 and July 9, 1959, in Docket No. G-10699 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 23, 1953, in Docket No. G-2047 be and the same is hereby amended to authorize Applicant to transport and deliver, on an interruptible basis, to National Distillers a total of 18,000 Mcf of fuel gas per day from September 16 through April 15 of each year and a total of 29,000 Mcf of fuel gas per day from April 16 through September 15 of each year, all as hereinbefore described and as set forth in the subject application to amend, as supplemented.

(B) Ordering paragraph (D)(2)(iii) of the Commission's order issued October 23, 1953, in Docket No. G-2047, which requires the filing of annual reports showing the volumes of gas delivered monthly to National Distillers at Tuscola, be and the same is hereby amended to require the volumes so reported to be broken down into (a) shrinkage volumes due to extraction of liquid and (b) fuel gas volumes. Further, such reports shall show the maximum day delivery volume, by classes, during each month and the date of such maximum delivery.

(C) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(D) The Commission's order issued July 9, 1959, in Docket No. G-10699 be and the same is hereby amended to delete therefrom authorization for the transportation and delivery, on an interruptible basis, by Applicant to National Distillers of 5,000 Mcf of fuel gas per day.

(E) In all other respects said orders shall remain in full force and effect.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LOWER VALLEY POWER AND LIGHT, INC., PROJECT NO. 2168

ORDER APPROVING REVISED PROJECT EXHIBIT AND FIXING ANNUAL CHARGES

(Issued March 17, 1965)

On February 14, 1964, Lower Valley Power and Light, Inc., licensee for transmission line Project No. 2168, filed for Commission approval a revised Exhibit K map showing the project area occupied by the transmission line under the license. The exhibit was filed pursuant to Article 15 of the license.

The effect of our approval of the exhibit will be to fix the annual charges for the use by the line of lands of the United States. The exhibit shows that the line occupies a 50-foot wide right-of-way about 8.082 miles in length over lands of the United States, part of which are within the Targhee National Forest. The annual charge for the use of lands of the United States by the line is based on $8.00 per mile for a 100-foot wide right-of-way.

The Commission finds:

(1) Exhibit K (Revised) (FPC No. 2168-3) conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) The annual charges under the license for recompensing the United States for the use, occupancy, and enjoyment of its lands by the transmission line are reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The exhibit described in finding (1) above is hereby approved as part of the license for transmission line Project No. 2168.

(B) Subparagraph (ii) of Article 17 of the license for the project is hereby revised to read as follows:

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands for transmission line right-of-way, the amount of $32.33.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-145

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1965)

On November 20, 1964, Colorado Interstate Gas Company (Applicant), filed in Docket No. CP65-145 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a hydrocarbon extraction plant at its Rawlins Compressor Station site in order to control the Btu content of its Wyoming supply of gas flowing to the Denver, Colorado market area, all as more fully set forth in the application.

The subject plant, having a design capacity of 220,000 Mcf per day, will lower and stabilize the wide-ranging heat content of Applicant's Wyoming gas stream at approximately 1031 Btu per cubic foot. Applicant states that the Wyoming gas supply must be controlled in order to conform with the heat content provisions contained in its FPC Gas Tariff, and to alleviate existing operational problems faced by its customers in the Denver area, Applicant's existing operating conditions limit the volumes of Wyoming gas which can be delivered to the Denver area, and require the utilization of certain compressor facilities on certain days which otherwise would be unnecessary.

The application shows that without the proposed plant Applicant will be forced to inefficiently route gas from its southeastern gas sources to the Denver area to blend with high Btu content Wyoming gas, resulting in volumes of gas exceeding the requirements of the Denver area. The distributors in the Denver blending site were forced to a costly program of re-orificing when Applicant first commenced receiving Wyoming gas. Prior to that time, approximately 980 Btu gas was delivered into these areas. Advent of the high Btu gas required appliances to be orificed to accommodate gas with heat content ranging from 980 to 1031 Btu. Since then, the Btu content of Wyoming gas has at times reached 1075 Btu; this, according to the distributors is uncomfortably close to another re-orificing.

Applicant has agreed that products revenues in excess of the plant costs will be credited to its system cost of service.

The estimated cost of the facilities is $4,882,000; capital required for construction will be obtained through a combination of current working funds and any necessary short-term loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The proposed construction and operation of facilities, as hereinbefore described and as more fully set forth in the application and exhibits in this

proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, authorizing the construction and operation of facilities as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 18 months from the date on which this order issues.

(D) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by the Commission, Colorado Interstate, the Commission staff, or any affected party herein, in any proceeding now pending or hereafter instituted by or against Colorado interstate, or any other companies, persons, or parties affected by this order.

OPINION NO. 456

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP61-8

OPINION AND ORDER DETERMINING APPLICABILITY OF LIBERALIZED DEPRECIATION AND REFUNDS

(Issued March 18, 1965)*

Syllabus

1. Determining that liberalized depreciation principles of *Alabama-Tennessee* are applicable to pipeline here, Commission finds flow-through and lower rates more effective stimulus to new investment than normalization and provides for deduction of accumulated reserves from rate base, unless pipeline submits appropriate plan for flowing through some or all of such reserves to customers. P. 576.

---

*Rehearing granted by order issued May 12, 1965, unreported. See Opinion No. 456-A issued June 23, 1965, 33 FPC 1277. Generally affirmed; remanded on one aspect, *City of Chicago v. F.P.C.*, —— F. 2d ——. (CADC-1967).

2. **All parties agree that settlement agreement represents a binding contract. P. 576.**
3. **There is no language in the settlement which can fairly be interpreted as requiring refunds retroactive to date rate increase was put into effect. P. 577.**
4. **Question of proper treatment of liberalized depreciation is uniquely a matter for Commission's informed judgment. P. 578.**
5. **Prior treatment of deferred taxes for rate purposes at a one and one half percent rate of return was not illegal. P. 578.**
6. ***Agreeing* that pipeline customers should not bear loss of refunds since date of *Alabama-Tennessee*, Commission puts Natural on par with Alabama-Tennessee and *orders* refunds back to February 3, 1964. P. 578.**
7. **In proceedings initiated under Section 4 of the Natural Gas Act, Commission *determines* applicability of liberalized depreciation and *orders* refunds.**

Commissioner O'Connor *concurring* in result.

Commissioner Black, *dissenting in part*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

In our Opinion No. 367, 28 FPC 731, on October 25, 1962, approving the recent settlement of a rate case in these proceedings the Commission reserved the question of the proper treatment for ratemaking purposes of the higher deductions from Federal income taxes made available by liberalized depreciation under Section 167 of the Internal Revenue Code. In *Alabama-Tennessee Natural Gas Co.*, 31 FPC 208, Opinion No. 417, Docket No. G–5471, *et al.*, February 3, 1964, the practice of normalization, formerly permitted by the Commission,[1] was found no longer justified with respect to that Company. The initial question is whether the principles of *Alabama-Tennessee* are applicable to Natural. If we conclude that they are, the question here arises as to the date on which the flow-through treatment of liberalized depreciation adopted in *Alabama-Tennessee* is to be made effective for Natural and the amount of any refunds which Natural must make to its customers in the Chicago area.

This proceeding began as a Section 4 rate case. After the hearings ended, a settlement agreement was reached and made part of the record on June 21, 1962 (Tr. 2954). In the settlement the question of the appropriate treatment of liberalized depreciation and consolidated taxes was reserved. We approved the agreement in Opinion No. 367, 28 FPC 731, on October 25, 1962. On May 11, 1964, the City of Chicago filed a motion requesting that the Commission decide the liberalized depreciation issue, and on May 19, 1964, Natural filed its answer and a proposal to reduce its rates as of October 1, 1965, stating that it was willing to waive its right to conduct further proceedings to show cause why the determination in *Alabama-Tennessee* is not applicable to Natural if the Commission approved its proposal. Under the proposal Natural's reduced rates would reflect the holding in *Alabama-Tennessee*. Thus, in computing its rates Natural would deduct the balance of deferred taxes in Account 282 from its rate base and would flow-through the tax reduction resulting from liberalized depreciation unless it elected to abandon use of liberalized depreciation by October 1, 1965. Natural also proposed that the rate reduction would be deferred beyond October 1, 1965, until *Alabama-Tennessee* became final, but, if so, Natural would pay a refund from that date if the Commission were upheld. Chicago objected to the rate reduction proposal arguing that the utilization of liberalized depreciation by Natural should in accordance with the principles enunciated in *Alabama-Tennessee* be flowed through to its customers and under the settlement agreement Natural should put its rate reduction in effect as of March 1, 1961.

---

[1] *Amere Gas Utilities Co.*, 15 FPC 781, and *El Paso Natural Gas Co.*, 22 FPC 260, 267.

In our order of July 31, 1964, 32 FPC 478, we recited that Natural had filed a rate reduction proposal, in which it had waived its right to contest the applicability of *Alabama-Tennessee* to it if we approve the proposal. The order makes clear, however, that the reopened proceeding was not limited to consideration of Natural's proposal and provided broadly for the filing of briefs on all questions relating to the reserved issue of liberalized depreciation. Briefs were accordingly filed by Natural, our staff, and Chicago, whose brief the Public Service Commission of Wisconsin adopts.

Initially, it is clear that we must determine whether the principles of *Alabama-Tennessee* are applicable to Natural. The settlement agreement calls for determination of this question, and our order of July 31, 1964, required briefs on it. Natural did not submit additional evidence on the question, and did not argue the question in its briefs, although our order gave it opportunity, and indeed called for such argument. The hearing record in the case made prior to the original settlement contains undisputed evidence showing that, like the pipeline industry as a whole, Natural is an expanding enterprise, and will continue to expand in the foreseeable future. Natural apparently does not dispute the fact it is properly subject to the principles enunciated in *Alabama-Tennessee* if that case is upheld. As with *Alabama-Tennessee,* we are of the opinion that flow-through and lower rates are a more effective stumulus to new investment than normalization, and, as in that case, we shall provide for deduction of the accumulated reserves from the rate base, unless Natural submits an appropriate plan for flowing some or all of such reserves through to its customers.

We now turn to the question as to the date on which Natural should give effect to these principles. All parties agree that the settlement agreement represents a binding contract; the controversy arises over its effect. The agreement provides in Section IV (2) as follows:

> 2. The question of whether Natural, in computing its cost of service for rate purposes, should compute its federal income tax expense allowance by "normalizing" such taxes to eliminate the effect of Section 167 of the Federal Internal Revenue Code, which relates to "accelerated" or "liberalized" depreciation, or by utilizing the principle of "flow-through" of the tax effect of the use of such "accelerated depreciation" deductions for tax purposes, as proposed and defined by the City of Chicago in these proceedings, rather than the "normalization" method, shall be determined by an adjudication by the Commission in these proceedings and this issue shall not be terminated by approval of the settlement proposed hereunder.
>
> To permit a resolution of this issue at the earliest possible date, however, all parties hereto request that in lieu of any intermediate decision proceedings herein, the Commission render a final decision with respect to such issue and, pursuant to the requirements of Section 1.30(c) of the Commission's Rules of Practice and Procedure, request the opportunity to file briefs relating to this issue, inclusive of proposed findings and conclusions, in accordance with a briefing schedule to be prescribed by the Commission, and to thereafter present oral argument to the Commission relating thereto; each party, subject to the foregoing, reserving its right to apply for rehearing and petition for judicial review of the Commission's decision with respect to such issue.
>
> In the event it shall be determined in these proceedings by a valid and final order of the Commission that Natural, in computing its cost of service in

> these proceedings, must utilize the above mentioned "flow through" method of tax computation, Natural, subject to its right to seek judicial review thereof, shall make such further refunds, with interest at 7 per cent per annum from the 20th day of each month in which each excess payment was collected, to the date Natural refunds such excess payment, as shall result from the reduction, if any, in the level of any of the rates contained in its FPC Rate Schedules that may be required by the Commission at the time of such order; provided, however, that Natural's obligation to make a refund hereunder shall not become effective unless and until the aggregate sum refundable under this Paragraph (2) shall be equal to $100,000.
>
> It is agreed that the difference between the depreciation deduction used in computing the Federal Income Tax allowance by use of the above mentioned "normalization" method, which is included in the cost of service of $137,014,823, and the depreciation deduction for such tax allowance purposes, relative to such cost of service, which would have resulted from use of the above mentioned "flow through" method, is $7,928,320. Any refunds and/or rate reductions made by reason of this Section IV(2) shall be made as described in the last paragraph of Section IV(1) above.

In interpreting this agreement both Chicago and the staff argue that it provides for a full refund for the entire period that excess rates were collected. They contend that the treatment of liberalized depreciation was the issue reserved, and, once it is decided that normalization is improper, Natural's cost of service should be adjusted and refunds should follow automatically from March 1, 1961. Natural on the other hand contends that there should be no refunds prior to October 1, 1965, assuming that the Commission is upheld by the Courts in *Alabama-Tennessee.*

It is entirely clear to us that the agreement was drafted with the possibility of refunds in mind. Thus it is provided that "In the event it shall be determined" that Natural must use "flow-through", it "shall make such further refunds * * * as shall result from the reduction, if any, in the level of any of the rates contained in its FPC Rate Schedules that may be requested by the Commission. * * *" However, it is also clear that the refund is made contingent on the action we might take on the question of liberalized depreciation and there is no language in the settlement which can fairly be interpreted as requiring us to order refunds retroactive to the date the rate increase was put into effect by Natural.

Chicago cites a letter of May 10, 1962, written to its corporation counsel by counsel for Natural explaining the proposed settlement agreement. There it is stated that "Natural also agrees to go to trial before the FPC on two issues and if it loses on either, to make additional refunds and rate reductions. * * *" Even if this letter is admissible as an explanation of the settlement agreement, there is nothing in this language which supports a conclusion that the parties agreed on March 1, 1961 as the effective date for making refunds. Under the language of this letter, as in the settlement agreements, the question of refunds is dependent on our decision herein with respect to liberalized depreciation. The question before us is to determine the appropriate date for refunds in light of all of the circumstances of this case.

Opinion No. 367 approving the settlement does not lead to a different result. The relevant language reads as follows (28 FPC at p. 733):

> The second issue is whether Natural should "normalize its tax expense to eliminate the effect of Int. Rev. Code § 167, relating to accelerated depreciation, or should compute its tax expense on the basis of taxes actually paid during the test year (1960). The settlement provides further that pending

> our decision on these issues, Natural shall collect revenues subject to refund based upon a 52% tax rate and "normalized" depreciation.

This language, like that in the settlement agreement, does not require a refund as of any particular date, although it does contemplate a refund if that should be required by our determination.

Both Natural and Chicago claim support for their position from our decision in *Alabama-Tennessee.* We agree with Chicago that the reference to the present proceeding in Opinion No. 417[2] conveys no more than that the same substantive issue was presented in both cases. We also agree that it was not a commitment that we would make any determination here prospective from the date of this order or from the October 1965 date proposed by Natural. On the other hand, there is nothing in this language to suggest that our substantive determination here *must* be made retroactive to March 1, 1961.

The question of the proper treatment of liberalized depreciation is uniquely a matter for the Commission's informed judgment. While we have decided that for the future flow-through should be the normal rate treatment of liberalized depreciation (and the normal accounting treatment as well) and specifically that it should be applied to Natural, our previous treatment of deferred taxes for rate purposes at a 1½ percent rate of return was not illegal. See *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 316 F. 2d 659 (CADC), certiorari denied, 375 U.S. 881. If we had chosen to utilize the instant case rather than the *Alabama-Tennessee* proceeding as the vehicle for reconsidering our previous policy, we would have applied our new policy of flowing through the tax benefits resulting from the use of liberalized depreciation and deducting the accumulated reserves from the rate base prospectively only as we in fact did in *Alabama-Tennessee.* Nothing in the settlement stipulation or anything else which has been brought to our attention would have required a different conclusion.

We do agree with Chicago, however, that it should not have to bear the loss resulting from the time that has elapsed since our decision a year ago in *Alabama-Tennessee.* We think the most equitable resolution of this matter is to put Natural on a par with *Alabama-Tennessee.* We shall therefore order refunds back to February 3, 1964.

Natural's selection of an October 1965 date seems to reflect the view that it is entitled to be put on a par with American-Lousisana, Michigan-Wisconsin, Panhandle and Trunkline rather than Alabama-Tennessee. With respect to each of these four pipelines, rate settlements agreeable to their customers as well as the

---

[2] Opinion No. 417 stated 31 FPC at p. 209:

> The same issue was also deferred in a number of Commission orders prescribing future rates for other natural gas pipeline companies, conditioned on the decision in this case.[3] In thus reserving this issue, we uniformly provided that any changed policy which might be formulated in this proceeding would have only a prospective effect on the rates and charges of the individual pipelines concerned. We are aware that a number of such pipelines have argued in these proceedings that the result we reach here cannot be made binding upon them in the absence of further proceedings. While we are not convinced as to the validity of such arguments, we shall afford such other pipelines an opportunity to show cause why the determination we are making here is not applicable to them. Accordingly, the decision rendered herein will constitute the final element in determining a just and reasonable level of return for *Alabama-Tennessee* and a proposed decision on this point with regard to the various other pipelines with respect to which this specific issue has been reserved.
>
> [3] *American Louisiana Pipe Line Co.* and *Michigan Wisconsin Pipe Line Company,* Opinion No. 363, issued September 17, 1962, 28 FPC 482; *El Paso Natural Gas Company,* Opinion No. 366, October 19, 1962, 28 FPC 688; *Southern Natural Gas Company,* Opinion No. 379, February 18, 1963, 29 FPC 323; *Natural Gas Pipeline Co. of America,* RP61-8, Opinion No. 367, October 25, 1962.

Commission were subsequently reached, after our decision in *Alabama-Tennessee*, under which they agreed to flow through the benefits of liberalized depreciation commencing in October 1965, subject to the outcome of the pending litigation in *Alabama-Tennessee*.[8] In none of those proceedings did the settlement actually reserve the liberalized depreciation issue or provide that the pipeline agreed to make such refunds as the Commission might order.

In the case of American-Louisiana and Michigan-Wisconsin, unlike Natural, no evidence had been introduced on the question of the treatment of liberalized depreciation, and the issue was confined to whether a return should be allowed on accumulated deferred taxes as formerly prescribed in the *Northern Natural* case, 25 FPC 431. A further hearing would have been required before flow-through could be implemented. For that reason the October 1, 1965 date was agreed upon in settlement negotiations (which also provided for certain other reductions in Michigan-Wisconsin's rates) as the date by which a Commission decision on this matter after hearing could have been reached. Thus there was avoided the necessity for such a hearing while *Alabama-Tennessee* was being reviewed in the courts.

With respect to Panhandle and Trunkline, the situation is even less analogous. Neither of these companies were subject to any contingent liability with respect to their use of liberalized depreciation and neither had pending rate increase proceedings. Instead, as a result of informal representations made by the Commission's staff following its review of the pipelines' earnings for calendar year 1963, the two companies, as part of an overall proposal which involved filing immediate rate reductions, agreed also to file further reductions to reflect the flow-through of liberalized depreciation as of October 1965, contingent upon the outcome of the *Alabama-Tennessee* case.

The Commission further finds:

(1) Natural will maintain a growing or stable plant for the foreseeable future.

(2) Rate flow-through will effectively and substantially promote expanded plant investment by Natural and will best implement the fundamental objective of Section 167 of the Internal Revenue Code, to benefit the national economy by stimulating plant modernization and expansion.

(3) Accumulated "deferred tax" balances should be maintained intact and retained by Natural as a contingency reserve (not a segregated fund) and withdrawn only to offset any increased taxes resulting from a decline in overall tax depreciation deductions, attributable to earlier use of liberalized depreciation, on all depreciable properties used in rendering public service, below the level of the normal tax deductions under straight-line depreciation, or until amortized pursuant to a plan approved by the Commission.

(4) There is no present factual justification for normalizing the rates of Natural after the date of issuance of our Opinion No. 417, *Alabama-Tennessee Natural Gas Co.*, 31 FPC 208, Docket No. G-5471, *et al.*, on February 3, 1964, so that rates should reflect only the actual taxes currently payable based upon the cost of service set forth in the stipulation of June 21, 1962.

(5) Natural is not entitled to any return on accumulated amounts in Account 282, Accumulated Deferred Income Taxes—Liberalized Depreciation, so that amounts included in Account 282 should be excluded from the rate base.

---

[8] *American Louisiana Pipe Line Co.*, 31 FPC 1579, Docket No. G-18419, June 23, 1964; *Michigan Wisconsin Pipe Line Co.*, 31 FPC 1579, Docket No. RP64-38, June 23, 1964; *Panhandle Eastern Pipe Line Co.*, 31 FPC 736, Docket No. RP64-18, March 30, 1964; *Trunkline Gas Co.*, 31 FPC 743, Docket No. RP64-19, March 30, 1964.

(6) Natural should file reduced rates, and should make refunds for the period commencing February 3, 1964 to reflect the flow-through of tax reductions resulting from the application of Section 167 of the Internal Revenue Code and to reflect the deduction from its rate base of balances in Account 282.

The Commission orders:

(A) Within 30 days of the date that the decision in *Alabama-Tennessee*, Opinion No. 417, becomes final, Natural shall file new rate schedules, effective immediately, reflecting the lower Federal income tax allowance and the lower rate base referred to above conforming to the stipulation of June 21, 1962, and satisfactory to the Commission.

(B) Within 30 days of the date of issuance of the order Natural shall refund to its jurisdictional customers for the period from February 3, 1964, to the date of refund the difference between the amounts collected and those which would have been collected for such period under the rate schedules required to be filed by this paragraph, together with interest at the rate of 7 percent per annum from the date of payment to Natural to the date of refund.

(C) Within 30 days of making the refunds required by Paragraph (B) Natural shall report to the Commission in writing and under oath the details of its calculations resulting in the refunds together with copies of releases from each of its jurisdictional customers.

Commissioner O'Connor *concurring* in the result.

Commissioner Black *dissenting in part.*

O'CONNOR, *Commissioner, concurring* in result:

In view of my disagreement with the principles enunciated in *Alabama-Tennessee Natural Gas Co.*, 31 FPC 208 (1964), I am compelled to make a short statement of my position in this proceeding. I adhere to my separate views expressed in that opinion. See my dissenting statement, 31 FPC, at 232, and Commissioner Woodward's dissenting statement, 31 FPC, at 222, with which I expressly joined. Nevertheless, a majority of the Commission endorses that opinion, which is presently being reviewed by the courts. Pending reversal by judicial decision or otherwise, I believe it proper to accept it as the governing expression of Commission policy. Accordingly, I join in consideration of the primary issue in this proceeding: the appropriate date, considering the settlement involved herein, that the policy is to be implemented. For the reasons stated by the majority, I agree that the date applied in *Alabama-Tennessee* should also be followed in this proceeding.

BLACK, *Commissioner, dissenting in part:*

I disagree with the majority opinion because its effect is to withhold from the customers of Natural Gas Pipeline Company in the Chicago area the sum of $28.5 million, plus interest, which rightly belongs to them and to their retail consumers who, for the past four years, have been paying more than they should for gas service. The Commission should order Natural to refund the excess revenues collected by reason of its "normalized" treatment of liberalized depreciation for the entire period the inflated rates have been in effect; that is from March 1, 1961, to the present.

This proceeding was initiated by Natural in October, 1960, under Section 4 of the Natural Gas Act for the purpose of raising its rates. The proposed rates were suspended by Commission action and set for hearing. The suspension period expired and the higher rates became automatically effective March 1, 1961, subject to refund of all amounts collected above the rate which the Commission would, under normal circumstances, determine to be just and reasonable. The parties, however, after full hearing entered into a settlement agreement which the Commission approved in October of 1962, and which provided, *inter alia*, for refund of excess revenues collected from and after March 1, 1961. Not resolved by the parties was the question of the proper rate-making treatment of liberalized depreciation. The settlement agreement by its terms reserved this issue for later determination by the Commission "in these proceedings," and provided that should the Commission decide the "flow-through" method of tax computation to be proper, then Natural would "make such further refunds, with interest at 7 percent per annum from the 20th day of each month in which each excess payment was collected, to the date Natural refunds such excess payment. * * *"

It is not at all uncommon in settlement proceedings or, for that matter, in fully adjudicated cases, for the parties or the Commission to reserve an issue for subsequent determination. When the severed issue is decided, unless specific provision is made to the contrary, it will relate back in time, utilizing the same test period, and fit into the agreement or the decision of the Commission just as if it had been decided along with the other issues.[1] No contrary intent was evidenced by the parties to the settlement agreement in this case, nor do the circumstances here warrant contrary treatment by the Commission.

The majority erroneously relates the refund period here to the *date* of our decision in *Alabama-Tennessee*. While it is true that that decision stands for the proposition that flow-through is the proper rate-making treatment of liberalized depreciation—the same issue that was reserved in the instant case—it was not in the contemplation of the parties that *Alabama-Tennessee* was, as such, the missing piece. They could easily have made such provision in their settlement agreement, but that document doesn't mention *Alabama-Tennessee*. A matter of such vast importance and involving so many millions of dollars in refunds would hardly have been left to inference. If the parties to this case intended that application here of a legal and policy decision to be made some time in the indefinite future in another case, would be prospective from the date that case was decided, clearly they would have said so. It is especially noteworthy that the Commission order in *Alabama-Tennessee* and in the other dockets reserving the issue of liberalized depreciation did expressly provide that its future orders resolving that issue would have prospective effect only.[2]

The Commission rather defensively maintains that while it *could* pick a date earlier than the date *Alabama-Tennessee* was decided for the computation of refunds, it isn't *required* to do so. I disagree. The settlement agreement constitutes a contract which this Commission is not empowered to rewrite for the parties. This case was settled, with our approval, between Natural and its customers on certain definite terms and conditions. One such condition was that should flow-through be decided properly to control Natural's use of liberalized depreciation for rate-making purposes, then Natural would make further refunds reflecting the excess revenues, with interest, from "the 20th day of *each month in which excess payment was collected.* * * *"—not each month after *Alabama-Tennessee* was decided. Indeed, it would seem most unlikely that responsible business management would arrive at an understanding affecting millions of dollars, and leave the measurement of this sum to the uncertain future determination by this Commission of a similar controversy in another case. It may be conceded that the parties, mindful of the pendency of *Alabama-Tennessee*, recognized the necessary applicability of whatever decision the Commission might make in the case, to the facts of the instant case. But it does not follow at all that the *date* of the *Alabama-Tennessee* decision was intended to affect the amount of refunds. Our decision in *Alabama-Tennessee* might have been months away or years away. It is impossible for me to believe that settlement of Natural's rate case was arrived at with such a huge variable intended—one not related to any substantive issue of law, fact, or policy.

---

[1] *Cities Service Gas Company*, Docket No. G–18799, issued March 27, 1961, 25 FPC 582; Opinion No. 396, issued July 15, 1963, 30 FPC 158.

[2] *Alabama-Tennessee Natural Gas Company*, Opinion No. 360, issued June 13, 1962, 27 FPC 1180; *American Louisiana Pipe Line Company* and *Michigan Wisconsin Pipe Line Company*, Opinion No. 363, issued September 17, 1962; *El Paso Natural Gas Company*, Opinion No. 366, issued October 19, 1962; *Southern Natural Gas Company*, Opinion No. 379, issued February 18, 1963.

This Commission approves settlements only if all the parties agree to the settlement. Here we have approved one settlement on the basis of which the parties discontinued their litigation. We are now, three years later, imposing on them an entirely different "settlement." In my opinion the parties clearly would not have consummated their agreement had they known what would happen to it at the hands of the Federal Power Commission.

It may be that Natural made a bad bargain; but a bargain it was, nonetheless, and it is not incumbent on us to relieve them of it. The majority justifies the result on "equitable" grounds. The gas consumers in the Chicago area who are, in the final analysis, being compelled to bestow a windfall of more than $30 million on Natural Gas Pipeline Company of America, will surely be surprised to learn that this constitutes "equity" in the view of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman: L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PITTSBURGH PLATE GLASS COMPANY, CHEMICAL DIVISION (FORMERLY COLUMBIA SOUTHERN CHEMICAL CORPORATION), DOCKET NO. E-6406

ORDER TERMINATING AUTHORIZATION FOR PERMANENT CONNECTION FOR EMERGENCY USE

(Issued March 18, 1965)

The Commission, by order issued February 18, 1954 (13 FPC 825) in the above-entitled matter, authorized Columbia-Southern Chemical Corporation, now Pittsburgh Plate Glass Company, Chemical Division (Applicant), to maintain and use a permanent connection for emergency use between its facilities and those of Gulf States Utilities Company at West Lake, Louisiana.

By application filed December 21, 1964, Applicant states that the emergency use of the interconnection which was caused by a deficiency in generating capability in the electric power system of Gulf States in Southwest Louisiana no longer exists; therefore, the interconnection is no longer needed, and the Applicant and Gulf States have agreed to cancel, effective December 1, 1964, the aforesaid agreement dated December 13, 1951. The facilities will no longer be used for emergency use only.

The Commission orders:

The authorization heretofore granted by order of the Commission issued February 18, 1954 in the above-entitled matter is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CAROLINE HUNT SANDS AND LOYD B. SANDS, DOCKET NO. RI64-356

ORDER

(Issued March 18, 1965)

This proceeding involves a rate increase from 23.55¢ per Mcf to 24.55¢ per Mcf filed on November 1, 1963, by Caroline Hunt and Loyd B. Sands (Sands) for sales of natural gas to Hope Natural Gas Company (Hope) from the South Thornwall Field in Southern Louisiana. An immediate hearing was ordered on the increase because it was the highest price on file for sales in this area and could possibly serve as a basis for price redeterminations under other producer contracts. (See Commission order issued in this proceeding, November 26, 1963). Interventions were filed by the Public Service Commission of the State of New York, the Pennsylvania Public Utility Commission, the United Gas Improvement Company, and Hope.

At the hearing in this proceeding cost of service evidence pertaining to Sands was introduced by both Sands and staff and in addition staff introduced evidence intended to prove that Sands operates as part of an organization comprised of the various members of the H. L. Hunt family and argued that the combined cost of all the Hunts should be considered. At the examiner's request both staff and Sands presented carved-out costs for the two leases from which the sales involved in this proceeding are made. On the basis of these carved-out costs the examiner found that the rate increase was justified.

As pointed out by the exceptions of staff and certain intervenors it would appear that the examiner was in error in relying solely on carved-out costs to justify this increase. *Hunt Oil Co., et al.*, 28 FPC 623, *H. L. Hunt, et al.*, 28 FPC 897, *Socony Mobil Oil Co., Inc.*, 27 FPC 347. Sands also introduced company-wide evidence of costs which it claimed justified the increase but this evidence was contested by staff which submitted cost figures to show that Sands' cost would not exceed 20¢ per Mcf, whether such costs were computed on the basis of treating the Hunt group as one entity or treating Sands as a separate corporation. We do not find it necessary to pass on this evidence at this time.

Neither is it necessary nor appropriate at this time to determine a just and reasonable rate under any of the theories proposed because the increased rate was filed in violation of a moratorium provision in the certificate under which the sale is being made.

A permanent certificate was originally granted for this sale on August 10, 1959, at an unconditioned price of 23.55¢ in Opinion No. 337 (22 FPC 378). The Court of Appeals for the District of Columbia reversed this opinion "insofar as it grants unconditioned certification to the initial price proposals." *Public Service Commission of New York* v. *F.P.C.*, 287 F. 2d 146, certiorari denied, *sub nom. Hope Natural Gas Co.* v. *Public Service Commission of New York*, 365 U.S. 880. Upon remand the Commission determined in Opinion No. 398 (30 FPC 283) issued July 17, 1963, that the proper initial price for this sale was 20¢ per Mcf including taxes and that in addition a moratorium on the filing of any increase above 23.55¢ including taxes should be imposed.

The Court of Appeals for the Fifth Circuit granted a stay of Opinion No. 398 on January 15, 1964, and reversed it in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (August 14, 1964). Petitions for a writ of certiorari were granted by the Supreme Court on March 8, 1965. If the Supreme Court upholds the Commission's moratorium it would be effective as of July 17, 1963, and the rate increase here in issue would be rejected as of the date of filing because it is in violation of the moratorium.

If the moratorium is not upheld by the Supreme Court this sale will again be before the Commission in a certificate proceeding where the Commission will be required to determine whether the public interest and the public convenience and necessity require certification of this sale under the terms of a contract which would authorize sales at a price of 24.55¢.[1]

Accordingly, the Commission orders:

Further proceedings in this docket are deferred pending decision by the Supreme Court in *F.P.C.* v. *Callery Properties, Inc., et al.*, 335 F. 2d 1004 (CA5-1964), or until further order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, DOCKET NO. E-7146

ORDER REQUIRING RESPONDENT TO APPLY FOR AND SECURE A LICENSE

(Issued March 18, 1965)*

On December 30, 1963, the Commission issued an order (30 FPC 1630) requiring the South Carolina Electric & Gas Company (Respondent) to show cause why it should not apply for and secure a license for its Stevens Creek hydroelectric project in Georgia and South Carolina. The project is on the Savannah River, about 8.7 miles upstream from Augusta, Georgia. The Savannah River is a navigable water of the United States. See *United States* v. *Twin City Power Co.*, 350 U.S. 222.

In its answer the Respondent states that it operates the project by virtue of a War Department permit issued to its predecessors on July 20, 1910. The Respondent further states that authority to issue the permit stemmed from: (1) a special act, approved August 5, 1909 (36 Stat. 180), and extended March 5, 1912 (37 Stat. 72); (2) the General Dam Act of 1906 (34 Stat. 386), as amended June 23, 1910 (36 Stat. 593).

The Respondent recognizes that its permit was subject to the 1910 amendment of the General Dam Act, containing the important innovation that War Department permits would terminate at the end of a period not to exceed fifty years. The fifty-year limitation, and an exception to it on which the Respondent relies, are as follows:

> * * * the authority granted under or in pursuance of the provisions of this Act shall terminate at the end of a period not to exceed fifty years from the date of the original approval of the project under this Act, unless sooner revoked as herein provided or Congress shall otherwise direct: *Provided, however*, That this limitation shall not apply to any corporation or individual heretofore authorized by the United States, or by any State, to construct a dam in or across a navigable waterway, upon which dam expenditures of money have heretofore been made in reliance upon such grant or grants. § 4, 36 Stat. 593, 595 (1910).

Respondent's permit, and its amendments, came before us in the headwater benefits case of *South Carolina Electric & Gas Co.*, 29 FPC 624, Op. No. 384, Docket No. E-6468, March 28, 1963, *aff'd sub nom. South Carolina E & G Company* v. *F.P.C.*, 338 F. 2d 898 (CA-4). The permit and supplemental instruments of approval reveal that there was no construction work on the dam until well after the 1910 amendment of the General Dam Act. The supplemental approval by the War Department, issued November 16, 1912, provided:

---

[1] "Where the application on its face or on presentation of evidence signals the existence of a situation that probably would not be in the public interest, a permanent certificate should not be issued" *Atlantic Refining Co. v. Public Service Commission of New York*, 360 U.S. 378 at 391 (1958).

*Opinion No. 459 issued May 11, 1965 denied rehearing and grants stay, 33 FPC 984.

> That whenever said company shall commence the actual construction of said dam, lock or appurtenances, as provided under this permit, such commencement shall be construed as an acceptance of this permit by said company and of all the conditions therein imposed.

Respondent states that it qualifies under the exception to the fifty-year limitation on War Department permits enacted in 1910 because prior to that time it expended "substantial sums". However, Respondent does not claim that the expenditures were "upon said dam" as the exception requires. Expenditures on the dam, in fact, would have been illegal because the War Department permit was not issued until after the enactment in 1910 of the time limitation. Congress in 1909 consented to the construction of a dam near Stevens Creek, but under the General Dam Act, incorporated by reference in the special legislation, expenditures on the dam could not legally be made until a War Department permit, approving its plans and specifications, had been issued.

As no expenditures upon the dam were authorized prior to July 20, 1910, any expenditure would have been of the nature referred to by Theodore Roosevelt when he vetoed that Rainy River Bill. In that veto message, President Roosevelt stated that the public interest required prompt exercise of the privilege of constructing dams across navigable streams and pointed out the need for fixing terms in permits. 42 Cong. Rec. 4698 (1908). Of the kind of expenditures respondent may have made before the 1910 amendment of the General Dam Act, the President said:

> I do not believe that natural resources should be granted and held in undeveloped condition either for speculation or other reasons. *Ibid.*

The Rainy River veto message is an important part of the legislative history of the 1910 amendment to the General Dam Act. The Representative in charge of the legislation, explaining it in the House, referred to the message and to the fact that afterwards the House agreed with the President that the existing law governing dams should be amended in view of the general considerations which prompted the Rainy River veto. 45 Cong. Rec. 5683 (1910).[1]

Whether expenditures prior to the issuance of a War Department permit would exempt anyone from the 50-year limitation on such permits is purely a question of law. The plain language of the exception and its legislative history clearly indicate that the purchase of land or flowage rights would not exempt a permittee from the fifty-year limitation. An opposite conclusion would put a premium on promotional activity of a type the legislation sought to discourage. It is further to be considered that "all federal grants are construed in favor of the Government lest they be enlarged to include more than what was expressly included". *United States* v. *Grand River Dam Authority*, 363 U.S. 229, 255.

The conclusion that Respondent's War Department permit has expired by its terms is supported by the recent decision in *South Carolina Electric & Gas Co.* v. *F.P.C.*, 338 F. 2d 898 (CA-4). There Respondent's "primary defense" against an assessment for headwater benefits was "denial of the reach of the Act". *Id.* at 901. The Court held that South Carolina's permit issued July 20, 1910 was amenable to the General Dam Act as amended and provided "for a term of 50 years". *Id.* at 901–2.

---

[1] In *United States ex rel. Chapman* v. *F.P.C.*, 345 U.S. 153, 167, the Supreme Court noted this and other veto messages of Presidents Roosevelt and Taft and their significance in the development of national hydroelectric power policy.

The Commission finds:

(1) The Savannah River is a navigable water of the United States.

(2) South Carolina Electric & Gas Company (South Carolina) is a corporation organized under the laws of the State of South Carolina.

(3) Respondent operates and maintains the Stevens Creek hydroelectric project in Georgia and South Carolina on the Savannah River, about 8.7 mile upstream from Augusta, Georgia.

(4) Under the provisions of an Act of Congress approved August 5, 1909 (36 Stat. 180), as extended by the Act of March 5, 1912 (37 Stat. 72), and the General Dam Act of June 23, 1910 (36 Stat. 593), the War Department issued a permit on July 20, 1910 to Respondent's Predecessors.

(5) The permit was amended from time to time and the Stevens Creek project was constructed in 1913–1914.

(6) The fifty-year permit term prescribed by the General Dam Act of 1910 has expired.

(7) Respondent is operating and maintaining the Stevens Creek project works without a valid federal permit issued prior to June 10, 1920 or a license under the Federal Power Act in violation of Section 23(b) of that Act (16 U.S.C. 817).

The Commission orders:

South Carolina Electric & Gas Company shall, within ninety (90) days from the date of issuance of this order, file application for license, pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its project works in and along the Savannah River in the vicinity of Stevens Creek.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA ELECTRIC COOPERATIVE, INC. v. ALABAMA POWER COMPANY, DOCKET NO. E–7183

ORDER PRESCRIBING REVISED PROCEDURE, PERMITTING INTERVENTION, DENYING MOTIONS TO DISMISS COMPLAINTS, REQUIRING PRODUCTION OF DATA, AND DENYING APPLICATION FOR REHEARING

(Issued March 19, 1965)

We have before us for consideration in connection with this proceeding: (1) an "Application for Rehearing" filed by the Alabama Power Company (Company) and directed to our order of February 5, 1965, 33 FPC 183, designating the complaint filed against it by Alabama Electric Cooperative, Inc. (Cooperative) for hearing and rejecting Company's motion to dismiss; (2) the examiner's action of March 4, 1965, referring to us an appeal by Company from the examiner's order directing Company to make certain documents available to Cooperative; (3) petitions by the Cities of Troy and Luverne (Cities) filed March 1, 1965 seeking to intervene in this proceeding; moving to dismiss it; and complaining about the rates, charges, terms, and conditions by which Cooperative presently sells power to the Cities. Pursuant to such complaint, Cities seek determinations from the Commission as to whether it has jurisdiction over such sales and, if so, whether Cooperative's rates are excessive and the terms of sale unfair, unjust, unreasonable, burdensome, discriminatory, or preferential.

As indicated below, Company's "Application for Rehearing" (which is being considered as an application for reconsideration since our order of February 5, 1965, was not a final order of the Commission from which rehearing lies (see FPC Rules of Practice and Procedure, § 1.34)) is being denied, as will its appeal from the examiner's ruling. Cities' petitions for intervention are being granted and their motions to dismiss denied. Finally, all further action on Cities' complaints against Cooperative is deferred until the Commission has an opportunity to consider the matters raised therein in the light of Cooperative's answer thereto and any reply which may be timely filed by Cities.

1. We have examined the "Application for Rehearing" filed by Company and the Motions to Dismiss filed by Cities and conclude that they advance nothing which would cause us to reconsider the conclusion reached in our order of February 5, 1965 that Cooperative's complaint against Company should be set for hearing. In so holding, we do not intend to indicate that we necessarily agree with some of the statements by counsel for Cooperative in the course of prehearing conference, referred to in the application for rehearing, suggesting that should Cooperative prevail on the merits of its complaint, we would have authority, in addition to prescribing lawful rates, to enjoin either permanently or temporarily any service by Company to Cities. However, the fact that Cooperative may *inter alia* be seeking relief which we could not or should not afford it, is not grounds for dismissing the complaint in view of the fact that Cooperative also seeks relief by way of the prescription of lawful rates which is clearly within our jurisdiction under the Act.

2. We do not agree with Company or the Cities that the jurisdictional question Company has raised by way of a defense to the Cooperative complaint must or should be finally resolved by the Commission prior to any hearing on the merits of the case. Such a procedure would obviously impose an unnecessary time burden upon parties filing complaints before the Commission. In view of the nature of the issue, we are prepared to have the staff of the Commission assume the burden in the hearing of demonstrating our jurisdiction over the Company's rates in question, but this matter should be tried along with and not separate from the merits of Cooperative's complaint. Nor do we believe that the fact that Company has raised the jurisdictional issue would justify it in refusing to comply with those portions of the Cooperative's request for documents and other information which the examiner (in our opinion correctly) has granted. The appeal from his ruling is therefore denied.

3. Cities' petitions for intervention are not opposed and will be granted. Their complaints against Cooperative, however, present a procedural question. Actual service was apparently made upon Cooperative on March 1, 1965 but the Secretary of the Commission did not serve copies of the complaints upon Cooperative, as contemplated by Section 1.17 of our Rules of Practice and Procedure until March 8, 1965. While Cooperative, in its "Answer to Petitions to Intervene," filed March 8, adverts briefly to the complaints, contending that they are "notably lacking in merit", it has not yet had an opportunity to answer the complaints in any detail. Our rules contemplate that parties complained of will have 30 days from the date of service in which to file their answers unless the Commission, for cause, prescribes a lesser period. In view of the circumstances, we believe that Cooperative should be given an opportunity to respond fully to the complaints before we take any action thereon, and we think a period of 30 days from March 1, 1965—the date upon which the pleading containing the complaint was served by Cities upon Cooperative—would be adequate for this purpose.

On the basis of this answer, plus any reply the Cities may wish to file within 15 days from the filing of such answer, we shall determine what action is appropriate with respect to the Cities' complaints. We recognize that at such time we may wish to consolidate any hearing on the Cities' complaints with the instant proceeding, but we do not believe that this possibility should presently lead to postponement of the instant proceeding.

There remains for consideration the question of setting a new date for the commencement of the hearing in this proceeding. The hearing had originally been set to begin on March 16, 1965, but in view of the pendency of these various motions, the Secretary, at our direction, on March 15, 1965, postponed the hearing date pending our further order. We believe that the examiner is in the best position to determine the earliest practical date at which the hearing can be started, bearing in mind the ultimate objective of completing this proceeding as expeditiously as possible. We shall, therefore, direct him to call a further prehearing conference at the earliest convenience of the parties and to fix therein such dates for filing of testimony and oral examination of witnesses as he may determine will best achieve these objectives.

The Commission orders:

(A) The Cities of Troy and Luverne, Alabama, are hereby permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission; *Provided, however*, That their participation shall be limited to matters affecting asserted rights and interests as specifically set forth in their petitions; and, *Provided, further*, That the admission of said Cities as intervenors shall not be construed as recognition by the Commission that said Cities might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(B) The application filed by the Company for reconsideration of the Commission's order issued February 5, 1965, in this proceeding, and the petitions filed by the Cities of Troy and Luverne on March 1, 1965, insofar as they seek dismissal of this proceeding at this time are hereby denied.

(C) Company shall furnish data to Cooperative in accordance with the presiding examiner's rulings as referred to above.

(D) Cooperative shall have until March 31, 1965 to answer the complaints filed against it by the Cities of Troy and Luverne, and the Cities may reply to such answer on or before April 15, 1965.

(E) The examiner is directed to forthwith convene a further prehearing conference in this proceeding and to fix thereat the schedule for subsequent filing of testimony and oral examination of witnesses by the several parties.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-166

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 22, 1965)

On December 10, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP65-166 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Commission's Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of natural gas facilities for the sale of natural gas to direct customers and for miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct lateral and loop lines, taps, metering and regulating equipment, structures and other facilities necessary for the measurement and delivery of natural gas to direct consumers who will use the gas solely for road building, irrigation, agriculture, general use in school and hospitals located in areas outside of local distributors' franchise areas and for seasonal industrial purposes. Applicant states that it will construct a maximum of 60 lateral and loop lines with maximum lengths of five miles each and maximum diameters of six inches for service to the direct consumers. Further, Applicant states that miscellaneous rearrangement facilities proposed herein will not exceed thirty separate projects, which projects include the alteration and relocation of miscellaneous gas transmission facilities required in connection with highway construction, dam or reservoir construction, industrial plant expansion, development of private property and other similar projects.

The proposed facilities will not be used for deliveries to any one consumer exceeding 100,000 Mcf annually, and the gas so delivered will not be used by any consumer for boiler fuel purposes.

The total estimated cost of the proposed facilities is not to exceed $300,000 and will be financed with treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of subparagraph (7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to direct customers and as proposed for miscellaneous rearrangements, all as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of subparagraph (7) of Section 157.7(c) of the aforesaid Regulations and, further, shall not entitle any industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HOPE NATURAL GAS COMPANY, DOCKET NO. CP63-272

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 22, 1965)

On March 1, 1965, the cities of Canton, Cleveland and Massillon, Ohio (Cities), interveners in the above-captioned proceeding, filed a joint application for rehearing of the Commission's Opinion No. 448 and order issued February 2, 1965, 33 FPC 150. The Cities argue that the Commission erred in its approval of the certificate for the merger of Hope Natural Gas Company and New York State Natural Gas Company, and in its allowance of the interim accounting procedure with regard to the computation of purchased gas costs under the OSS Rate

Schedule of New York Natural. The Cities request, in essence, that upon due reconsideration of our opinion we vacate the order as therein issued and enter an order denying the certificate as not being required by the public convenience and necessity.

We have considered the assignments of error and grounds for rehearing set forth in the application and have reconsidered our Opinion No. 448. The arguments advanced here by the Cities are similar, if not identical, to those advanced by them in their brief before the examiner and in their exceptions and rejected by us in the opinion. All points raised in the application have been discussed in the opinion. Our conclusions as to these matters remain unchanged. No new facts or arguments are called to our attention which would be cause for granting rehearing or disturbing the original opinion and order.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 448 and accompanying Order.

The Commission orders:

The application for rehearing filed by the cities of Canton, Cleveland, and Massillon, Ohio, on March 1, 1965, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP65-203

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 23, 1965)

On January 4, 1965, Columbia Gulf Transmission Company (Applicant) filed in Docket No. CP65-203 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon in place 4.65 miles of 2-inch to 6-inch field lines and appurtenant equipment in the State of Louisiana, all as more fully set forth in the application.

The facilities proposed to be abandoned are as follows:

Field	Parish	Producer	Lines to be abandoned
Franklin	St. Mary	Ted Weiner	0.95 mile of 4-inch.
Savoy	St. Landry	Gulf Interstate Oil Co.	1.96 miles of 2-inch.
Savoy	St. Landry	Tidewater Oil Co.	1.477 miles of 4-inch.
Second Bayou	Cameron	Perry E. Bass, *et al*	0.262 mile of 6-inch.

The subject lines and equipment were originally constructed to enable Applicant to take gas for the account of United Fuel Gas Company (United) from the above-described properties. Abandonment is necessary because production has ceased, and the reservoirs of the wells connected to the gas purchase facilities are fully depleted.

Applicant states that the cost of salvaging is too great to justify an attempt to take up the pipe and sell it.

All of the independent producers involved have been granted permission and approval to abandon service, except Ted Weiner who never commenced regular production.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 5, 1958, in Docket No. G–15524 (20 FPC 681).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment in place, as hereinbefore described and as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Columbia Gulf Transmission Company of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63–296

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 23, 1965)

On January 13, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63–296 an application to amend the order of the Commission issued in said docket on December 16, 1963, 30 FPC 1520, as amended on July 29, 1964, 32 FPC 423, which order authorized Applicant to sell a total of 100,000 Mcf of natural gas per day to Southern California Gas Company and Southern Counties Gas Company of California (jointly Southern) in addition to Southern's 1,130,000 Mcf of maximum contract daily demand. The sale was authorized on a limited-term basis, continuing until November 1, 1965, or until commencement of any new service which results from an order in *Transwestern Pipeline Company, et al.*, whichever is earlier.

In the present application, Applicant seeks amendment of the order issued December 16, 1963, as amended July 29, 1964, in Docket No. CP63–296 by requesting extension of the term of the sale of up to only 70,000 Mcf of gas per day to Southern for one year, until November 1, 1966, or until commencement of any new service which results from an order in *Transwestern Pipeline Company, et al.*, Docket No. CP63-204, *et al.*, whichever is earlier.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 27, 1965 (30 F.R. 853). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued December 16, 1963, as amended July 29, 1964, in Docket No. CP63-296 be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of convenience and necessity issued to El Paso in the Commission order of December 16, 1963, as amended July 29, 1964, be and the same is hereby further amended by extending the term of the sale of up to only 70,000 Mcf of gas per day to Southern until November 1, 1966, or until commencement of any new service pursuant to an order in *Transwestern Pipeline Company, et. al.*, Docket No. CP63-204, *et al.*, whichever is earlier, as hereinbefore described and as more particularly described in the aforementioned petition which is on file with the Commission.

(B) In all other respects the order, as amended in Docket No. CP63-296 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF HOLYOKE GAS & ELECTRIC DEPARTMENT, PROJECT NO. 2386

ORDER ISSUING LICENSE (MINOR)

(Issued March 23, 1965)*

Application was filed on July 5, 1963 by the City of Holyoke Gas & Electric Department (Applicant) for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2386, known as Power Project No. 1, located on a canal system along the Connecticut River within the City of Holyoke in Hampden County, Massachusetts.

Power Project No. 1 was acquired by Applicant in 1902. The four generating units were installed in 1923 to replace the original installation made in 1893.

The canal system upon which Power Project No. 1 is situated takes water from the Connecticut River, a navigable water of the United States, and discharges the water back into the Connecticut River at a point downstream. On July 5, 1949, the Commission issued a license to the Holyoke Water Power Company for Project No. 2004 which included therein the canal system as a part of the project works, but not the hydroelectric facilities owned by others and located along the canal system.[1] No lands of the United States are affected by the project.

---

*Rehearing granted by order issued May 10, 1965, unreported.

[1] Article 16 of the license for Project No. 2004, provides:

Article 16. The Licensee shall follow a plan of operation which will result in a maximum economic utilization of the water of the Connecticut River at Holyoke, Massachusetts, through the facilities along the existing canals and through the new power plant covered by this license, consistent with the use of water for process and other essential purposes.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interests of fish and wildlife and recreation.

The Department of Health, Education, and Welfare has advised of a need for a detailed study of the area affected by the project and will report further upon completion of the study. However, on September 15, 1964, the Department advised that such a report would not be forthcoming for perhaps a year or so.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date as of March 1, 1941 and a terminating date of February 28, 1991.[2]

Pursuant to petition therefor, the Commission, by order issued January 26, 1965, permitted Holyoke Water Power Company, of Holyoke, Massachusetts, to intervene in this proceeding.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a municipal corporation organized under the laws of the Commonwealth of Massachusetts and a municipality, as defined by Section 3(7) of the Act, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene in opposition to the project have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1408 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

---

[2] On March 4, 1941, in Bellows Falls Hydro-Electric Corporation, *et al.* (2 FPC 380, 387), the Commission determined the Connecticut River to be a navigable water of the United States from its mouth up to and beyond Bellows Falls, Vermont.

The Commission orders:

(A) This license is hereby issued to the City of Holyoke Gas & Electric Department under Sections 4(e) and 10(i) of the Act for a period effective as of March 1, 1941 and terminating February 28, 1991, for the continued operation and maintenance of Project No. 2386, located on the canal system of the Holyoke Water Power Company which takes water from the Connecticut River, a navigable water of the United States, subject to the terms and conditions of the Act not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2386 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) project works consisting of: a brick powerhouse (38 feet x 50 feet in plan) containing two 330 hp turbines connected to two 240 kw vertical hydro generators and two 400 hp turbines connected to two 288 kw vertical hydro generators—all having a total capacity of 1056 kw at a 19 foot head; and two 32 foot long (10 foot diameter) steel penstocks and two 320 foot long brick tailraces.

(iii) all other structures, fixtures, equipment, or facilities which are located in the project area and are used or useful in the maintenance and operation of the project; and all rights and interests the possession of which are necessary or appropriate to the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period March 1, 1941 through March 31, 1962 an annual charge of $5.00, and effective April 1, 1962 an annual charge of $70.00.

Article 13. The Licensee (City of Holyoke Gas & Electric Department) shall cooperate with the Licensee for Project No. 2004 (Holyoke Water Power Company) in order that the conditions of Article 16 of the license for Project No. 2004 can be fulfilled.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF HOLYOKE GAS & ELECTRIC DEPARTMENT, PROJECT NO. 2388

ORDER ISSUING LICENSE (MINOR)

(Issued March 23, 1965)*

Application was filed on July 5, 1963, by City of Holyoke Gas & Electric Department (Applicant) for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2388, known as Power Project No. 3, located on a canal system within the City of Holyoke, in Hampden County, Massachusetts.

Power Project No. 3 was completed in June, 1940.

The canal system upon which Power Project No. 3 is situated takes water from the Connecticut River, a navigable water of the United States, and discharges the water back into the Connecticut River at a point downstream. On July 5, 1949, the Commission issued a license to the Holyoke Water Power Company for Project No. 2004, which included therein the canal system as part of the project works, but not the hydroelectric facilities owned by others and located along the canal system.[1] No lands of the United States are affected by the project.

The Department of the Army and the Chief of Engineers have reported that plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife and recreation.

The Department of Health, Education, and Welfare has advised of a need for a detailed study of the area affected by the project and would report further upon completion of the study. However, on September 15, 1964, the Department advised that such a report would not be forthcoming for perhaps a year or so.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of June 1, 1940, and a terminating date of May 31, 1990.

Pursuant to petition therefor, the Commission, by order issued January 26, 1965, permitted Holyoke Water Power Company, of Holyoke, Massachusetts, to intervene in this proceeding.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a municipal corporation organized under the laws of the Commonwealth of Massachusetts and a municipality, as defined by Section 3(7) of the Act and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene in opposition to the project have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any

---

*Rehearing granted by order issued May 10, 1965, unreported.

[1] Article 16 of the license for Project No. 2004, provides:

Article 16. The Licensee shall follow a plan of operation which will result in a maximum economic utilization of the water of the Connecticut River at Holyoke, Massachusetts, through the facilities along the existing canals and through the new power plant covered by this license, consistent with the use of water for process and other essential purposes.

water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 600 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to the City of Holyoke Gas & Electric Department under Sections 4(e) and 10(i) of the Act for a period effective as of June 1, 1940, and terminating May 31, 1990, for the continued operation and maintenance of Project No. 2388, located on the canal system of the Holyoke Water Power Company which takes water from the Connecticut River, a navigable water of the United States, subject to the terms and conditions of the Act not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2388 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) project works consisting of: a brick powerhouse (32 feet by 43 feet in plan) containing a 746 hp turbine connected to a vertical hydro generator rated at 450 kw and operating under a 12.5 foot head; two 11-foot by 7 foot brick penstocks, 80 feet in length; and a 30 foot wide by 94 foot long open tailrace; and

(iii) all other structures, fixtures, equipment, or facilities which are located in the project area and are used or useful in the maintenance and operation of the project: and all rights and interests the possession of which are necessary or appropriate to the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period June 1, 1940 through March

31, 1962 an annual charge of $5.00, and effective April 1, 1962 an annual charge of $30.00.

Article 13. The Licensee (City of Holyoke Gas & Electric Department) shall cooperate with the Licensee for Project No. 2004 (Holyoke Water Power Company) in order that the conditions of Article 16 of the license for Project No. 2004 can be fulfilled.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MANUFACTURERS LIGHT AND HEAT COMPANY, CUMBERLAND AND ALLEGHENY GAS COMPANY, TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64–244

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 23, 1965)

On April 16, 1964, The Manufacturers Light and Heat Company (Manufacturers), Cumberland and Allegheny Gas Company (Cumberland), and Texas Eastern Transmission Corporation (Texas Eastern) (Applicants) filed in Docket No. CP64–244 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the exchange and delivery of natural gas, all as more fully set forth in the application on file with the Commission.

The application states that to the extent operating conditions of Manufacturers and Cumberland will reasonably permit, Texas Eastern will deliver to Cumberland in Garrett County, Maryland, for redelivery by Cumberland to Manufacturers at the Maryland-Pennsylvania state line such quantities of natural gas as Texas Eastern may have available in Garrett County, Maryland, up to a maximum daily quantity of 5,000 Mcf, in exchange for equivalent reductions in takes by Manufacturers at presently established points of delivery between Texas Eastern and Manufacturers. In addition, Manufacturers will, at a later date, deliver to Cumberland at the Maryland-Pennsylvania state line for the account of Texas Eastern to be delivered by Cumberland to Texas Eastern in Garrett County, Maryland, such daily volumes of natural gas requested by Texas Eastern as may at that time be in excess of the requirements of Manufacturers to meet its system obligations, up to a maximum daily quantity of 5,000 Mcf. Texas Eastern will return equal volumes of natural gas to Manufacturers at presently established points of delivery between Texas Eastern and Manufacturers. The term of this proposed exchange is one year, commencing May 1, 1964.

The application states that no new facilities will be required for the project.

Temporary authorization for the joint proposal was granted by Commission letter order dated April 24, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 20, 1944, in Docket No. G–593, *et al.*, (4 FPC 821).

(2) Applicant, Cumberland and Allegheny Gas Company, a West Virginia corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 5, 1944, in Docket No. G–387 (4 FPC 472).

(3) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–1089 (8 FPC 228).

(4) The proposed exchange and delivery of natural gas between the Applicants, in interstate commerce, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed exchange and delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the rules, regulations and requirements of the Commission thereunder.

(7) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicants in this proceeding jointly, authorizing the exchange and delivery of natural gas in interstate commerce as hereinbefore described, as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder is hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP65-48

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 23, 1965)

On August 14, 1964, Midwestern Gas Transmission Company (Applicant) filed in Docket No. CP65-48 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the utilization of Applicant's existing interconnection with Northern Natural Gas Company (Northern) in Chisago County, Minnesota, for the sale of natural gas, on an interruptible basis, to Northern until December 31, 1965, all as more fully set forth in the application in this proceeding .

No additional facilities will be required to make the proposed sale, which will be made under Applicant's presently effective FPC Gas Rate Schedule I-2, at a price of 24.92 cents per Mcf. The deliveries will be made when Applicant has gas available in excess of its existing customers' requirements and when at the same time Northern is able to take gas from Applicant. Under the proposal, Applicant is not obligated to sell and Northern is not obligated to purchase.

The application indicates that Northern plans to purchase 5,255,200 Mcf of interruptible gas from Applicant. Northern will inject 2,840,000 Mcf of this gas into its Vincent Storage Field by displacement and the remaining 2,415,200 Mcf will be resold in its Zones B and C as designated in Northern's tariff.

For the following reasons it appears that the subject proposal will be beneficial to both Northern and its customers:

(1) The portion of this gas injected into Vincent Storage Field by displacement will result in earlier development of storage inventory for future firm requirements on Northern's system;

(2) The estimated injection into Vincent Storage Field as well as the additional sales in Zones B and C will not result in cutbacks in Northern's present gas supplies;

(3) No new facilities are to be constructed. Northern will receive this gas at a point within 175 miles of the downstream end of its system at times when upstream capacity is fully utilized;

(4) The downstream supply of gas as proposed herein will give Northern added flexibility in operating its system;

(5) The additional 2,415,200 Mcf made available to eleven of its resale customers will result in additional revenues of $101,720 to such customers. The "additional revenues" represent the difference between the distributor's retail rates and wholesale rates of Northern, and

(6) The resale portion of the gas will result in revenues to Northern in excess of the cost of gas of approximately $11,500 annually.

We had before us in the proceeding in Docket No. CP61-303 a similar proposal involving Applicant and Northern. In that proceeding, Applicant sought to amend its certificate issued in Docket No. CP61-303 to authorize interruptible sales to Northern at the existing Chisago County interconnection. However, by our Opinion No. 400 and order issued August 13, 1963, 30 FPC 469 in said docket, we denied authorization for the proposed sale. Our denial was based upon the finding that Applicant had not sustained its burden of proof rather than upon any finding that the proposal was contrary to the public interest. At that time it appeared to us that (a) the gas to be purchased from Applicant could conceivably replace cheaper gas available to Northern (from the Hugoton area) and that the latter was experiencing difficulty in taking all of this cheaper gas, and (b) based on the then effective rates of Applicant and Northern, it seemed likely that Northern would incur a loss of $34,000, based on the proposed purchase price and the price at which it was to be resold.

For the following reasons, it now appears that circumstances have changed to the point where these objections are no longer appropriate:

(1) Northern's purchase of gas from Applicant, and the resulting equivalent sales in its rate Zones B and C, will be solely for the purpose of making overrun gas available to its customers when its system south of Farmington Compressor Station (near Minneapolis-St. Paul) is fully loaded and such overrun gas would otherwise be curtailed. With the system south of Farmington operating at its full capability, Northern could not transport more of its cheaper Hugoton gas to Zones B and C for use as overrun. Absent the purchases from Applicant, it would be required to curtail such deliveries. With the purchases from Applicant, Northern could provide more overrun gas to its customers during periods of maximum demand when its own system could not supply any additional gas for overrun use. Thus, the purchases from Applicant would not replace, but merely supplement Northern's cheaper Hugoton gas, while furnishing its customers the benefits of overrun gas at the time of greatest need for such gas, and

(2) Subsequent rate reductions by Applicant have brought its proposed rate to Northern below the latter's charge to its Zones B and C customers. Instead of operating at a loss, Northern will realize a profit of approximately $11,500.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 12, 1959, in Docket No. G-16841 (21 FPC 653).

(2) The proposed transportation and sale of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce, subject to the jurisdiction of the Commission, and such proposed transportation and sale are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Midwestern Gas Transmission Company, to transport and sell natural gas, on an interruptible basis, during the period ending December 31, 1965, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65–226

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 23, 1965)

On January 26, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65–226 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(d) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing Applicant, during the three calendar years 1965 through 1967, to construct and operate natural gas pipeline facilities and compression facilities for the testing and development of underground reservoirs, for the possible storage of natural gas, located on lands adjacent to Applicant's pipeline system within the general areas of its markets, all as more fully set forth in the application in this proceeding.

Applicant states in this "budget-type" application (1) that the volume of natural gas to be injected into the prospective storage fields will not exceed a total of 10,000,000 Mcf with not more than 2,000,000 Mcf being injected into any single reservoir; (2) that the gas will be injected for testing purposes only during off-peak periods; (3) that any storage field developed pursuant to authorization received in this docket will not be utilized to render service without further authorization of the Commission, and (4) the total expenditure for the three-year period will not exceed $3,000,000 with not more than $1,000,000 being spent for any one calendar year period.

On February 15, 1965, the State Corporation Commission of the State of Kansas filed a notice of intervention in this proceeding; however, on February 23, 1965, said notice was withdrawn.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-

gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, during the three calendar years 1965 through 1967, to construct and operate the proposed facilities for the testing and development of underground reservoirs for the storage of natural gas as hereinbefore described, all as more fully described in the application in this proceeding and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The certificate issued by paragraph (A) above is hereby conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(D) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant shall submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

VALLEY GAS TRANSMISSION, INC., DOCKET NO. CI62-124[1]: RICHARD M. FINDER, D/B/A TEXKAN OIL COMPANY (OPERATOR), ET. AL. DOCKET NO. CI61-1043

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 23, 1965)

On August 3, 1961, Valley Gas Transmission, Inc. (Valley Gas), filed in Docket No. CI62-124, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas for Texkan Oil Company (Texkan) and the delivery thereof to Tennessee Gas Transmission Company (Tennessee Gas) in Brooks and Jim Wells Counties, Texas, all as more fully set forth in the application.

On January 13, 1961, as supplemented on June 7, 1961, Richard M. Finder, d/b/a Texkan Oil Company (Operator), *et al.*, (Texkan) filed in Docket No. CI61-1043, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Tennessee Gas Transmission Company from production in the East Alice Field, Jim Wells County, and delivered to Tennessee in said County, at a price of 15.09520 cents per Mcf at 14.65 psia, all as more fully set forth in the application and supplement thereto.

Valley Gas proposes to transport for Texkan 30,000 Mcf of natural gas, monthly, produced in Jim Wells County, and 30,000 Mcf per month of gas produced in Brooks County, all in Texas, to points of delivery on the system of Tennessee Gas in said counties. Valley Gas proposes to charge Texkan 2.0 and 3.0 cents per Mcf for gas deliveries from Jim Wells County, and Brooks County, respectively. No new facilities will be required.

Temporary authorizations were issued by the Commission to Valley Gas and Texkan on October 9, 1961.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and the supplement thereto of Texkan and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Richard M. Finder, d/b/a Texkan Oil Company (Operator), *et al.*, an independent producer of natural gas, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The proposed transportation of natural gas by Valley Gas of Texkan and delivery thereof to Tennessee Gas in Brooks and Jim Wells Counties, Texas, as hereinbefore described, and as more fully described in the applications and supplement thereto and exhibits in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

[1] Valley Gas was determined to be an interstate pipeline in Docket No. CI60-542 by order of Commission issued July 27, 1962, 28 FPC 237.

(4) The sale of natural gas by Texkan to Tennessee Gas hereinbefore described, and as more fully described in Texkan's application in Docket No. CI61–1043 will be made in interstate commerce, subject to the jurisdiction of the Commission and such sale by Texkan, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sale of natural gas by Texkan, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) The aforesaid proposed transportation and delivery of natural gas by Valley Gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Valley Gas and Texkan are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter to Valley Gas and the rights granted thereunder be conditioned upon Valley Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Valley Gas in Docket No. CI62–124 authorizing the transportation and delivery of natural gas to Tennessee Gas, as more fully described in the application and exhibits in the proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Valley Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) A certificate of public convenience and necessity be and the same is hereby issued upon the terms and conditions of this order, authorizing the sale by Texkan of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission used for the sale of natural gas in interstate commerce, to Tennessee Gas, as hereinbefore described and as more fully described in the application and supplement thereto filed in Docket No. CI61–1043.

(D) The certificate hereby issued to Texkan in paragraph (C) above is not transferable and shall be effective only so long as Texkan continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations and orders of the Commission.

(E) The grant of the certificates issued in paragraph (C) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TOWN OF WAYLAND, IOWA, DOCKET NO. CP64-295

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 23, 1965)

On June 10, 1964, the town of Wayland, Iowa (Applicant), filed an application, pursuant to Section 7(a) of the Natural Gas Act, for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver to Applicant natural gas for resale in said town. Supplements to such application were filed by Applicant on October 16, and December 8, 1964.

Applicant proposes to construct and operate a natural gas distribution system in Wayland, Iowa, at a cost of approximately $229,460. The system is to be financed by the sale of gas revenue bonds not to exceed $248,000. The sale of such gas revenue bonds was approved by an election held on April 19, 1964.

Michigan Wisconsin filed an answer to the application on July 17, 1964 and supplements thereto on November 25, 1964 and January 6, 1965.

Pursuant to due notice a hearing on the application was held on March 3 and 4, 1965.

At the hearing, Applicant presented testimony indicating its third year peak day and annual requirements to be 710 Mcf and 80,590 Mcf, respectively. Assuming the validity of the third year annual requirement figure, Michigan Wisconsin, on the basis of its so-called "10-cent formula," would have been required to construct 2.51 miles of line at a cost to it of $53,970. The total length of the lateral required to deliver natural gas is approximately 12.7 miles.

Testimony presented by Michigan Wisconsin indicated the third year total annual requirements of Wayland would be approximately 63,806 Mcf. Assuming the validity of this estimate, Michigan Wisconsin under the so-called "10-cent formula" would be required to construct 2.1 miles of pipeline at a cost to it of $42,850.

Following the presentation of Michigan Wisconsin's testimony, counsel for Applicant stated that for purposes of this proceeding Applicant was willing to accept Michigan Wisconsin's basis for providing service, including a reduction in peak day requirements from 710 Mcf to 600 Mcf.

As a result of the agreement between the parties and the change with respect to the length of line Michigan Wisconsin would be required to construct, the cost of the project to Applicant would be increased from $229,460 to $233,080.

The evidence shows that even by using the agreed upon annual sales requirements, Applicant's debt service coverage would be 1.64 based upon 25 years of operation.

Counsel for Applicant moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) The town of Wayland, Iowa is a municipal corporation and is legally authorized to construct, own and operate a local gas distribution system.

(2) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 30, 1946 in Docket No. G–669 (5 FPC 953).

(3) It is necessary and desirable in the public interest that the Commission, by order, direct Michigan Wisconsin Pipe Line Company to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the town of Wayland, Iowa and to sell and deliver to Wayland a maximum volume of 600 Mcf of natural gas per day for resale and distribution in said community.

(4) The extent of the required lateral to be constructed by Michigan Wisconsin Pipe Line Company in order to render service to the town of Wayland, Iowa, as set forth in paragraph (3) *supra* should be determined by Michigan Wisconsin's 10-cent formula as heretofore approved by the Commission, and which the evidence shows to be 2.1 miles of 4½ inch O.D. pipeline.

(5) The requirement that Michigan Wisconsin serve Applicant as above set forth will not place any undue burden upon it nor require it to enlarge its facilities, nor impair its ability to render adequate service to its existing customers.

(6) A request having been made by counsel for Applicant for omission of the intermediate decision procedure and all requirements of the provisions of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and the same is hereby directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the town of Wayland, Iowa, and to sell and deliver a maximum volume of 600 Mcf of natural gas per day to Wayland for resale and distribution in said community.

(B) Michigan Wisconsin Pipe Line Company shall apply its "10-cent formula," as heretofore approved by the Commission, in order to determine the amount of expenditures to be made by it for the cost of the transportation facilities necessary to render service to the town of Wayland, Iowa, which will require it to construct 2.1 miles of 4½ inch O.D. pipeline.

(C) The town of Wayland, Iowa shall be prepared to receive natural gas service from Michigan Wisconsin Pipe Line Company within one year from the date of issuance of this order.

(D) Michigan Wisconsin Pipe Line Company shall report to the Commission in writing the date of commencement of service to said town of Wayland, Iowa.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-200; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-219

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF FILINGS

(Issued March 24, 1965)

On December 31, 1964, Colorado Interstate Gas Company (Colorado) filed in Docket No. CP65-200 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the short-term sale of natural gas, all as more fully set forth in the application on file with the Commission.

On January 18, 1965, Northern Natural Gas Company (Northern) filed in Docket No. CP65-219 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the exchange of natural gas with Colorado, all as more fully set forth in the application on file with the Commission.

Colorado proposes to make a two-year, short-term sale to Cabot Corporation (Cabot) of an estimated annual volume of 9,125,000 Mcf of natural gas at a price of 15.75¢ per Mcf, to be delivered to Cabot by Northern for Colorado's account. The gas will be used by Cabot in carbon black operations. Deliveries are to take place at three separate points of interconnection between Cabot's system and Northern's system in Carson and Gray Counties, Texas, to be constructed, operated, and maintained at Cabot's expense.

The application states that Colorado has agreed to redeliver a like volume of gas to Northern at the present interconnection between Colorado's gathering system and Northern's system in Kearny County, Kansas, and seeks authorization to construct and operate a meter station and a 1,220 horsepower compressor station at said interconnection for the purpose of effecting the proposed redelivery.

The estimated cost of Colorado's proposed facilities is $245,850, and will be financed with internal funds. The application states that an estimated 66 percent of the construction cost will be recovered by salvage of the facilities upon the termination of the sale involved.

In its related application, Northern proposes to deliver up to 30,000 Mcf of natural gas per day to Cabot for the account of Colorado. Colorado proposes to deliver a like volume to Northern at a present interconnection of facilities in Kearny County, Kansas.

Northern seeks authorization to install two additional 4-inch side valves in Gray and Carson Counties, Texas, for deliveries to Cabot, with the estimated cost of $2,020 for such valves to be borne by Cabot.

The application states that the exchange is proposed for a two-year period commencing with the date of initial delivery of gas to Cabot by Northern.

Service under the proposals is to be rendered in accordance with Colorado's Rate Schedule X-23 and Northern's exchange agreement as Rate Schedule X-10.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. 294 (4 FPC 936).

(2) Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(3) The proposed construction and operation of facilities and sale and exchange of natural gas, as hereinbefore described and as more fully described in the applications and exhibits in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and sale and exchange of natural gas are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Colorado and Northern are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) Colorado's related Rate Schedule X–23 to its FPC Gas Tariff, Second Revised Volume No. 2 and Northern's related Rate Schedule X–10 to its FPC Gas Tariff, original Volume No. 2 should be accepted for filing to become effective upon the date of issuance of this order.

(8) The certificate issued hereinafter should not entitle Cabot to whom firm deliveries are authorized hereinafter to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Colorado and Northern, authorizing the construction and operation of facilities and the sale and exchange of up to a maximum of 30,000 Mcf per day of natural gas for a 24-month period following the date of this order, as hereinbefore described and as more fully set forth in the applications in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Colorado's and Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) Colorado's related Rate Schedule X-23 to its FPC Gas Tariff, Second Revised Volume No. 2 and Northern's related Rate Schedule X-10 to its FPC Gas Tariff, original Volume No. 2, are hereby accepted for filing to become effective upon the date on which this order issues.

(E) This certificate shall not entitle Cabot to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF HOLYOKE GAS & ELECTRIC DEPARTMENT, PROJECT NO. 2387

ORDER ISSUING LICENSE (MINOR)

(Issued March 24, 1965)*

Application was filed on July 5, 1963, by the City of Holyoke Gas & Electric Department (Applicant) for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2397, known as Power Project No. 2, located on the canal system along the Connecticut River within the City of Holyoke, in Hampden County, Massachusetts.

Power Project No. 2 was completed in April 1938.

The canal system upon which Power Project No. 2 is situated takes water from the Connecticut River, a navigable water of the United States, and discharges the water back into the Connecticut River at a point downstream. On July 5, 1949, the Commission issued a license to the Holyoke Water Power Company for Project No. 2004 which included therein the canal system as a part of the project works, but not the hydroelectric facilities owned by others and located along the canal system.[1] No lands of the United States are affected by the project.

The Department of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife and recreation.

The Department of Health, Education, and Welfare has advised of a need for a detailed study of the area affected by the project and would report further upon completion of the study. However, on September 15, 1964, the Department advised that such a report would not be forthcoming for perhaps a year or so.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date as of April 1, 1938 and a terminating date of March 31, 1988.

Pursuant to petition therefore, the Commission, by order issued January 26, 1965, permitted Holyoke Water Power Company, of Holyoke, Massachusetts, to intervene in this proceeding.

---

*Rehearing granted by order issued May 10, 1965, unreported.

[1] Article 16 of the license for Project No. 2004, provides:

Article 16. The Licensee shall follow a plan of operation which will result in a maximum economic utilization of the water of the Connecticut River at Holyoke, Massachusetts, through the facilities along the existing canals and through the new power plant covered by this license, consistent with the use of water for process and other essential purposes.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a municipal corporation organized under the laws of the Commonwealth of Massachusetts and a municipality, as defined by Section 3(7) of the Act, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene in opposition to the project have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,067 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to the City of Holyoke Gas & Electric Department under Sections 4(e) and 10(i) of the Act for a period of 50 years, effective as of April 1, 1938 and terminating March 31, 1988, for the continued operation and maintenance of Project No. 2387, located on the canal system of the Holyoke Water Power Company which takes water from the Connecticut River, a navigable water of the United States, subject to the terms and conditions of the Act not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2387 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined; and

(ii) project works consisting of: a 1017 hp turbine connected to an 800 kw vertical hydro generator operating under a 19.5 foot head; two 9-foot diameter steel penstocks, 240 feet in length; and two 9-foot by 10-foot brick tailraces, 120 feet in length.

(iii) all other structures, fixtures, equipment, or facilities which are located in the project area and are used or useful in the maintenance and operation of the project; all rights and interests the possession of which are necessary or appropriate to the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions designed as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of adminstration of Part I of the Act for the period April 1, 1938 through March 31, 1962, an annual charge of $5.00 and effective April 1, 1962 an annual charge of $53.00.

Article 13. The Licensee (City of Holyoke Gas & Electric Department) shall cooperate with the Licensee for Project No. 2004 (Holyoke Water Power Company) in order that the conditions of Article 16 of the license for Project No. 2004 can be fulfilled.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of this acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NEVADA IRRIGATION DISTRICT, PROJECT NO. 2266

ORDER APPROVING AMENDED PROJECT EXHIBITS

(Issued March 24, 1965)

On April 6, 1964, Nevada Irrigation District, licensee for Project No. 2266, filed an amended Exhibit K drawing to show revisions in the project boundary at Jackson Meadows reservoir and amended Exhibit L drawings relating to the Jackson Meadows, Dutch Flat No. 2, and Rollins developments; and on September 10, 1964, filed amended Exhibit L drawings for the Faucherie development. The licensee seeks Commission approval of the amended exhibits.

With respect to the Jackson Meadows Development, Exhibit K-2 Amended, "Jackson Meadows Reservoir", (FPC No. 2266-91) shows revised elevations and boundaries by surveys made subsequent to issuance of the license for the project. The originally proposed angled axis of the Jackson Meadows dam was revised to a curved one as a result of further site explorations. The spillway chute was lengthened by 100 feet to comply with the requirements of the California State Department of Water Resources, and the normal water surface was raised three feet to comply with the requirements of the California Department of Fish and Game concerning the maintenance of minimum dead storage. The height of each taintor gate was increased by one foot to provide minimum freeboard. The top width of the dam was increased by 11 feet to comply with U.S. Forest Service requirements for a roadway. There has been no change in the spillway capacity. The licensee advises that an estimated savings of $21,000 was effected by relocating the valves at the tunnel outlet, thereby eliminating the vertical access shaft. The U.S. Forest Service has advised that the changes do not interfere and are not inconsistent with the purposes for which the Tahoe National Forest was created or acquired.

With respect to the Faucherie Development, the amended exhibits show that the rock-fill, sloping impervious-cored and filter-zoned Faucherie dam, with only minor changes is similar in general design principles to that originally proposed by the licensee.

With respect to Dutch Flat No. 2 Penstock and Forebay Unit, the amended exhibits show that the penstock diameters have been increased slightly as a result of final economic studies by the licensee. Vertical shaft control works for the penstock were changed to an intake structure. This resulted in a savings of about $16,000. The design for the rolled impervious-fill Forebay dam now provides for a cutoff trench carried to sound bedrock and the crest of dam changed from elevation 3340.0 to elevation 3336.0.

With respect to Dutch Flat No. 2 Afterbay Dam, the amended exhibits show that it has been located about 1,500 feet downstream from the originally proposed dam site, and is a gravel-fill structure with a compacted impervious center core confined by 12-foot upstream and downstream filter zones which, in turn, are confined by compacted upstream and downtown shell zones each superimposed by a layer of cobbles. The dam was changed from the originally proposed arch dam to a gravel-fill structure when it became evident, from further site investigations of geologic and foundation conditions, that an arch dam would not be feasible. The spillway will pass all anticipated discharges from the upstream Lake Spaulding.

With respect to the Rollins Development, the dam was changed from the originally designed and approved gated to an ungated structure to meet the requirement of the California Department of Water Resources. The spillway capacity has not changed from that originally approved by the Commission. The Licensee advises that it has saved an estimated $30,400 by changing the access to the outlet works from a shaft to a tunnel.

The above-mentioned project changes have been reviewed by our staff and have been found to be safe and stable.

The Commission finds:

The amended Exhibit K and L drawings described conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) The following described amended exhibits are hereby approved as part of the license for Project No. 2266.

Exhibit	FPC No. 2266	Entitled
K-2 Amended	-91	Jackson Meadows Reservoir.
L-2 Amended	-93	Jackson Meadows Dam.
L-4 Amended	-94	Jackson Meadows Diversion and Unwatering.
L-10A Amended	-109	Faucherie Unwatering.
L-10B Supplement to Exh. L-10 Amended	-110	Faucherie Unwatering.
L-40A Amended	-97	Dutch Flat No. 2 Forebay.
L-40B Amended	-98	Dutch Flat No. 2 Forebay Unwatering.
L-42 Amended	-99	Dutch Flat No. 2 Afterbay Dam.
L-47A Amended	-100	Rollins Dam.
L-47B Amended	-101	Rollins Spillway.
L-49 Amended	-102	Rollins Diversion and Unwatering.

(B) The following described exhibits which are now part of the license for the project and which have been superseded are hereby eliminated from the license: Exhibit K-2 (FPC No. 2266-7); Exhibit L-2 (FPC No. 2266-44); Exhibit L-4 (FPC No. 2266-46); Exhibit L-10 (FPC No. 2266-52); Exhibit L-42 (FPC No. 2266-82); Exhibit L-47 (FPC No. 2266-87); Exhibit L-49 (FPC No. 2266-89); and Exhibit L-40 (FPC No. 2266-80), "Dutch Flat No. 2 Forebay and Penstock" to the extent it shows sections of the dam and tunnel.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

APPLICATIONS OF NATURAL GAS PIPELINE COMPANIES TO ABANDON FACILITIES OR SERVICE; EXHIBITS, DOCKET NO. R-271

ORDER NO. 295

AMENDING § 157.18 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued March 24, 1965)*

This order amends § 157.18 of the Commission's Regulations under the Natural Gas Act to require the inclusion of a map showing the location of facilities to be abandoned as one of the exhibits in support of an application for authorization to abandon facilities or service pursuant to section 7(b) of the Natural Gas Act. Such maps are now required[1] in connection with a single application requesting both a certificate under section 7(c) and an abandonment authorization under section 7(b), but the lack of such a specific requirement in the abandonment rule, here being amended, has caused confusion. Some applicants include maps with their abandonment applications but others do not. This has been brought to our attention by several companies which have suggested that it would be advisable to require the inclusion of a map, thus assuring that all interested parties will know the exact location of the facilities that the applicant is proposing to abandon.

The Commission finds:

(1) Compliance with the notice provisions of section 4 of the Administrative Procedure Act is unnecessary since the amendment herein adopted is of a clarifying nature in that it no more than explicitly requires the filing of an exhibit which contains information now implicity required to be filed as part of another exhibit.

(2) The amendment adopted herein is necessary and appropriate for the purposes of administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7(b) and 16 thereof (52 Stat. 824, 830; 15 U.S.C. 717f(b), 717o) *orders:*

(A) Section 157.18, Part 157, Subchapter E of Chapter I, Title 18 of the Code of Federal Regulations, is amended by adding a new paragraph (g) as follows:

§ 157.18 Application to abandon facilities or service; exhibits.

* * * * * * *

(g) *Exhibit Z—Location of facilities.*

Unless shown on Exhibit V or elsewhere, a geographic map of suitable scale and detail showing, and appropriately differentiating between, all of the facilities proposed to be abandoned and the other existing facilities of applicant, the operation or capacity of which will be directly affected by the facilities to be abandoned. This map shall clearly show the relationship of the facilities to be abandoned to the applicant's overall system and shall include:

---

*Published in the Federal Register on March 30, 1965 (30 F.R. 4129).

[1] § 157.14(a)(6), Regulations under the Natural Gas Act.

(1) Location, length and size of pipelines.

(2) Location and size (rated horsepower) of compressor stations.

(3) Location and designation of each point of connection of existing facilities with (i) main line industrial and other consumers, pipeline or distribution companies and municipalities, indicating towns and communities served at wholesale or retail and (ii) gas-producing and storage fields, or other sources of gas supply. Designate on the map those facilities and services proposed to be abandoned.

[Sections 7(b), 16, 52 Stat. 824, 830; 15 U.S.C. 717f(b), 717o.]

(B) The amendment prescribed herein shall become effective on May 1, 1965.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE SUPERIOR OIL COMPANY v. TRUNKLINE GAS COMPANY, UNION OIL COMPANY OF CALIFORNIA AND PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI65-300

ORDER DENYING MOTIONS FOR RECONSIDERATION[1]

(Issued March 24, 1965)

On the dates set forth below, Trunkline Gas Company (Trunkline), Union Oil Company of California (Union) and Pan American Petroleum Corporation (Pan American) respectively, filed applications for rehearing (pursuant to Section 1.34 of the Commission's Rules of Practice and Procedure) of the Commission's order of February 1, 1965, 33 FPC 144, in the above proceeding, which denied motions of these respondents to dismiss the complaint filed against them by The Superior Oil Company (Superior) under Section 5(c) of the Outer Continental Shelf Lands Act:

Union Oil Company of California—February 26, 1965
Pan American Petroleum Corporation—February 26, 1965
Trunkline Gas Company—March 1, 1965

We do not consider these applications for rehearing as falling within the ambit of Section 19(a) of the Natural Gas Act and Section 1.34 of the Commission's Rules of Practice and Procedure, since the order of February 1, 1965 was merely an interlocutory order noticing and setting procedures for hearing of the complaint; and, consequently, we shall treat these applications as motions for reconsideration of that order.

Upon reviewing the specifications of error and grounds for "rehearing", it appears that the "applications" essentially repeat the positions taken in the various initial motions to dismiss the complaint. There are no new arguments presented which have not already been considered in the order of February 1 1965. A question of fact is raised by Union's assertion that the Commission erred in holding that the pipeline (Transco) which is nearest to Superior's leases is not making any purchases in the vicinity of said leases and has no facilities to do so. Upon further investigation, we find that Transco does purchase natural gas in Block 14 Field. While this fact may be relevant to our determination of the merits of the complaint it is not grounds for its dismissal.

---

[1] We are treating the applications for rehearing as motions for reconsideration

The Commission finds:

(A) The applications for rehearing filed by Trunkline, Union and Pan American are addressed to an interlocutory order which (1) notices the complaint of Superior for hearing under Section 5(c) of the OCSLA and (2) denies respondents' motions to dismiss the aforesaid complaint. Consequently, the applications, since they are not addressed to a final order, should be treated as motions to reconsider the Commission's denial of the motions of respondents to dismiss Superior's complaint.

(B) The motions for reconsideration present no matters of substance which require modification or change of the order of February 1, 1965, and fail to state any new grounds not already presented in the original motions.

The Commission orders:

The applications of Trunkline Gas Company, Union Oil Company of California and Pan American Petroleum Corporation, having been considered herein as motions for reconsideration of the Commission's denial of the respondents' motions to dismiss the complaint, should be and hereby are denied for the reasons indicated above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE SUPERIOR OIL COMPANY v. TRUNKLINE GAS COMPANY, UNION OIL COMPANY OF CALIFORNIA, AND PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI65-300

DENIAL OF MOTIONS FOR CONSOLIDATION

(Issued March 24, 1965)

On February 19, 1965, Union Oil Company of California (Union) and Pan American Petroleum Corporation (Pan American) filed motions to consolidate the above proceeding with the proceeding entitled The Superior Oil Company, Docket No. G-6067.

On July 23, 1964, the Commission issued its Opinion in Docket No. G-6067, Opinion No. 437, 32 FPC 241. That Opinion was directed to a request by Superior to substitute undedicated offshore acreage for other unconnected offshore acreage dedicated to American Louisiana Pipe Line Company under the terms of a contract dated July 17, 1953. The Commission in Opinion No. 437 granted Superior's request to substitute new acreage for that originally contemplated; however, it specifically made its authorization subject to certain conditions. The conditions imposed by the Commission primarily dealt with the total initial price that Superior could charge for its gas. It is understood that Superior has not accepted the modified certificate.

Pan American and Union contend that the consolidation requested is appropriate because Docket No. G-6067 "remains open" and is subject to further Commission action. They further contend that "common questions of fact and law" exist in both proceedings, and that certain testimony and exhibits reflected in the record in Docket No. G-6067 relating to estimated recoverable reserves underlying Superior's leases in Block 14 Field are relevant and material to the instant proceeding.

Docket No. G–6067 involves a certificate application under Section 7 of the Natural Gas Act, and, even assuming arguendo it is still open, its consolidation with the present proceeding arising under Section 5 of the Outer Continental Shelf Lands Act would not be in the public interest. However, Union and Pan American may seek to incorporate specific exhibits from the record in Docket No. G–6067 into the record in the instant proceeding to the extent such action is found to be appropriate and useful by the Presiding Examiner.

The Commission orders:

The motion filed on February 19, 1965, by Union Oil Company of California and Pan American Petroleum Corporation to consolidate Docket No. G–6067 with the instant proceeding be and hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65–93; VALLEY GAS TRANSMISSION, INC., DOCKET NO. CP65–123

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 24, 1965)

On October 6, 1964, Tennessee Gas Transmission Company (Tennessee Gas) filed in Docket No. CP65–93 an application, as supplemented on November 6, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of up to an additional 10,000 Mcf (at 14.65 psia) of natural gas daily for Iroquois Gas Corporation (Iroquois) from points of interconnection in Texas and Louisiana with Valley Gas Transmission, Inc. and the delivery thereof at existing points of delivery to Iroquois in the State of New York, all as set forth in the application and supplement.

On November 4, 1964, Valley Gas Transmission, Inc. (Valley Gas) filed in Docket No. CP65–123 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of additional quantities of natural gas to Iroquois Gas Corporation (Iroquois), all as more fully set forth in the application.

Valley Gas proposes to construct at an approximate cost of $170,000 and to operate approximately 2.5 miles of 6-inch, 4.0 miles of 4-inch, and .4 miles of 2-inch pipeline together with appropriate metering, regulating and appurtenant facilities in connection with the proposed sale of additional natural gas to Iroquois and to deliver an average daily quantity of 10,000 Mcf of natural gas at various points on Tennessee Gas' system in Nueces and Wharton Counties, Texas, and Cameron Parish, Louisiana. Tennessee Gas will transport for the account of Iroquois the said additional volumes of natural gas through its system to its East Aurora Sales Meter Station located in Erie County, New York, at which point delivery will be made to Iroquois. Valley Gas' initial price to Iroquois for the sale involved is 17.0 cents per Mcf at 14.65 psia.[1]

---

[1] This price is 1.33 cents per Mcf less than the price Valley Gas' present sale of 25,000 Mcf of natural gas per day to Iroquois authorized in Docket No. CP63–270.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the applications and supplement thereto in Docket Nos. CP65-93 and CP65-123, and exhibits filed in the proceedings in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) Applicant, Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1960, Docket No. G-19618 (25 FPC 233).

(3) The proposed transportation and delivery of natural gas by Tennessee Gas for the account for Iroquois, as hereinbefore described and as more fully described in the application and supplement on file in Docket No. CP65-93, and the sale of natural gas by Valley Gas to Iroquois and the construction and operation of facilities as hereinbefore described, and as more fully described in the application on file in Docket No. CP65-123 are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed transportation and delivery of natural gas by Tennessee Gas, and the sale of natural gas together with the construction and operation of facilities by Valley Gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Tennessee Gas and Valley Gas are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Tennessee Gas' and Valley Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly Tennessee Gas' compliance with the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations, and Valley Gas' compliance with the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to (1) Tennessee Gas Transmission Company authorizing the transportation of natural gas for the account of Iroquois, as hereinbefore described, and as more fully described in the application and supplement on file in Docket No. CP65-93, and (2) Valley Gas authorizing the sale of natural gas to Iroquois and the construction and operation of facilities as hereinbefore described and as more fully described in the application on file in Docket No. CP65-123, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Tennessee Gas' and Valley Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations applicable to Tennessee Gas, and paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations applicable to Valley Gas.

The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 6 months of the date on which this order issues.

ATLANTIC SEABOARD CORPORATION, G-16401; HOME GAS COMPANY, G-16402; KENTUCKY GAS TRANSMISSION CORPORATION, G-16403; THE MANUFACTURERS LIGHT AND HEAT COMPANY, G-16404; UNITED FUEL GAS COMPANY, G-20270; ATLANTIC SEABOARD CORPORATION, G-20272

ORDER DENYING APPLICATION FOR REHEARING AND RECONSIDERATION

(Issued March 25, 1965)

On February 26, 1965, Lynchburg Gas Company (Lynchburg), filed an Application for Rehearing and Reconsideration of the Commission's orders issued January 28, 1965, in Docket No. G-16401, *et al.*, 33 FPC 113, and Docket No. G-20270, *et al.*, 33 FPC 123, respectively. That application requests the Commission to vacate those orders insofar as they purport to authorize the Columbia Companies[1] to maintain partial requirements CDS-PR rate schedules pending the outcome of further hearings in Docket No. G-16401, *et al.*, in accordance with the opinion of the Court of Appeals for the District of Columbia in *Lynchburg Gas Company* v. *F.P.C.*, 336 F. 2d 942.

Lynchburg states that it is filing its application because the Commission's orders reinstating the original PR schedules are premised on a complete misunderstanding and misstatement of Lynchburg's position and because it seeks "to preclude the possibility, in any future review proceeding, that it will be charged with failure to exhaust its administrative remedy".

We find Lynchburg's first indicated purpose for filing this application, and its arguments in support thereof, to be without merit. We deem it unnecessary to comment on the second stated purpose.

The thrust of Lynchburg's argument is that "no PR rate is on file or can validly be filed until after *proof* is made (assuming, *arguendo*, such proof can be made) that a PR rate is warranted." Clearly, Lynchburg is again contending that the Court by its opinion declared the PR rates null and void and completely terminated all further proceedings in the above dockets. Moreover Lynchburg's position amounts to a contention that the Court's remand "for further proceedings not inconsistent with the opinion of this Court" requires the institution of at least two new proceedings before any PR rate could be finally approved. First, before any rate proposal could be even filed, any pipeline would apparently be required to prove whether a PR rate is or is not warranted. Second, if it is determined that a PR rate is warranted, Lynchburg would assert that a hearing on the merits of the rate proposal thereafter filed would also be necessary.

That these arguments are untenable and contrary to the Court's opinion is patent from that decision. Moreover, these arguments and others raised by

---

[1] These include only the four companies docketed in Docket No. G-16401, *et al.* United Fuel Gas Company has no partial requirements rate schedule.

Lynchburg in its petition for declaratory order were fully dealt with by our order issued January 28, 1965.

The other contentions in Lynchburg's application present no bases for our deviating from our previous determination. Accordingly, we find that such application should be denied.

The Commission orders:

The application for rehearing and reconsideration filed by Lynchburg on February 26, 1965 hereby is denied.

Commissioner Ross *dissenting.*

Ross, *Commissioner, dissenting:*

The majority is imposing the CDS–PR tariff which the Commission unanimously found to be unjust and unreasonable in Opinion No. 368 (*Atlantic Seaboard Corporation*, 28 FPC 860). No appeal was taken from this aspect of the Commission's determination and it must be adjudged conclusive. While the Court has reversed the Commission's determination with respect to a different tariff prescribed in that opinion, that fact hardly provides any satisfactory basis for resurrecting the tariff initially proposed by the companies and rejected by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLUMBIAN FUEL CORPORATION

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 25, 1965)

Columbian Fuel Corporation (Columbian) on February 26, 1965, filed an application for rehearing of the Commission's letter-order of January 28, 1965, denying Columbian's request for a retroactive effective date of April 25, 1960, for its proposed increased rates of 14.6334¢ per Mcf, designated as Supplement Nos. 2 and 4 to Columbian's FPC Gas Rate Schedule Nos. 15 and 23, respectively, for sales of gas to Hugoton Plains Gas & Oil Company (Hugoton). The proposed rates had been accepted by order issued August 19, 1964 to be effective as of August 20, 1964, which was thirty days after filing.

Columbian seeks to make its increased rates effective for the period it was contractually authorized to file for such rates but did not do so. In support of its request, Columbian contends, among other things, that (1) with respect to its FPC Gas Rate Schedule No. 15, its interest therein under Section 154.91(b) of the Commission's Regulations is covered under the rate schedule of the operator, Texaco Inc.; (2) since the amount of the rate increase under its FPC Gas Rate Schedule No. 23 was indefinite and uncertain in 1960 because Hugoton's related increase of 20.5457¢ per Mcf was in effect subject to refund, it is entitled under the court decision in *Phillips Petroleum Company* v. *F.P.C.*, 258 F. 2d 906 (CA10–1958) retroactively to collect the contractually authorized rate; (3) The Commission's action in the instant case is inconsistent with the action taken in the order issued February 8, 1965, in the *D. Clayton Arnold* case in Docket No. CI65–358 where a certificate was issued to Arnold and his rate schedule was accepted with an initial rate of 14.6334¢ per Mcf effective as of April 7, 1960; and (4) the failure of Hugoton to give Columbian formal notice of the approval of Hugoton's settlement in Docket No. RI60–102 caused Columbian to refrain from filing for its contractually authorized rate as of October 8, 1963, the date of approval of Hugoton's settlement.

While a signatory operator is required under Section 154.91(b) of the Regulations to cover in its filings all signatory co-owners which do not exercise the choice given them under that section of making their own filings, once the signatory co-owner has elected to make his own filings, as Columbian did here, it is bound by its choice and is not free to utilize the operator's filings or its own depending on which are most advantageous to it. Here Columbian chose to make its own filings as permitted under Section 154.91(b). It is therefore in no position to claim now that it is covered by Texaco's filings.

The *Phillips* decision to which Columbian refers is a case in which the court ruled that Phillips' initial rate as of June 7, 1954, was the rate provided for in the contract and not the rate appearing in the billing statement filed by Phillips. That case has no applicability here since Columbian is not seeking to correct an initial rate filing but is attempting to obtain a retroactive effective date for an increased rate that it could have filed at an earlier date. Although Columbian's contractual right in 1960 to a higher rate was subject to later invalidation if Hugoton's related increase was disallowed, Columbian was fully apprised at that time of its maximum contractual rights to a rate increase.

The *Arnold* decision is also inapplicable here. Arnold did not have a rate schedule on file at the time he was contractually authorized to receive a higher rate because he had been assured by Hugoton that his interest was covered under Hugoton's rate schedule. Since Columbian had its own rate schedule on file and could have filed for the contractually authorized rate increase, it is clear the two situations are not similar.

While there may be certain equitable considerations in favor of Columbian's position that the failure of Hugoton to give Columbian prompt notice of approval of its offer of settlement caused Columbian to refrain from filing (assuming *arguendo* that Hugoton had the obligation to give such notice and Columbian did not otherwise receive notice of such settlement), such considerations alone do not in our view warrant a departure from the filed rate doctrine by permitting Columbian to obtain a retroactive effective date here.

The Commission orders:

For the reasons set forth above, the application for rehearing filed by Columbian on February 26, 1965 of the Commission's letter-order issued January 28, 1965, is hereby denied.

ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued March 25, 1965)*

Syllabus

1. Permanently certificated sales are to be preferred over temporary sales in determining in-line price if there are sufficient sales and substantial volumes to provide sound basis for such determination. P. 627.

---

*Initial decision appears on p. 623. Rehearing denied by order issued May 13, 1965, 33 FPC 1000.

[1] This consolidated proceeding was formerly captioned *Gulf Oil Corporation*, Docket No. CI64–25, *et al.* Since the initiation thereof, this docket and others have been severed and permanent certificates issued by various Commission orders. (A listing is included in the examiner's decision. By letter filed March 5, 1965, the applicants in Docket No. G–18884 stated their willingness to accept a certificate conditioned in accordance with the examiner's decision.

2. Evidence in instant case does not indicate any normal practice in Wyoming that buyers or pipeline companies buy gas undehydrated and uncompressed at wellhead. P. 628.
3. There is no justification here for any incremental allowance to cover claimed special services performed by producer beyond wellhead. P. 629.
4. 15.384 cents per Mcf found to be in-line price for instant sales. P. 630.
5. Application dismissed where producer failed to appear or submit necessary evidence.
6. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act.

Bernard A. Foster, Jr., and *Stuart J. Scott* for the Atlantic Refining Company.

Bernard A. Foster, Jr., for Graham B. Morrison and Glen W. Pryor, Trustees.

Clifford O. Stone, Jr., Harold H. Young, Jr., J. P. Hammond, T. J. Files, Frank Houck, and *Carroll L. Gilliam* for Pan American Petroleum Corporation.

Donald R. Arnett, Warren M. Sparks and *Arthur F. Whitt* for Gulf Oil Corporation.

Royal J. Voegeli for Belco Petroleum Corporation.

J. Calvin Simpson, Richard E. Tuttle and *Sheldon Rosenthal* for the People of the State of California and Public Utilities Commission of the State of California.

Richard W. Sabin for Public Utility Commissioner of Oregon.

Julia B. Smith for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

On January 22, 1965, the Presiding Examiner issued his initial decision in this case holding that certificates of public convenience and necessity should be issued under Section 7(e) of the Natural Gas Act to three of the four captioned producer applicants authorizing the sales of gas to three pipeline purchasers, but at a price lower than proposed in the applications. The application filed by Martha Featherstone in Docket No. CI64–591 would be dismissed for failure to appear or to submit the necessary evidence. As a condition to the certificates issued in the remaining dockets, the initial decision would require that each applicant file a supplement to its presently filed rate schedule to reflect an initial price, including all reimbursements and charges, and regardless of delivery pressure or other alleged services performed by the producer prior to the point of sale, not greater than 15.384 cents per Mcf at 15.025 psia from the date of issuance of the decision and until changed in the manner provided in the Act. Additional conditions would require certain refunds and makes the take-or-pay for provision in the applicants' contracts subject to ultimate disposition in the rule-making proceeding in Docket No. R–199.

A brief on exceptions to the Examiner's decision was filed on February 19, 1965, by The Atlantic Refining Company. Atlantic contends that the price condition, as applied to it, is unwarranted on the ground that the Examiner erroneously determined the in-line price for Wyoming to be 15.384 cents per Mcf and, further, that even assuming the propriety of such price generally, it remains erroneous as applied to Atlantic for the reason that Atlantic is entitled to an additional price increment on the basis of various allegedly unique and valuable services which it performs beyond the wellhead prior to effecting delivery. Atlantic, in excepting to the initial decision, maintains that its initial contract price of 17.0 cents per Mcf is justified and that certification thereof would be in the public interest.

On our review we conclude that the Examiner's decision is correct respecting all the issues in this case, and that we should adopt it as our decision herein.

His decision is based upon adequate findings which are substantially supported by the record and are grounded upon a correct application of the law. All material objections to the Examiner's decision advanced in the exceptions are adequately dealt with by the Examiner and require no further comment.

The Commission further finds:

Upon consideration of the entire record in this proceeding, including the evidence adduced, the briefs and exceptions filed, and the Presiding Examiner's initial decision, said decision should be adopted as the decision of the Commission in this case and the exceptions thereto should be denied.

The Commission orders:

(A) The initial decision of the Presiding Examiner issued herein on January 22, 1965, is hereby adopted and such decision shall become effective as the decision of the Commission as of the date of issuance of that order.

(B) The exceptions to the Examiner's decision referred to hereinabove are denied.

INITIAL DECISION OF THE PRESIDING EXAMINER

(Issued January 22, 1965)

SHRIVER, *Presiding Examiner.* This is a consolidated proceeding under sections 7 (c) and (e) of the Natural Gas Act in which the producer-applicants seek permanent certificates of public convenience and necessity to sell natural gas to pipelines for resale in interstate commerce.[1] The gas involved is produced in Fremont, Sweetwater, and Sublette Counties, Wyoming. The principal issue in the case is the price at which the applicants shall be authorized to sell their gas in conformity with the public convenience and necessity.

On July 29, 1964, the Commission issued an order consolidating the nine dockets herein for hearing. On September 8, 1964, the Atlantic Refining Company moved for a prehearing conference. This motion was denied by the Examiner on September 22, 1964. Hearings were held on October 5, 6, 7 and 8, 1964.[2]

---

[1] The names of the pipeline companies are set forth in Appendix A hereto.

[2] Meanwhile, on September 9, 1964, one of the applicants, the Pan American Petroleum Corporation (Docket No. CI61-419) filed a motion for severance and for the issuance of a permanent certificate under abridged procedure in accordance with the initial price condition set out in the temporary authorization. This motion was granted by order of the Commission dated November 6, 1964, pursuant to which a permanent certificate was authorized on condition that the initial price shall not exceed 15 cents per Mcf at 14.65 psia or 15.384 cents per Mcf at 15.025 psia for all gas delivered at or in excess of 500 psig.

On September 22, 1964, the Belco Petroleum Corporation filed a motion for severance (Docket Nos. G-20104, G-19591, and G-19589) and the issuance of permanent certificates under abridged hearing procedure. By order issued December 30, 1964, the Commission severed these dockets and issued certificates in them upon condition that the initial price for all gas delivered at pressures of 100 to 860 psig shall not exceed 15 cents per Mcf at 15.025 psia and that the initial price for all gas delivered at pressures of or in excess of 860 psig shall not exceed 15.384 cents per Mcf at 15.025 psia.

On December 24, 1964, Gulf filed a petition for approval of offer of settlement and motion for severance and on January 19, 1965, the Commission granted the motion for severance, etc., issuing a certificate of convenience and necessity on condition that the initial price not exceed 15.384 cents per Mcf at 15.025 psia. On September 29, 1964, the applicant, Graham B. Morrison and Glen W. Pryor, Trustees (Docket No. G-18884) filed a motion for severance and an offer of settlement. By order dated November 18, 1964, 32 FPC 1335, the Commission denied this motion and rejected the offer of settlement.

By an order dated September 18, 1964, the Washington Natural Gas Company (State of Washington) was granted permission to intervene. On August 24, 1964, the Public Utility Commissioner of Oregon filed a notice of intervention in Docket Nos. G-20104, G-19591, G-19589, and G-18884. Notice of intervention was also filed by the People of the State of California and the Public Utilities Commission of the State of California on August 10, 1964, in Docket Nos. CI61-419, G-19589, G-19591, and G-20104.

At the hearing the parties stipulated (1) that the applicants are willing and able to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the applicable Rules and Regulations promulgated thereunder, (2) that as to each docket there exists no affiliation between the applicant and the purchasers receiving the gas proposed to be sold by the applicant, and (3) that each contract involved in the subject proceeding is a product of arm's-length bargaining.

Temporary certificates were granted in Docket Nos. CI63-434, CI63-576, CI61-419, G-20104,[3] G-19591, G-19589, and G-18884. No temporary certificates were requested or granted to Gulf (Docket No. CI64-25) or to Martha Featherstone (Docket No. CI64-591). The applicants, Martha Featherstone and W. S. Kilroy, were not represented at the hearing. The application and contract of Martha Featherstone were not offered in evidence at the hearing.

The contracts remaining involved in the proceeding were executed between May 27, 1959 and February 8, 1963.[4] The proposed initial prices for the sales range from 16.41 cents per Mcf at 15.025 psia to 17.5 cents.

Sections 7(c) and (e) of the Natural Gas Act provide among other things that no natural gas company shall engage in the sale of natural gas in interstate commerce without a certificate of public convenience and necessity issued by the Commission, that a certificate shall be issued to a qualified applicant for the sale if such sale is found to be required by the present or future public convenience and necessity, and that the Commission shall have the power to attach to the issuance of the certificate such reasonable terms and conditions as the public convenience and necessity may require.

Both the courts and the Commission have construed these provisions of the Natural Gas Act. The Supreme Court has held that the purpose of the Act was to underwrite just and reasonable rates to the consumers of natural gas. *Federal Power Commission* v. *Hope Natural Gas Company*, 320 U.S. 591 (1944). The Supreme Court has also held that a permanent certificate should not be issued unless it is shown by the application on its face or by other evidence that the proposed rate is in the public interest. *Atlantic Refining Company* v. *Public Service Commission of New York*, 360 U.S. 378, 391 (1959). In this case the Court said at pages 391-392:

> The Congress, in § 7(e), has authorized the Commission to condition certificates in such manner as the public convenience and necessity may require. Where the proposed price is not in keeping with the public interest because it is *out of line* or because its approval might result in a triggering of general price rises or an increase in the applicant's existing rates by reason of "favored nation" clauses or otherwise, the Commission in the exercise of its discretion might attach such conditions as it believes necessary.
>
> This is not an encroachment upon the initial rate-making privileges allowed natural gas companies under the Act, *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp., supra*, but merely the exercise of that duty imposed on the Commission to protect the public interest in determining whether

---

[3] This docket and the three preceding ones contain a condition that the initial price should not exceed 15.384 cents per Mcf at 15.025 psia. Docket Nos. G-19591 and G-19589 were conditioned that the initial price for gas delivered at a pressure exceeding 860 psig should not exceed 15.384 cents per Mcf. The temporary certificate granted in Docket No. G-18884 at 17.5 cents per Mcf at 15.025 psia contained a condition that any amount in excess of the amount resulting from the rate finally determined to be proper in this docket should be refunded.

[4] See Appendix A.

> the issuance of the certificate is required by the public convenience and necessity, which is the Act's standard in § 7 applications. In granting such conditional certificates, the Commission does not determine initial prices nor does it overturn those agreed upon by the parties. Rather, it so conditions the certificate that the consuming public may be protected while the justness and reasonableness of the price fixed by the parties is being determined under other sections of the Act. Section 7 procedures in such situations thus act to *hold the line* awaiting adjudication of a just and reasonable rate. [Italics supplied.]

What is meant by out of line or in-line and the criteria to be utilized in arriving at an appropriate initial price for gas in a section 7 proceeding has been considered by the courts and by the Commission in numerous cases. Thus in *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, 824 (1960) it was held that "the price line is intended to reflect current conditions in the industry. Therefore, comparative prices upon which it is based must be prices under which a substantial amount of gas presently moves in interstate commerce * * * it would be an abuse of discretion for the Commission in establishing a price line to rely upon producer prices which are under such a cloud." (Prices used for comparative purposes which are under review in pending court and Commission proceedings.) "As used in *CATCO*, the line means the price at which similar sales, not suspect, were made under similar circumstances from the same area about the same time." *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677, 680 (1963).

The Commission has held that, "The in-line price is not a mechanical reflection of certificated prices or of the market. It is, rather, the Commission's considered judgment as to the maximum initial price appropriate in the interest of the public convenience and necessity reflecting the current conditions in the industry." *Union Texas Petroleum, et al.*, Opinion No. 436, July 23, 1964, 32 FPC 254 at p. 260. "* * * the key element in our in-line determination is the time at which the contract in issue was executed * * * the evidence must relate to a period reasonably contemporaneous with the contracts in issue." *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, December 9, 1963, 30 FPC 1438 at p. 1442. "The fact that some of the permanently certificated sales have been approved in uncontested proceedings does not, standing alone, serve to diminish or destroy their otherwise precedential value in the formulation of a price line." *Amerada Petroleum Corporation, et al.*, Opinion No. 442, March 23, 1964, 31 FPC 623 at p. 631. "* * * we disagree with the examiner that the series of Court Opinions establishing the 'suspect price doctrine' support the proposition that temporary authorizations have no relevance in this determination." Notwithstanding that "* * * permanent certificates are decidedly more persuasive and relevant in 'in-line' determinations than are temporary authorizations, but this does not thereby render temporary authorizations *per se* inadmissible." *Ibid.* p. 632. We turn now to a consideration of the evidence in the case.

Three witnesses appeared on behalf of the producers at the hearing and one on behalf of the Staff. The producer's principal witness was an economist, Dr. Paul J. Garfield. Dr. Garfield testified for The Atlantic Refining Company and its contract dated July 30, 1962, Docket No. CI63-576. The initial base price for the sale of gas under this contract is 16.58 cents per Mcf at 14.65 psia. or 17 cents at 15.025 psia. The witness concluded that Atlantic could justify a price higher than its contract price of 17 cents. In support of his recommendation, the witness prepared an exhibit (Ex. No. 1) listing 54 contracts for the sale of gas in Wyoming for the five-year period of January 1, 1959 to December 31, 1963.

This list included five of the nine dockets consolidated in this proceeding. The list is made up of proposed or initial base price sales.

Although the witness stated that timewise Atlantic's contract falls close to the center of the time period he selected, this is erroneous. Atlantic's July 30, 1962 contract falls approximately in the center of a 1959–1965 time period rather than the center of the witness' 1959–1963 period.

The witness' exhibit discloses that there were 12 interstate sales of gas in Wyoming in 1962, the year of Atlantic's contract. This number included two of the subject contracts, Atlantic's and one other. Although two of the 12 sales were made at an initial base price of 17.50 cents per Mcf at 14.65 psia,[8] and the Atlantic sale at 16.58 cents, the arithmetical average price for the year 1962 was 14.32 cents. For the year preceding, namely 1961, the exhibit shows that 12 sales were made and the highest priced sale was at 15 cents per Mcf. The average for the 12 sales was 13.21 cents. For the year following, that is 1963, the exhibit reveals that 20 sales were made inclusive of two of the subject contracts. The highest priced sale was 16 cents and the average price of the 20 sales was 14.50 cents. The average sales price of the 54 sales for the period January 1, 1959 to December 31, 1963 was 14.18 cents per Mcf.

When the five subject contracts are excluded the average price for the five-year period drops to 13.99 cents per Mcf at 14.65 psia.

Although the producer's chief witness testified at length at the hearing (direct testimony) most of his testimony related to gathering, compression, dehydration and market trends and did not culminate in his recommended price. In support of his recommended price he points to a few sales and to delivery volumes set forth in Schedules 2 and 3 of Exhibit 1. As to Schedule 2 he states "in the five-year time period under review, [January 1, 1959–December 31, 1963] 47.5 percent of the total delivery volume under new contracts was priced *at or above* 16.58 per Mcf (14.65 psia)." Referring to Schedule 3 he states "Schedule 3 excludes the subject contracts, and shows that 38.5 percent of the delivery volume in new contracts during this time period [1959–1963] was priced *above* an initial price level of 16.58 cents per Mcf (14.65 psia)." An analysis of the foregoing statements reveals that they provide no sound basis for the price recommended.

Since all the sales upon which the witness relies fall within three years it is inappropriate to characterize the delivery volume as being priced in a five-year period. The witness' first statement is based upon three sales in 1959, two in 1960, and three in 1962. The subject Atlantic sale accounts for 14.6 percent of his 47.5 percent of volume. The fallacy of determining an in-line price solely upon a few sales and by volume is illustrated by the fact that although the witness says that 47.5 percent of the total delivery volume was priced *at or above* 16.58 percent per Mcf, three sales (including the subject sale) out of a total of eight in the years 1959, 1960, and 1962 account for 43.77 percent of the total volume whereas the remaining five sales account for only 3.68 percent of the volume. In the witness' second statement, where the subject contracts are excluded, the witness says that 38.5 percent of the delivery volume was priced above an initial price of 16.58 cents per Mcf (14.65 psia) or 17 cents per Mcf (15.025 psia). In point of fact, however, two sales in 1959 and one in 1962 out of a total of six in 1959, 1960 and 1962, account for 35.509 percent of the volume and the remaining four sales account for a mere 3.008 percent of the volume. It is pertinent to observe in respect to the sales in question that the small volumes commanded the same price as the large volumes. Moreover, the delivery volumes concerning which the witness generalizes relate not to the five-year period but to three years or less (specifically from August 5, 1959 to October 1, 1960, inclusive, and from October 4, 1962 to December 6, 1962).

---

[8] Unless otherwise stated the price is at 14.65 psia.

In arriving at a recommended in-line price the witness included in his array five of the nine sales consolidated in this proceeding. To include such sales is "circulatory and 'begs the issue' ". The witness also recommends a price as high or higher than the highest contract prices of gas sold in interstate commerce in Wyoming, but the Commission has held that a price "* * * is not in line as of a given time if it is the highest price or in the highest group of prices theretofore paid." *Continental Oil Company, et al.*, 27 FPC 96, 102. The backbone of the witness' recommendation consists of the ten contracts executed between July 5, 1959 and February 12, 1963 at initial base prices of between 15.60 and 17.50 cents per Mcf at 14.65 psia but none of these contracts were permanently certificated by the Commission at an initial price of more than 15 cents per Mcf at 14.65 psia, and as already indicated permanently certificated sales are to be preferred over temporary sales in determining an in-line price if there are sufficient sales and substantial volumes so as to provide a sound basis for determining such price.

When the actual delivery volumes of gas under the subject Atlantic sale (CI63-376), however, are considered and this sale in addition to those of Martha Featherstone (CI64-591) and W. S. Kilroy (CI63-434) are compared with those relied upon by Dr. Garfield (schedule 3), it is apparent that favorable and substantial volumes of gas were moved under the latter contracts for a legitimate comparison.

Another witness of the producers, one who is responsible for the negotiation and administration of all contracts for the sale and purchase of natural gas for The Atlantic Refining Company, also testified in respect to Atlantic's contract of July 30, 1962, which is in issue. He stated that the sale of gas from the Riverton Dome Field was commenced in 1952, that the Northern Utilities Company was the only company purchasing gas in that area, and that Atlantic then made short-term successive one-year contracts. He indicated that after negotiations on the July 30, 1962 sale had begun several other purchasers became interested but that the contract was executed in a buyers' market. He contended that the 1962 contract contained special features in respect to volume, pressure, central point delivery, and content, making it exceptionally favorable to the buyer. He testified that because of the extremely low temperatures in the area during the winter months, the purchaser, Montana-Dakota Utilities Co., insisted upon gas having a low water content (no more than five pounds per million cubic feet of gas). The witness testified further that the performance by Atlantic of the special services called for by the contract were estimated to cost more than 2 cents per Mcf. In support of his contention he referred to, *Panhandle Eastern Pipe Line Company, et al.*, 27 FPC 35, 45 (1962) issued by the Commission a few months before the Atlantic contract was executed.

In the *Panhandle* case the Commission stated:

> There is no question but that the gathering, dehydration and compression services which Shell proposes to render at Elk City are beneficial and required in the public interest; and that if Shell were to sell this gas to Panhandle at the wellhead without these services, it would be necessary for Panhandle to install its own facilities to gather, dehydrate and compress the gas, with a resulting increase in cost to Panhandle's jurisdictional customers. Under these circumstances, and where, as here, the 15-cent area ceiling price is based on a prevailing practice of making sales at the wellhead, Shell should be permitted to recover as part of its initial price so much of its cost of gathering, dehydration and compression as may be properly allocable to the sale of gas to Panhandle.

Atlantic says that producer sales in Wyoming normally provide for delivery at the wellhead and quotes language from the Commission's Opinion in *Standard Oil Company of California*, 27 FPC 1153, 1157 (1962), as authority, "This 15.384-cent gas is gas well gas of pipeline quality, delivered at pressures up to 860 psig at the wellhead." We do not agree with Atlantic's contention. In the passage quoted, the Commission was referring to the ceiling price of gas in Wyoming not to the prevailing practice of making sales at the wellhead. Indeed, in the *Standard Oil Company* case the Commission limited the Panhandle decision to gas produced from an area where the buyer normally performs special service functions. In the recent decision of *Edwin L. Cox, et al.*, Docket No. CI61-153, *et al.*, Opinion No. 446, November 17, 1964, 32 FPC 1301 at p. 1307 the Commission also limited the Panhandle Opinion and stated, "As a general rule the in-line price is the price applicable at the point of delivery negotiated at arm's-length between the parties and no extra allowance is in order for services performed by the producer beyond the wellhead necessary in effecting deliveries under the contract. Thus, the fact that a producer may be required to compress and dehydrate his gas or transport it in order to make a sale does not necessarily justify a higher price for that gas in an in-line proceeding." In the instant case, the evidence does not indicate any normal practice in Wyoming that the buyers or pipeline companies buy gas undehydrated and uncompressed at the wellhead. In fact the producers principal witness testified in respect to 58 contracts listed in his exhibit that 28 provide for delivery at the wellhead, and the remainder provide for central point (including plant outlet) deliveries such as provided in Atlantic's contract.

As already indicated, the witness testified that the sales contract of July 30, 1962, was executed in a buyers' market. The contract does not disclose that Atlantic proposes to construct any additional properties or service facilities. The unique or favorable features urged by Atlantic as setting the contract apart appear to have been an integral part of the contract and conditional to the sale. But aside from the evidence of record, the Commission has heretofore expressed the same view in the *Standard Oil* case, *supra*, at page 1159 where it stated:

> * * * Futhermore, a review of the contracts which the Commission has approved in connection with sales in Wyoming, Colorado and Utah, reveals no consistent pattern with respect to dehydration and compression which would indicate that pipeline buyers in the area normally buy gas undehydrated and uncompressed at the wellhead. On the contrary, the record shows a number of contracts which require the producers to dehydrate their gas to meet the quality conditions for delivery under their contracts. At the same time, there is nothing in other contracts, not requiring dehydration, which would suggest that the gas delivered without dehydration is of any lesser quality with respect to entrained water than the gas which is delivered after dehydration. As for compression, we have already noted that the Wyoming ceiling, which is the in-line price governing the present sales, is actually based on sales at the wellhead of gas at 860 psig, a pressure sufficiently high to permit delivery into the buyer's pipeline without additional compression. There is no question but that the producers in Wyoming are not permitted an allowance over the ceiling price because their gas has a wellhead pressure which eliminates the need for the buyer to compress the gas at the point of delivery, * * *"

When this case was appealed, the Court of Appeals stated, "We also have serious doubts as to whether any of the costs or delivery service urged by the petitioner to sustain the initial price of 18.5 cents are relevant at all in determining the in-line price in a section 7 proceeding * * *," and held that the Commission was not required "* * * to consider the exploration and drilling costs or the cost of delivery services in arriving at the in-line price in a certificate proceeding. The consideration of these matters may properly be left to a section 4 proceeding." *California Oil Company,* Western Division* v. *Federal Power Commission*, 315 F. 2d 652, 660 (1963). Accordingly, in view of the facts of record, it is concluded that there is no justification for any incremental allowance to cover special services performed by Atlantic beyond the wellhead.

Assuming that the testimony in reference to gathering, compression, dehydration and market trends were relevant in the instant case, the Commission has established specific restrictions upon any allowance in price by reason of "premium features." Thus in *Amerada Petroleum Corporation, et al.*, Docket No. CI62-1544, *et al.*, Opinion No. 422-A, May 27, 1964, 31 FPC 1315 at p. 1318 the Commission said: "Compression of the gas where necessary to enable its entry into the pipeline and dehydration for removal of excess water content are normal requirements imposed on producers and cannot be considered a premium feature of exceptional benefit to either the pipeline or the Consumer." In *Superior Oil Company*, Docket No. G-6067, Opinion No. 437, July 23, 1964, 32 FPC 241 at p. 243 the Commission held that, "An area in-line price is applicable to sales of gas by a producer throughout the area * * * The fact that it is necessary for a producer to transport its gas to a pipeline in order to make a sale does not justify a higher price for the gas in an in-line proceeding." And in *El Paso Natural Gas Company, et al.*, Docket No. CP60-72, *et al.*, Opinion No. 358, June 11, 1962, 27 FPC 1134 at p. 1138 the Commission said that "it is impossible to draw any easy conclusions as to what particular trends may mean in terms of price." Considering the record in this proceeding it is found that the evidence is insufficient to indicate any premium features of objectively measurable value.

The Staff witness testified that he had extracted data from producers rate schedules, related certificate applications, and other reports filed with the Commission and that he had prepared two exhibits (Exs. 2 and 3), based on this data. In preparing his exhibits he utilized 1963 volumes. Based on these exhibits he recommended an in-line price for producer sales of gas in Wyoming of 15 cents per Mcf at 15.025 psia "for the period prior to 1959," and a price of 15.38 cents per Mcf for the period subsequent thereto both preceding and following September 28, 1960, the date of the Statement of General Policy No. 61-1. In arriving at his recommendations, the witness relied upon permanently certificated sales. He also testified that the quality and delivery requirements of the proposed sales were reasonably comparable to the certificated sales at the 15 and 15.38 cent level in Wyoming.

The Staff witness included in Exhibit No. 2 all permanently certificated sales in Wyoming from 1942 to 1964, inclusive. His exhibit lists among others 14 sales for the year 1949, 13 for 1953, 14 for 1956 and large delivery volumes under these contracts in 1963. His exhibits reveal that during the period between September 28, 1960 and December 31, 1963, there were 12 permanently certificated sales in Wyoming at 15.38 cents per Mcf at 15.025 psia and that this constituted 42.85 percent of the number of sales during the period. The actual annual volumes of gas delivered under these contracts in 1963 at this price amounted to 6,188,560 Mcf or 45.79 percent. For the period of January 1, 1959 through September 28, 1960, 50 percent of the sales and 88.26 percent of the volumes were permanently certificated at 15.38 cents per Mcf. During this period there were, however, only eight sales. When the entire period of certificated sales in

---

*The California Oil Company is the successor in interest to the Standard Oil Company of California.

Wyoming is considered (1942–1964), the witness indicated that 36 percent of the sales were made at either 15 or 15.38 cents per Mcf at 15.025 psia and included about 68 percent of the actual delivery volumes. The sales price and delivery volumes not contemporaneous with the subject sales are of little relevance. It will be observed that when the sales during the early years are put on one side, particularly preceding 1953, more than 42 percent of the sales were made at 15 and 15.38 cents per Mcf at 15.025 psia and that more than 80 percent of the delivery volumes were made at this price level. During the period 1959 to 1963, approximately 66 percent of the sales were made at 15 or 15.38 cents per Mcf at 15.025 psia and extremely large delivery volumes were made at this level.

In its brief, counsel for Atlantic points particularly to the 1962 Wyoming sales as being significant since Atlantic's contract was executed in that year. There, it is stated that Dr. Garfield's study shows that the weighted average price for all 1962 contracts was 16.95 cents per Mcf, a mere 0.5 mills less than 17 cents per Mcf. And examination of Exhibit 1 reveals that Dr. Garfield lists 12 sales for the year 1962. This list includes two of the subject sales (Kilroy and Atlantic) at proposed prices of 16 and 16.58 cents per Mcf, respectively. These two sales account for a combined annual delivery volume of 8,114.4 MMcf out of the total 1962 sales of 18,017.6 MMcf. The witness also included in the 1962 list two other sales by Kerr-McGee and Pan American (Docket Nos. CI64–277 and CI63–867) both at a proposed initial price of 17.50 cents per Mcf. These sales account for a combined annual delivery volume of 7,740 MMcf. However, since the Kerr-McGee application was returned to the applicant on July 1, 1964 and the Pan American application was rejected on July 29, 1963, no temporary authorizations have been granted, and no volumes of natural gas are moving in interstate commerce under these contracts. It is clearly evident, therefore, that when these sales, or the two subject sales, or both are eliminated, the witness' weighted average price for the year 1962 is considerably reduced—eliminating the four sales reduces the volume to 2,163.2 MMcf and the weighted average price to 13.045 cents per Mcf at 14.65 psia.

Even if the testimony of the producer's witnesses as to a recommended in-line price is not entirely unacceptable, the recommendation is supported by a more limited number of sales, smaller volumes, and more significantly sales not permanently certificated. In view of this and previous precedents, the in-line price found herein must be based chiefly on permanently certificated sales. When resort is made to such sales the preponderance of evidence indicates both from the point of view of the number of sales and delivery volumes of gas moving in interstate commerce in Wyoming contemporaneous with applicable subject sales in this proceeding that a price not in excess of 15.384 cents per Mcf at 15.025 psia (or 15 cents at 14.65 psia) would be in-line and it is so found.

FINDINGS AND CONCLUSIONS

Upon consideration of the record, the briefs, and arguments of counsel, it is found and concluded, in addition to the findings and conclusions heretofore stated that:

(1) Each of the applicants in Docket Nos. CI63–434, CI63–576 and G–18884 is presently a natural-gas company within the meaning of the Natural Gas Act, or will be engaged in the sale of natural gas in interstate commerce for resale for ultimate consumption, subject to the jurisdiction of the Commission, and therefore, will be a natural-gas company within the meaning of said Act upon the commencement of the service under the respective authorizations granted hereinafter.

(2) The sales of natural gas proposed to be made by the applicants referred to in paragraph (1) will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The applicants referred to in paragraph (1) are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas as proposed by each of the applicants referred to in paragraph (1) together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(5) The application for a certificate of public convenience and necessity in Docket No. CI64-591 should be dismissed.

(6) It is appropriate and in the public interest in carrying out the provision of the Natural Gas Act that refunds be required, as ordered below, in Docket No. G-18884.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice and Procedure that:

(A) A certificate of public convenience and necessity is hereby issued to the applicants in Docket Nos. CI63-434, CI63-576 and G-18884 for the sale of natural gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor upon the terms and conditions of this order.

(B) The certificates issued herein are not transferable and shall be effective only so long as each of said applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The certificates issued to the applicants in paragraph (A) hereof are hereby expressly conditioned so that the total initial price, including all reimbursements and charges, and regardless of delivery pressure, shall be no greater than 15.384 cents per Mcf at 15.025 psia from the date of the issuance of this order until such prices may be lawfully changed in the manner provided in the Natural Gas Act.

(D) The certificates issued herein are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to the Commission's ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R-199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any charges or modifications to be made in accordance with this paragraph shall be prospective only.

(E) Within 30 days from the date of issuance of this order, each applicant referred to in paragraph (A) above shall file supplements to their presently filed rate schedules reflecting the conditioned price as the initial price in lieu of the initial price provided in the contract; provided that the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations under the Natural Gas Act are waived insofar as they apply to the reductions in rates hereby ordered.

(F) The applicants in Docket No. G–18884, Graham B. Morrison and Glen W. Pryor, Trustees, shall, within 60 days of the date upon which this order shall become effective, refund to the pipeline purchaser, with interest, a sum equal to the difference between the price charged to and collected from such purchaser from and after January 1, 1964, and the price of 15.384 cents per Mcf as conditioned herein. The interest charge specified herein shall be calculated at the rate of 7 percent per annum until full refund has been made.

(G) Mountain States Drilling Company, the predecessor in interest in Docket No. G–18884, shall, within 60 days of the date upon which this order shall become effective, refund to the pipeline purchaser, with interest, a sum equal to the difference between the price charged to and collected from such purchaser from August 12, 1959, to January 1, 1964, and the price of 15.384 cents per Mcf as provided herein. The interest charge specified herein shall be calculated at the rate of 6 percent per annum for all gas paid for prior to March 1, 1960, and at 7 percent per annum thereafter, until full refund has been made.

(H) Within 10 days of the date of the refund provided in paragraphs (F) and (G) above, Graham B. Morrison and Glen W. Pryor, Trustees, and Mountain States Drilling Company shall each file with the Commission a duly certified statement, in triplicate, showing the amount of the refund, its manner of computation, the interest payments related thereto, and a statement from the purchaser acknowledging receipt thereof.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 of the Commission's Regulations under said Act. Such grant is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose or prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts here involved.

(J) The application filed in Docket No. CI64–591 is hereby dismissed.

HARRY C. SHRIVER,
Presiding Examiner.

APPENDIX A

DOCKET No. CI64-25, *et al.*

Schedule 1 Footnotes

[1] Contract rate.

[2] Conditioned temporary rate.

[3] No maximum. Minimum 500 psig prior to July 1, 1970, and 250 psig thereafter.

[4] 1.0¢ additional if pressure is 860 psig or greater.

[5] Temporary conditioned to refunding any amount in excess of amount resulting from rate finally determined to be proper in Docket No. G-18884.

[6] 16.0¢ if pressure is 860 psig or greater.

[7] Conditioned rate for gas at pressure in excess of 800 psig.

[8] Docket covers additional acreage supplements to certificate issued in Docket No. G-10207.

[9] 500 psig for first 10 years and 250 psig thereafter.

[10] Docket covers additional acreage supplements to certificate issued in Docket No. G-10208.

[11] Proposed sales pertain to additional acreage agreements dated: 12-12-59, 2-15-60, 9-28-60, 2-13-61 and 6-14-61.

[12] Proposed sales pertain to additional acreage agreements dated: 2-13-61 and 4-4-63.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 25, 1965)

On February 1, 1965, Martha Featherstone (Applicant) filed in Docket No. CI65-757 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to sell gas to Colorado Interstate Gas Company from acreage in the Patrick Draw area, Sweetwater County, Wyoming. The application supersedes a prior application in Docket No. CI64-591 which proposed a sale to the same buyer and under the same contract but at a higher initial price.

The application in Docket No. CI64-591 was consolidated into the proceeding in lead Docket No. CI64-25, which proceeding was the subject of an Examiner's decision rendered therein on January 22, 1965, *Gulf Oil Corporation, et al.*, Docket No. CI64-25, *et al.* By order issued concurrently herewith, *sub nom. Martha Featherstone, et al.*, Docket No. CI64-591, *et al.*, *supra*, p. 621, the Examiner's decision has been adopted as the decision of the Commission. The Examiner dismissed the application in Docket No. CI64-591 because of the applicant's failure to appear or to submit the necessary evidence.

The sale proposed at Docket No. CI65-757 will be rendered at a rate of 15.384 cents per Mcf at 15.025 psia in lieu of the initial contractually proposed rate of 16.4096 cents per Mcf. The rate currently proposed is equal to the initial service guideline ceiling rate for the area involved and is also equal to the in-line rate found by the Examiner and approved in our order.

Concurrently with the subject application Applicant submitted a copy of the related contract which will hereinafter be accepted for filing as Applicant's FPC gas rate schedule No. 2, together with supplements No. 1, 2 and 3.[1]

Appropriate notice of the application in Docket No. CI65-757 has been given, including publication in the Federal Register on February 16, 1965, 30 F.R. 2114. No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sale of natural gas hereinbefore described, as more fully described in the application herein, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary

---

[1] Supplement No. 1 is contract No. 276-B dated September 18, 1963. Supplements No. 2 and 3 are, respectively, contract No. 276-E and 276-F, both dated November 8, 1963.

therefor, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the related contract submitted by Applicant, together with supplements No. 1, 2 and 3, be accepted for filing and be designated as Applicant's FPC gas rate schedule.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicant of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as hereinbefore described and as more fully described in the application and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The certificate issued herein is expressly conditioned to prohibit a total initial price, including all reimbursements and charges, and regardless of delivery pressure, greater than 15.384 cents per Mcf at 15.025 psia from the date of issuance of this order and until such price may be lawfully changed in the manner provided in the Natural Gas Act.

(D) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose or prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contract here involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act.

(E) The related contract dated February 8, 1963, submitted by Applicant is accepted for filing and designated as Martha Featherstone FPC Gas Rate Schedule No. 2, together with Supplements No. 1, 2 and 3, to be effective on the date of initial delivery.

(F) Upon the commencement of deliveries applicant shall inform the Commission within 10 days of such fact, together with the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MARATHON OIL COMPANY, DOCKET NO. RI64-549

ORDER ACCEPTING OFFER OF SETTLEMENT REQUIRING FILING OF NOTICE OF CHANGE, CONTRACT AMENDMENT, REFUNDS, AND TERMINATING PROCEEDINGS

(Issued March 25, 1965)

On February 8, 1965, Marathon Oil Company (Marathon) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's

Rules of Practice and Procedure. The offer involves a proposed increased rate for a sale of natural gas made to Transcontinental Gas Pipe Line Corporation (Transco) by Marathon under its FPC Gas Rate Schedule No. 10 in the North Markham-North Bay City Field, Matagorda County, Texas (Texas Railroad Commission District No. 3). The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective, subject to refund, by Marathon on July 2, 1964.

In its offer, Marathon proposes a settlement rate of 15.5¢ per Mcf of natural gas at 14.65 psia., inclusive of tax reimbursement and dehydration charge reimbursement, for the remaining life of the contract. Marathon also proposes to eliminate the favored-nation and periodic price escalation provisions from the contract and to extend the contract term three years to December 24, 1973. Additionally, Marathon proposes to dedicate to the contract approximately 120 million Mcf of new reserves of gas without modification of Transco's existing obligations in regard to maximum and minimum takes, and the take-or-pay provisions under the contract. Marathon will refund all amounts collected, subject to refund, under the subject rate schedule in excess of the settlement rate. Its revenues will be decreased approximately $36,000 annually below the presently effective rate revenue, and it will refund approximately $25,000, exclusive of interest. No protests or objections have been filed to the proposed settlement.

Marathon's proposal is identical to one which we considered and approved by order issued October 1, 1964 in *Sun Oil Company*, Docket No. G–8288, *et al.*, 32 FPC 894, for sales of natural gas to the same purchaser in the same field. Here, as there, we find that the circumstances permit an exception to the applicable area ceiling and we, therefore, find Marathon's settlement rate of 15.5¢ per Mcf to be proper and approve the same.

For all of the reasons set forth in our order in *Humble Oil & Refining Company*, Docket Nos. G–9287 and G–9288, *et al.*, 32 FPC 49 (order issued July 8, 1964) we shall require Marathon to retain the amounts of refund ordered herein until further order directing the nature of their disposition, and also to submit within 45 days of this order to the Commission and to Transco a detailed report setting the amount of refund related to the subject rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct Transco within ten days from the receipt of such report, to submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its jurisdictional customers and the names of such customers and amounts of refund each would receive, or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such report indicates that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Marathon (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event Transco indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Marathon on February 8, 1965, is in the public interest and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Marathon on February 8, 1965, is hereby approved in accordance with the provisions of this order.

(B) Marathon shall file, within 30 days from the date of issuance of this order, a notice of change in rate under its FPC Gas Rate Schedule No. 10 providing for the 15.5¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to said schedule eliminating the favored nation and periodic price escalation provisions therefrom, and extending the contract term to December 24, 1973. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Marathon shall file, within 30 days from the date of issuance of this order, appropriate certificate and rate schedule filings, in accordance with the Commission's Regulation under the Natural Gas Act, to reflect the dedication of the additional reserves more fully described in its offer of settlement.

(D) Marathon shall compute the difference between the rates collected subject to refund and the related settlement rate for the period from July 2, 1964 to the date of this order, together with interest as specified by order of the Commission in this docket to the date of this order. Marathon shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on Transco, setting out the amount of refunds related to the subject rate schedule (showing separately the principal and applicable interest), the bases used for such determination, the period covered, and a letter from Transco agreeing to the correctness of such amounts.

(E) Marathon shall retain the amounts shown in the report required under paragraph (D) above, subject to further order of the Commission directing the disposition of those amounts.

(F) If Marathon elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from May 7, 1965 to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(G) If Marathon elects to deposit the retained refunds in a special escrow account, Marathon shall tender for filing on or before May 7, 1965, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Marathon and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Marathon, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable

within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(H) If Marathon elects not to commingle the retained refund with its general assets, or to deposit such funds in a special escrow account, it may deposit, within 45 days from the date of this order, such funds in savings accounts, not to exceed $10,000 each, in any banks or savings and loan associations where deposits are insured by the Federal Deposit Insurance Corporation, with all interest thereon to be credited to the savings accounts. If Marathon elects so to do, it shall file a statement with the Secretary of the Commission of its election, and such statement shall include the names and addresses of the banks or savings and loan associations.

(I) Upon notification by the Secretary of the Commission that Marathon has complied with the terms and conditions of this order, the rate and charge of 15.5¢ per Mcf at 14.65 psia., specified in its offer of settlement, shall be effective as of the date of issuance of this order, and the above-designated proceeding shall be deemed terminated insofar as it relates to the sale of natural gas to Transco under Marathon's FPC Gas Rate Schedule No. 10, without further order of the Commission.

(J) The acceptance by the Commission of Marathon's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Marathon, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BORDER PIPE LINE COMPANY AND AMERICAN SMELTING AND REFINING COMPANY, DOCKET NO. G-228

ORDER FURTHER AMENDING ORDER AUTHORIZING THE EXPORTATION OF NATURAL GAS

(Issued March 26, 1965)

On December 23, 1964, Border Pipe Line Company (Border) and American Smelting and Refining Company (American) collectively referred to as Petitioners, filed in Docket No. G-228 a joint application pursuant to Sections 3 and 16 of the Natural Gas Act, for a further order amending the export authorization heretofore granted Petitioners in Docket No. G-228, pursuant to Section 3 of the Act, by order issued on October 10, 1942 (3 FPC 827), as amended by orders issued on November 4, 1942 (3 FPC 859), July 11, 1950 (9 FPC 910), May 10, 1956 (15 FPC 1387), and on March 25, 1960 (23 FPC 529). The joint application to amend filed December 23, 1964 by Petitioners in Docket No. G-228 seeks an extension through March 26, 1970 of the authorization heretofore granted them to export up to 14,000 Mcf of natural gas per day to the Republic of Mexico in accordance with and pursuant to the terms of their agreement of July 5, 1949, as amended, for use by American in supplying the requirements of its subsidiary, Compania Minera Asarco, S. A., all as more fully set forth in the application to amend.

Petitioners present authorization permitting export of up to 14,000 Mcf per day will expire on March 26, 1965, under the terms of the Commission's order issued March 25, 1960, which amended Paragraph (C) of the order of the Commission issued October 10, 1942.

Presidential permits were issued, simultaneously and separately, to Border and American on September 29, 1942, authorizing the construction, operation and maintenance of export facilities in this subject docket at the international boundary. Border sells the gas to American on the United States side of the boundary and American transports the gas into Mexico for delivery to its Mexican subsidiary, for use in industrial purposes.

The aforesaid order of October 10, 1942, as amended, grants authority to export pursuant to the terms of an agreement dated July 5, 1949, between Border and American. The parties by agreement dated March 12, 1959, amended the original contract so as to grant to American the option to extend the term thereof for a further period of five years beginning March 27, 1965, through and including March 26, 1970. American exercised its option to so extend the terms of the 1949 contract, as amended, to March 26, 1970 by agreement dated December 1, 1964.

Border is now purchasing gas for export from producers in the Aguilares, Cabezon, El Ranchito, Leyendecker, Reiser and Retamia fields, in Webb and Zapata Counties, Texas. Border has entered into contracts for additional supplies of gas available to be delivered to American. The contract date, price, producer supplying the additional volumes, and the fields from which the gas is to be produced are listed as follows:

Field	Producer	Contract date	Purchaser cost of gas per Mcf @ 14.65 psia
			Cents
Cabezon	Sun Oil Co	Dec. 10, 1959	14.5
El Rancnito	Allen and Kircher	Apr. 27, 1961	10
Leyendecker	Blanco Oil Co	June 22, 1964	12
Retamia	Fairway Operating Co., Inc.	Sept. 23, 1960	10
Various Webb and Zapata Counties Tex.	Delhi Gas Pipeline Corp.[1]	June 29, 1964	16

[1] Delhi Gas Pipeline Corporation has a firm obligation to deliver to Border the quantities of gas specified in the contract, namely a daily volume increasing from 1,000 Mcf to 6,000 Mcf in the fourth year and 7,000 Mcf daily thereafter until March 27, 1970.

Border estimates that as of January 1, 1964, the remaining natural gas reserves in the Aguilares, Leyendecker, Cabezon, El Ranchito, Reiser and Retamia fields, and covered by Border's contracts with the producers of such gas is 28,585,000 Mcf of natural gas measured at 14.65 psia.

Due notice of the filing of the application to further amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 14, 1965 (30 F.R. 506). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

The grant of the relief or extension of authorization requested in the aforesaid joint application of December 23, 1964, will not be inconsistent with the public interest and, good cause having been shown for the granting of the same, it is necessary or appropriate to carry out the provisions of the Natural Gas Act that the aforesaid order of October 10, 1942, as amended November 4, 1942, July 11, 1950, May 10, 1956 and March 25, 1960, be further amended as hereinafter ordered.

The Commission orders:

(A) Paragraph (C) of the Commission's order of October 10, 1942, as specifically amended November 4, 1942, July 11, 1950, May 10, 1956 and March 25, 1960, is hereby further amended so as to extend for a five year period commencing March 27, 1965 and ending March 26, 1970 the authorization heretofore granted Border Pipe Line Company and American Smelting and Refining Company for the exportation of natural gas to the Republic of Mexico in accordance with and pursuant to the terms of their agreement of July 5, 1949, as amended, for use by American in supplying the requirements of its subsidiary, Compania Minera Asarco, S.A.

(B) In all other respects the terms, conditions and authorizations set forth in the order of October 10, 1942, as amended, shall remain in full force and effect, and the grant of the instant authorization, together with the exercise of the rights therein granted, shall be fully subject thereto.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP64-6

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 29, 1965)

On January 12, 1965, Algonquin Gas Transmission Company (Applicant), filed in Docket No. CP64-6 an application to amend the certificate of public convenience and necessity issued by the Commission on December 19, 1963, 30 FPC 1559, and amended October 28, 1964, 32 FPC 1229, which, among other things, authorized Applicant in Docket No. CP64-6 to sell to Cambridge Gas Company (Cambridge), commencing November 1, 1965, a total maximum daily quantity of 19,275 Mcf of natural gas under Applicant's Rate Schedule No. F-1.

By the instant application, Applicant seeks amendment of the aforementioned certificate, as amended in Docket No. CP64-6 to reflect an increase in maximum daily quantity to Cambridge from 19,275 Mcf to 21,000 Mcf, per agreement between the parties dated January 7, 1965.

The application states that the proposed increased sales to Cambridge will be made from Applicant's presently unallocated capacity and supply, and consequently no additional facilities or supply will be required.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 23, 1965 (30 F.R. 766). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate issued by the Commission on December 19, 1963 and amended October 28, 1964. in Docket No. CP64-6 be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Applicant in the Commission order of December 19, 1963 and amended October 28, 1964, be, and the same is hereby further amended to increase the maximum daily quantity of natural gas to Cambridge from 19,275 Mcf to 21,000 Mcf, in accordance with the agreement dated January 7, 1965, between the parties as hereinbefore described and as more particularly set forth in the aforementioned application to amend which is on file with the Commission.

(B) In all other respects the certificate, as amended in Docket No. CP64-6 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62-1544, ET AL.

ORDER

(Issued March 29, 1965)*

There is presently before us a certificate proceeding under Section 7 of the Natural Gas Act which originally involved 35 separate applications by 26 producers for initial sales of natural gas by the producers, individually or as operator, for sales in Texas Railroad Commission District No. 4 to various pipelines for resale in interstate commerce at prices ranging from 15.944¢ per Mcf to 19.795¢ per Mcf. The Commission issued temporary certificates at prices not exceeding 18¢. In eight of the dockets, refund conditions were included in the temporary authorizations which would require the producers to refund to their purchasers any amount collected in excess of the initial price to be determined in the permanent certificate. In the remaining dockets, no refund conditions were imposed.

By our Opinion No. 422, issued March 23, 1964, and Opinion No. 422-A issued May 27, 1964, 31 FPC 623, 1315, we granted permanent certificates of public convenience and necessity to the applicants at an initial price of 16¢ per Mcf, which we found to be the "in-line" price for Texas District No. 4 at the time the sales contracts were executed. In those dockets where the producers had commenced deliveries pursuant to temporary certificates containing refund conditions, we ordered proper refunds to be made. In the remaining dockets where the producers were selling gas at prices in excess of 16¢ per Mcf under temporary certificates void of any refund obligation, we deferred our decision on the question of whether refunds should be ordered.[1]

The refund issue in this proceeding arises out of the decision of the Court of Appeals for the District of Columbia[2] on appeal of our Opinion in *Skelly Oil Co., et al.*[3] In the *Skelly* case we concluded that producers operating under unconditioned temporary certificates should not be required to make refunds of amounts collected in excess of the determined "in-line" price. The Court, however, held that the power to order refunds does not depend upon an explicit refund provision in the temporary authorizations. While petitions for *certiorari* by the Supreme Court were denied in the *Skelly* case, the issue has again been raised in petitions for *certiorari* filed in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5-1964). On March 8, 1965, the Supreme Court granted *certiorari* in the *Callery* case.

---

*Reconsideration denied by order issued May 26, 1965, 33 FPC 1124.

[1] Paragraph (G) of the order accompanying Opinion No. 422.

[2] *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC), cert. denied 377 U.S. 963.

[3] Opinion No. 362, issued August 30, 1962, 28 FPC 401, modified on rehearing by Opinion No. 362-A, 28 FPC 1065.

Since it now appears that the refund issue will be reviewed and clarified by the Supreme Court we conclude that further action in this proceeding should be deferred until after the Court has issued a decision in the *Callery* case.

Accordingly, the Commission orders:

Further proceedings in the above entitled case shall be deferred pending a final decision by the Supreme Court in the *Callery* case, or until further order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COOS-CURRY ELECTRIC COOPERATIVE, INC., PROJECT NO. 2319

ORDER EXTENDING PERIOD OF PRELIMINARY PERMIT

(March 29, 1965)

Application was filed on January 25, 1965 by Coos-Curry Electric Cooperative, Inc., of Coquille, Oregon, permittee for proposed Project No. 2319, for a one-year extension of the preliminary permit issued for a period of two years, effective as of April 1, 1963 and terminating March 31, 1965.

The permittee advises that while under the permit it has undertaken preliminary investigations concerning the potential markets for that portion of the project output in excess of its own needs, consummation of the treaty between the United States and Canada, providing for development of Upper Columbia River storage reservoirs and the marketing of the Canadian Entitlement power in the United States, has had a marked effect on the over all power market in the area. The permittee states that many negotiations now in progress concerning the sale of Canadian Entitlement power and other power which may become available as a result of the treaty have made it impossible for the permittee to conclude its power market studies within the time allowed by the preliminary permit.

An extension of the period of the permit for the requested additional year would not exceed the three year limit fixed by Section 5 of the Federal Power Act.

The Commission finds:

It is not inconsistent with the public interest to extend the permit as hereinafter provided.

The Commission orders:

The period of the preliminary permit for proposed Project No. 2319 is hereby extended to and including March 31, 1966.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. CP64-184 AND CP64-239

ORDER AMENDING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 29, 1965)

On February 4, 1965, El Paso Natural Gas Company (Applicant), El Paso, Texas, filed in Docket Nos. CP64-184 and CP64-239 an application to amend the orders of the Commission issued in said dockets of April 20, 1964, and June 11, 1964, 31 FPC 959, 1535, respectively. The order issued in Docket No. CP64–184 authorized, among other things, the construction and operation of the Fort Wingate Meter Station which was proposed to be utilized for the sale and delivery of natural gas to Southern Union Gas Company for resale to Fort Wingate Ordnance Depot located in McKinley County, New Mexico. The order issued in Docket No. CP64–239 authorized, among other things, the Skyline Cafe Tap which was proposed to be utilized for the sale and delivery of natural gas to Washington Natural Gas Company for resale to Skyline Cafe, located near Chehalis, Washington.

In both instances Applicant seeks to have the respective certificates amended to delete therefrom the authorization to construct and operate the above described facilities for the reason that these facilities have not been constructed and they are not now proposed to be constructed.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on February 17, 1965 (30 F.R. 2166). No protest, petition to intervene, notice of intervention, or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificates of public convenience and necessity heretofore issued in Docket Nos. CP64–184 and CP64–239 be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to El Paso Natural Gas Company in the Commission order of April 20, 1964, in Docket No. CP64–184 be and the same is hereby amended by deleting therefrom the authorization for the construction and operation of the Fort Wingate Ordnance Meter Station, which is more fully described in the application which is on file with the Commission.

(B) The certificate of public convenience and necessity issued to El Paso Natural Gas Company in the Commission order of June 11, 1964, in Docket No. CP64–239 be and the same is hereby amended by deleting therefrom the authorization for the construction and operation of the Skyline Cafe Tap, which is more fully described in the application which is on file with the Commission.

(C) In all other respects the orders in Docket Nos. CP64–184 and CP64–239 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LATERAL GAS PIPELINE COMPANY, DOCKET NO. CP65–204

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 29, 1965)

On December 31, 1964, Lateral Gas Pipeline Company (Applicant) filed in Docket No. CP65–204 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in order to transport natural gas for the account of Iowa Electric Light & Power Company (Iowa Electric), all as more fully set forth in the application in this proceeding.

Applicant proposes to transport gas purchased by Iowa Electric from Natural Gas Pipeline Company of America from certain points on Natural's transmission system in Iowa and deliver such gas to Iowa Electric for distribution by the latter in the communities of Marengo, Kalona, Lacona, North English, South English and Williamsburg, all in Iowa.

Specifically, Applicant proposes to construct and operate approximately 30 miles of 4-inch and 4 miles of 2-inch pipeline in Keokuk and Iowa Counties, Iowa; approximately 8.33 miles of 2-inch pipeline in Washington County, Iowa and approximately 2.25 miles of 2-inch pipeline in Warren County, Iowa.

The total estimated cost of the proposed facilities is $599,524, which cost will be financed with funds on hand, funds obtained by sale of Applicant's stock to Iowa Electric and/or temporary advances from Iowa Electric.

The gas proposed to be transported is from allocations which Natural is presently obligated to deliver to Iowa Electric.

Applicant will perform the proposed transportation service in accordance with its FPC Gas Tariff, Original Volume No. 1.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 26, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lateral Gas Pipeline Company, an Iowa corporation having its principal place of business in the City of Cedar Rapids, Iowa, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1954, in Docket No. G–2318 (13 FPC 1184).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lateral Gas Pipeline Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MONTANA POWER COMPANY, PROJECT NO. 5

ORDER FIXING HEARING

(Issued March 29, 1965)*

The Confederated Salish and Kootenai Tribes of the Flathead Reservation, organized on October 28, 1935, under the Indian Reorganization Act of June 18, 1934, (Confederated Tribes), filed a petition for readjustment of annual charges under subsection 10(e) of the Federal Power Act[1] for use of tribal lands by The Montana Power Company (the Company) for operation of its Kerr Project No. 5 on the Flathead River in Montana.

Action on the petition of the Confederated Tribes was deferred pending a decision in a then pending proceeding to fix annual charges for a third generating unit which had been added at the Kerr Project (22 FPC 502; 25 FPC 221). The Commission's orders were affirmed in *The Montana Power Company* v. *F.P.C.*, 298 F. 2d 335, decided on January 25, 1962.

Subsequent efforts by both the Confederated Tribes and the Company to arrive at an agreement on readjustment of annual charges have failed because of differences which are best illustrated by their statements of position and replies thereto submitted under dates of April 5, and May 7, and April 3, May 8, and July 24, 1964.

Subsection 10(e), as amended, provides that the Commission may readjust annual charges after 20 years of operation after notice and opportunity for hearing. At the time the license for Project No. 5 was issued subsection 10(e) provided that the Commission might readjust annual charges for 20 years of operation in a manner to be described in each license. That manner is set forth in Article 30(D):

---

*See order issued July 7, 1965, denying petition to vacate hearing, etc., 34 FPC 12.

[1] The pertinent provisions of subsection 10(e) involved read as follows:

* * * Provided, that when licenses are issued involving the use of Government dams or other structures owned by the United States or tribal lands embraced within Indian reservations the Commission shall, subject to the approval of the Secretary of the Interior in the case of such dams or structures in reclamation projects and, in case of such tribal lands, subject to the approval of the Indian tribe having jurisdiction of such lands as provided in Section 16 of the Act of June 18, 1934 (48 Stat. 984), fix a reasonable annual charge for the use thereof, and such charges may with like approval be readjusted by the Commission at the end of twenty years after the project is available for service and at periods of not less than ten years thereafter *upon notice and opportunity for hearing.*

NOTE.—The italic has been supplied to indicate the language which was inserted in this section by the amendment of 1935 in place of: *"in a manner to be described in each license."*

Article 30(D)

* * * * * *

> The annual charges payable under this license may be readjusted at the end of twenty (20) years after the beginning of operation under this license and at periods of not less than ten (10) years thereafter by mutual agreement between the Commission and the Licensee, with the approval of the Secretary of the Interior. In case the Licensee, the Commission, and the Secretary of the Interior cannot agree upon readjustment of such charges, it is hereby agreed that the fixing of readjusted charges shall be submitted to arbitration in the manner provided for in "The United States Arbitration Act." (U.S.C., Title 9), such readjusted annual charges to be reasonable charges fixed upon the basis provided in Section 5 of Regulation 14 of the Commission, to wit, upon the commercial value of the tribal lands involved, for the most profitable purposes for which suitable, including power development.

Essentially this Article provided for readjustment by agreement between the Commission and the Licensee with the approval of the Secretary of the Interior, or by arbitration if the Commission, the Secretary, and the Licensee could not agree. In 1935, Section 10(e) was amended to give the Commission authority to make such readjustments as may be appropriate.

The Confederated Tribes contend that readjustment is necessary and that it should be made by the Commission pursuant to Section 10(e) of the Act, as amended in 1935. The Company contends readjustment is unnecessary, but if it were necessary, it must be made in accordance with Article 30(D) of the license. We do not find it necessary to determine at this time the question of whether any readjusted charges are to be finally determined pursuant to the 1935 amendment to Section 10(e) or pursuant to the manner described in Article 30(D) of the license. Under either situation, the Commission would have to determine whether it believes any readjustment is appropriate and this determination, we believe, can be made only after an evidentiary hearing.

We shall, therefore set this matter for hearing to determine (1) whether readjustment is necessary; (2) if so, what the readjustment should be; and (3) whether any such readjustment should be ordered by the Commission in this proceeding pursuant to the provisions of Section 10(e) of the Act as amended. Since the latter question appears to be solely a matter of law, we do not contemplate that any evidence will be introduced thereon but the parties may, of course, argue the matter to the examiner and the Commission by way of a brief.

The Commission finds:

It is appropriate and in the public interest to hold a public hearing, as hereinafter provided, respecting: (1) whether annual charges for the occupancy and use of lands of the Confederated Tribes by Project No. 5 of the Company should be readjusted; (2) if such charges should be readjusted, the amount of the readjusted charges; and (3) whether any such readjusted charges should be ordered by the Commission in this proceeding pursuant to the provisions of Section 10(e) of the Act as amended.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Federal Power Act, particularly Sections 10(e) and 308 thereof, and the Commission's Rules of Practice and Procedure, a public hearing shall be held on July 20, 1965 at 10 a.m. (EDST) in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., respecting the matters involved and issues presented in the above finding.

(B) The following procedure is prescribed for this proceeding:

(1) The Confederated Tribes and the Company shall file by May 25, 1965 with the Secretary of the Commission an original and ten copies of all their testimony including qualifications of witness, and exhibits to be presented in their direct cases;

(2) Commission Staff shall file by June 25, 1965 with the Secretary, an original and ten copies of all of its direct testimony and exhibits, including qualifications of witnesses;

(3) All motions to strike shall be filed with the Presiding Examiner by July 5, 1965 with replies to such motions to be filed by July 13, 1965;

(4) All of the testimony, except exhibits, shall be in question and answer form;

(5) No exhibits, except those of which official notice may properly be taken, shall contain narrative material other than brief explanatory notes;

(6) Any party submitting more than one exhibit shall enclose a cover sheet listing the title of each exhibit in the sequence they are to be marked for identification;

(7) The Presiding Examiner will specify the order of cross-examination and time to be permitted for preparation of rebuttal evidence.

(C) The Commission's Rules of Practice and Procedure shall apply in this proceeding except to the extent that they are modified or supplemented herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SIERRA PACIFIC POWER COMPANY AND SIERRA NEVADA POWER COMPANY, DOCKET NO. E-7204

ORDER AUTHORIZING MERGER AND CONSOLIDATION OF FACILITIES

(Issued March 29, 1965)

On January 25, 1965, Sierra Pacific Power Company (Sierra-Maine) and Sierra Nevada Power Company (Sierra-Nevada) filed a joint application, as subsequently amended, with the Federal Power Commission, for an order, pursuant to Section 203 of the Federal Power Act authorizing Sierra-Maine to merge into Sierra-Nevada and an order authorizing Sierra-Nevada to acquire all of the assets and assume all of the liabilities of Sierra-Maine and to issue its own Common and Preferred Stock in connection with the merger.

Sierra-Maine is a corporation organized under the laws of the State of Maine with its principal business office at Reno, Nevada and is engaged principally in the utility business in 11 counties in west-central Nevada and 7 counties in the adjoining eastern section of California.

Sierra-Nevada is a corporation organized under the laws of the State of Nevada with its principal business office at Reno, Nevada and has been formed solely for the purpose of providing a means whereby the corporate domicile of Sierra-Maine could be transferred from Maine to Nevada.

According to the application, on the effective date of the merger, Sierra-Maine will cease to exist as a corporate entity and Sierra-Nevada will succeed to all of Sierra-Maine's licenses, franchises, permits and corporate assets. Also on the effective date of the merger, Sierra-Nevada will issue one share of Preferred Stock for each share of Preferred Stock of Sierra-Maine then outstanding and two shares of Common Stock for each share of Common Stock of Sierra-Maine then outstanding, except those shares dissenting, and Sierra-Nevada will assume and become liable for all debts and obligations of Sierra-Maine including those incurred or to be incurred by the issuance of unsecured short-term Promissory Notes in a principal amount not to exceed $12,000,000 outstanding at any one time, as authorized by Commission order issued December 22, 1964, in Docket No. E-7195, 32 FPC 1496. At the time of this merger, the name of the surviving corporation will be changed from Sierra-Nevada to the original name, Sierra Pacific Power Company.

On the effective date of the proposed merger, Sierra-Nevada will succeed to the business of Sierra-Maine and to the ownership and operation of the latter's facilities. In a separate order issued concurrently herewith, *Sierra Pacific Power Company and Sierra Nevada Power Company, Project No. 743, et al., infra,* p. 652, the transfer of the licenses for certain of these facilities from Sierra-Maine to Sierra-Nevada is approved.

According to the application, Sierra-Nevada will issue two shares of Common Stock for each outstanding Common share of Sierra-Maine. After the merger, Sierra-Nevada will have outstanding Common Stock of 3,791,486 shares, $3.75 par, instead of Sierra-Maine's presently outstanding Common Stock of 1,895,743 shares, $3.75 par. The issuance of the additional shares will be recorded by a debit of $7,109,036 to Premium on Capital Stock-Common Stock, and a credit of the same amount to Common Stock.

In the merger, Sierra-Nevada will succeed to all assets and will assume all liabilities of Sierra-Maine. Therefore, on the books of Sierra-Nevada as of the effective date of the merger, the same amounts for assets and other debits and the same amounts for liabilities and other credits will be recorded as are recorded on the books of Sierra-Maine as of the same date, with the exception of the above mentioned transfer from Premium on Capital Stock to Common Stock for issuance of the additional shares of Common Stock.

According to the application, the change of the corporate domicile of Sierra-Maine from Maine to Nevada will be compatible with the public interest and in the best interest of Sierra-Maine as the reasons for the incorporation of Sierra-Maine in the State of Maine in 1912 no longer prevail. The Applicants represent that such a change of corporate domicile from Maine to Nevada will permit Sierra-Maine to operate under the modern and flexible corporation laws of the State of Nevada where its principal office and business and operations are, for the most part, maintained and carried on, will result in tax, legal and regulatory expense savings of an appreciable amount and will improve business relations in its service area.

If the merger becomes effective, Sierra-Nevada will be a public utility organized and operating in a state under the laws of which its security issues and its assumptions of liability with the exception of short term promissory notes maturing within less than twelve months, are regulated by a state regulatory body, the Nevada Public Service Commission. After the merger, such issuances of securities or assumptions of liabilities by the Company will not be subject to authorization by the Commission under Section 204(f) of the Federal Power Act.

Written notice of the application has been given to the Public Service Commission of Nevada and the Public Utilities Commission of California, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on February 9, 1965 (29 F.R. 1826), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before February 23, 1965 with the Federal Power Commission, Washington, D.C. 20426. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Sierra-Maine, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 14, 1959, *In the Matter of Sierra Pacific Power Company*, Docket No. E-6873 (21 FPC 684).

(2) Sierra-Nevada, a corporation, will become the owner and operator of all Sierra-Maine's facilities at the moment of its succession to Sierra-Maine and at that time will become a public utility within the meaning of Section 203 of the Federal Power Act.

(3) By the proposed transaction, as described above, Sierra-Maine will dispose of the whole of its facilities subject to the jurisdiction of the Commission within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed merger and consolidation of facilities as recited above upon the terms and conditions set forth in the application, subject to the provisions of this order, will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons stated above.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed disposition by Sierra-Maine of the whole of its facilities subject to the jurisdiction of the Commission, as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application, subject to the provisions of this order.

(B) Sierra-Maine and Sierra-Nevada shall record the proposed transactions and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) The authority granted to Sierra-Maine by Commission order issued on December 22, 1964 in Docket No. E-7195 to issue Promissory Notes in the aggregate principal amount of $12,000,000 is hereby extended to Sierra-Nevada.

(D) This authorization shall expire unless the transactions herein authorized and approved are consummated within 60 days from the date of issuance of this order.

(E) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SIERRA PACIFIC POWER COMPANY AND SIERRA NEVADA POWER COMPANY, PROJECT NOS. 743, 938, 958, 959, 978, 982, 1037, 1191, 1262 AND 1446

ORDER APPROVING TRANSFER OF LICENSES

(Issued March 29, 1965)

Joint application was filed on February 25, 1965, pursuant to Section 8 of the Federal Power Act (Act) by Sierra Pacific Power Company, a Maine corporation, and Sierra Nevada Power Company, a Nevada corporation, for Commission approval of transfer of the licenses for the above-designated transmission line projects from the former to the latter. The lines are located either in the State of California or the State of Nevada. The Joint Applicants request that any Commission approval of transfer of the licenses be made effective as of the date of conveyance of the project properties. Commission authorization of a merger of Sierra Pacific into Sierra Nevada has been granted by our order of even issuance date in Docket No. E-7204 *supra*, p. 649. Following the merger, Sierra Nevada, a Nevada corporation, will change its name back to Sierra Pacific Power Company.

The licenses for transmission line Projects Nos. 743, 958, 959, 978, 982 and 1037 waive the provisions of Section 8 of the Act which requires Commission approval of the transfer of the license. Consequently, no Commission approval of the transfer of those licenses is required.

According to our staff study of the ten transmission lines covered in the application, the lines are in fact distribution lines and are not primary lines or parts of a "project" as defined in Section 3(11) of the Federal Power Act. However, inasmuch as the licensee of record is to be merged into the proposed transferee at an early date, we are approving the transfer of the licenses which do not waive Section 8 of the Act, designated as Project Nos. 938, 1191, 1262 and 1446, subject to the requirement that the transferee obtain authority from the appropriate Government agency for the continued occupancy by these lines of the Government lands involved, and upon obtaining such authority to then apply for surrender of its licenses for these lines.

The Commission finds:

(1) Public notice of the filing of the application in Docket No. E-7204 has been given which recited the proposed transfer of the licenses held by Sierra Pacific Power Company.

(2) The proposed transferee is a corporation organized under the laws of the State of Nevada, is domesticated in the States of Nevada and California, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws as necessary for the operation of Project Nos. 938, 1191, 1262 and 1446.

(3) Approval of transfer, upon compliance with the conditions set forth herein, of the licenses for the projects designated in finding (2) above to the proposed transferee will not be inconsistent with the public interest.

The Commission orders:

(A) The transfer of the licenses for the projects designated in finding (2) above from Sierra Pacific Power Company to Sierra Nevada Power Company is hereby approved, effective as of the effective date of the merger referred to above, subject to Section 9.3 of the Commission's Regulations under the Federal Power Act, and subject to the further condition that the net investment in the projects shall not be increased on account of the transfer; provided that the transferee shall be subject to the conditions and obligations of the licenses and to all of the provisions of the Act to the same extent as though it were the original licensee for the projects. Our approval respecting the licenses for these projects is subject to the requirement that the transferee obtain authority from the appropriate Government agency for the continued occupancy by the lines of the Government lands involved, and upon obtaining such authority to then apply for surrender of its licenses for those lines.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the licenses for the projects designated in finding (2) above by Sierra Nevada Power Company. In acknowledgment of the acceptance of such licenses, this instrument shall be signed for Sierra Nevada Power Company, the new licensee, and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF TACOMA, WASHINGTON, PROJECT NO. 1862

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued March 29, 1965)

On November 9, 1964, the Department of Public Utilities, on behalf of the City of Tacoma, Washington, licensee for Project No. 1862, filed a letter requesting Commission approval of certain changes proposed in one of the Exhibit K drawings on file with the Commission.

The proposed changes involve a sale of a tract of approximately 7.2 acres of land and the lease of an adjacent tract of approximately 12.6 acres within the project boundary to provide for development of a commercial resort area on Alder Reservoir. Improvements of a permanent nature would be located on the land to be purchased. All of the lands would be open to the public, with some uses on a fee basis. The development would provide for the reconstruction and relocation of an existing public boat livery near the dam, damaged by fire in 1946. Public boat launching, picnicking, camping and sanitary facilities are located within about 2 miles of the proposed land sale and lease, on the shore of Alder Reservoir.

The development as proposed would provide greater public enjoyment of outdoor recreational opportunity of Alder Reservoir. Adequate lands for future development are available, including lands administered by the U.S. Forest Service and the State of Washington as well as lands owned by the licensee within the project boundary. The project lands proposed to be sold lie in Section 11, T. 15 N., R. 4 E., Willamette Meridian, Pierce County, Washington. The maximum normal elevation of Alder Reservoir is 1200 feet MSL, and the parcel proposed to be sold lies above the 1220 foot elevation and is not necessary in connection with the operation of the project.

The Commission finds:

It will not be inconsistent with the public interest to change the project boundary by eliminating therefrom the aforesaid tract of approximately 7.2 acres of lands and to approve the lease of other project lands by approving the revised Exhibit K drawing as hereinafter provided.

The Commission orders:

Exhibit K (FPC No. 1862-39), revised by our staff to show the removal of the aforesaid tract of approximately 7.2 acres of lands from Project No. 1862 and the lease of the tract of approximately 12.6 acres of project lands, are hereby approved, provided that the licensee file a copy of the lease with the Commission and reserves in such lease all rights of the licensee, its successors and assigns to use such leased lands for project purposes as contemplated in the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

VANCEBURG ELECTRIC LIGHT, HEAT AND POWER SYSTEM, VANCEBURG, KENTUCKY v. KENTUCKY POWER COMPANY AND AMERICAN ELECTRIC POWER COMPANY, INC., DOCKET NO. E-7184

ORDER GRANTING PETITION TO INTERVENE AND DENYING APPLICATION FOR RECONSIDERATION

(Issued March 29, 1965)

This order denies an "Application for Rehearing" of our March 4, 1965 order *supra*, p. 406, filed by Respondents, Kentucky Power Company and American Electric Power Company. Our order of March 4, 1965 denied Respondents' motions to dismiss and designated for hearing the complaint against Respondents filed by Vanceburg Electric Light, Heat & Power System. We are also granting the petition for leave to intervene filed by the Fleming-Mason Rural Electric Cooperative on March 22, 1965.

On March 19, 1965, Respondents filed with the Commission an "Application for Rehearing" directed to our order of March 4, 1965. Respondents' "Application for Rehearing" is being considered as a motion for reconsideration since our order of March 4, 1965, was not a final order of the Commission from which rehearing lies (see F.P.C. Rules of Practice and Procedure, § 1.34; *F.P.C.* v. *Metropolitan Edison Co.*, 304 U.S. 375).

Our order of March 4, 1965 ordered a hearing on the issues raised in Vanceburg's complaint and Respondents' answer thereto, including, *inter alia*, questions of rate discrimination, reasonableness of Kentucky Power Company's wholesale rates, jurisdiction, appropriate terms and conditions for service by Kentucky Power, and an alternative request for an order making possible service to Vanceburg from Fleming-Mason. The order also denied motions to dismiss made by Respondents, without prejudice to their renewal at the close of the hearing. We directed in that order that copies of the Complaint and Answer be served upon Fleming-Mason and that Fleming-Mason be offered opportunity to intervene in this proceeding.

On March 22, 1965, Fleming-Mason Rural Electric Cooperative, Flemingsburg, Kentucky, filed with the Commission a petition to intervene in the above-entitled proceeding. Fleming-Mason in its petition states, *inter alia*, that it is willing to interconnect with and sell power to Vanceburg Electric Light, Heat & Power System as requested in Vanceburg's complaint filed with the Commission October 1, 1964.

The "Application for Rehearing" raises no issues which were not considered by the Commission prior to the issuance of the March 4, 1965 order or which upon present consideration would lead us to deviate from the determination made therein that the matter should be designated for hearing. The Commission did not "overlook" the status of Vanceburg, as a municipality, to file a complaint under § 202(b) of the Act. We decided that issue in *Shrewsbury Municipal Light Department* v. *New England Power Company*, order of May 2, 1963; Opinion No. 438, issued July 27, 1964, 32 FPC 373. See *United States* v. *Public Utilities Commission of California*, 345 U.S. 295, 312–316. We believe that the complaint and answer, properly construed, raised the question of the rate level of Kentucky Power's sales to Vanceburg, but in any event it was within our power under Section 206 of the Act, in designating the complaint for hearing to put this question into issue. In short, the Complaint and Answer raise questions relating to issues of discrimination and rate level, the facts of which should properly be developed in the course of a hearing. Accordingly, dismissal of the complaint and termination of the proceeding at this time would be inappropriate.

The Commission further finds:

(1) It is appropriate for purposes of the Federal Power Act that Fleming-Mason be permitted to intervene in this proceeding.

(2) The "Application for Rehearing" filed by Respondents advances nothing which would cause us to reconsider the conclusion reached in our order of March 4, 1965, that Vanceburg's complaint against Respondents in this proceeding should be set for hearing.

The Commission orders:

(A) Fleming-Mason Rural Electric Cooperative is hereby permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission: *Provided, however*, That the participation shall be limited to matters affecting asserted rights and interests as specifically set forth in the petition to intervene: and *Provided, further*, That the admission of Fleming-Mason shall not be construed as recognition by the Commission that Fleming-Mason might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(B) The motion filed by Respondents for reconsideration of the Commission's order issued March 4, 1965, in this proceeding is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP65-190; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP65-191

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 30, 1965)

On December 24, 1964, American Louisiana Pipe Line Company (American Louisiana) filed in Docket No. CP65-190 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of natural gas, all as more fully set forth in the application on file with the Commission.

On December 24, 1964, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) filed in Docket No. CP65-191 an application, as supplemented on January 25, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities, all as more fully set forth in the application on file with the Commission.

American Louisiana proposes to: (1) construct and operate approximately 293 miles of 30-inch pipeline, looping portions of its main line in Louisiana, Mississippi, Arkansas, Tennessee, Kentucky and Indiana; (2) install additional compressor units totaling 12,800 horsepower, at compressor station Nos. 1, 4, 7 and 10, located in the States of Louisiana, Mississippi, Kentucky and Indiana, respectively; (3) construct and operate approximately 7.4 miles of 20-inch gas supply line together with a meter station, in St. Mary Parish, Louisiana.

Michigan Wisconsin seeks authorization to construct and operate (1) approximately 10.4 miles of 30-inch loop line between its Stations 10 and Wisconsin "A", in the State of Illinois; (2) approximately 14.7 miles of 30-inch loop line between its Stations Wisconsin "A" and Wisconsin "B", in the State of Illinois; (3) approximately 8.5 miles of 12-inch loop line on Applicant's line extending to Two Rivers, Wisconsin; (4) approximately 3.3 miles of 6-inch loop line on Applicant's line extending to Keokuk, Iowa; and (5) approximately 8.3 miles of 8-inch loop line on Applicant's line extending to Grand Haven, Michigan. Applicant also proposes to install an additional 1,100 horsepower of compression at its Station Wisconsin "B" in the State of Wisconsin.

American Louisiana states that the proposed facilities will provide expansion of the sales capacity of its system by approximately 89,000 Mcf per day, to meet, commencing in the fall of 1965, the increased requirements of its existing customers.

Michigan Wisconsin states that the proposed facilities are required for the expansion of its system capacity by approximately 75,000 Mcf per day, in order to enable it to meet the contract nominations of its customers for their existing markets, commencing September 1, 1965, and to provide reasonable volumes to meet pending and future requests for service to new markets.

The estimated cost of American Louisiana's proposed construction is $37,380,000, and will be financed initially with funds on hand and bank loans, the latter subsequently to be refinanced in major part with long-term debt.

The estimated cost of Michigan Wisconsin's proposed facilities is $4,158,000, and will be financed with funds on hand and funds generated internally.

There is no gas supply problem in either project.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing on March 26, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications as supplemented, and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 1, 1954, in Docket No. G–2306, *et al.* (13 FPC 380).

(2) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G–669 (5 FPC 954).

(3) The proposed construction and operation of facilities and sale and exchange of natural gas, as hereinbefore described and as more fully described in the applications, supplement and exhibits in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and sale and exchange of natural gas are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) American Louisiana and Michigan Wisconsin are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to American Louisiana and Michigan Wisconsin, authorizing the construction and operation of facilities and the sale of additional quantities of natural gas, as hereinbefore described and as more fully set forth in the applications and supplement in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon American Louisiana's and Michigan Wisconsin's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (B) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

(D) This certificate is further conditioned by Michigan Wisconsin's continuing to file the monthly reports in compliance with the Commission's order in Docket No. CP63-230 issued November 12, 1963, 30 FPC 1239, for the contract year commencing September 1, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-120

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 30, 1965)

On November 4, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP65-120 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant seeks authorization to: (1) construct and operate approximately 64 miles of 36-inch pipeline and approximately 31 miles of 30-inch pipeline, looping portions of its main line in Alabama, Mississippi, New York, Ohio, Pennsylvania, and Tennessee; (2) install a total of 5,000 additional horsepower of compression at its Station Nos. 219, 237 and 261, located at or near Mercer, Pennsylvania; Clifton Springs, New York, and Agawam, Massachusetts, respectively; and (3) replace approximately eight miles of 8-inch lateral line in Massachusetts with eight miles of 12-inch lateral line.

The application states that the proposed facilities will provide Applicant with an additional 47,000 Mcf of annual average day delivery capacity, increasing its system's capacity from 2,924,000 Mcf to 2,971,000 Mcf.

Applicant seeks further authorization for the transportation and sale of additional volumes of natural gas to existing customers, in order to meet the requirements of such customers for the 1965–66 heating season. Additional peak day sales volumes are stated to total 29,638 Mcf. A portion of the additional capacity herein authorized amounting to 9,946 Mcf per day will be utilized by Applicant for the transportation of natural gas to Iroquois Gas Corporation (Iroquois) on a long-term basis commencing with the 1965–66 winter heating season, as authorized by the Commission in Docket No. CP65–93. This transportation of 9,946 Mcf is currently being accomplished by means of the presently available unallocated capacity of Applicant's system. However, this unallocated capacity may not be available for transportation to Iroquois in the 1965–66 winter heating season and thereafter.

The estimated cost of Applicant's proposed facilities is $18,306,000, and will be financed through the sale of bonds, debentures, and preferred stock.

Pennsylvania Gas and Water Company (Penn Gas) by motion filed February 10, 1965, unopposed by Applicant, requested the inclusion herein of the same language as to its claim to remain a purchaser under Applicant's G–4 Rate Schedule as is more particularly set forth in the Commission's order issued July 13, 1964, in Docket No. CP64–165, 32 FPC 112.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 26, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record, finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Tennessee Gas Transmission Company, authorizing the construction and operation of facilities and the sale and delivery of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particulary the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

(D) The certificate issued by paragraph (A) is further conditioned by the following reservations: "the authorization hereinafter granted to Applicant is without prejudice to Penn Gas' claim that it is entitled to remain a purchaser under Applicant's G–4 Rate Schedule and issuance hereinafter of the certificate to the Applicant is not to be interpreted as permanently allocating 9,754 Mcf of Applicant's additional capacity to Penn Gas."

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65–188

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 31, 1965)

On December 23, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP65–188 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the transportation and sale of natural gas in interstate commerce, all as more fully set forth in the application.

Applicant requests authorization to construct and operate 64.8 miles of 30-inch and 24-inch main line loops on portions of its system in Kansas, Nebraska, and Iowa; 8.5 miles of branch lines in Iowa; two measuring and regulating stations in Iowa; and a total of 5,400 horsepower of compression at its Bushton and Mullinville, Kansas compressor stations. The above facilities are requested in order to increase Applicant's system capacity by 47,741 Mcf per day to supply the increased contract demand requirements of its present customers for the 1965-66 heating season. Of the total requested increase of 47,741 Mcf per day in contract demand, 25,741 Mcf is to meet the growth requirements of existing customers, and 22,000 Mcf is for Iowa Public Service Company for resale to

Terra Chemicals International, Inc. for use in the latter's proposed fertilizer plant in Woodbury County, Iowa.

Applicant also requests authorization to discontinue firm deliveries of gas to Minneapolis Gas Company (Minneapolis) for resale to Minneapolis-Moline Company (Moline), and to provide interruptible service instead.[1] There will be no change in Minneapolis' contract demand since the quantity of gas released by Moline will be utilized by Minneapolis for service to its other firm customers.

Total estimated cost of Applicant's proposed construction is $8,100,000, and will be financed by means of cash on hand, reserve accruals, and retained earnings.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 31, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Applicant's request for discontinuance of firm deliveries and substitution of interruptible deliveries to Minneapolis Gas Company for resale to Minneapolis-Moline Company should be granted.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

---

[1] Firm delivery of 623 Mcf of gas per day to Minneapolis for resale to Moline was authorized by Commission order issued May 1, 1959, in Docket No. G–11657, 21 FPC 624.

(B) Applicant's request for discontinuance of firm deliveries and substitution of interruptible deliveries to Minneapolis Gas Company for resale to Minneapolis-Moline Company is hereby granted.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the sales of natural gas hereby authorized shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2106

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued April 1, 1965)

Application was filed on August 14, 1964, by Pacific Gas & Electric Company, licensee for Project No. 2106, for Commission approval of modified plans for the afterbay dam and associated facilities of the Pit No. 7 development of the project. Project No. 2106 is located on the McCloud and Pit Rivers in Shasta County, California, and affects lands of the United States within the Shasta-Trinity National Forest.

The proposed modifications call for: (1) relocation of Pit 7 afterbay dam to a point about 950 feet upstream from the bridge near Fenders Flat, rather than the location previously proposed, about 500 feet downstream from the bridge; (2) changing the design of the dam from a low, slotted concrete gravity overpour dam to a low, rockfill overpour dam with a variable width concrete gravity weir section equipped with three discharge pipes 5 feet in diameter to be used to bypass water during construction; (3) construction of a boat ramp from the dam and an access road to it; and (4) provision for a flat area for recreation purposes at Fenders Flat.

The relocation of the afterbay dam avoids difficulties in diversion during construction, and its revised design permits its construction in sections without the necessity of a diversion tunnel, thus resulting in a savings of cost. The afterbay dam will operate automatically, without any mechanisms, to attenuate the discharge from the Pit No. 7 plant resulting in a relatively slow rise in river stage below it rather than an abrupt rise which would occur without it.

The afterbay dam as now proposed will be located in the headwaters of the U.S. Bureau of Reclamation's Shasta Reservoir and would be subject to being completely submerged by reservoir high water. Therefore, the rockfill portion of the afterbay dam has been designed for such overtopping and also for overtopping when passing large flood flows by providing galvanized steel matting to prevent unraveling. According to the licensee, model tests have confirmed the stability of this type of structure.

Construction of the boat launching ramp downstream from the dam and an access road to it will be a suitable replacement for the gravel bar previously used for this purpose, and will be more desirable and less costly than the ramp near the mouth of Potem Creek and access road to it as prescribed by Article 37 of the license. The U.S. Forest Service has indicated its approval of this improved arrangement.

According to the licensee, the estimated capital cost of the afterbay dam and associated facilities, as now proposed, is $850,000. The estimated capital cost of facilities previously proposed and originally licensed, but trended to present day costs, is $1,050,000. Hence, the proposed changes and modifications will result in an estimated capital cost saving of $200,000. We consider this figure as reasonable.

The Chief of Engineers, Department of the Army, has advised that the plans of the project structure affecting navigation are satisfactory and have been approved pursuant to Section 4(e) of the Federal Power Act.

The Department of Agriculture, through the Forest Service, has advised it has no objection to the proposed change in plan for the Pit No. 7 afterbay dam, and will not interfere or be inconsistent with the purposes for which the Shasta-Trinity National Forest was created or acquired.

The Department of the Interior, in reporting on the application, recommended that the modified plans for the Pit No. 7 afterbay dam be made subject to a condition that the United States Government not be liable for any damages to the licensee's subject project works either during construction or operation due to inundation or backwater from storage in Shasta Reservoir, and that the licensee shall develop and implement adequate measures to prevent water pollution acceptable to the State of California Department of Fish and Game, the U.S. Forest Service, and the Bureau of Sport Fisheries and Wildlife of the Department of the Interior.

Article 32 of the license provides for the prevention of releases of debris and gravel into the McCloud and Pit Rivers during construction of the project. Inasmuch as new Article 50 hereinafter to be included in the license provides for such prevention, Article 32 should be eliminated from the license.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The license for Project No. 2106 further amended as hereinafter provided is in the public interest.

(3) Exhibit L-8A (FPC No. 2106-61), filed with the application, conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K-6A (FPC No. 2106-44) and Exhibit L-8 (FPC No. 2106-53), now parts of the license, should be eliminated from the license to the extent they show the Pit No. 7 afterbay dam and reservoir.

The Commission orders:

(A) Exhibit L-8A (FPC No. 2106-61) is hereby approved as part of the license for Project No. 2106, and Exhibit K-6A (FPC No. 2106-44) and Exhibit L-8 (FPC No. 2106-53) are hereby eliminated from the license to the extent indicated in finding (3) above.

(B) The license for Project No. 2106 is hereby further amended, effective as of February 1, 1965, in the following respects:

PARAGRAPH I. Articles 32 and 37 of the license are eliminated therefrom.

PARAGRAPH II. The following new articles are included in the license:

Article 49. The Licensee shall not hold the United States liable for any damage to Pit No. 7 afterbay dam either during construction or operation due to inundation or backwater from storage in Shasta Reservoir.

Article 50. The Licensee shall take special precautions during construction and operation to prevent discharge into the McCloud and Pit Rivers of silt, debris, and other substances harmful to fish and wildlife and their habitats, and prevent to a reasonable extent loss, removal, disturbance, compaction, or shifting of gravel of the McCloud River channel downstream from McCloud Diversion dam except as appropriate for protection or improvement of fish and wildlife habitat; provided, the Licensee shall develop and implement such reasonable measures to prevent stream bank erosion and stream siltation and pollution as may be prescribed by the Commission upon its own motion or upon the recommendation of the State of California Department of Fish and Game, U.S. Forest Service, or Bureau of Sport Fisheries and Wildlife.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY AND PACIFIC GAS & ELECTRIC COMPANY

ORDER APPROVING HEADWATER BENEFITS SETTLEMENT

(Issued April 1, 1965)

Southern California Edison Company (Edison) on January 14, 1965, requested approval of an agreement with Pacific Gas & Electric Company (Pacific) concerning compensation for headwater benefits in the San Joaquin River basin in California. The Commission, as provided in Section 13.1 of the Regulations under the Federal Power Act, may approve such settlements in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

Edison's seven upstream projects, Project Nos. 67, 120, 2017, 2085, 2086, 2174, and 2175, provide headwater benefits to Pacific's Kerckhoff development, Project No. 96. Pursuant to ten headwater benefits determinations, the most recent of which was made on October 5, 1959 (22 FPC 646), Pacific has paid more than $1.2 million for headwater benefits which Edison provided to it from 1923 through December 31, 1953. Pacific also has made annual preliminary payments based on its estimated obligations for benefits which Edison provided to it from January 1, 1954, through December 31, 1963.

By letter dated January 7, 1964, Edison and Pacific entered into the following agreement respecting compensation for headwater benefits:

(a) Edison and Pacific have reviewed the preliminary payments which Pacific has paid to Edison for years 1954 through 1963, which have amounted to a total of $643,514 for such 10-year period, and agree that this amount is mutually satisfactory to them as payment in full for such period.

(b) Edison and Pacific agree that an annual payment of $72,000 by Pacific to Edison for years commencing with 1964 will be mutually satisfactory to them.

(c) Edison and Pacific agree that the annual payment set forth in (b) shall be subject to review every 5 years at the request in writing by either Edison or Pacific of the other in order to provide for revisions that may be appropriate by reason of changes in facilities, costs of interest, depreciation, or maintenance, or in pertinent operating conditions which might result in changes in benefits.

Since this agreement concerns headwater benefits compensation, it may be filed by the parties under Section 13.1 of the Regulations under the Federal Power Act for approval by the Commission.

The Commission finds:

The agreement of January 7, 1964, between Southern California Edison Company and Pacific Gas & Electric Company constitutes an effective and reasonable method for compensating the Southern California Edison Company for benefits received by the Pacific Gas & Electric Company's downstream improvement in the San Joaquin River basin in California.

The Commission orders:

The aforesaid agreement is approved with respect to settlement of headwater benefits under Section 13.1 of the Regulations under the Federal Power Act in lieu of headwater benefits determinations under Section 10(f) of the Federal Power Act until further order of the Commission is required due to changes in conditions.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP65-235

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 2, 1965)

On February 9, 1965, Lone Star Gas Company (Applicant) filed in Docket No. CP65-235 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 100 feet of 2-inch lateral pipeline extending from its transmission line F to the city gate of Highland Village in Denton County, Texas, in order to provide service to the said town and environs, all as more fully set forth in the application.

Applicant will construct and operate its own distribution system, which during the third year of operation will require estimated annual and peak-day volumes of 11,715 Mcf and 285 Mcf of natural gas, respectively.

Applicant estimates the cost of the pipeline facilities to be $735, the cost of the city gate measuring station to be $3,290, and the cost of the local distribution system to be $32,148, all of which will be financed from working capital.

Applicant has obtained a franchise from Highland Village authorizing it to distribute gas therein. The village is presently without the benefits of natural gas service.

Due notice of the filing of the application was published in the Federal Register on March 11, 1965 (30 F.R. 2418). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on April 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued April 11, 1944, in Docket No. G-442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Lone Star Gas Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP65-50

ORDER INSTITUTING INVESTIGATION AND REQUIRING REPORTING OF COST AND REVENUE DATA

(Issued April 2, 1965)*

Natural Gas Pipeline Company of America (Natural) is engaged in the transportation of natural gas in interstate commerce and in the sale for resale of natural gas in interstate commerce for ultimate distribution to the public, and therefore is a natural gas company within the Natural Gas Act.

On the basis of the data available to the Commission, it appears that the rates, charges, or classifications demanded, observed, charged, or collected in connection with the sales or transportation of natural gas by Natural, subject to the jurisdiction of the Commission, and the rules, regulations, practices, and contracts relating thereto, may be unjust, unreasonable, unduly discriminatory or preferential.

The company itself is most familiar with its books and records. It is appropriate, therefore, that Natural prepare and submit a report of its cost and revenue data for calendar year 1964, as hereinafter prescribed. It is not intended that the submittal of cost and revenue data by the company will be a substitute for the investigative responsibility of the staff nor will it preclude staff examination of the books or records of the company to the extent deemed necessary.

The Commission finds:

(1) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act, that an investigation be instituted

---

*See order issued April 30, 1965, denying reconsideration, etc., *infra*, p. 929.

by the Commission, upon its own motion, into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by Natural for or in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

(2) It is necessary and appropriate, in order to expedite such investigation that Natural submit the cost and revenue report hereinafter prescribed.

The Commission orders:

(A) Under authority of Sections 4 (a) and (b), 5, 10, 14, 15 and 16 of the Natural Gas Act an investigation of Natural is hereby instituted for the purpose of enabling the Commission to determine whether, with respect to any transportation or sale of natural gas, subject to the jurisdiction of the Commission, made or proposed to be made by Natural, any of the rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory, or preferential.

(B) On or before April 30, 1965, Natural shall report to the Commission cost and revenue data conforming with subsection (f) of Section 154.63 of the Commission Regulations under the Natural Gas Act (except statements N and P), The data shall utilize calendar year 1964 adjusted for changes in revenues and costs which are known and are measurable with reasonable accuracy at the time of filing and which will become effective within nine months after the base period. The 12 months base period shall be adjusted to eliminate nonrecurring items (except minor amounts so specified), but this shall not preclude Natural from including items clearly designated as such, which, on the basis of existing facts, detailed in the report, it can show will be experienced or from including an appropriate normalizing adjustment, in lieu of a specified nonrecurring item. Working papers prepared in conjunction with the cost and revenue data shall be included in the report submitted and all statements, schedules and working papers shall be prepared in accordance with the classifications provided in the Uniform System of Accounts. All adjustments and estimates shall be explained and the bases and procedures used in the deprivation thereof shall be submitted in detail to permit ready analysis and verification thereof. Ten sets of the cost and revenue data shall be served upon the Commission, and Natural shall simultaneously serve copies of such data upon all of its jurisdictional customers and the State commission of each state in which it does business.

(C) Further orders in this proceeding will specify the dates for any formal hearing under Section 5 of the Natural Gas Act which the Commission on further consideration of the matter deems appropriate and will provide an opportunity for intervention in such hearing by interested parties.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-244

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 2, 1965)

On February 18, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-244 an application pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the construction for a 12-month period and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $5,000,000 and no single project will exceed a cost of $500,000, which costs will be financed from funds on hand.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the application has been received.

At a hearing held on April 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G–200 and G–207 (3 FPC 273).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct during the twelve-month period commencing on the date of issuance of this order, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the twelve-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

(E) The certificate issued herein shall not be construed as authorizing Applicant to attach new customers or to increase the volume of sales to existing customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65–70

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING WITHDRAWAL OF PETITION FOR LEAVE TO INTERVENE

(Issued April 2, 1965)

On January 22, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP65–70, an application to amend an order of the Commission issued December 14, 1964, 32 FPC 1420, in Docket No. CP65–70, authorizing among other things the sale of natural gas to Carolina Pipeline Company (Carolina), an annual volume of 2,000,000 Mcf of natural gas under Applicant's Rate Schedule ACQ–2, all as more fully set forth in the application to amend. Applicant seeks authorization to increase the annual contract volume of ACQ or off-peak gas allocated to Carolina to 4,000,000 Mcf to be effective only during the calendar years 1965 and 1966, in lieu of the 2,000,000 Mcf originally authorized in said order of December 14, 1964.

The proposed additional volumes will be in addition to the existing sales being made by Applicant to Carolina under Applicant's FPC Gas Rate Schedules CD–2 and E–2.

Carolina, by letter dated January 6, 1965, requested Applicant to increase the annual contract quantity under Rate Schedule ACK–2 for the calendar years 1965 and 1966 only.

Public Service Electric and Gas Company filed on March 8, 1965 a request to withdraw petition for leave to intervene filed in this proceeding on January 22, 1965.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on February 9, 1965 (30 F.R. 1827). No protest, other petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued December 14, 1964, in Docket No. CP65–70 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 14, 1964 in Docket No. CP65–70 be and the same is hereby amended by authorizing Applicant to increase the annual contract volume of ACQ or off-peak gas allocated to Carolina to 4,000,000 Mcf to be effective only during the calendar years 1965 and 1966, in lieu of the 2,000,000 Mcf originally authorized in said order of December 14, 1964.

(B) In all other respects said order shall remain in full force and effect.

(C) The request of Public Service Electric and Gas Company filed March 8, 1965 to withdraw its petition for leave to intervene in Docket No. CP65–70 on March 1, 1965, be and the same is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA POWER COMPANY AND MOUNT VERNON MILLS, INC., PROJECT NO. 2408

ORDER ISSUING LICENSE (MAJOR)

(Issued April 5, 1965)*

On September 10, 1963, Alabama Power Company filed an application for license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2408, known as the Thurlow Project, located on the Tallapoosa River in Tallapoosa and Elmore Counties, Alabama, in the vicinity of Tallassee and Carrville. On January 9, 1964, Mount Vernon Mills, Inc. of Baltimore, Maryland filed a joinder in the application filed by Alabama Power Company. We are hereinafter sometimes referring to these two companies as Joint Applicants.

According to the application for license, the original project, consisting of a wing dam across the western part of the river with power generating facilities, was constructed between 1843 and 1845. In 1897, the original dam was extended completely across the river and a new powerhouse was constructed on the east bank. On June 8, 1923, the Joint Applicants entered into an agreement whereby Alabama obtained the right to redevelop the site, and Alabama installed two additional generating units, of 3,000 kilovolt-amperes each, in stalls provided in the powerhouse. In 1928, Alabama raised the dam crest from elevation 258 to 284 feet and constructed a new powerhouse on the right bank containing three generating units. Alabama owns unit Nos. 1 and 2, and Mount Vernon owns Unit No. 3, although the latter is operated by Alabama.

The Thurlow Project is situated on the Tallapoosa River about 50 miles above its confluence with the Coosa River which joins with the Tallapoosa River to become the Alabama River. The United States has improved the Tallapoosa River for navigation from its mouth to a point 48 miles upstream therefrom.

---

*Order issued June 2, 1965, granting rehearing for further consideration [unreported].

The drainage area of the Tallapoosa River at Thurlow dam is about 3,300 square miles. The normal maximum water surface elevation of the Thurlow reservoir is 288.85, with a gross capacity of 18,400 acre-feet, of which 2,800 acre-feet are usable with a five-foot drawdown. The spillway capacity with the water surface at the top of the non-overflow sections is about 371,000 cfs, which is equivalent to the total peak output flow from Alabama's Martin project, about 10 miles upstream, plus the inflow from the intervening drainage area. The Thurlow project is a part of a more comprehensive plan which provides regulation for the flow of the Alabama River and hydroelectric power for the area by utilizing and coordinating stream flow and storage from two adjacent tributary watersheds. Available records show that the Thurlow project is capable of affecting the stage of the Tallapoosa River in the stretch improved for navigation and the stage of the Alabama River at the Montgomery gage situated 55 miles downstream from the project. No lands of the United States are affected by the project.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures affecting navigation pursuant to Section 4(e) of the Act, and a condition was recommended for inclusion in any license for the project to insure that the project would not be operated in a manner that would nullify the provisions in the interest of navigation included as Article 8 in the license for Alabama's Martin Project No. 349 located upstream from the Thurlow project.

The Department of the Interior, in reporting on the application, stated that the project has no significant deleterious effects on fish and wildlife, and that the conditions usually included in a license for such a project in the interests of fish and wildlife and recreation will be adequate.

The Department of Health, Education, and Welfare has advised that the project has not created any problems affecting water supply, water pollution or vector control problems and none is expected to occur in the near future.

On May 11, 1964 Ben Walker, *et al.*, owners of lands along the Tallapoosa River which were flooded as a result of a storm on February 24, 1961, filed a petition to intervene in this proceeding. On June 5, 1964 Alabama Power Company moved to dismiss the petition to intervene on the grounds that Petitioners' interest related solely to pending civil damage proceedings relating to past operations of the Martin project and is not related to the application for license for the Thurlow project. While, for the reasons set forth herein, we do not concur in the specific relief requested by Petitioners, we think their petition does relate to matters affecting the present license proceeding in which they may have an interest. We shall therefore grant the petition to intervene.

The Petitioners alleged that the Joint Applicants by opening the gates at the Thurlow dam, could inundate their lands and that the Commission should insert in any license for the Thurlow project a requirement that the Joint Applicants maintain a cushion of reservoir capacity in the Thurlow reservoir during the rainy season between December 1 and April 1 of each year whereby exceptional and unusual floods could be absorbed within the reservoir capacities. Since Thurlow is a run of the river plant and enlargement of its storage capacity would be infeasible, the particular remedy suggested by these parties does not appear appropriate. However, we are inserting in the license a special article which will require Alabama Power to operate all of its Tallapoosa River projects, including the Martin reservoir which provides the primary storage on this stretch of the river in a manner which will tend to insure that stages no higher than natural peak stage can occur downstream from the Thurlow dam. Moreover, we are including a separate article directing Alabama Power Company to develop and implement a plan to provide adequate warning to downstream property owners whenever it appears that the discharge from the Martin storage project will be in excess of the hydraulic capacity of its power plant.

Pursuant to Section 4.41 of our Regulations under the Federal Power Act, the Applicant filed an Exhibit R setting out in detail the circumstances relating to recreational use in and around the project area. Applicant will be required to provide free access to project lands and waters by Article 18 of the license. Applicant's Exhibit R indicates, however, that the recreation potential of this run of the river project, like that of the Yates project immediately upstream therefrom, is not presently substantial and that the major recreational activities in the area are provided by the Licensee at its upstream Martin project where large storage facilities make boating and other recreational activities more feasible. Under these circumstances we have concluded that no additional recreational use facilities are required at the Thurlow project at the present time. Nevertheless we are providing by special Article 32 that the Licensee shall continue to cooperate with Federal, State, and local agencies in the development of facilities necessary for full recreational utilization by the public of project lands and waters and that it shall report the results of such cooperation and development to the Commission periodically at six-year intervals from the date of its license. Moreover, pursuant to the provisions of Article 17 of the license, the Commission is reserving the authority to require the Licensee to construct, maintain, and operate such additional recreational facilities as the Commission, after notice and opportunity for hearing, may determine are necessary and desirable and reasonably consistent with the primary purpose of the project.

Joint Applicants request a 50-year license, effective from the date of its issuance. In accordance with the criteria set forth in our April 25, 1962, Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962, and a termination date of December 31, 1993.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Joint Applicant Alabama is a corporation organized under the laws of the State of Alabama, and Joint Applicant Mount Vernon is a corporation organized under the laws of the State of Maryland and each has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the joint application has been given. Except for the aforementioned petition to intervene, no protests have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 77,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform

to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Alabama Power Company and Mount Vernon Mills, Inc. (Joint Licensees) under Section 4(e) of the Federal Power Act (Act), for a period effective as of April 1, 1962, and terminating December 31, 1993, to the extent of the interest of each of the Joint Licensees in the ownership of the project facilities, for the continued operation and maintenance of constructed Thurlow Project No. 2408, located on the Tallapoosa River, and affecting navigable waters of the United States, subject to the terms and conditions of the Act which is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Thurlow Project No. 2408 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensees or by the United States: such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license.

Exhibit J: General Map (FPC No. 2408–1)

Exhibit K: Project Area Map (FPC No. 2408–2)

(ii) all project works consisting principally of: an open, fixed crest, concrete spillway with concrete non-overflow sections creating a reservoir at normal pool elevation of 288.85 feet with an area of 574 acres extending about three miles to the Yates Dam; the powerhouse containing two 25,000 kilowatt generators owned by Alabama Power Company and one 8,000 kilowatt generator owned by Mount Vernon Mills, Inc., step-up substation, 110 KV transmission line from Thurlow plant to the interconnected transmission system of Alabama Power Company; and appurtenant electrical and mechanical facilities; the location and character of the project works being more fully shown and described by the exhibits hereinbefore cited and other exhibits which are designated and described as follows:

Exhibit L	FPC No.	Showing
Sheet 1	2408–3	General layout of dam and powerhouse.
Sheet 1A	2408–11	Plan and sections of abutments.
Sheet 2	2408–4	Longitudinal section of powerhouse along centerline of units.
Sheet 3	2408–5	Plan of powerhouse showing equipment layout.
Sheet 4	2408–6	Sectional plan of powerhouse at elevation 226.
Sheet 5	2408–7	Transverse section powerhouse main unit.
Sheet 6	2408–8	Typical spillway section and crest detail.
Sheet 7	2408–9	Transverse section through mill unit.

Exhibit M, consisting of four typewritten pages entitled "General Description of Mechanical, Electrical and Transmission Equipment," filed in the Commission September 10, 1963.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in L–3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114, which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof except for Article 25 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. Licensees shall not operate the Thurlow Project in such a manner which would nullify the provisions in the interest of navigation included in the license for Project No. 349, (Martin) of the Alabama Power Company, located upstream.

Article 31. The Licensees shall pay to the United States the following charge, effective as of April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations in effect from time to time. The authorized installed capacity for such purpose is 77,300 horsepower.

Article 32. Licensees shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensees shall advise the Commission by letter of the results of cooperation with such agencies and of further recreation development at the project.

Article 33. Licensee, Alabama Power Company, shall operate its Tallapoosa River Projects Nos. 349, 2407 and 2408 in such manner that stages no higher than natural peak stage occur downstream from the Thurlow dam.

Article 34. Licensee, Alabama Power Company, shall implement a plan satisfactory to the Commission's Regional Engineer, which will provide public notice and warning to downstream property owners along the Tallapoosa River when discharge from Martin Project No. 349 is in excess of the hydraulic capacity of the Martin power plant.

Article 35. Licensee, Alabama Power Company, shall operate its Tallapoosa River Projects in the interests of flood control and coordinate such operation with the District Engineer, Corps of Engineers, as is consistent with the primary purpose of the reservoirs to provide for Licensee's power requirements.

(D) Petitioners Ben Walker, *et al.*, are hereby permitted to become interveners in this proceeding subject to the rules and regulations of the Commission: *Provided, however,* That participation by the Petitioners shall be limited to matters affecting asserted rights and interests specifically set forth in their petition for leave to intervene; and *Provided, further,* That the admission of the Petitioners shall not be construed as recognition by the Commission that they might be aggrieved because of any order or orders by the Commission in this proceeding.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensees and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross *dissenting.*

Ross, *Commissioner; dissenting:*

On December 13, 1963 and on May 11, 1964 a group of persons, owning property adjacent to the Tallapoosa River, filed a Petition to Intervene in this matter and requested certain relief. The majority recognize that the interests alleged by these persons are substantial enough to warrant intervention since their interests are related to the operation of the present project as well as other projects licensed to Alabama Power Company.

It may be that modification of the operation of the flashboards and adequate warning would alleviate the intervenors' problems. Whatever corrective measures may be appropriate, if any, it is certain the intervenors and the applicant are now confronted with a settled position by the Commission. Despite the fact that the complaining parties have had a petition on file for nearly a year and a half, the intervenors are now for the first time being notified of their rights of intervention and will have to rely upon a petition for rehearing to present any other alternative measures for relief, an inadequate solution at best.

In my opinion, the matters raised in the petitions should have been fully explored with all interested parties prior to the grant of the requested license. The majority refuses to follow this course of action, and I therefore dissent.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. G–2214

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1965)

On February 16, 1965, Cities Service Gas Company (Cities) filed a request for further amendment to the certificate of public convenience and necessity issued in Docket No. G–2214 on September 25, 1953, 12 FPC 1257 as amended by orders issued on March 12, 1962, 27 FPC 497, and February 19, 1964, 31 FPC 433. Cities requests deletion of the authorization granted to it in the Commission's order issued February 19, 1964, to construct and operate replacement facilities in order to increase maximum annual deliveries to Farmers Chemical Company (Farmers) from 338,154 Mcf to 1,701,043, Mcf.

The original order of September 25, 1953, authorized Cities to construct and operate certain facilities in Cherokee County, Kansas, and in Jasper County, Missouri, in order to sell and deliver 182,077 Mcf of natural gas annually, on an interruptible basis, to Farmers (formerly Missouri Farmers' Association, Inc.) to be utilized by Farmers at its fertilizer plant near Empire City, Kansas. The order of March 12, 1962, authorized an increase in maximum annual deliveries to 338,154 Mcf.

The application for the order issued on February 19, 1964, resulted from plans by Farmers to increase the capacity of its fertilizer plant. The reason for the present request is that Farmers has now abandoned its plans to enlarge its plant, and greater quantities of natural gas will not be required.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order in Docket No. G–2214 issued September 25, 1953, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order in Docket No. G–2214 issued September 25, 1953, as amended, be and the same is hereby further amended by deleting therefrom the authorization granted to Cities Service Gas Company by the Commission's order issued February 19, 1964, to construct and operate replacement facilities and to transport and deliver, on an interruptible basis, up to a maximum of 1,701,043 Mcf of natural gas annually to Farmers Chemical Company.

(B) In all other respects said order, as amended by the Commission's order issued on March 12, 1962, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO GAS SUPPLY COMPANY, DOCKET NO. CP60–101; EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61–26

ORDER PERMITTING WITHDRAWAL OF APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1965)

On March 22, 1965, El Paso Gas Supply Company (Supply Company) and El Paso Natural Gas Company (El Paso) filed in Docket Nos. CP60–101 and CP61–26, respectively, notices pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure withdrawing applications for certificates of public convenience and necessity filed in said dockets on May 13, 1960, and July 29, 1960, respectively. El Paso had requested authorization to construct and operate facilities for the purchase of natural gas from Houston Pipe Line Company (Houston) and Lo-Vaca Gathering Company (Lo-Vaca). Supply Company had requested authorization to transport this gas from the sellers to El Paso.

The contract between El Paso and Houston provided that the gas would be purchased by El Paso in Texas and would be consumed solely as fuel by El Paso and by Phillips Petroleum Company in Texas. In a petition filed in Docket No. CP61–177 for a declaratory order to remove uncertainty as to the jurisdictional character of Houston's sale, Houston stated that it could not make the gas available to El Paso if the gas was moved or sold in interstate commerce. In *Lo-Vaca Gathering Company, et al.*, Docket No. CI60–693, *et al.*, 26 FPC 606,[1] aff'd *sub nom. People of the State of California, et al.* v. *Lo-Vaca Gathering Company, et al.*, 379 U.S. 366 (1965), the Commission held that both sales would be jurisdictional.

In their notices withdrawing the applications Supply Company and El Paso state that the economic feasibility of the project of which the proposals in Docket Nos. CP60–101 and CP61–26 are parts is seriously impaired by loss of the gas which will not be made available to El Paso. Supply Company and El Paso also cite subsequent large discoveries of natural gas in the Delaware Basin which will make the project, as proposed, unnecessary. Accordingly, it would be appropriate to permit withdrawal of the applications.

The Commission finds:

Good and sufficient cause has been shown by El Paso and Supply Company to permit the withdrawal of the applications for certificates filed in Docket Nos. CP61–26 and CP60–101, respectively.

---

[1] Opinion No. 348.

The Commission orders:

El Paso Natural Gas Company, Applicant in Docket No. CP61–26, and El Paso Gas Supply Company, Applicant in Docket No. CP60–101, be and they are hereby permitted to withdraw the applications for certificates filed in said dockets.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65–61

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1965)

On February 18, 1965, El Paso Natural Gas Company (El Paso) filed a petition to amend the Commission's order in Docket No. CP65–61, issued pursuant to Section 7(c) of the Natural Gas Act on December 15, 1964, 32 FPC 1425, which order among other things, authorized El Paso to construct and operate a measuring and regulating station adjacent to its Northwest Division Eugene lateral in Lane County, Oregon, and to sell and deliver natural gas at the outlet thereof to Northwest Natural Gas Company (Northwest Natural) for resale to Coburg Veneer Company's plant near Coburg, Oregon. Northwest Natural was to construct and operate connecting facilities and provide El Paso with an access road to the meter station.

Northwest Natural has determined that it can install the measuring facilities at the terminus of its supply line, at its sole expense, more economically than it can provide access to the meter proposed by El Paso, and it has done so. Therefore, El Paso seeks to have the authorization for the measuring and regulating station described above deleted from the certificate of public convenience and necessity and in lieu thereof to obtain authorization to construct and operate a mainline tap at the delivery point to Northwest Natural.

Due notice of the filing of the petition was published in the Federal Register on March 11, 1965 (30 F.R. 3332). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP65–61 on December 15, 1964, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity to El Paso Natural Gas Company in Docket No. CP65–61 on December 15, 1964, is hereby amended by deleting authorization for the construction and operation of the measuring and regulating station and authorizing, in lieu thereof, the construction and operation of a mainline tap as hereinbefore described and as more fully described in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GAS UTILITY DISTRICT NO. 2 OF POINTE COUPEE PARISH, LOUISIANA, DOCKET NO. CP65-107

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 5, 1965)

On October 23, 1964, Gas Utility District No. 2 of Pointe Coupee Parish, Louisiana (Applicant) filed in Docket No. CP65-107 an application, as supplemented on December 28, 1964, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Eastern Transmission Corporation (Texas Eastern) to establish two separate physical connections of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution within the District and environs, all as more fully set forth in the application and supplement.

The total estimated volumes of natural gas required to meet Applicant's annual and peak day requirements for the initial three years of service are stated to be:

	1st year	2d year	3d year
Annual (Mcf)	80,122	86,719	93,154
Peak day (Mcf)	1,054	1,143	1,230

Applicant's total project cost, including transmission line and distribution system, is estimated to be $825,000, and will be financed with proceeds from the sale of revenue bonds.

On January 22, 1965, Texas Eastern filed an answer to the application and supplement filed by Applicant in this proceeding stating it would render the requested service on order of the Commission favorably determining the merits of the application.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on March 4, 1965 (30 F.R. 2829). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 11, 1947 in Docket No. G-880 (6 FPC 171).

(2) Applicant, Gas Utility District No. 2 of Pointe Coupee Parish, Louisiana, a corporate subdivision of the State of Louisiana having its principal place of business in Pointe Coupee Parish, Louisiana, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Texas Eastern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant

with Texas Eastern in accordance with the Commission's Regulations, up to 1,230 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Texas Eastern serve Applicant, as hereinafter ordered, will not place an undue burden upon Texas Eastern, require Texas Eastern to enlarge its transportation facilities, or impair Texas Eastern's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Texas Eastern for distribution in Gas Utility District No. 2 of Pointe Coupee Parish, Louisiana, within one year from the date of the issuance of this order.

The Commission orders:

(A) Texas Eastern Transmission Corporation be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 1,230 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Texas Eastern in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Texas Eastern's presently filed appropriate rate schedule.

(B) Texas Eastern shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KASKASKIA GAS COMPANY, DOCKET NO. CP65-176

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 5, 1965)

On December 15, 1965, Kaskaskia Gas Company (Applicant) filed in Docket No. CP65-176 an application as supplemented on February 5, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission Corporation (Mississippi) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in the community of Iuka, Illinois (Iuka), and environs, all as more fully set forth in the application and supplement thereto.

Applicant proposes (1) to construct a natural gas distribution system in Iuka and approximately 0.85 mile of 2-inch lateral transmission line, and (2) to receive deliveries of gas for Iuka at a point on Mississippi's main transmission line in Marion County, Illinois, approximately 0.85 mile due south of Iuka. The Illinois Commerce Commission, on January 20, 1965, issued an order authorizing Applicant to serve the Iuka area.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for Iuka in the initial three-year period of proposed operations are stated to be:

	1st year	2d year	3d year
Annual (Mcf)	9,600	13,800	22,000
Peak day (Mcf)	106	155	250

The estimated cost of Applicant's proposed construction is $58,000, and will be financed by the issuance of common stock and by a loan from the First National Bank of Springfield, Illinois.

On January 21, 1965, Mississippi filed an answer to the application stating it does not object to the issuance of an order providing for the installation of facilities and for the sale of up to 250 Mcf of natural gas daily provided Applicant executes an appropriate service agreement for a volume of up to 250 Mcf per day for resale and distribution in Iuka, Illinois and environs.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on January 7, 1965 (30 F.R. 176). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020).

(2) Applicant, Kaskaskia Gas Company, an Illinois corporation having its principal place of business in Salem, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Mississippi to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Mississippi in accordance with the Commission's Regulations, up to 250 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Mississippi serve Applicant, as hereinafter ordered, will not place an undue burden upon Mississippi, require Mississippi to enlarge its transportation facilities, or impair Mississippi's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Mississippi for distribution in Iuka, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Mississippi River Transmission Corporation be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Kaskaskia Gas Company, as herein described, and to sell and deliver up to 250 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Mississippi in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described.

(B) Mississippi shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MIDWEST MISSOURI GAS COMPANY, DOCKET NO. CP65–179

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 5, 1965)

On December 18, 1964, Midwest Missouri Gas Company (Applicant) filed in Docket No. CP65–179 an application, as supplemented on March 9, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission Corporation (Transmission) to make a physical connection of its transmission facilities with Applicant's proposed distribution facilities and to sell and deliver natural gas to Applicant for distribution and resale to residential and commercial customers located in the northeast section of Jefferson County, Missouri, all as more fully described in the application.

The estimated volumes of natural gas required to supply Applicant's annual and peak day requirements for the initial three years of proposed operations are stated to be:

	1st year	2d year	3d year
Annual (Mcf)	168, 400	208, 000	248, 100
Peak day (Mcf)	2, 056	2, 476	2, 897

This gas will be made available to Applicant through a corresponding reduction in the contract demand of Laclede Gas Company, (Laclede) under Laclede's contract with Transmission. (Laclede owns 60 percent of Applicant, and Missouri Natural Gas Company owns the remaining 40 percent.) It is stated that Applicant, Laclede and Transmission are all agreeable to the change and that the reduction will not diminish Laclede's ability to serve its market.

The total cost of construction of Applicants' distribution facilities is estimated to be $804,930, and the cost of metering and regulating facilities to be constructed by Transmission is estimated to be $16,500.

The Missouri Public Service Commission has authorized Applicant to serve the proposed area.

Laclede proposes to finance Applicant's construction with renewable short-term notes. The method of long-term financing will be determined later.

On December 30, 1964, Transmission filed its answer with the Commission and stated it has no objections to providing the requested service.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on January 8, 1965 (30 F.R. 241). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Mississippi River Transmission Corporation, a Delaware corporation with its principal place of business in St. Louis County, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 339 in Docket No. CP60–95, *et al.*, issued November 29, 1960 (24 FPC 1020).

(2) Applicant is a public utility company in the State of Missouri and is authorized to construct and operate the proposed facilities and to distribute and sell natural gas to inhabitants of the communities along its proposed pipeline system.

(3) It is necessary and desirable in the public interest that Transmission be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver to Applicant its daily and annual requirements of natural gas, as set forth in the application and as hereinafter ordered and conditioned.

(4) The requirement that Transmission serve the Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Mississippi River Transmission Corporation be and is hereby directed to establish physical connection of its natural gas transmission system with the facilities of the Applicant and to sell and deliver up to 2,897 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Mississippi River Transmission Corporation shall execute and file with the Commission a new service agreement with Laclede Gas Company reflecting the reduction in contract demand, in accordance with the Commission's Regulations.

(C) Mississippi River Transmission Corporation shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

(D) Applicant shall be prepared to receive natural gas from Transmission within one year from the date of this order.

(E) Mississippi River Transmission Corporation shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INDEPENDENT PRODUCERS OF NATURAL GAS—ANTI-TRIGGERING CONDITIONS IN CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, DOCKET NO. R-273

ORDER NO. 296

TENTH AMENDMENT TO STATEMENT OF GENERAL POLICY NO. 61-1

(Issued April 5, 1965)*

The Commission's Statement of General Policy No. 61-1 issued on September 28, 1960 (24 FPC 818, 18 CFR 2.56), specified acceptable price levels for initial service rates and proposed rate changes that would be accepted without suspension provided no protests or petitions to intervene were filed with respect thereto. The Commission noted in this Policy Statement that it was necessary to formulate a policy that was sufficiently broad to reach all its pricing areas in order to protect the consumer by "making the most effective use possible of the Commission's limited facilities in discharging the new and additional duties called for by the regulation of producers of natural gas". The Commission also recognized therein that it would be necessary to make changes to and to augment this Statement as demanded by time and circumstances.

The Commission's continuing experience with the effects of indefinite escalation clauses contained in some producer contracts for the sale of natural gas has made it manifest that in order for it to meet its statutory obligations to the consumer that it must implement its Policy Statement with respect to the operation and effect of such clauses.

---

*Published in the Federal Register on April 10, 1965 (30 F.R. 4670). Reconsideration denied June 2, 1965, 33 FPC 1190.

The Commission has in numerous recent certificate proceedings[1] relating to the initial sale of natural gas in interstate commerce utilized price-conditioning techniques in order to prevent the escalation of prices above existing triggering levels or to new price plateaus while the just and reasonable prices for such sales can be determined. The Commission indicated in these previous decisions that the price-conditioning techniques were adopted as a "* * * means of protecting the public interest by keeping gas at triggering prices from entering interstate commerce in the interim period until just and reasonable area rates are fixed".[2] It is clear that these objectives can be effectively frustrated if persons receiving permanent certificates to make sales of gas in noncontested proceedings could file increased rates at such triggering levels. Accordingly, we are amending the Statement of General Policy, as set out below, to outline the procedure we intend to follow henceforth to preclude any such result.

To accomplish our objective, we have set out in a new paragraph (d) of the Policy Statement triggering levels above which we propose, by condition in the permanent certificate granted in any noncontested proceeding to preclude any increased rate filing for a fixed period. As will be observed, the moratorium levels are fixed at two cents above the present initial price ceiling except in those areas in which we have already established triggering levels in litigated cases, in which case we have utilized the established level. This reflects a Commission study indicating that in the various areas which have not been the subject of Section 7 hearings any price more than two cents above the new gas ceiling is likely to result in triggering filings by other sellers in the area or to establish a new high price plateau. The moratorium period will extend to January 1, 1968, except for those areas in which earlier dates have already been established. Any applicant wishing to demonstrate that the price specified in the Policy Statement is not a triggering rate or otherwise wishing to contest the propriety of the condition will be permitted to do so, upon filing a timely request. In such situation, the application will be set for formal hearing and, if the producer wishes to commence operation pending such hearing, he must comply with the provisions of Section 157.28 of the Regulations under the Natural Gas Act governing temporary authorizations.

The Commission finds:

In view of the fact that this Statement of Policy does not prescribe any course of action on the part of any person but merely sets forth the Commission's contemplated course of action, notice under section 4(a) of the Administrative Procedure Act is not required and the Statement may be made effective upon issuance.

The Commission, acting pursuant to authority granted by the Natural Gas Act, as amended, particularly sections 4, 5, 7, and 16 thereof (52 Stat. 822, 823, 824, 830, 15 USC 717c, 717d, 717f, 717o), *orders:*

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7191

ORDER AUTHORIZING ACQUISITION AND DISPOSITION OF FACILITIES

(Issued April 5, 1965)

Pacific Power & Light Company (Pacific), filed an application with the Federal Power Commission on November 12, 1964, seeking an order pursuant to Section 203 of the Federal Power Act authorizing the exchange of certain electric facilities with the Consumers Power, Inc. (Consumers).

Pacific is a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Washington, Wyoming, California, Montana and Idaho with its principal business office at Portland, Oregon. It is engaged primarily in the business of generating, purchasing, transmitting, selling and distributing electric energy. It operates 12 physically separate electric systems which are interconnected through facilities of other electric utility systems.

Consumers was incorporated under the laws of the State of Oregon in 1939 as the Benton-Lincoln Electric Cooperative, Inc., and changed its name in 1955. It is an REA financed cooperative system engaged in transmitting and distributing electric energy in six counties in Oregon. It has no generating capacity and purchases electric energy to meet its requirements, mostly from Bonneville Power Administration.

The facilities to be acquired by Pacific from Consumers are located in the Willamette Valley area of Oregon and consist of 64 miles of distribution lines which serve 565 customers. The facilities include poles, conductors and all appurtenances used in rendering the service affected, together with all other property related thereto. The facilities to be acquired by Consumers from Pacific consist of 119 miles of distribution lines serving 954 customers.

According to the application, Pacific will pay a consideration of $178,700 for the properties to be acquired from Consumers which amount is $75,500 in excess of estimated depreciated original cost of $103,200 and an acquisition adjustment of $75,500 will be created on the books of Pacific. This adjustment will be eliminated by a debit to Account 435, Miscellaneous Debits to Surplus. For the properties to be transferred to Consumers, Pacific will receive a consideration of $352,000, which amount is $126,000 in excess of estimated depreciated original cost of $226,000, and, therefore, the sale will create a gain of $126,000 on Pacific's books. Pacific proposes to credit this gain to Account 434, Miscellaneous Credits to Surplus.

Applicant estimates that 89 of the 861 residential customers which will be transferred to Consumers will experience a small rate reduction amounting to about 37¢ per month. The remainder of the 861 customers will experience no change in rates. Applicant also estimates that 52 of the 507 residential customers which will be transferred from Consumers to Applicant will experience a small rate increase amounting to about 37¢ per month and that the remainder will experience no change in rates. Thirty-three customers served under a general rate schedule and one served under a government and municipal rate schedule will be transferred from Applicant to Consumers and 17 commercial customers served by Consumers will be transferred to Applicant. None of these customers will experience a change in rates.

Applicant states that the exchange of certain electrical distribution facilities in counties of the Willamette Valley will eliminate present unsatisfactory conditions of competition and duplication of systems with resultant benefits to the utilities and the consumers in less cost and better service. Greater efficiency and economy will result from more cohesive, integrated operating units and the prevention of unnecessary future duplication of extensions into common territory. Principal intangible benefits which will result from the transaction are the improvement of safety conditions for maintenance crews due to removal of cross-overs and lines in close proximity, and improvement of appearance of roads and streets by elimination of duplicate distribution facilities.

Direct monetary benefits from the transaction to the two systems involved will be small in relation to the size of the systems. Some savings will result immediately from the elimination of the operation and maintenance costs of some 50 miles of line which will be removed. In the future, orderly system development should prove more economical than the methods of the past in the Willamette Valley area.

Written notice of the application has been given to the Public Utility Commissioner of Oregon and to the Governor of that State. Notice has also been given by publication in the Federal Register on November 28, 1964 (29 F.R. 15932), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before December 16, 1964, with the Federal Power Commission, Washington, D.C. 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Pacific, a corporation is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described in the Commission's order issued July 20, 1963, *Pacific Power & Light Company*, Docket No. E-7108 (30 FPC 409).

(2) By the proposed transaction, Pacific will acquire facilities from Consumers which have a value in excess of $50,000 and will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Consumers, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition, merger or consolidation of certain facilities by Pacific in exchange for certain facilities of Consumers, all as described above, upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Pacific of the aforementioned facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Pacific shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, evaluation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by the Commission.

OPINION NO. 457

SOUTHERN CALIFORNIA EDISON COMPANY AND DESERT ELECTRIC COOPERATIVE, INC., DOCKET NO. E-7165

MEMORANDUM OPINION AND ORDER APPROVING ACQUISITION OF FACILITIES

(Issued April 5, 1965)*

Syllabus

1. In proceeding under Section 203 of the Federal Power Act Commission need not pass on authority of Cooperative to effect sale of local distribution facilities to Public Utility. P. 688.
2. Holding it has jurisdiction to question sale price in determining whether transaction is "consistent with the public interest" under Section 203, Commission *finds* purchase price for Cooperative's local distribution facilities is not unfair. P. 688.
3. Merger is consistent with public interest where it results in improved service at less cost. P. 689.
4. Sale of Cooperative's local distribution facilities approved where Cooperative sustained operating deficit for past five years and where rates to be applied will reduce costs to homeowners by 52 percent. PP. 689, 695.
5. Under Section 1.31(a) of the Rules, exceptions to presiding examiner's initial decision may be filed only by party to proceeding. P. 689.
6. Improperly filed "Exceptions" accepted as brief *amicus curiae* and considered on merits. P. 689.
7. Argument that decision should be deferred pending outcome of California suit relating to Cooperative's legal authority to dispose of its property rejected—Commission agrees it should now approve merger as in public interest. PP. 689, 696, 697.
8. Public Utility required to keep separate accounts for newly acquired property pending completion of State litigation. P. 689.
9. There was no need to make finding that Cooperative member was party in interest under Section 308(a) of the Act, since he was permitted to participate in hearing but never sought intervention. P. 689.
10. Commission *approves* acquisition of facilities under Section 203 of the Federal Power Act.

John R. Bury, *R. E. Woodbury*, and *Donald J. Carman* for Southern California Edison Company.

Glen E. Stephens, *Eugene A. Nazarek* and *Bert L. Lunceford* for Desert Electric Cooperative, Inc.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

In his initial decision issued January 27, 1965, in the above entitled matter the presiding examiner approved the merger or consolidation of the facilities of Southern California Edison Company with the facilities of Desert Electric Cooperative, Inc. under Section 203 of the Federal Power Act. No exceptions have been filed by any party, but Forrest H. Riordan, a member of the Cooperative but not a party, filed a brief on exceptions and by letter of March 9, 1965, the Secretary accepted the brief conditionally for consideration by the Commission. On March 22, 1965, Edison and the Cooperative filed a joint brief opposing exceptions, and on March 26, 1965, Riordan filed a motion for leave to file a brief in reply to the brief opposing exceptions.

---

*Initial decision appears on p. 690.

As found by the examiner, Edison, a public utility under the Federal Power Act incorporated in California, operates in large areas in California and in Nevada. The Cooperative owns facilities for the local distribution of electricity in the vicinity of the community of Twenty-nine Palms in San Bernardino County, California, and is subject to the jurisdiction of the California Public Utilities Commission. It makes no sales for resale and purchases its entire requirements from Edison.

As of December 31, 1963, the original cost less depreciation of Cooperative's electric plant in service was $1,994,270.14. Its total assets, including debits, amounted to $2,354,993.78. In each of five years ending in 1963 it sustained increased operating losses, and by the end of that year it had an operating margins deficiency amounting to $185,710.47. Its indebtedness to the Rural Electrification Administration had increased to $2,448,275 by May 31, 1964.

Based on the receipt of consents from a majority of the members (71.7 percent as of the date of the hearing) an agreement of Purchase and Sale was executed on April 2, 1964. Under the agreement the price to be paid by Edison is the amount of the Cooperative's indebtedness to REA, the amount of membership fees collected, and all current liabilities. Had the sale been consummated as of May 31, 1964, the purchase price would have been approximately $2,520,000. Edison's lower rates would be put into effect and the Cooperative's personnel would be retained except for the manager who is over the retirement age. After hearing, the Public Utilities Commission of California authorized the merger in accordance with the agreement.

Because of protests from members of the Cooperative, a hearing was held in Twenty-nine Palms, California; notices of intervention were filed only by the California Commission and the People of the State of California. However, individual protestants, who were not parties, were permitted to cross-examine and offer statements and testimony. As recited by the examiner, Edison's evidence showed that the acquisition would result in major economies, rate reductions of over 50 percent, elimination of the indebtedness to REA, and likelihood of increased economic development of the area.

The protestants contended the proposed sale was not properly authorized by the Cooperative's membership, the price did not represent true value, and the line charges to new members exceeded those charged by the Cooperative. The examiner, in our opinion, properly did not pass upon the authority of the Cooperative to effect the sale, which is subject to a suit in the Courts of California, but confined his findings to the public interest under Section 203 of the Power Act.

We also agree with the examiner that the price is not unfair. It will be in excess of the book net assets and will result in an acquisition adjustment, which Edison proposes to write off to earned surplus. The amount of the acquisition adjustment cannot be precisely determined on the record but would be the excess of the purchase price over the Cooperative's net investment and other assets. As the examiner says, a higher price would be unfair to the stockholders of the purchasing company, who would be burdened by the acquisition adjustment. However, we believe contrary to the examiner, that we have jurisdiction to question the price in order to determine whether the transaction is "consistent with the public interest" under Section 203.

As for the line charges to new customers, the examiner finds that for a small amount of service the Cooperative's charges would be lower than Edison's, but with increased service Edison's charges would be more favorable than the Cooperative's. In any case, as the examiner notes, the evidence shows that the Cooperative's line extension charges were the major cause of its operating deficits.

As found by the examiner, we are of the opinion that the resulting rate decrease is very much in the public interest. Thus for 1963 the Cooperative's revenues from all classes of service was approximately $257,000; at Edison's rate the total would have been only $123,000 or 52 percent less.

The root of the dissensions among the members of the Cooperative is the change in the nature of the membership. In the early stages the original membership was composed largely of permanent residents located on large sites at considerable distances from the main line, who were interested in inexpensive line extensions. Now the substantial majority of the current membership consists of those who build small homes for use on week-ends and are more concerned with low operating rates. We must take cognizance of the fact that this change has occurred and is not likely to be reversed. Our determination must therefore be made on the basis of the overall interests of the current membership, which will gain from a change to the service provided by Edison.

In conclusion, we agree with the examiner that the result of the merger will be improved service at less cost. There is a positive advantage to the consuming public if the acquisition of Cooperative's facilities by Edison is approved, which satisfies us that the merger is consistent with the public interest.

Riordan's brief on exceptions is not properly filed as such because under Section 1.31(a) of our Rules, exceptions may be filed only by a party to the proceeding. However, we accept it as a brief *amicus curiae* and will consider it on its merits. We shall also accept Riordan's reply to Applicant's brief opposing exceptions as it is in the nature of an addendum to his brief on exceptions.

While Riordan argues that we should defer decision pending the outcome of the California suit relating to the Cooperative's legal authority to dispose of its property, we agree with the examiner that we should now approve the consummation of the merger as in the public interest. *California* v. *F.P.C. and El Paso Natural Gas Co.*, 369 U.S. 482, cited by Riordan is distinguishable because it concerns a suit on a matter related to the public interest—whether the merger violated the antitrust laws. Here the suit merely relates to corporate authority, a matter which we must necessarily leave to the California courts, but does not concern the basis of our decision. However, we shall provide that Edison shall keep separate accounts for its newly acquired property pending completion of the litigation. Riordan makes the further argument that the examiner should have found him a party in interest under Section 308(a) of the Act. There was no need to make such a finding because Riordan was permitted to participate in the hearing but never sought to intervene.

The Commission further finds:

(1) Southern California Edison Company, a California corporation, is a public utility within the meaning of Sections 201 and 203 of the Federal Power Act, subject to the jurisdiction of the Commission.

(2) By the proposed transaction, as described above, Southern California Edison Company will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Desert Electric Cooperative, Inc., another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition and merger or consolidation of the facilities of Desert Electric Cooperative, Inc. by Southern California Edison Company, as recited above, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons set forth above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of Desert Electric Cooperative, Inc. by Southern California Edison Company, all as described above, is hereby authorized and approved upon the terms and conditions as set forth in the application, subject to the provisions of this order.

(B) Southern California Edison Company shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, particularly the provisions of Account 102, Electric Plant Purchased or Sold, Account 114, Electric Plant Acquisition Adjustments, and appropriate Electric Plant Instructions, thereof.

(C) Any acquisition adjustment created by Southern California Edison Company's acquisition of Desert Electric Cooperative, Inc.'s facilities shall be eliminated by a charge to Account 216, Unappropriated Earned Surplus.

(D) Edison shall maintain in conformity with the Uniform System of Accounts, supplemental accounts in scope and form, satisfactory to the Commission designed to show separately electric plant, depreciation reserve, operating revenues, operating expenses, and depreciation applicable to the properties of the Cooperative until such time as Edison is relieved from this requirement by the Commission.

(E) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(F) Riordan's brief filed March 2, 1965, is not accepted as a brief on exceptions but as a brief *amicus curiae.* Riordan's motion filed on March 26, 1965, to file a reply brief to Applicant's brief opposing exceptions is hereby granted, and the reply brief is accepted with the same status as the brief on exceptions.

(G) The decision of the presiding examiner, except as modified above, is hereby adopted as the decision of the Commission.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION UNDER SECTION 203 OF THE FEDERAL POWER ACT TO ACQUIRE ADDITIONAL FACILITIES

(Issued January 27, 1965)

RENDELMAN, *Presiding Examiner:* Southern California Edison Company (Edison) and Desert Electric Cooperative, Inc. (Cooperative) filed a joint application with the Federal Power Commission on May 25, 1964, for an order pursuant to Section 203 of the Federal Power Act which would authorize the acquisition by Edison, and the merger or consolidation with its own facilities, of all the electric facilities owned by Cooperative, in accordance with the terms and provisions of an Agreement of Purchase and Sale between the parties dated April 2,

1964. The application further seeks inclusion in the order of a declaration that the Federal Power Commission has no jurisdiction over the sale by Cooperative of the said facilities or alternatively, authorization of such sale by Cooperative pursuant to the terms of the aforementioned agreement. Commission jurisdiction over the acquisition by Edison is conceded.

Edison is a public utility incorporated under the laws of the State of California which generates, purchases, transmits, distributes and sells electric energy in portions of central and southern California and in the counties of Nye and Esmeralda in the State of Nevada.

Cooperative was incorporated in the State of California on February 27, 1950, and was granted a certificate of public convenience and necessity by the Public Utilities Commission of the State of California on January 31, 1956,[1] which permitted exercise of the franchise granted by San Bernardino County, dated June 8, 1953.[2] Cooperative owns facilities for the local distribution of electricity in the vicinity of the community of Twenty-Nine Palms in San Bernardino County, California, and is subject to the jurisdiction of the California Public Utilities Commission with respect to rates, service, security issues, etc. Its certificated service area includes approximately 226 miles east of, but not including, the community of Twenty-Nine Palms and approximately 252 square miles to the west thereof for a total of 478 square miles in what is known as the "high desert" area of southern California. A considerable portion of this area is undeveloped and electric service is generally concentrated in the developed areas totaling some 200 square miles. Practically all of Cooperative's service area is surrounded by the facilities and service territory of Edison, however, each company serves at retail only within its respective territory and does not compete with the other. Cooperative makes no sales for resale and purchases its entire energy requirements from Edison at the rate set forth in Edison's Rate Schedule FPC No. 18, taking delivery at a substation adjacent to Edison's high desert substation located about seven miles west of Twenty-Nine Palms.

As of December 31, 1963, the original cost of Cooperative's electric plant in service, less accrued depreciation, was $1,994,270.14. Cooperative's total assets, including debits, amount to $2,354,993.78. In each of the five years since 1958 Cooperative has sustained increased operating losses as follows:

1959	$1, 151
1960	25, 573
1961	36, 879
1962	44, 966
1963	50, 169

On December 31, 1963, Cooperative's operating margins deficiency, as shown on its books, amounted to $185,710.47. Cooperative's indebtedness to the Rural Electrification Administration (REA) has increased from approximately $1,500,000 in 1958 to $2,448,275 by May 31, 1964. Under the circumstances outlined in this proceeding, it is unnecessary to reach the question of this Commission's jurisdiction over Cooperative.

In July 1963 a petition signed by approximately 600 Cooperative members was presented to Cooperative's Board of Directors requesting that negotiations be initiated for sale of the Cooperative properties to an investor-owned utility company. A five-member sale committee was appointed by the Board which invited purchase offers from all of the major investor owned utilities in California. California Electric Power Company, the only utility which evinced any interest, entered into negotiations with the sale committee which resulted in submission of an offer on September 20, 1963. Because of a three-to-three split in the vote of Cooperative's Board of Directors, no further action was taken thereon. Thereafter, following the merger of California Electric into Edison, as authorized by order of the Commission issued October 1, 1963, a further, and ostensibly more favorable offer was tendered by Edison. At the annual meeting of Cooperative's membership on March 14, 1964, two additional directors favorable to the proposal were elected and the question of acceptance of Edison's offer was then submitted to the entire membership. Based on the receipt of consents from a majority of the members, an "Agreement of Purchase and Sale" was executed on April 2, 1964. As of the date of this hearing Cooperative had a total of 2,382 members of whom 1,709 or 71.7 percent voted in favor of acceptance.

---

[1] Decision No. 52526, 54 CPUC 639.

[2] Ordinance No. 713.

Under the terms of the agreement the price to be paid by Edison is the amount of Cooperative's indebtedness to REA, plus an amount equal to the unrefunded membership fees collected and held by Cooperative. In addition, Edison agrees to assume all Cooperative's current liabilities. Had the sale been consummated as of May 31, 1964, the purchase price would have been approximately $2,520,000. The rate to be placed into effect in Cooperative's service territory, allegedly lower than Cooperative's rate, is the rate presently applicable in Edison's rate zone 6.1, which includes the areas surrounding Barstow, Blythe, Palm Springs, Twenty-Nine Palms, and Victorville. Personnel presently employed by Cooperative is to be retained by Edison at the same salaries as heretofore with the exception of Cooperative's manager who is over Edison's mandatory retirement age. After hearing, the Public Utilities Commission of the State of California, by Opinion and Order dated August 25, 1964, authorized the merger in accordance with the Agreement of Purchase and Sale of April 2, 1964. A petition for rehearing was denied on November 10, 1964.

Following receipt of a large number of letters, mostly from members of Cooperative objecting to the proposed sale, the Commission, by order dated July 29, 1964, directed that a public hearing be held "respecting the matters involved in any issues presented in this proceeding." Pursuant to the further order of the Commission dated September 10, 1964, the hearing took place as scheduled in Twenty-Nine Palms, California on September 28 and 29, 1964, before a group of approximately 150 persons, consisting almost entirely of Cooperative members.

The applicants' witnesses testified generally that acquisition of Cooperative's facilities would be consistent with the public interest in that (1) major economies would result from the elimination of duplication in management, supervision, clerical and mechanical accounting functions; (2) substantial rate reductions in all classes of service would result under Edison's rate in that revenues from residential customers would be reduced by approximately 56 percent, and total revenues from all sources by approximately 52 percent; (3) consolidation of the two systems would eventually result in a reduction of unit cost; (4) Cooperative's indebtedness to REA and its steadily increasing operating deficit would be eliminated; and (5) the likelihood of increased economic development in the area because of the availability of an abundant supply of electric energy.

Notices of intervention were filed only by the Public Utilities Commission of California and the People of the State of California. Despite the failure to file petitions to intervene, as required by the Commission's order of July 29, 1964, individual protestants, who with one exception were unrepresented by counsel, were permitted to cross-examine the applicants' witnesses and to offer unsworn statements of position, or sworn oral testimony, in opposition to the proposed sale.

The principal contentions of those opposed to the sale are (a) the proposed sale was not authorized by the membership in accordance with Cooperative's articles of incorporation; (b) the price to be paid does not represent the true value of Cooperative's facilities; and (c) that the line charges to new members to be instituted by Edison exceed the line charges currently charged by Cooperative.

Prior to this hearing, but after execution of the Agreement of Purchase and Sale, an action described as a "Shareholders Derivative Suit" was commenced in the Superior Court of the State of California in and for the City of San Bernardino by an individual Cooperative member suing on his own behalf and on behalf of Cooperative and all its members. The action challenges the validity of the Agreement of Purchase and Sale and further, seeks to enjoin the sale of Cooperative's properties to Edison. The suit, briefly, alleges irregularities in the election of the presently constituted Board of Directors; invalid amendment of the articles of incorporation so as to provide for sale of Cooperative's facilities on approval by a majority vote of the members rather than by a two-thirds vote as heretofore required; and irregularities in the solicitation of consents to the proposed transaction.

During the course of this hearing the Presiding Examiner excluded testimony bearing on the issues in the state court action on the ground that those issues are appropriately and properly, and by choice of the protestants, before the state court for decision; nor are they material or relevant to a determination of the question concerned in this proceeding, namely, whether the proposed transfer of Cooperative's facilities to Edison is "consistent with the public interest," as required by Section 203 of the Federal Power Act.

Insofar as the monetary consideration to be paid is concerned, the protestants cite the fact that since there has been no independent appraisal of Cooperative's facilities, there can be no determination of the true value thereof. It is further alleged that the amount accepted by Cooperative's Board of Directors was the first and only offer made by Edison and not a sum arrived at as the result of arm's-length negotiation. Edison's witness, however, testified that the contract price represented substantially more than book value and that the continuing operating losses of Cooperative have resulted in a current net deficit in proprietary capital in the amount of approximately $185,000. This amount in excess of original cost less depreciation constitutes a "write off" which must be charged to surplus and borne by Edison's stockholders rather than the ratepayers. Edison therefore contends that in all fairness to its stockholders it should not pay more than the agreed price. This method of charging acquisition cost in excess of original cost, less depreciation, to earned surplus is in accord with Commission policy. *Southern California Edison Co.*, 28 FPC 787, 790; *Duke Power Co.*, 30 FPC 1004, 1006. In the light thereof it would be inconsistent for the Commission to require a public utility to pay a price higher than the orginal cost of an electric facility since, to the extent that the seller gains by receiving a price in excess of original cost, the buyer loses in the same amount, a result which would be completely unfair to the stockholders of the purchasing company and would tend to discourage electric utility industry expansion even though such a transaction would benefit the consumer.

In the case of *South Carolina Electric and Gas Company*, 7 FPC 606,[3] the Commission had before it the protest of a would-be purchaser against the sale of the stock of a public utility company to another utility company whose purchase offer was less than the amount of the protestant's offer. There the Commission, citing *Pacific Power & Light Co., et al.* v. *Federal Power Commission*, 111 F. 2d 1014 held:

---

[3] Affirmed, *South Carolina Public Service Authority* v. *F.P.C.*, 170 F. 2d 948 (CA4-1948), cert. denied, 336 U.S. 953.

> Granted such a proposal, or some other plan not presently before us, might be better in certain aspects, nevertheless that fact is insufficient to support a finding that the proposal formally before us is not consistent with the public interest. The contention that the pending application should be denied because of the refusal of Commonwealth & Southern to accept the offer of the Authority to pay more than the price agreed upon with the applicant, and the protest regarding the methods used by Commonwealth & Southern incident to the negotiations, are matters relating to the sale by Commonwealth & Southern of its holdings to the applicant, over which we have no jurisdiction.

In the instant case, there is no evidence that the price is unfair, or that the transaction is contrary to the public interest, and the Commission similarly would appear to lack jurisdiction to question the sale price.

Further objection to the proposed acquisition stems from the allegation that development of the area will be deterred because Edison's line charges to new customers will be higher than the line charges presently charged by Cooperative. Cooperative's existing line extension rule provides for 1,000 feet of free footage, plus 65 cents per foot thereafter. Edison's Rule No. 15, in effect in the surrounding area served by Edison, is "promotional" in nature. Basically, Edison provides 300 feet of free footage and charges $1.30 per foot for each foot in addition thereto. However, additional free footage is provided in direct proportion to the increase in load. Thus the greater the number of the appliances connected, the greater will be the length of footage provided without charge.

The following table demonstrates the comparative practical operation of both Edison's and Cooperative's line extension charges:

Facts	Desert electric rule	Edison rule
(1) Residential customer, one light bulb, single phase service.	1,000 ft. of free footage. 65¢ per foot for excess length.	300 ft. of free footage. $1.30 per foot for excess length.
(2) Customer with refrigerator and lighting, 2,000 ft. line extension.	$650 for line extension.	$2,000 for line extension.
(3) All-electric home, 2,000 ft. line extension.	$325 for line extension.	No charge for line extension
(4) Motors of 1 horsepower or more, three phase service.	Free footage is 100 ft. per hp. $1.00 per foot for excess length.	Free footage is 175 ft. per hp. of connected load. $1.30 per foot for excess length.

Cooperative's president, testifying in favor of the merger, stated that Cooperative's current line extension policy was the major cause of Cooperative's continually increasing operating deficit and that if the instant merger were not consummated, he would recommend application by Cooperative to the California Public Utilities Commission for a revision of the line extension policy so as to more nearly conform to the line extension policy maintained by Edison in the surrounding area.

Much of the internecine dissension in Cooperative results from the gradual change in the composition of the majority of its membership. Whereas in its early and formative stages the original membership was composed almost entirely of permanent residents, the substantial majority of the current membership consists of what has come to be known locally as "week-enders," or residents who have established smaller homes in the area, on minimum homesteaded sites (400 sq. ft.), which are used mainly on weekends for recreational purposes.

The original Cooperative members, with permanent residences on large sites at considerable distances from the mainline, were interested mainly in the construction of line extensions, and the transportation of electrical energy, from the main power line as inexpensively as possible. But the presently constituted majority membership, by reason of the large buildup of homes maintained for recreational purposes on considerably smaller plots of ground in proximity to the mainline, is more concerned with low operating rates than inexpensive line extension charges. While the Edison line extension policy could, in and of itself, prove more expensive to the individual whose home is not near, or adjacent to, the mainline, the fact is that the large majority of Cooperative's membership will derive greater benefit from the cheaper rates which will be instituted by Edison, than from the current line extension policy which the dissident minority seeks to perpetuate. Also of interest to the "week-enders" is the fact that Edison's minimum charge is $1.10 per month, whereas Cooperative's minimum charge is $6.00 per month.

A comparison of Cooperative's rates with the rates Edison would apply, as set forth in the California Public Utilities Opinion of August 25, 1964, demonstrates the following:

Rate Comparison—Residential and Commercial Service, Southern California Edison Co.—Desert Electric Cooperative, Inc., Typical Monthly Bills*

Residential service	Lighting, and small appliances 50 kwhr	Lighting, etc., and refrigeration 100 kwhr	Lighting, etc., refrigeration and cooking 250 kwhr	Lighting, etc., refrigeration, cooking, and water heating	
				500 kwhr	750 kwhr
Desert Electric schedule D	$6.00	$10.00	$14.00	$19.00	$24.00
Edison Co.:					
Present schedule	3.67	5.47	9.71	12.07	15.74
Proposed schedule	3.67	5.47	9.71	12.07	15.74
Commercial service	**3.0 kw 375 kwhr**	**6.0 kw 750 kwhr**	**12.0 kw 1500 kwhr**	**30.0 kw 6000 kwhr**	**40.0 kw 10,000 kwhr**
Desert Electric schedule No. A	$21.00	$36.00	$63.00	$201.00	$311.00
Edison Co.:					
Present schedule	18.98	34.73	59.57	185.71	262.61
Proposed schedule	18.98	34.73	59.57	185.71	258.61
Schedule P-1	13.63	24.50	45.80		
Schedule P-2				124.25	179.25

*Levels of usage are the standards used in the Federal Power Commission publication of Typical Electric Bills.

Street lighting service is provided for on Desert Electric Cooperative, Inc. Schedule No. LS-1 at $4.00 per lamp per month for all night service to utility-owned 175 watt incandescent lamps. Service on Southern California Edison Co. Schedule LS-1 is provided for at $3.00 per lamp per month.

The record also shows that Cooperative revenues from residential customers in 1963 amounted to approximately $228,000. Charges for the same usage at Edison's rate would have been approximately $99,000, a reduction of 56 percent. For the same period Cooperative revenues from all classes of customers was approximately $257,000. At Edison's rate the total would have been approximately $123,000, or 52 percent less. It thus appears that Cooperative's customers, in the aggregate, are presently paying approximately $10,000 more per month than they would be paying for the same amount of energy, under similar conditions of service, at Edison's applicable rate schedule.

Several protestants voiced the fear that if the merger were accomplished Edison would immediately take steps to institute a rate increase. No reason appears why it should be assumed that such an application to the California Public Utilities Commission, if made, would automatically be granted. As a matter of fact, Edison's representations to the Commission with respect to the savings which would result from the merger of California Electric Power Co. into the Edison system, and the following condition in the order approving such merger, practically assure a contrary result.[4]

> (C) Edison shall file, on or before May 1, 1965, cost and revenue data showing Company's costs of rendering service to each of its wholesale for resale customers the rates to which are subject to this Commission's jurisdiction, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the calendar year 1964 showing both historical revenues and *pro forma* adjustments thereto, a prudent net investment rate base and a fair rate of return thereon.

There are additional advantages to be gained from the acquisition of Cooperative's facilities by Edison. The economic future of Cooperative under existing conditions would not appear to be overly sanguine. There is nothing in the record to support a prognosis that Cooperative's economic deficit will diminish or that Cooperative could become self supporting in the reasonably foreseeable future. The result as presently indicated could only be an increased indebtedness to the REA.

The conclusion is inescapable that under Edison there will be improved electric service at less cost. Duplication of facilities and services will be eliminated and the quality of electric service will be improved because of the larger and more efficient organization which will be made available by Edison.

In *Pacific Power & Light Co.* v. *Federal Power Commission*, 111 F. 2d 1014, 1016, 1017 the court, in interpreting that part of Section 203 of the Federal Power Act which requires that the Commission find that acquisition by, or merger of one public utility with another, "will be consistent with the public interest" stated:

> The phrase "consistent with the public interest" does not connote a public benefit to be derived or suggest that idea of a promotion of the public interest * * *. It is enough if the applicants show that the proposed merger is compatible with the public interest * * *. We see no more in the prohibition [against consolidation of facilities without prior approval of Commission] than the purpose of insuring against public disadvantage through the requirement of a showing that mergers of this sort will not result in detriment to consumers or investors or to other legitimate national interest * * * the statute does not require a showing that positive benefit to the public will result * * *

In the instant case the applicants have gone further than merely "insuring against public disadvantage" and have adduced sufficient evidence to prove "that a positive benefit to the public will result * * *." On the record in this case it is therefore found that the public interest will best be served if the acquisition of Cooperative's facilities by Edison is approved.

Informal requests have been filed with the Commission on behalf of the protestants urging that the Commission suspend further action herein until such time as a final decision is reached in the state court action. Under the circumstances, however, the delay that would be occasioned thereby is not warranted. As hereinbefore pointed out, a determination of the issues before the state court is not requisite to resolution of the issues in this proceeding. It is thus possible to reach a conclusion with respect to the merits of the merger, insofar as the public interest is concerned, independent of any consideration of the validity of the contract by which the merger is to be effected. A state court judgment holding such contract invalid would therefore not render a Commission decision moot with respect to the issues considered therein. The request must therefore be denied.

---

[4] As of January 1, 1965, Edison instituted a rate reduction to retail customers in this area which would have the effect of further reducing the estimated revenue from Cooperative members by an additional $4,000 per year.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record herein, the evidence adduced, and the briefs filed, it is found and concluded, in addition to the findings and conclusions heretofore set out, that:

(1) Southern California Edison Company, a California corporation, is a public utility within the meaning of Sections 201 and 203 of the Federal Power Act, subject to the jurisdiction of the Commission.

(2) By the proposed transaction, as described above, Southern California Edison Company will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Desert Electric Cooperative, Inc., another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition and merger or consolidation of the facilities of Desert Electric Cooperative, Inc. by Southern California Edison Company, as recited above, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons set forth above.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or upon its own motion, as provided by the Commission's Rules of Practice and Procedure, that:

(A) The proposed acquisition and merger or consolidation of the facilities of Desert Electric Cooperative, Inc. by Southern California Edison Company, all as described above, is hereby authorized and approved upon the terms and conditions as set forth in the application, subject to the provisions of this order.

(B) Southern California Edison Company shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, particularly the provisions of Account 102, Electric Plant Purchased or Sold, Account 114, Electric Plant Acquisition Adjustments, and appropriate Electric Plant Instructions, thereof.

(C) Any acquisition adjustment created by Southern California Edison Company's acquisition of Desert Electric Cooperative, Inc.'s facilities shall be eliminated by a charge to Account 216, Unappropriated Earned Surplus.

(D) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

MARTIN E. RENDELMAN,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-26

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1965)

On February 18, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP63-26 a petition to amend an order of the Commission issued in said docket April 6, 1964, 31 FPC 789, and amended June 4, 1964, 31 FPC 1387, which order and amendment authorized Applicant among other things, to construct and operate a pipeline extending approximately 175 miles from the vicinity of Macon, Georgia, and to make certain sales from said line to Atlanta Gas Light Company (Atlanta) for resale and distribution in certain southeast Georgia communities and to the City of Vidalia, Georgia (Vidalia) for resale and distribution therein.

Applicant seeks amendment of the aforementioned orders so as to authorize Applicant to sell and deliver to Atlanta rather than Vidalia natural gas for distribution in Vidalia. In addition Applicant requests deletion from the aforementioned orders the authorization to construct and operate a separate delivery point for service to Vidalia at Alamo, Georgia.

The Applicant states that on September 24, 1964, Vidalia granted a franchise to Atlanta to distribute gas in Vidalia. Consequently, sale and delivery of gas by Applicant for resale and distribution in Vidalia are proposed to be made to Atlanta rather than to Vidalia. The application further states that Atlanta proposes to serve Vidalia through its Alamo, Georgia, delivery point from Applicant, and that for this reason the separate delivery point to Vidalia at Alamo, Georgia, will not be required.

Due notice of the subject application to amend has been given by publication in the Federal Register on March 11, 1965 (30 F.R. 3334). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 6, 1964, and amended June 4, 1964, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 6, 1964, and amended June 4, 1964, be and the same is hereby amended by (1) authorizing Applicant to substitute Atlanta Gas Light Company (Atlanta) in lieu of the City of Vidalia, Georgia, as the resale customer and distributor of natural gas in the City of Vidalia, Georgia, and (2) deleting authorization for the construction and operation of a separate delivery point for the City of Vidalia, Georgia.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64-5

ORDER FURTHER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1965)

On December 14, 1964, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP64-5 an application to further amend the certificate of public convenience and necessity issued by the Commission in said docket on December 19, 1963, 30 FPC 1959, as amended on October 28, 1964, 32 FPC 1229. The certificate, as amended, authorized among other things the construction and operation of approximately 638 miles of 30-inch pipeline loops to be installed at various locations and in varying lengths along Applicant's pipeline system between Opelousas, Louisiana, and Lambertville, New Jersey. Applicant now requests authorization to construct and operate approximately 337 miles of 36-inch pipeline loops in lieu of 421 miles of the presently remaining 502 miles of 30-inch loops which have not yet been installed, as more fully described in the application.

The facilities authorized by the Commission in the aforesaid orders included approximately 177 miles of 36-inch lateral pipeline extending to the vicinity of Venice, Plaquemines Parish, Louisiana, from a point on Applicant's 30-inch south Louisiana pipeline system near New Roads, Pointe Coupee Parish, Louisiana, and a total of approximately 638 miles of 30-inch pipeline loops to be installed at various locations and in varying lengths along Applicant's pipeline system between Opelousas, Louisiana, and Lambertville, New Jersey over a 4 year period. Pursuant to such authorizations, the 1964 pipeline facilities consisting of approximately 136 miles of 30-inch pipeline loops and the 36-inch Venice lateral pipeline have been installed, leaving approximately 502 miles of 30-inch pipeline loops to be installed under such authorizations during the 1965, 1966 and 1967 construction programs. Approximately 81 miles of the 30-inch pipeline loops will be installed as heretofore authorized. The present application contemplates that the remaining 421 miles of 30-inch looped lines previously authorized will not be constructed, but, in lieu thereof, 337 miles of 36-inch looped lines will be installed.

The proposed change in construction, as set forth above, will not further increase the peak day capacity of the system beyond the 408,010 Mcf per day increase contemplated by the certificate of December 19, 1963, as amended.

The proposed facilities will result in an increase in estimated construction costs for the next three years of $4,978,000. The estimated operation and maintenance costs are estimated to be decreased by $3,000 per year as a result of the change.

Due notice of the filing of the application to amend was published in the Federal Register on December 29, 1964 (29 F.R. 18529). No protest, petition to intervene, notice of intervention, or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued on December 19, 1963, as amended on October 28, 1964, be further amended as herein ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Texas Eastern Transmission Corporation in the Commission order of December 19, 1963, as amended October 28, 1964, in Docket No. CP64-5 be and the same is hereby amended by deleting therefrom the authorization for the construction and operation of approximately 421 miles of the 30-inch pipeline loops and substituting therefor 337 miles of 36-inch pipeline loops as described above and as more fully described in the application which is on file with the Commission.

(B) In all other respects the orders in Docket No. CP64-5 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP63-143

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1965)

On August 7, 1964, Transwestern Pipeline Company (Applicant) filed in Docket No. CP63-143 an application to amend the order of the Commission issued April 3, 1963 in said docket, 29 FPC 702, which order authorized the construction and operation of a tap valve on Applicant's line in Curry County, New Mexico, and the transportation and sale, through September 30, 1964, of surplus volumes of natural gas on an interruptible basis to Southern Union Gas Company (Southern) for resale through Southern's distribution facilities in Portales, New Mexico, all as more fully set forth in the application.

The original purpose of the service being rendered by Applicant was to supplement Southern's gas supply to avoid curtailments of institutional and industrial customers. Applicant has executed a service agreement with Southern to supply Southern a maximum peak day delivery of 5,000 Mcf, and continue the service now being rendered under Applicant's Rate Schedule E-1, under the same terms and conditions, except the date of termination thereof. The gas will be sold to Southern's customers for use in industrial plants and for industrial purposes. Applicant requests an extension of the prior authorization for a period of two years, ending September 30, 1966, pursuant to an agreement between Applicant and Southern dated July 27, 1964.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 29, 1964 (29 F.R. 18532). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 3, 1963, in Docket No. CP63-143, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 3, 1963, in Docket No. CP63-143, be and the same is hereby amended so as to extend the time period during which Applicant is authorized to make short-term, interruptible sales to Southern Union Gas Company to end September 30, 1966, in lieu of September 30, 1964, in accordance with the agreement between Applicant and Southern Union Gas Company, dated July 27, 1964.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC UTILITIES AND LICENSEES—TRANSMISSION LINE STATISTICS IN ANNUAL REPORT FPC FORM NO. 1, DOCKET NO. R-270

ORDER NO. 294-A

AMENDING ORDER NO. 294 TO EXTEND ITS PROVISIONS TO NONJURISDICTIONAL ENTITIES

(Issued April 6, 1965)*

The Commission, on March 16, 1965, issued Order No. 294, 33 FPC 569 (30 F.R. 3707), intending thereby to relieve partially all persons who are required to file the annual report, F.P.C. Form No. 1, from furnishing detailed information with respect to each transmission line they operate. Since, however, certain language in the order erroneously restricted the relief to jurisdictional respondents, we are here making the necessary corrections to carry out our original intention. Accordingly—

The Commission, acting pursuant to the authority set forth in Order No. 294, *orders*:

(A) The opening paragraph of Order No. 294 is amended to read as follows:

> "The schedule 'Transmission Line Statistics' on page 442 of the annual report F.P.C. Form No. 1, provides for the furnishing of information with respect to each transmission line operated by the public utility, licensee, or other person required to make the report by paragraphs (b) and (c) of § 141.1 of the Regulations Under the Federal Power Act."

(B) The first paragraph of ordering clause (A) of Order No. 294 is amended to read as follows:

> "Effective for the reporting year 1964 only, Annual Report F.P.C. Form No. 1, required by paragraph (b) and (c) of § 141.1, Subchapter D, Chapter I of Title 18, Code of Federal Regulations, to be filed by public utilities, licensees, and others, is amended by amending instruction paragraphs 1. and 3. to the schedule 'Transmission Line Statistics', on page 442 of the said Form No. 1 to read as follows:"

(C) These amendments shall be effective as of March 16, 1965, the date of issuance of Order No. 294.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

---

*Published in the Federal Register on April 22, 1965 (30 F.R. 5703).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. CP65-157 AND G-1922

ORDER AUTHORIZING EXPORTATION OF NATURAL GAS AND MODIFYING PERMIT

(Issued April 6, 1965)

On December 1, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP65-157 an application pursuant to Section 3 of the Natural Gas Act for authorization to export natural gas from the United States to the Dominion of Canada (Canada), all as more fully set forth in the application in this proceeding.

Applicant proposes to export natural gas for sale to Trans-Canada Pipe Lines Limited (Trans-Canada) at an existing delivery point at the international boundary near Niagara Falls, New York. Applicant and Trans-Canada have entered into a precedent agreement, dated November 2, 1964, whereby the latter agrees to purchase the following annual volumes of natural gas (14.73 psia) during a five year period ending November 1, 1970:

	MMcf
Until November 1, 1966	25,500
November 1, 1966 to November 1, 1967	20,400
November 1, 1967 to November 1, 1968	15,300
November 1, 1968 to November 1, 1969	10,200
November 1, 1969 to November 1, 1970	5,100

The application indicates that the gas will be sold at a rate of 43.43 cents per Mcf at 15.025 psia.

The facilities at the existing delivery point near Niagara Falls, New York, were authorized by the Commission's opinion and order, issued September 1, 1953, in Docket No. G-1969 (12 FPC 311); in Docket No. G-1921 said opinion and order also authorized Applicant to export natural gas to Canada. On September 11, 1953, in Docket No. G-1922, Applicant was issued a Presidential Permit authorizing the facilities for the exportation of natural gas contemplated in Docket Nos. G-1921 and G-1969. By subsequent Commission orders, issued July 25, 1960, 24 FPC 71, in Docket No. G-1921 and December 14, 1961, in Docket No. G-20389, 26 FPC 860, as amended, Applicant was authorized to import or export natural gas in the event of an emergency on the system of either Trans-Canada or Applicant and to import natural gas to be purchased from Trans-Canada by Applicant on an interruptible basis, all by means of the existing facilities at the international boundary near Niagara Falls. The same orders amended the Presidential Permit issued in Docket No. G-1922 to reflect the use of the existing facilities for the additional purposes.

On December 1, 1964, Applicant filed in Docket No. G-1922 an application to amend further its Presidential Permit in order to operate and maintain its existing facilities at the international boundary near Niagara Falls to export natural gas to Canada for sale to Trans-Canada as proposed in the application in Docket No. CP65-157.

Concurrently with the filing of the instant applications, Applicant filed in Docket No. CP65-158 a related application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities in order to export natural gas as proposed in the instant applications.

Notice of the filing of the instant applications was issued on December 18, 1964. This notice fixed January 14, 1965, as the last day for filing protests or petitions to intervene. Several petitions to intervene were filed herein. None of said petitioners requests a hearing in these proceedings or opposes the granting of the requested authorizations. On January 14, 1965, Panhandle Eastern Pipe Line Company filed a petition to intervene herein; however, on January 19, 1965, said petition was withdrawn. Opportunity for hearing has been given by the issuance of said notice and the publication thereof in the Federal Register on December 29, 1964 (29 F.R. 18528).

The Commission finds:

(1) The exportation of natural gas by Applicant, Tennessee Gas Transmission Company, from the United States to Canada, as hereinabove described and as set forth in the application in Docket No. CP65–157, will not be inconsistent with the public interest within the meaning of Section 3 of the Natural Gas Act provided that said exportation be on the terms and conditions hereinafter set forth:

(a) Applicant shall file statements or reports with the Commission from time to time under oath and in such details as the Commission may require with respect to the whole or any part of the instant export operation.

(b) The authorization granted herein is not transferable or assignable and shall remain in full force and effect only so long as Applicant continues the acts or operations herein authorized in accordance with the terms and conditions herein set forth.

(c) The authorization granted herein shall automatically terminate on November 1, 1970.

(d) Applicant shall not, during the term of the authorization granted by this order, materially change or alter its export operations without first obtaining the permission and approval of the Commission.

(e) In the event that Applicant should abandon or permanently cease for any reason whatsoever all or any part of the instant export operation prior to the termination date described in (c) hereof, Applicant shall forthwith notify the Commission of said fact and the reason therefor.

(f) The maximum annual volumes to be exported for sale to Trans-Canada by Applicant should not exceed the following:

Contract period:	*Annual volume MMcf at 14.73 psia*
Until November 1, 1966	25,500
November 1, 1966 to November 1, 1967	20,400
November 1, 1967 to November 1, 1968	15,300
November 1, 1968 to November 1, 1969	10,200
November 1, 1969 to November 1, 1970	5,100

(g) Applicant should comply with requirements of Section 153.8 of the Commission's Regulations under the Natural Gas Act before initiating the proposed exports to Canada.

(2) The Presidential Permit issued to Applicant in Docket No. G-1922 should be modified to authorize Applicant to maintain and operate the facilities for the purposes hereinafter authorized.

The Commission orders:

(A) Authorization be and the same is hereby granted to Applicant to export natural gas from the United States to Canada, as hereinabove described and as set forth in the application in Docket No. CP65-157, upon the conditions herein set forth and subject to the provisions of the Natural Gas Act and the Commission's Regulations issued thereunder.

(B) The maximum annual volumes to be exported for sale to Trans-Canada by Applicant shall not exceed the following:

Contract period:	*Annual volume MMcf at 14.73 psia*
Until November 1, 1966	25,500
November 1, 1966 to November 1, 1967	20,400
November 1, 1967 to November 1, 1968	15,300
November 1, 1968 to November 1, 1969	10,200
November 1, 1969 to November 1, 1970	5,100

(C) Applicant shall comply with requirements of Section 153.8 of the Commission's Regulations under the Natural Gas Act before initiating the proposed exports to Canada.

(D) The Presidential Permit issued to Applicant in Docket No. G-1922 is hereby modified to authorize Applicant to maintain and operate the facilities for the purposes authorized in Paragraph (A) above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-158

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 6, 1965)

On December 1, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP65-158 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities in order to export natural gas to Trans-Canada Pipe Line Limited (Trans-Canada) at the international boundary near Niagara Falls, New York, all as more fully set forth in the application in this proceeding.

Applicant proposed to construct and operate approximately 94.28 miles of 36-inch pipeline loop in Mississippi, Alabama, Tennessee, Kentucky and Ohio; 7.97 miles of 30-inch pipeline loop in Pennsylvania, and a combined total of 12,300 additional horsepower at its Compressor Stations Nos. 860, 87 and 219 located in Centerville, Tennessee; Portland, Tennessee; and Mercer, Pennsylvania, respectively.

The above described facilities will increase Applicant's system annual average day delivery capacity by 56,000 Mcf, from 2,971,000 Mcf to 3,027,000 Mcf.

Applicant proposes to export and sell the following annual volumes (14.73 psia) to Trans-Canada on a firm basis, during a five year period ending November 1, 1970:

	MMcf
Until November 1, 1966	25,500
November 1, 1966 to November 1, 1967	20,400
November 1, 1967 to November 1, 1968	15,300
November 1, 1968 to November 1, 1969	10,200
November 1, 1969 to November 1, 1970	5,100

The total estimated cost of the proposed facilities is $23,537,000, which cost will be financed through the sale of preferred stock, debentures and first mortgage pipeline bonds.

The deliveries of natural gas will be made to Trans-Canada at an existing interconnection at the international boundary near Niagara Falls, New York. The facilities at this delivery point were authorized by the Commission's opinion and order, issued September 1, 1953, in Docket No. G–1969 (12 FPC 311); in Docket No. G–1921 said opinion and order also authorized Applicant to export natural gas to Canada. On September 11, 1953, in Docket No. G–1922 Applicant was issued a Presidential Permit authorizing the interconnection for the exportation of natural gas contemplated in Docket Nos. G–1921 and G–1969. By subsequent Commission orders, issued July 25, 1960, in Docket No. G–1921, 24 FPC 71, and December 14, 1961, in Docket No. G–20389, 26 FPC 860, as amended, Applicant was authorized to import or export natural gas in the event of an emergency on the system of either Trans-Canada or Applicant and to import natural gas to be purchased from Trans-Canada by Applicant on an interruptible basis, all by means of the existing facilities at the international boundary near Niagara Falls. The same orders amended the Presidential Permit issued in Docket No. G–1922 to reflect the use of the existing facilities for the additional purposes.

Concurrently with the filing of the subject application, Applicant filed related applications in Docket Nos. CP65–157 and G–1922 for authorization to export natural gas and to amend further its Presidential Permit, respectively.

Several petitions to intervene and a notice of intervention by the Pennsylvania Public Utility Commission were filed herein. None of said petitions or the Pennsylvania Commission request formal hearing in this proceeding or object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said petitions or notice appears necessary. On January 14, 1965, Panhandle Eastern Pipe Line Company filed a petition to intervene herein; however, on January 19, 1965, said petition was withdrawn.

After due notice, no other petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Before beginning construction of the facilities hereinafter authorized applicant should submit proof to the Commission of Trans-Canada's authorization from the National Energy Board of Canada to import gas.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct and operate the proposed facilities and to transport natural gas in order to export natural gas for sale to Trans-Canada as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) Before beginning construction of the facilities hereinabove authorized applicant shall submit proof to the Commission of Trans-Canada's authorization from the National Energy Board of Canada to import gas.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN STATES POWER COMPANY, PROJECT NO. 2440

ORDER ISSUING LICENSE (MAJOR)

(Issued April 7, 1965)

Application was filed on January 6, 1964 by Northern States Power Company (Applicant) of Eau Claire, Wisconsin, for a major license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2440, known as the Chippewa Falls Hydro Plant, located on the Chippewa River, at Chippewa Falls, in Chippewa County, Wisconsin.

The project was constructed during 1927–28 and no substantial alterations to the project have been made thereafter.

Applicant requests a license for a period of 50 years effective from the date of its issuance. In a proceeding on an application for license filed by Dairyland Power Cooperative for Project No. 1960, the Commission on November 17, 1949, found in its Findings and Order issuing a license for Project No. 1960 on the Flambeau River, among other things, that the Flambeau and Chippewa Rivers, together with the Mississippi River were used for a number of years as a highway for the floating and rafting of quantities of logs and lumber in interstate commerce, and that the Flambeau River, at least from a point above Project No. 1960, and the Chippewa River, at least from its confluence with the Flambeau River constitutes navigable waters of the United States (8 FPC 1276, 1278).

Project No. 1960 is located at river mile 25.5 on the Flambeau. Project No. 2440 is located at river mile 78 on the Chippewa which is downstream from the mouth of the Flambeau. In its aforementioned Findings and Order, the Commission stated that logs floated down the Flambeau joined logs being floated down the Chippewa River where, at Eau Claire, they were sorted and coupled into fourteen-crib rafts which were floated down the Chippewa to Read's landing on the Minnesota bank at the confluence of the Chippewa and Mississippi Rivers.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended, for inclusion in any license for the project, a special condition in the interests of fish and wildlife and recreation.

The Department of Health, Education, and Welfare has advised that there is no apparent pollution problem above or below the project dam, and it is not expected that the licensing of the project will adversely affect water supply, pollution or vector control.

The Public Service Commission of Wisconsin informed us that it had authorized the project dam by a permit it had granted in 1928.

On January 6, 1964, Applicant filed as part of its application an Exhibit R, a proposed plan for full public utilization of the project for recreational purposes, as required by Section 4.41 of the Commission's Regulations under the Federal Power Act (18 CFR 4.41). We expanded that section of our Regulations on January 8, 1965 to require that Exhibit R should include: (1) a map of the project area; (2) a statement of the extent of consultation and cooperation with appropriate Federal, State, and local recreation authorities; (3) notations on the map of the location and nature of the present and planned facilities and which of these are to be supplied by the licensee; and (4) estimates of public recreational utilization of the project. Consequently we are not approving the Exhibit R as filed with the application for license but we are requiring by Article 31 herein that the Applicant file within one year from the date of this license a revised Exhibit R conforming to the Commission's Regulations, and by Article 32 herein we are requiring Applicant to cooperate with the City of Chippewa Falls in the interests of recreation in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of November 1, 1949 and a termination date of December 31, 1993.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a water-

way or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 28,800 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Northern States Power Company (Licensee) of Eau Claire, Wisconsin, under Section 4(e) of the Federal Power Act (Act), for a period effective as of November 1, 1949 and terminating December 31, 1993 for the continued operation and maintenance of Chippewa Falls Hydro Plant Project No. 2440, located on the Chippewa River at Chippewa Falls, in Chippewa County, Wisconsin, and affecting navigable waters of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2440 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2440-1) General Map of System (FPC No. 2440-2) General Map of System

Exhibit K: (FPC No. 2440-3) Detail Plan

(ii) project works consisting of: a 29-foot high dam 1267 feet long composed of a 270-foot concrete powerhouse section, a 64-foot sluice gate section, a 69-foot retaining section, a 572-foot concrete spillway section equipped with thirteen 40 x 13-foot tainter gates, and two rip rapped earth embankments of 177 and 175 feet in length, respectively; a powerhouse containing six adjustable-blade propeller-type turbine (5000 hp each) connected to six 3600 kw generating units connected to a 34,000 kva substation; and other appurtenances; the location, nature and character of which are more specifically shown and described by the exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L No.	FPC No.	Showing
1	2440-4	General plan of development.
2	2440-5	Plan and elevation of dam.
3	2440-6	Longitudinal section of power house on centerline of units.
4	2440-7	Plan of generator room and forebay.
5	2440-8	Cross section of power house.
6	2440-9	Plan view and cross section of sluice and retaining section of dam.
7	2440-10	Cross section and details of spillway dam.
8	2440-11	Elevation and details of sluice and retaining sections of dam.
9	2440-12	Retaining wall and embankment at south end of spillway.
10	2440-13	Retaining wall and embankment at north end of power house.

Exhibit M: Consisting of one typewritten page and a circuit diagram filed January 6, 1964.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964) entitled, "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Article 1 through 29, are attached hereto and made a part hereof, except for Article 25; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall within two years from the date of issuance of license provide such modifications in the project operation as may be agreed to by the Licensee, the Wisconsin Conservation Department, and the Bureau of Sport Fisheries and Wildlife to assure adequate flows for the downstream fisheries and recreation. In the event that the Licensee and the agencies named herein fail to reach an agreement on the issues involved, the Commission reserves the right to determine the amount of flow to be released after notice and opportunity for hearing.

Article 31. The Licensee shall within one year from the date of issuance of license submit for Commission approval a revised Exhibit R, conforming to regulations contained in 18 CFR 4.41 as clarified by Order No. 292 issued January 8, 1965, 33 FPC 32.

Article 32. Licensee shall cooperate with the City of Chippewa Falls in improving the existing boat launching ramp and with State and local agencies and individuals in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation developments at the project.

Article 33. The Licensee shall pay to the United States the following annual charge effective November 1, 1949:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission, in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 28,800 horsepower.

Article 34. The Commission reserves the right to determine at a later date what transmission facilities, if any, shall be included in this license as part of the project works.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC UTILITY DISTRICT NO. 2 OF GRANT COUNTY, WASHINGTON, PROJECT NO. 2114

ORDER APPROVING EXHIBIT L DRAWINGS SHOWING FISH FACILITIES

(Issued April 7, 1965)

On March 29, 1957, Public Utility District No. 2 of Grant County, Washington, filed for Commission approval Exhibit L drawings of the general plans of the fish passage facilities at the Priest Rapids development of Project No. 2114, located on the Columbia River, Washington. The drawings, which were filed pursuant to Article 39 of the license, show the functional plans for fish passage facilities constructed at the Priest Rapids development.

By letters dated April 29, 1957 and May 15, 1957, respectively, the State of Washington, Department of Game, and the Department of the Interior, have advised of their approval in general of the fish passage facilities.

The Commission finds:

It is consistent with the public interest that the general plans for fish passage facilities, as shown on Exhibit L (FPC Nos. 2115-47 through -51) be approved.

The Commission orders:

The Exhibit L drawings for fish passage facilities at the Priest Rapids development of Project No. 2114, as described in the above finding, are hereby approved.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. RI64-1 AND RI64-642

ORDER TERMINATING PROCEEDINGS

(Issued April 7, 1965)

On February 18, 1965, Socony Mobil Oil Company, Inc. (Socony) filed a motion to terminate the above-docketed proceedings which concern a sale of natural gas made to El Paso Natural Gas Company (El Paso) in the Gallegos Canyon Field, San Juan County, New Mexico. Socony states that its predecessor in interest in these properties had filed successive proposed increased rates of 13.0495¢ and 14.05775¢ per Mcf with the Commission, reflecting a tax reimbursement increase and a periodic increase coupled with a proportional tax increase, respectively. Each of the proposed increased rates were suspended by order of the Commission, and were made effective, subject to refund, as of July 9, 1963, in Docket No. RI64-1 and May 18, 1964, in Docket No. RI64-642. However, El Paso did not pay the rate increase involved in Docket No. RI64-1, and paid only that increment of the proposed increased rate attributable to the periodic increase in Docket No. RI64-642.

On January 15, 1965, Socony made appropriate filings to waive the minimum guarantee for liquids provisions of the contract, and to withdraw that portion of the increased rate attributable to the increased tax reimbursement. The reduced rate of 13.0¢ per Mcf at 15.025 psia, which is at the area ceiling as set by the Statement of General Policy No. 61-1, was accepted for filing, and made effective as of January 1, 1965.

Socony states that the total amount of monies collected subject to refund, either by its predecessor, whose obligation it assumed, or itself, is $199.47. Under the circumstances, we view Socony's action here of filing a decrease in rate to the applicable area ceiling, and waiving the minimum guarantee for liquids provision in its contract, as being in the nature of an offer of settlement. No answer or protest to Socony's motion has been filed.

In view of the *de minimis* sum of monies involved, and our prior acceptance of Socony's proposed reduced rate, we shall relieve Socony of all refund obligation in these proceedings and shall terminate the same.

The Commission finds:

The motion to terminate filed by Socony on February 18, 1965, and to be relieved of refund obligation in these proceedings, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be granted as hereinafter ordered.

The Commission orders:

(A) The motion to terminate and to be relieved of refund obligation filed by Socony on February 18, 1965, in Docket Nos. RI64-1, and RI64-642, be and the same is hereby granted.

(B) The proceedings in Docket Nos. RI64-1 and RI64-642, be and the same are hereby terminated, and Socony is hereby relieved of any refund obligation imposed therein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

JOINT USE OF WATER POWER PROJECT WORKS OR PARTS THEREOF FOR CERTAIN WATER SUPPLY PURPOSES, DOCKET NO. R-249

ORDER TERMINATING PROCEEDING

(Issued April 7, 1965)*

This proceeding involves a proposed amendment of the Regulations under the Federal Power Act to provide for the joint use of project works for certain water supply purposes. As set out in the notice of proposed rulemaking, issued November 6, 1963, the proposed amendment was intended to facilitate multiple uses of licensed project works, primarily reservoirs, in the interest of comprehensive development of a waterway or waterways and the conservation and utilization of water resources of a region, without imposing the cost of such uses on the power consumers.

General notice of the proposed rulemaking was given in the Federal Register on November 15, 1963 (28 F.R. 12176). On December 9, 1963, an extension of time to submit data, views and comments was granted. Many licensees and other interested parties commented. These comments have been carefully considered.

In view of the comments received, and after additional opportunity to consider the problems, we conclude that issuance of the proposed rule would be unnecessary and procedurally inappropriate. Insofar as existing licenses are concerned the proposed rule could have no application except to the extent that provision for the particular use was already incorporated into the license as a result of an express provision of the Act or a special or general article of the license. Since such authority will vary from license to license, it appears desirable to handle joint use problems relating to existing licenses on an *ad hoc* basis as they may arise. Insofar as new licenses are concerned, we believe that the matter can better be handled by special conditions in the license itself.

---

*Published in the Federal Register on April 14, 1965 (30 F.R. 4769).

We are, therefore, incorporating the substance of the proposed rule into a specific license condition which, in the absence of a showing of special circumstances, will be inserted in licenses issued in the future. The form of this proposed article is set out as Appendix A hereto. As will be noted, several modifications have been made in the Article as compared to the proposed rule. The first of these would eliminate reference to "pumped storage hydroelectric" facilities. As we made clear in Opinion No. 443 (Susquehanna Power Company and Philadelphia Electric Company, Project Nos. 405 and 2355, 32 FPC 826); any such project would require a license from the Commission and the Commission's comprehensive licensing authority is not restricted by any rights of existing licensees to be free of joint use of the water resources by a new project when the Commission finds that the resulting totality of river development, giving full consideration to any negative effects of such joint use, is most conducive to comprehensive development. We shall accordingly process such applications in accordance with our normal licensing procedures and the principles outlined in that Opinion.

The second modification was suggested by the Secretary of the Interior in his comments. This change would add "Federal agency" to those who could petition to use the project works for water supply purposes.

Finally, several of the comments expressed apprehension concerning interference with State water rights law or State or local plans for multiple use of project waters. As previously provided in the proposed rule, the Article provides that necessary water rights for such non-project purposes must be acquired pursuant to applicable State law, and we will also provide that parties seeking to invoke the Article submit a statement as to the relationship of the proposed use to any State or municipal plans which may have been adopted with respect to the use of such waters.

Upon consideration of the entire record in this proceeding—

The Commission finds:

The rule proposed herein is not necessary or appropriate in carrying out the provisions of the Federal Power Act and the proceeding should be terminated.

The Commission orders:

The above-captioned rulemaking proceeding is hereby terminated.

APPENDIX A

SPECIFIC LICENSE CONDITION PROVIDING FOR JOINT USE

On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the application possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. RP65-39; ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-40

ORDER DENYING RECONSIDERATION

(Issued April 8, 1965)

On March 11, 1965, Washington Gas Light Company (Washington) filed an "Application for Reconsideration" of the Commission's orders, issued in the above proceedings on February 23, 1965, 33 FPC 306, 312. Those orders accepted revised tariff sheets reflecting rate reductions in the commodity components of the companies' rates effective January 1, 1965, and approved proposed refunds on a similar basis for the period from March 1, 1964 to December 31, 1964. The rate changes were submitted in accordance with a letter to the Commission filed on February 24, 1964, by The Columbia Gas System, which advised the Commission that after determination had been made in their rate design proceedings, United and Seaboard would consider the effect of the reduction in Federal income tax rates on their costs of service, and if warranted, would *voluntarily* file reduced rates to reflect the reduction in the Federal income tax rate for corporations from 52 percent to 50 percent. The rate design determinations were made in Opinion Nos. 430 and 430-A issued June 2, and October 14, 1964, 31 FPC 1342, and 32 FPC 1106. United and Seaboard filed their proposed reductions in rates on January 22, 1965 and served copies of those filings upon their jurisdictional customers.

On February 12, 1965, Washington submitted its comments on the proposals in which it observed that the proposed rate reductions were being reflected entirely in the commodity component of the demand-commodity rates without Respondents' having provided explanation or justification therefor. Washington concluded its letter with a statement to the effect that since more than 50 percent of the tax cost has been included in demand, "logical consistency" requires that the reduction in taxes be reflected in the demand component of the rate.

Our orders issued February 23, did not make specific mention of Washington's comment. However, due consideration was given whether the benefits of the proposed voluntary rate reductions and refunds should be delayed pending discussions on whether such reduction should be reflected in both the demand and commodity components of the companies' two-part rates. That manner of reflecting the reductions proposed in these proceedings would have only minor effect on the rates and refunds of any customer. On balance, we were of the view that it would not be in the public interest to delay our action on the proposal as submitted. Moreover, we do not agree with Washington's contention that "logical consistency" requires that these reductions be reflected entirely in the demand components of the rates. The minor changes in the commodity rates resulting from these reductions are not inconsistent with the rate design objectives of Opinion Nos. 430 and 430-A.

Accordingly, we find that Washington's application for reconsideration should be denied.

The Commission orders:

The application for reconsideration filed by Washington Gas Light Company on March 11, 1965, hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER DISMISSING APPLICATION FOR REHEARING AND VACATING ORDER PERMITTING INTERVENTION

(Issued April 9, 1965)

On February 3, 1965, the Incorporated Village of Freeport, New York (Freeport) tendered for filing a petition requesting that this proceeding be reopened to consider further evidence as to the effect of the project on fish resources of the Hudson River. A petition to intervene was also filed. Both petitions were denied as untimely on February 5, 1965.

On March 10, 1965, Freeport tendered an application for rehearing. The day before, on March 9, we issued our Opinion No. 452, 33 FPC 428, which contained our order issuing a license to Consolidated Edison. In the opinion and order, we found it in the public interest to invoke our continuing authority under the license to require the Applicant to take all necessary measures for the protection of fish. We therefore provided an opportunity for interested persons to submit additional evidence concerning the design of the fish protection facilities. Accordingly, a public hearing, including this issue, was calendared for May 4, 1965, and intervention by new parties was permitted until April 16, 1965. By notice issued March 26, 1965, the time to file petitions to intervene was extended to May 3, 1965.

In view of the foregoing, by letter-order of March 19, 1965, we accepted Freeport's application for rehearing as a petition to intervene in the proceeding set for hearing on May 4, 1965, and, by our order of March 30, 1965, we permitted intervention. Freeport, by letter received April 8, 1965, states that although it intends to file a formal petition to intervene in the proceeding calendared for May 4, 1965, our order of March 30, 1965 granting intervention should be vacated. Freeport's reason is that it wishes to preserve its claimed right to court review under Section 313 of the Federal Power Act (16 USC 825(1)) of the denial of its petitions to intervene and to reopen the original proceeding.

Considered as an application for rehearing of our letter-order of February 5, 1965, denying the petition to intervene and the petition to reopen the original proceeding, Freeport's application, filed March 10, 1965, was beyond the thirty-day limit prescribed by Section 313(a) of the Federal Power Act for the filing of applications for rehearing.

It is further apparent that, with reference to the original hearings, Freeport's petition to intervene, filed shortly before the issuance of the license order, was untimely under our rules. In our letter-order of February 5, 1965, rejecting the petition, we detailed the lengthy chronology of the proceeding, showing that before this matter was submitted for decision, there had been ample opportunity to file petitions to intervene. See Section 1.8(d) of the Commission's Rules of Practice and Procedure. We also denied the request to reopen on the ground that such a request may be granted only to a party to the proceeding. The application for rehearing asserts no basis for deviating from our previous determination.

The Commission finds:

(1) Freeport's application for rehearing does not present any new ground which would cause us to modify our letter-order of February 5, 1965 rejecting Freeport's untimely petition to intervene and its request to reopen the original proceedings.

(2) Freeport's application, filed after expiration of the thirty-day limit on applications for rehearing prescribed by the Federal Power Act, should be dismissed.

(3) The order of March 30, 1965, granting Freeport intervention in the hearing calendared for May 4, 1965, should be vacated.

The Commission orders:

(A) Freeport's application for rehearing is hereby dismissed.

(B) The order of March 30, 1965, granting Freeport intervention in the hearing calendared for May 4, 1965, is hereby vacated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOHIO PETROLEUM COMPANY, DOCKET NO. G-17376

ORDER REJECTING OFFER OF SETTLEMENT, AND DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued April 9, 1965)

On September 28, 1964, Sohio Petroleum Company (Sohio) submitted an offer of settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, involving a sale of natural gas to Tennessee Gas Transmission Company (TGT) under Sohio's FPC Gas Rate Schedule No. 90 in the Deckers Prairie Field, Harris County, Texas (Texas Railroad Commission District No. 3). Under the terms of the offer, Sohio proposes to eliminate the favored-nation and price redetermination clauses from its contract, to amend the periodic escalation provisions thereof, and to establish a 14.6¢ per Mcf rate for the subject sale. Additionally, Sohio proposes to refund the difference between 16.16947¢ per Mcf, the amount which has been charged and collected subject to refund, and the settlement rate from and after September 1, 1961, which is the refund date fixed in Sohio's company wide settlement, *Sohio Petroleum Company*, Docket No. G-8488, *et al.*, 30 FPC 1623. However, the proposed increased rate involved herein was made effective, subject to refund, after the statutory suspension period, by motion filed on June 1, 1959, and has been charged and collected since that date. Although the sale made under Sohio's Rate Schedule No. 90 is the same as the sale made under its Rate Schedule No. 1, which was included in its company-wide settlement, the interest covered by Rate Schedule No. 90 was not acquired until after Sohio had filed its company-wide settlement proposal.

Therefore, Sohio's proposal to make refunds only from September 1, 1961, is not consistent with our policy of requiring full refunds of the difference in amounts collected subject to refund and the settlement rate when offers of settlements as to particular sales are proposed under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264 issued March 27, 1963, 29 FPC 589. Sohio has not shown good cause for an exception to that requirement. Consequently, we shall reject the offer of settlement and motion to terminate.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to reject the offer of settlement and to deny the motion to terminate filed by Sohio with the Commission on September 28, 1964.

The Commission orders:

The offer of settlement filed by Sohio in this proceeding on September 28, 1964, is hereby rejected, and the motion to terminate filed therewith is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL ILLINOIS ELECTRIC AND GAS CO., DOCKET NO. CP65-257

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 12, 1965)

On February 26, 1965, Central Illinois Electric and Gas Co. (Applicant) filed in Docket No. CP65-257 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to make physical connection of its transmission facilities with Applicant's proposed distribution facilities and to sell and deliver natural gas to Applicant for distribution and resale to residential and commercial customers located in the Villages of Camargo and Garrett, Illinois, and their environs, all as more fully described in the application.

Applicant seeks two separate physical connections of its proposed lateral transmission lines with Panhandle's main transmission line at points in Douglas County, Illinois, and the sale and delivery of natural gas to Applicant for resale to Camargo and Garrett at those connections. Applicant will construct a regulator and odorizer station at the points of connection with Panhandle's line and construct 2-inch intermediate pressure lateral mains from the regulator stations to the south village limits of Camargo and Garrett. The distribution systems are also to be constructed by Applicant.

The total third year cost of the proposed facilities to be constructed by Applicant is estimated to be $109,660. No enlargement of Panhandle's transmission facilities is required.

The estimated gas requirements of Applicant are as follows:

	1st year	2d year	3d year
Annual (Mcf)	15,086	26,530	31,157
Peak day (Mcf)	253	296	340

Applicant is regulated by the Illinois Commerce Commission which has granted it certificates of public convenience and necessity to serve the communities of Camargo and Garrett and environs. Applicant has also obtained 50-year franchises from each village.

Panhandle has not filed an answer to the application. Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on March 13, 1965 (30 F. R. 3402). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation with its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G-200 and G-207 (3 FPC 273).

(2) Applicant is a public utility company organized and existing under the laws of the State of Illinois and is authorized to construct and operate the proposed facilities and to distribute and sell natural gas to inhabitants of the communities along its proposed pipeline system.

(3) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 340 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order shall be conditioned upon Applicant's being prepared to receive gas from Panhandle, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between applicant and Panhandle in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Panhandle serve the Applicant, as requested, will not place an undue burden upon its nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and is hereby directed to establish physical connection of its natural gas transmission system with the facilities of the Applicant and to sell and deliver up to 340 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Panhandle Eastern Pipe Line Company shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Applicant shall be prepared to receive natural gas from Panhandle within one year from the date of this order.

(D) Panhandle shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COMMUNITY PUBLIC SERVICE COMPANY, DOCKET NO. E-7209

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued April 12, 1965)

Community Public Service Company (Applicant), filed an application on February 15, 1965, for authorization pursuant to Section 204 of the Federal Power Act to issue short-term, unsecured Promissory Notes in the maximum principal amount of $8,000,000.

Applicant is incorporated under the laws of the State of Texas and is authorized to do business in the State of New Mexico with its principal business office at Fort Worth, Texas. Applicant is engaged primarily in the generation, purchase, distribution and sale of electricity and the purchase, distribution and sale of natural gas, and furnishes electricity to 103 communities in Texas and 10 communities in New Mexico. Gas is supplied to 3 communities in Texas.

According to the application, the short-term Promissory Notes proposed for execution in the maximum aggregate principal amount of $8,000,000 will be issued and dated at such time or times as short-term bank loans are made or renewed on or before June 30, 1966. The Applicant represents that the proposed securities will evidence loans from Fort Worth and New York City banking institutions and that the maturity of each note will not exceed 120 days from its date. The Notes are to bear interest at a rate in effect for such loans on dates of issue or renewal in Fort Worth and New York.

Applicant states that the purpose of the proposed short-term bank loans is the reimbursement of the treasury of Applicant for expenditures for the construction, completion, extension or improvement of its facilities. According to the application, these expenditures for the Applicant's 1965 construction program will total $11,383,000. Principal items in Applicant's program are: $3,105,500 for transmission line facilities; $1,532,000 for three 138/69 kv transmission substations with total capacity of 400 Mva; $5,327,500 for electric distribution facilities; $1,279,000 for general electric facilities, and $139,000 for gas distribution facilities.

Written notice of the application has been given to the New Mexico Public Service Commission and to the Texas Railroad Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on February 25, 1965 (30 F.R. 2485), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before March 10, 1965, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued April 24, 1963, *Community Public Service Company*, Docket No. E-7084 (29 FPC 829).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $8,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $8,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is sufficient.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $8,000,000 outstanding at any one time, whether an original issue or a renewal note, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all notes to be issued pursuant thereto being not later than October 30, 1966.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., COMPLAINANT v. COLORADO INTERSTATE GAS COMPANY, DEFENDANT, DOCKET NO. RP65-43

ORDER GRANTING MOTION FOR CLARIFICATION OF OPINION AND ORDER

(Issued April 12, 1965)

The Commission on February 18, 1965, issued its Opinion No. 450 and accompanying order, in Docket No. CP64-294, 33 FPC 281, in which we granted a certificate of public convenience and necessity to Colorado Interstate Gas Company (Colorado) to sell and deliver gas to Cheyenne Light, Fuel & Power Company for distribution in Pine Bluffs, Wyoming, in accordance with Colorado's Rate

Schedule P-1. In that proceeding, Kansas-Nebraska Natural Gas Company, Inc. (KNCO), which purchases gas under Colorado's Rate Schedule P-2, objected to our granting the certificate upon grounds of undue discrimination in rate provisions. In our opinion and order, in view of these objections by KNCO, we also instituted this proceeding as an investigation into the propriety of Colorado's Rate Schedule P–2, stating that we would treat KNCO's allegations as a formal complaint herein.

On March 9, 1965, KNCO filed a notice seeking clarification of the finding and ordering paragraphs of our Opinion and accompanying order. KNCO's motion requests that the finding and ordering paragraphs be modified so as to permit it to present evidence covering "all aspects of the P-2 rate schedule" in order that we may determine, in words of Opinion No. 450, "the propriety of Colorado Interstate's P-2 rate schedule" and "the tariff provisions, rules and regulations which the Commission should prescribe . . . for service to Kansas-Nebraska by Colorado Interstate." KNCO points to the words of our finding and ordering paragraphs in Opinion No. 450 which appear to restrict the investigation to the "propriety of the 75-percent take-or-pay provisions."

On March 10, 1965, Colorado filed an answer to KNCO's motion for clarification, taking the position that our Opinion No. 450 and order need no clarification. Colorado states that the gravamen of KNCO's complaint in the certificate case was that the 75-percent take-or-pay provision was unfair and that the volumes of gas KNCO should be required to purchase from Colorado should be reduced.

It was our intention to permit KNCO to present evidence in support of the same allegations it made in the certificate proceeding. Thus, KNCO's brief before the Presiding Examiner, as well as its brief to us upon exceptions to his decision, relate to the billing demand ratchet contained in Rate Schedule P-1, and the minimum bill provisions of both rate schedules, P-1 and P-2. It, therefore, appears appropriate to modify our order as provided herein.

The Commission orders:

(A) Finding paragraph (2) of our order accompanying Opinion No. 450 is hereby modified by omitting therefrom the phrase "the 75-percent take-or-pay provision" and by substituting therefor the phrase "the billing determinants and minimum bill provisions of Colorado's Rate Schedule P-2 with particular reference to KNCO's allegations of discrimination in service offered another Buyer under Colorado's Rate Schedule P-1."

(B) Ordering Paragraph (C) of our order accompanying Opinion No. 450 is hereby modified by omitting therefrom all language *after* the phrase "a public hearing shall be held concerning the matters involved to determine", and by substituting for the omitted words the following phrase:

> the limited issue raised by KNCO's complaint made in Docket No. CP64–294, concerning the propriety of the billing determinants and minimum bill provisions of Colorado's Rate Schedule P–2, applicable to sales to KNCO from Colorado's 12-inch line involved herein, and whether such provisions are just and reasonable and not unduly discriminatory within the meaning of the Natural Gas Act, with particular reference to KNCO's allegations of discrimination in service offered another Buyer under Colorado's Rate Schedule P-1.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TOWN OF MEIGS, GEORGIA, DOCKET NO. CP65-205

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 12, 1965)

On January 7, 1965, the Town of Meigs, Georgia, filed in Docket No. CP65-205 an application as supplemented on January 13, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing South Georgia Natural Gas Company (South Georgia) to make two physical connections of its transmission facilities with Applicant's proposed distribution facilities and to sell and deliver natural gas to Applicant for distribution and resale to residential and commercial customers located in the Town of Meigs and the area adjacent thereto, all as more fully set forth in the application on file with the Commission.

The estimated volumes of natural gas involved to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be: .

	1st year	2d year	3d year
Annual (Mcf)	158,419	159,766	161,115
Peak day (Mcf)	225	242	258

The estimated cost of Applicant's proposed distribution system is $200,000, to be financed with a Public Facility Loan from the Housing and Home Finance Agency.

Applicant proposes to receive gas at two points on South Georgia's 8⅝-inch high pressure line. At Delivery Point No. 1 South Georgia will construct 1.7 miles of 3½-inch line and a meter and regulating station at the town border to serve Applicant's proposed distribution system. At Delivery Point No. 2 South Georgia will construct a meter and regulating station, which will be paid for by Applicant, to serve Applicant's industrial customer, Fuller's Earth Products, Inc. The total estimated cost to South Georgia is $34,000.

On January 25, 1965, South Georgia filed its answer with the Commission and stated that it has no objections to providing the requested service.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on January 20, 1965 (30 F.R. 658). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) South Georgia Natural Gas Company, a Georgia corporation with its principal place of business in Thomasville, Georgia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order in Docket No. G-1915, issued August 3, 1954 (13 FPC 666).

(2) Applicant is a municipality in the State of Georgia and is authorized to construct and operate the proposed facilities and to distribute and sell natural gas to inhabitants of the community along its proposed distribution system.

(3) It is necessary and desirable in the public interest that South Georgia be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver to Applicant its daily

and annual requirements of natural gas, as set forth in the application and as hereinafter ordered and conditioned.

(4) The requirement that South Georgia serve the Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) South Georgia Natural Gas Company be and is hereby directed to establish connections of its natural gas transmission system with the facilities of the Applicant and to sell and deliver natural gas to Applicant, all as hereinbefore described and as more fully described in the application.

(B) South Georgia Natural Gas Company shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

(C) Applicant shall be prepared to receive natural gas from South Georgia within one year from the date of this order.

(D) South Georgia Natural Gas Company shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER APPROVING REVISED EXHIBIT L DRAWINGS

(Issued April 12, 1965)

On March 22, 1965, Sacramento Municipal Utility District, licensee for Project No. 2101, filed for Commission approval revised Exhibit L drawings showing the final design for the Slab Creek Dam. The filing was pursuant to Article 26 of the license.

The revised drawings show a proposed concrete arch dam about 245 feet high and 830 feet long with a 462-foot long uncontrolled spillway section provided in the central portion of the crest creating a reservoir with a normal pool elevation of 1,850 feet and gross storage of 16,600 acre-feet. The reservoir will serve as an afterbay for the Camino powerhouse and as a forebay for the White Rock powerhouse.

Further geologic investigations dictated the movement of the left abutment of the dam 90 feet upstream. This, together with refinement in design, resulted in an increase in the dam's height from 240 feet to 245 feet (with no change in the crest elevation) and an increase in its length from 820 feet to 830 feet. The increased height of the dam will not increase the pool elevation over that presently authorized. The geologic investigations have established the competency of the foundation and abutment rock.

Stress analyses were made of the concrete arch dam under loading conditions which considered normal and maximum hydrostatic forces, temperature effect and seismic forces. The stresses were found to be within allowable limits.

The above-mentioned project changes have been reviewed by our staff and have been found to be safe and stable.

The Commission finds:

The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the Exhibit L drawings mentioned herein as being superseded should be eliminated from the license:

Exhibit L–113 (FPC No. 2101–196) showing "Slab Creek Dam Plan," superseding Exhibit L–89 (FPC No. 2101–148);

Exhibit L–114 (FPC No. 2101–197) showing "Slab Creek Dam Upstream Elevation and Sections," superseding Exhibit L–90 (FPC No. 2101–149) and

Exhibit L–115 (FPC No. 2101–198) showing "Slab Creek Dam Geometry."

The Commission orders:

The revised Exhibit L drawings described in the above findings are hereby approved as part of the license for Project No. 2101, and the superseded Exhibit L drawings described in the same finding are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA). DOCKET NO. AR64–1, ET AL.

ORDER DENYING APPEAL

(Issued April 13, 1965)*

Dorchester Gas Producing Company (Dorchester), on March 12, 1965, appealed a ruling of the presiding examiner which denied Dorchester permission to adduce herein individual company cost of service data for the purpose of showing that under the *Sierra* doctrine[1] it is entitled to a higher rate under its Rate Schedule No. 2 than is contractually authorized. Dorchester's request and the examiner's ruling were made in the pre-hearing stages of this proceeding. The examiner decided that the issues of elevation of fixed gas purchase contracts and the applicability of the *Sierra* doctrine should be resolved on an area's basis and not on an individual company basis, citing the Commission's order issued January 19, 1965, 33 FPC 88, in Docket No. RI64–749, which denied reconsideration of Dorchester's petition for a general rate investigation. The examiner also held that the relief sought here by Dorchester was substantially the same as that previously denied to other parties by the Commission in this same proceeding by order issued January 30, 1964, 31 FPC 197.

In its appeal Dorchester claims, among other things, that (1) the Commission's January 19, 1965, order did not purport to foreclose the presentation of its individual company data in the area proceeding; and (2) the relief sought by it is not substantially the same as that previously sought by other parties and denied by order of the Commission issued January 30, 1964, inasmuch as it is seeking relief under the *Sierra* doctrine from alleged confiscation.

Dorchester's motion misconceives the holding of our order of January 19, 1965, in Docket No. RI64–749. As we made clear therein, Dorchester is free, either on its own or in concert with producers similarly situated, to attempt to show in the present proceeding that the public interest would be served, within the meaning of the *Sierra* doctrine and in context of an area price proceeding, by Commission action pursuant to Section 5 of the Natural Gas Act, to make possible producer filings of rate increases up to the price determined to be just and reasonable for similar gas despite existing contractual inhibitions on such filings. *Sierra* makes

---

*Reconsideration denied June 7, 1965 [unreported]. Petition to review dismissed, *sub nom. Dorchester Gas Producing Co.* v. *F.P.C.*, 353 F. 2d 162 (CA3–1965), cert. denied, 383 U.S. 969 (1966).

[1] *F.P.C.* v. *Sierra Pacific Power Co.*, 350 U.S. 348.

clear, however, that even in the context of individual company rate making for pipelines or public utilities the issue is not whether the contractual limitations on rate filings will result in affording the company less than a fair return, but whether the rate "is so low as to adversely affect the public interest" (350 U. S. 348 at 355). Thus, without here determining what showing would be essential to "the protection of the public interest, as distinguished from the private interests" of Dorchester or other producers in context of an area rate proceeding it is clear that introduction of an individual company cost of service by Dorchester would not be of any greater relevance to a determination of the *Sierra* issue than to the fixing of the area rate itself.

To the extent that Dorchester is claiming that it is legally or equitably entitled to special relief over and beyond that to be afforded all other respondents who may have contractual inhibitions on filing rates up to the levels specified in our area rate determination, it is sufficient to add that Dorchester must await the fixing of the area rate or rates before it can properly present such a claim. This does not mean that having deferred Dorchester's claim (in Docket No. RI64–749) for an immediate proceeding to secure relief under the *Sierra* case in our order of January 19, 1965, for consideration as part of this proceeding, we are now postponing any possibility of relief for still an additional period of time. As indicated, Dorchester will be able to make any relevant showing indicating that as part of our area price determination there are public interest why producers should be permitted to file increases up to the general area rate or at least up to some specified level, their contracts notwithstanding, and we would, in any event, not be in a position to determine whether Dorchester was entitled to some special exception to the area rate until it had been fixed.

The Commission orders:

For the reasons set forth above, Dorchester's appeal from the examiner's ruling of March 9, 1965, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–89

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1965)

On December 1, 1964, Cities Service Gas Company (Cities Service) and Natural Gas Pipeline Company of America (Natural) filed in Docket No. CP64–89, a joint application to further amend the order of the Commission issued on January 2, 1964, 31 FPC 3, as amended on August 14, 1964, 32 FPC 618, authorizing Cities Service and Natural, among other things, to construct and operate certain facilities described therein, and to exchange up to 40,000 Mcf of natural gas daily for a period terminating May 1, 1965 under the terms of a Gas Exchange Agreement dated September 30, 1963, and amended April 13 and September 24, 1964.

The application to amend filed December 1, 1964, seeks modification of the Commission's said order so as (1) to extend the period during which Cities Service and Natural may exchange natural gas pursuant to the Gas Exchange

Agreement dated September 30, 1963, as amended, to May 1, 1970,[1] (2) authorize the construction, installation, and operation of certain pipeline and compressor facilities to provide for an additional delivery point (Pampa Exchange Point) of natural gas now delivered by Cities Service to Natural, (3) authorize the replacement and abandonment of certain compressor facilities of Cities Service, and (4) authorize the retention of the Pampa Exchange Point facilities as an emergency interconnection after the May 1, 1967 exchange expiration date.

Cities Service proposes to (1) install and operate two 1,000 #W.P. compressors and appurtenant facilities, together with the addition of a gas cooler at its Pampa Compressor Station in Gray County, Texas, (2) construct and operate approximately 0.57 mile of 10-inch pipeline from its Pampa Compressor Station to a point of interconnection with Natural's 26-inch pipeline (Pampa Exchange Point), located in Gray County, Texas, (3) construct and operate metering and regulating facilities to measure gas volumes delivered to Natural at the interconnection of Cities Services' proposed 10-inch pipeline and Natural's 26-inch pipeline in Gray County, Texas, and (4) abandon two 500 #W.P. compressors presently installed at its Pampa Compressor Station in Gray County, Texas (certificated December 28, 1943, in Docket No. G–298).

Natural proposes to install and operate a side-tap on its 26-inch pipeline at a point located in Gray County, Texas, to receive natural gas from Cities Service at the Pampa Exchange Point.

The total cost of the proposed facilities is estimated to be $88,660, of which $84,960 is attributable to Cities Service and $3,700 to Natural, all of which will be defrayed from their respective current funds.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 16, 1964 (29 F.R. 17854). No protest or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the order of the Commission issued on January 2, 1964, as amended on August 14, 1964, be further amended so as to (1) extend the period during which Cities Service and Natural may exchange natural gas to May 1, 1967, (2) authorize the proposed installation and operation of facilities by Cities Service and Natural, and abandonment of certain facilities by Cities Service, and (3) authorize the retention of the Pampa Exchange Point facilities as an emergency interconnection after May 1, 1967, expiration date.

The Commission orders:

(A) The order of the Commission issued on January 2, 1964, as amended on August 14, 1964, be further amended so as to authorize (1) the extension of the period during which Cities Service and Natural may exchange natural gas under their exchange agreement dated September 30, 1963, as amended, to May 1, 1967, (2) the installation and operation of facilities to provide an additional delivery point (Pampa Exchange Point) for natural gas now delivered by Cities Service to Natural, (3) the replacement and abandonment of certain compressor facilities of Cities Service, and (4) the retention of the Pampa Exchange Point facilities as an emergency interconnection after the May 1, 1967 exchange expiration date.

(B) In all other respects said order shall remain in full force and effect.

---

[1] Modified by letter dated February 25, 1965, filed with the Commission on March 2, 1965, indicating acceptance of extension of duration of gas exchange period to May 1, 1967, instead of May 1, 1970.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-211

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued April 13, 1965)

On January 12, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-211 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, all as more fully set forth in the application.

Specifically, Applicant seeks permission and approval to abandon by sale to Western Gas Service Company (Western), approximately 0.617 mile of 4½-inch O. D. pipeline, a tap thereon and necessary appurtenances in Luna County, New Mexico, known as the Deming lateral, pursuant to an agreement between Applicant and Western dated December 2, 1964. Western will convert the Deming lateral into a distribution line in order to expand its natural gas service. The agreed consideration is stated to be $1,000.

Due notice of the filing of the application was published in the Federal Register on January 23, 1965 (30 F.R. 768). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

At a hearing held on April 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment hereinbefore described, as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by El Paso Natural Gas Company of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP65–245

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1965)

On February 19, 1965, Michigan Gas Storage Company (Applicant) filed in Docket No. CP65–245 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of existing facilities for the transportation of additional volumes of natural gas wholly within the State of Michigan for and in behalf of Consumers Power Company (Consumers), all as more fully set forth in the application.

Specificially, Applicant proposes to transport for and in behalf of Consumers up to 250,000 Mcf of natural gas per day commencing April 1, 1965, and up to 275,000 Mcf per day commencing November 1, 1965.

By Commission order issued May 4, 1964, in Docket No. CP64–128, Applicant was authorized to transport up to 225,000 of natural gas per day for Consumers, commencing November 1, 1964. The gas involved is supplied by Trunkline Gas Company (Trunkline). Applicant states that on July 2, 1964, Consumers and Trunkline entered into a new agreement providing for the sale by Trunkline to Consumers of 250,000 Mcf per day commencing April 1, 1965, and 275,000 Mcf per day commencing November 1, 1965.[1] Accordingly, Applicant requests authorization herein to transport these increased volumes from Trunkline to Consumers.

The proposed increased transportation service will not require any additional facilities and all costs arising from said service will be passed on to Consumers pursuant to Applicant's cost-of-service tariff.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The transportation of natural gas hereinbefore described, as more fully described in the application in this proceeding, is to be in interstate commerce, subject to the jurisdiction of the Commission, and such transportation by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

[1] By Commission order issued March 15, 1965, 33 FPC 567, in Docket No. CP65–117, Trunkline was authorized to make the subject increased sale to Consumers.

(4) The proposed transportation of natural gas by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to transport natural gas for and in behalf of Consumers Power Company as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CI65–858

DECLARATORY ORDER WITH RESPECT TO COVERAGE UNDER RATE SCHEDULE

(Issued April 13, 1965)

Panhandle Eastern Pipe Line Company (Panhandle) on March 2, 1965, filed a petition in Docket No. CI65–858 for a declaratory order pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure requesting the Commission to determine that Panhandle's interest in sales of gas from the Reiswig #1–1 well, Section 1–T3N–R17ECM, in Texas County, Oklahoma and Klassen #1–17 well, Section 17–T6N-R19ECM, in Texas County, Oklahoma to Northern Natural Gas Company (Northern) by Hugoton Plains Gas and Oil Company (Hugoton) is covered by Hugoton's FPC Gas Rate Schedule No. 1, particularly Supplement No. 15 thereto. Supplement No. 15 contains the 15.75¢ settlement rate approved by the Commission in Docket No. RI60–102 by order issued October 8, 1963, 30 FPC 973, for Hugoton's sales to Northern. Panhandle indicates that Hugoton has taken the position that there is doubt as to whether it can lawfully make payments to Panhandle on the basis of the 15.75¢ per Mcf settlement rate effective as of April 7, 1960. Hugoton apparently believes that Panhandle must make its own rate filing before it is entitled to payment on the basis of the 15.75¢ settlement rate. Hugoton, however, has not filed a response to Panhandle's petition.

Panhandle and Hugoton own an undivided interest of 25% and 75%, respectively, in the Reiswig well. An agreement of April 20, 1951, between the parties provided that the price to be paid by Hugoton to Panhandle was 9.25¢ per Mcf at 16.4 psia until January 1, 1960, and thereafter the price was to be 1.25¢ below the price paid by Northern to Hugoton with a minimum of 9.25¢ per Mcf, subject to a Btu adjustment.

Panhandle and Hugoton along with Texaco Inc. each own an undivided interest of 19.1479%, 67.1374% and 13.714% respectively, in the Klassen well. An agreement of August 10, 1951, between Panhandle and Hugoton provided that the price to be paid by Hugoton to Panhandle was 8.26¢ per Mcf at 14.65 psia until January 1, 1960, and thereafter the price was to be 1.12¢ per Mcf below the price paid by Northern to Hugoton with a minimum of 8.26¢ per Mcf, subject to a Btu adjustment.

In support of its petition, Panhandle states, among other things, that it has always considered itself covered by Hugoton's certificate authorization and the rate schedule filed by Hugoton in connection therewith, as supplemented. Panhandle points out that it has always received payments from Hugoton in the past on the basis of Hugoton's filings under its FPC Gas Rate Schedule No. 1, and that communications between Hugoton and Panhandle reasonably led it to believe that its interest was covered by Hugoton filings.

While Hugoton's FPC Gas Rate Schedule No. 1 does not specifically refer to Panhandle's interest it must be deemed to have covered Panhandle's interest. Hugoton is in no position to question Panhandle's right to be covered by its rate schedule in light of previous communications between Panhandle and Hugoton and its prior practice of making payments to Panhandle on the basis of its own rate filings. It is significant in this connection that Panhandle never sought certificate authorization or attempted to file its own rate schedule for the sale involved here. We therefore conclude that Panhandle is and always has been covered under Hugoton's FPC Gas Rate Schedule No. 1.

The Commission orders:

For the reasons set forth above, we hereby determine that Panhandle's interest in the above-designated properties is and always has been covered under Hugoton's FPC Gas Rate Schedule No. 1.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP64–270; SOUTHERN NATURAL GAS COMPANY, CP64–259, CP64–314; EAST TENNESSEE NATURAL GAS COMPANY, CP65–66; TENNESSEE GAS TRANSMISSION COMPANY, CP64–165; CITY OF BUFORD, GEORGIA, CP65–11, CP65–20; CITY OF SUGAR HILL, GEORGIA, CP65–10, CP65–19; CITY OF AUSTELL, GEORGIA, CP65–74

ORDER GRANTING REQUEST FOR TEMPORARY AUTHORIZATION

(Issued April 13, 1965)

By a series of orders, the last of which was issued on October 6, 1964, the matters presented by the above-designated docketed applications were consolidated for formal hearing. In the main they consist of competitive proposals by Transcontinental Gas Pipe Line Corporation (Transco), Southern Natural Gas Company (Southern), and East Tennessee Natural Gas Company (East Tennessee) to construct facilities so as to meet the increased natural gas requirements of Chattanooga Gas Company (Chattanooga). East Tennessee is currently the sole supplier of Chattanooga since neither Transco nor Southern have any facilities into the Chattanooga area. The hearing in this proceeding, which commenced on November 9, 1964, is now nearing its conclusion.

Southern, in its application in Docket No. CP64-314, seeks authorization to install, construct, and operate (1) 94,870 compressor horsepower at new and existing stations and (2) approximately 195 miles of various-sized new pipeline and pipeline loops, and appurtenant facilities, all at an estimated cost of $28,377,920. These facilities, more fully depicted on Exhibit A appended hereto, will increase Southern's daily design delivery capacity by approximately 180,000 Mcf per day. Southern proposes to utilize the facilities so as to make additional sales of 146,165 Mcf per day to both new and existing customers. Of this amount Southern has allocated 24,770 to Atlanta Gas Light Company (Atlanta), 5,000 Mcf to The Water, Light and Sinking Fund Commission of Dalton, Georgia (Dalton), and 29,000 Mcf to Chattanooga. Although all three of the major applicants propose to serve the increased requirements of Chattanooga, only Southern and Transco are vying to supply the increased requirements of Atlanta and Dalton.

On February 23, 1965, in view of the virtual impossibility of the completion of the proceeding which would permit the timely issuance of permanent authorization to construct the facilities necessary to meet its existing customers' increased requirements for the coming heating season, Southern filed a request for temporary authorization to construct that portion of the facilities asked for in its application in Docket No. CP64-314, which it alleges are unassociated with its competitive project to serve Chattanooga. The request relates to the construction of the following facilities, more fully depicted on Exhibit B appended hereto, which are estimated to cost $9,739,000:

(a) One 6,500 horsepower compressor unit at each of Southern's proposed Bay Springs, York, Selma, and Auburn compressor stations and one 3,400 horsepower compressor unit at its proposed Hall Gate station, all on Southern's South Line; and

(b) One 6,500 horsepower compressor unit at its proposed Pearl River station and two 2,500 horsepower compressor units at its proposed Lacombe station, both stations being located on Southern's South Louisiana supply system.

On March 16, 1965, Transco filed an answer to Southern's request for temporary authorization. Transco does not oppose the grant of such authorization provided that it is without prejudice to the Commission's final determination to be made on the record in the instant consolidated proceeding. The inclusion of such conditioning language, under like circumstances, is customary, and we shall so order here. Additionally, Transco argues that certain volumetric limitations should be imposed on Southern's proposed increased deliveries to Dalton and Atlanta for the 1965-1966 winter through the use of the facilities sought to be constructed under the instant request for temporary authorization. Since we do not here propose to grant any authorization for the operation of the requested facilities we need not decide the merits of Transco's latter argument at this time.

On March 5, 1965, East Tennessee filed an answer objecting to the grant of the requested temporary authorization for the facilities enumerated under (a) above. Its arguments, in the main, other than those covered above, are twofold.

First, East Tennessee contends that Southern has not demonstrated a need to commence construction of the requested facilities by April 1, 1965, so as to be ready to place such facilities in service during the coming heating season should the Commission so authorize. East Tennessee does not, in its answer contest Southern's allegations as to the increased requirements of its existing customers for the coming heating season. Although, as heretofore noted, we are not authorizing the use of the facilities requested, we do not, under the given circumstances, deem a request of six months in which to undertake an orderly construction program and thereby avoid excess costs to be unreasonable.

We will, however, require that the costs associated with the construction of these facilities shall not be included in Southern's rate base in the event that permanent certification is not granted.

Alternatively, East Tennessee contends that, by reason of Southern's operational flexibility, increased volumes made available by the proposed facilities to be constructed under the temporary authorization could be utilized to supply the competitive markets and thereby prejudice East Tennessee's application in the instant consolidated proceeding. The only competitive market that East Tennessee is concerned with is in the Chattanooga area. Since no authorization is here being sought to construct any facilities so as to extend Southern's system into that area the contention that it may affect East Tennessee is wholly without merit.

The Commission finds:

Based on the allegations of Southern for a temporary certificate of public convenience and necessity and the further matters discussed above, the request for construction only of the above-enumerated facilities should be granted.

The Commission orders:

(A) The application of Southern Natural Gas Company in Docket No. CP64–314 for temporary authorization for construction only of the limited facilities enumerated above, and as more fully depicted in Exhibit B appended hereto, is hereby granted.

(B) The grant of the instant temporary authorization is without prejudice to such final determination of the applications in the proceeding in Transcontinental Gas Pipe Line Corporation, *et al.*, Docket No. CP64–270, *et al.*, as the record may require.

(C) The temporary certificate issued herein and the rights granted hereunder are hereby conditioned upon Southern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(1) and (c)(4) of Section 157.20 of such Regulations. Should the Commission deny permanent certification of the facilities herein authorized to be constructed under temporary grant, all costs associated with the construction of said facilities shall not be included in Southern's rate base.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. G-13002

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 13, 1965)

On January 14, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. G-13002 an application to amend the order of the Commission issued in said docket January 3, 1958, 19 FPC 31, which order authorized Applicant to construct and operate facilities for the sale of up to 18,250,000 Mcf of natural gas per year to Louisiana Power & Light Company (Louisiana Power).

By the present application, Applicant seeks amendment of the order issued January 3, 1958, in Docket No. G-13002 by requesting authorization for a total maximum delivery of 18,872,000 Mcf to Louisiana Power for calendar year 1965 only, in lieu of the 18,250,000 Mcf presently authorized, pursuant to an agreement between the parties dated December 11, 1964. These additional volumes will be used to operate older generating units at the Sterlington Power Plant for about five days each week during peak periods of the summer months in 1965.

The temporary increase of volumes will be sold during Applicant's off-season. Applicant states there is sufficient capacity in existing facilities for this increased service.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 29, 1965 (30 F.R. 970). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate issued by the Commission on January 3, 1958, in Docket No. G-13002, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Applicant in the Commission order of January 3, 1958, be, and the same is hereby amended by increasing the total maximum delivery of natural gas to Louisiana Power from 18,250,000 Mcf to 18,872,000 Mcf for calendar year 1965 only, in accordance with the agreement dated December 11, 1964, between the parties, all as hereinbefore described and as more particularly set forth in the aforementioned motion to amend which is on file with the Commission.

(B) In all other respects the certificate, as amended in Docket No. G-13002 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP64–154

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 14, 1965)

On December 24, 1964, American Louisiana Pipe Line Company (Petitioner) filed in Docket No. CP64–154 a petition, as supplemented on January 13, 1965, to amend the certificate of public convenience and necessity issued in Docket No. CP64–154, et al., by Commission order of June 2, 1964, 31 FPC 1333, by authorizing certain modifications in compressor horsepower, all as more fully set forth in the petition as supplemented.

Said order of June 2, 1964, authorized, among other things, the construction and operation by Applicant of four new compressor stations and the installation of additional compressors at three existing stations.

By the instant petition to amend, Petitioner seeks authorizations to install: (1) four 2,700 hoursepower units at Station 1 in Louisiana in lieu of the five 2,000 horsepower units presently authorized; (2) five 2,500 horsepower units at Station No. 4 in Mississippi in lieu of six 2,000 horsepower units presently authorized; and (3) four 2,7000 horsepower units at Station No. 7 in Kentucky in lieu of the five 2,000 horsepower units presently authorized.

Petitioner states that manufactures' production schedules would not permit delivery of the large number of 2,000 horsepower units in time to be available for the 1964–65 heating season, and that the substitution of fewer units of higher horsepower enables the construction schedules to be met and will, in addition, result in operating economies. Petitioner further states that the modifications herein requested will result in a reduction of $1,334,216 in the $11,494,216 estimated total cost of the equivalent certificated facilities, and that such modifications will not result in any significant change in Petitioner authorized system capacity.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropirate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued in Docket No. CP64–154, *et al.*, on June 2, 1964, be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued in Docket No. CP64–154, *et al.*, on June 2, 1964, be and the same is hereby amended by authorizing the modifications in compressor horsepower hereinbefore described, as more fully described in the aforementioned petition, as supplemented, on file with the Commission.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-182

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued April 14, 1965)

On January 11, 1965, Colorado Interstate Gas Company (Applicant), filed in Docket No. CP64-182 an application to amend the order of the Commission issued June 2, 1964, 31 FPC 1339, in said docket, which order authorized operation of existing facilities and exchange of natural gas between Applicant and Natural Gas Pipeline Company of America (Natural) for the calendar year 1964. This exchange was to allow Applicant to deliver up to 10,000 Mcf of gas per day on an interruptible basis to Natural in return for like volumes which Natural agreed to deliver to Cabot Corporation (Cabot) for Applicant's account. The gas is used by Cabot in its carbon black plant in Carson County, Texas.

In the instant application, Applicant seeks amendment of the order issued June 2, 1964, in Docket No. CP64-182 by requesting an extension of the term of the exchange through calendar year 1965. Applicant's rate to Cabot is to be increased from 14 to 14.75 cents per Mcf. Concurrently, Applicant filed First Revised Sheets Nos. 89 and 90 to its FPC Gas Tariff, Second Revised Volume No. 2, which extend the term of the exchange agreement.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 26, 1965 (30 F.R. 811). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued June 2, 1964, in Docket No. CP64-182 be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Colorado Interstate Gas Company in the Commission order of June 2, 1964, in Docket No. CP64-182 be and the same is hereby amended by extending the term of the exchange authorized therein through the calendar year 1965 as hereinbefore described and as more fully described in the application to amend.

(B) Applicant's First Revised Sheets Nos. 89 and 90 to its FPC Gas Tariff, Second Revised Volume No. 2 are hereby accepted for filing to become effective upon the date on which this order issues.

(C) In all other respects the order in Docket No. CP64-182 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONFEDERATED SALISH AND KOOTENAI TRIBES OF THE FLATHEAD RESERVATION, MONTANA, PROJECT NO. 2285; THE MONTANA POWER COMPANY, PROJECT NO. 2293

ORDER PERMITTING WITHDRAWAL OF APPLICATIONS

(Issued April 14, 1965)

On March 9, 1965, the Confederated Salish and Kootenai Tribes of the Flathead Reservation, Montana (the Confederated Tribes) filed an application to withdraw application for preliminary permit in Project No. 2285, and The Montana Power Company (Company) filed application to withdraw its application for license for Project No. 2293.

The application by the Confederated Tribes for a preliminary permit was filed November 14, 1960, covering the Buffalo Rapids Nos. 2 and 4 sites on the Flathead River in Montana. The application of the Company filed March 8, 1961 included proposed developments at the Buffalo Rapids Nos. 2 and 4 sites and its existing upstream Kerr development which is operating under license as Project No. 5.

The Confederated Tribes and the Company filed a joint application on March 9, 1965 for a joint license under the Federal Power Act for a term of 50 years from the date of its issuance authorizing the construction, operation and maintenance of a project to be known as the "Flathead Project", designated in the Commission's files as Project No. 2507, consisting of (1) two proposed hydroelectric developments at sites known as Buffalo Rapids Nos. 2 and 4 on the Flathead River to be constructed and owned by the Confederated Tribes; and (2) the existing hydroelectric development owned, operated and maintained by the Company on the Flathead River, known as the Kerr project, now licensed as Project No. 5. The application has been accepted for filing.

The Confederated Tribes propose to sell to the Company the entire output of the proposed Buffalo Rapids developments, and the Company states that it will require this additional power to assure adequate service to its growing and expanding market. The proposed Buffalo Rapids developments, as well as the existing Kerr development, are to be located, in part, on Tribal lands of the Confederated Tribes.

The Commission orders:

Permission to withdraw the aforesaid applications for preliminary permit and for license in Project Nos. 2285 and 2293 is granted, and the proceedings with respect to those applications are hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP65-223

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued April 14, 1965)

Eastern Shore Natural Gas Company (Applicant) filed in Docket No. CP65-223 an application on January 22, 1965 and a supplement thereto on March 25, 1965 pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon service to Delaware Power & Light Company (Delaware Power)[1] at an existing delivery point northwest of Middletown, Delaware, and for a certificate of public convenience and necessity authorizing the sale of natural gas to Chesapeake Utilities Corporation (Chesapeake) at the aforementioned Delaware Power delivery point, all as more fully set forth in the application.

Delaware Power and Chesapeake have entered into a purchase and sale agreement whereby the gas distribution facilities which connect two customers of Delaware Power, namely, Globe-Union, Inc., and Shallcross Motors Inc., in New Castle County, Delaware, have been conveyed to Chesapeake, on condition the instant application is granted. The Public Service Commission of Delaware approved the transfer on November 18, 1964. As a result of the aforesaid change in ownership of the related distribution facilities Applicant proposes to cancel its G–1 service agreement with Delaware Power, and continue the sale of 100 Mcf of natural gas daily to Chesapeake under a new service agreement with delivery at the same delivery point northwest of Middletown, Delaware.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G–12200 (18 FPC 710).

(2) The proposed sale and delivery of natural gas to Chesapeake Utilities Corporation, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The service proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) The proposed abandonment of the aforesaid service is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

---

[1] Concurrently with the application, Applicant filed a notice of cancellation of its contract with Delaware Power effective February 21, 1965.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Chesapeake Utilities Corporation, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment by Applicant of the service to Delaware Power & Light Company hereinbefore described, as more fully described in the application in this proceeding, is hereby granted.

(D) Applicant shall advise the Commission of the date of abandonment of the service as authorized in paragraph (A) above within ten days of such abandonment.

(E) The notice of proposed cancellation filed January 22, 1965, cancelling Applicant's contract filed under its Rate Schedule G–1 for service to Delaware Power is accepted for filing effective on the date of issuance of this order.

(F) Applicant shall file pursuant to Part 154 of the Commission's Regulations an acceptable service agreement reflecting the terms and conditions of the sale and service proposed to be rendered Chesapeake under Applicant's Rate Schedule CD–1.

OPINION NO. 458

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E–7089

OPINION AND ORDER DETERMINING JURISDICTION

(Issued April 14, 1965)*

Syllabus

1. Where public utility participates in and is dependent upon integrated interstate power pool, all its wholesale sales for resale are subject to Commission jurisdiction. P. 740.
2. Where electric energy is transmitted daily to or from power company across state borders, Commission need not know precise nature of flow in determining jurisdiction—Power Act applies to transmission and sale of "electric energy" which represents an attribute of electric current and its practical effect. PP. 744–745.
3. Sales for resale from constantly changing mass of electric energy extending over borders of many states and infusing facilities of power company and other system companies are sales in interstate commerce subject to Commission jurisdiction under the Federal Power Act. P. 746.
4. Interposition of transformers between out-of-state sources of power and delivery points to customers and resulting transformation process does not block transmission of energy—the significant fact within meaning of Section 201 of the statute. P. 746.

---

*Initial decision appears on P. 752. Opinion No. 458–A issued June 11, 1965, denies rehearing, 33 FPC 1252. Affirmed, *Indiana & Michigan Electric Co.* v. *F.P.C.*, 365 F. 2d 180 (CA7–1966), cert. denied, 385 U.S. 972 (1966).

5. That all wholesale utility companies in Indiana could have met all state loads and power company could have supplied all its Indiana customers, including wholesale, is not relevant because system is not operated that way. P. 747.
6. There is nothing in Federal Power Act that makes Commission jurisdiction over sales dependent on whether facilities used are local distribution facilities. P. 747.
7. All wholesale sales for resale in interstate commerce made by a public utility are subject to provisions of Sections 205 and 206 of the Act regardless of whether particular sale involved jurisdictional facilities. P. 748.
8. Power Company was not denied due process by denial of pre-hearing discovery where it has shown no need therefor and evidence sought has no relevancy to the issues. P. 749.
9. Request for subpoenas properly refused where company did not seek to secure evidence of relevant facts but rather to examine motives of Commission and memoranda and ideas of its staff. P. 750.
10. In a proceeding under Section 201 of the Federal Power Act, Commission *determines* jurisdiction over power company's wholesale sales for resale.

Richard M. Dicke, Richard Hawkins, Rolon W. Reed, Anthony L. Fletcher, Fred L. Forni and *John A. Guzzetta*, for Indiana & Michigan Electric Company.

William R. Connole and *Howard S. Spering* for the State of Michigan.

Ernst Liebman, Drexel D. Journey and *Herbert R. Scott* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACK, *Commissioner:*

This is a proceeding under Section 201 of the Federal Power Act, to determine whether wholesale sales made by Indiana & Michigan Electric Company (IM) to 24 municipalities and cooperatives in the States of Indiana and Michigan are subject to the jurisdiction of the Commission. Indiana-Michigan's status as a public utility within the contemplation of the Federal Power Act has been determined previously;[1] further, it concedes the interstate nature of many of its wholesale for resale transactions. The proceedings are now before us upon exceptions filed by IM to the examiner's decision, the staff's brief opposing exceptions and a reply brief by IM permitted to be filed upon its motion by special order of the Commission. For the reasons hereinafter developed, we conclude, as did the examiner, that, where a public utility participates in and is dependent upon an integrated interstate power pool, all of its wholesale sales for resale are subject to the jurisdiction of this Commission.

IM is a part of the integrated, interstate American Electric Power System (AEP). This system consists of one holding company, American Electric Power Company, Inc.; one service corporation, American Electric Power Service Corporation, and the following operating subsidiaries in addition to IM: Appalachian Power Company, Kentucky Power Company, Kingsport Utilities, Inc., Ohio Power Company, and Wheeling Electric Company. The facilities of the operating companies extend from Michigan and Indiana through Ohio, Kentucky and West Virginia into Virginia and Tennessee and make interconnections with other systems in some of these states and surrounding states. (See attached map) Of IM's wholesale customers involved here, 14 of the municipals and 7 of the cooperatives are in Indiana; two of the municipals and one cooperative are in Michigan.

---

[1] *Indiana & Michigan Electric Co. v. Public Service Company of Indiana, Inc.*, 10 FPC 1315, 1316.

The Commission first asked IM to file rate schedules for the sale of electric energy to the municipals and cooperatives by letter of January 2, 1963, and, obtaining no response, issued a show-cause order on April 16, 1963 (29 FPC 746). By order issued July 23, 1963 (30 FPC 391), the Commission denied application by IM for subpoenas *ad testificandum* for taking the testimony by deposition of Chairman Swidler, and Messrs. Joseph H. Gutride, Secretary, and Harold E. Miller, staff member, and for a subpoena *duces tecum* seeking data underlying the show-cause order. On the same day, the Commission ordered its secretary to issue a subpoena *duces tecum* directed to the AEP companies requiring that they supply certain specified documents relating to system operation (30 FPC 392). IM filed a complaint in the United States District Court in Indiana asking the issuance of the subpoenas. The court dismissed this on the ground the plaintiff had its remedy by seeking review in the Court of Appeals of the Commission's final action.[2]

After denial of the request of the Indiana Public Service Commission for a concurrent hearing, the first hearing session in this proceeding was held July 29, 1963. At this and several subsequent sessions, as will be set forth below, further requests for subpoenas were made and other procedural matters were discussed. After the filing of direct cases by IM and staff, cross-examination of the witnesses did not begin until March of 1964, and the hearing was not completed until June 11, 1964. Briefs were then exchanged; and the examiner's decision was issued December 7, 1964. On January 11, 1965, 33 FPC 38, the Commission denied IM's request to defer further action pending Congressional consideration of proposed legislation. Exceptions were filed to the examiner's decision by IM on January 28, 1965, an answer by the staff on February 12, 1965, and reply by IM on February 19, 1965, accepted in accordance with the Commission's order of March 10, 1965. On February 18, 1965, the Indiana Municipal Electric Association, whose members include 14 municipal customers of IM, filed a statement of position asking that the examiner's decision be upheld.

JURISDICTION OVER WHOLESALES

Based on the operations of the integrated AEP system, the examiner concluded that IM's sales to its wholesale customers were sales in interstate commerce and subject to Commission jurisdiction even though, he found that there were "no means presently known to science for identifying the particular sources of energy delivered by the AEP system to any particular point of sale." Rather than relying on staff's extensive technical evidence, he relied particularly on the Commission's *Pennsylvania Water and Power Company* case, 8 FPC 1[3] and found that the AEP system was a closely integrated network and that all of its electric energy resources are available to meet the combined loads of its members without reference to state boundaries. The staff took essentially the same position but also presented full evidence on the operation of the AEP system.

IM admits that it is a member of an integrated and coordinated system. It says, however, that it negotiated the contract for each sale in issue and that the dispatching of generation to serve these loads is done by it and not by the AEP system. IM also argues at length that the sole support for jurisdiction here is that the sales involved are pool sales, that under the Power Act and *Connecticut*

---

[2] *Indiana & Michigan Electric Co.* v. *F.P.C.*, 224 F. Supp. 166 (USDC N.D. Indiana).

[3] Affirmed 193 F. 2d 230 (CADC), affirmed 343 U.S. 414 (1952).

Light & Power Co. v. *F.P.C.*, 324 U.S. 515, 529, it is necessary to prove "technological" transmission of out-of-state energy, and that *F.P.C.* v. *Southern California Edison Co.* (Colton) 376 U.S. 205, also emphasized an engineering and scientific rather than a legalistic or governmental test for jurisdiction. In the earlier Commission cases cited by the staff, including *Penn Water*, IM points out the staff introduced evidence that proved as a matter of fact that out-of-state energy was involved in the sales in question. It says this has not been shown here, and, thus, there is no basis for the conclusion that the sales are in interstate commerce.

IM is a "public utility" subject to Part II of the Federal Power Act as found by the examiner and by the Commission (10 FPC 1315) because within the meaning of Sections 201 (b) and (e) it owns and operates facilities subject to the jurisdiction of the Commission. These include its own high voltage lines extending across the Indiana-Michigan state line and other lines used for transmitting and selling large amounts of energy into and out of Indiana. There is no controversy about this. The issue is confined to whether its wholesales are sales of "electric energy at wholesale in interstate commerce," within the meaning of Sections 201(b) and 205 and 206. The issue, then, is whether the sales to cooperatives and municipalities for resale are in interstate commerce and so subject to our jurisdiction.

In making our determination of jurisdiction over IM's wholesales, we shall, of course, employ an engineering and scientific test as is suggested by the *Connecticut* and *Colton cases*. In every previous case sales for resale from integrated, interstate pools have been found jurisdictional and in each case this finding has been supported by evidence purporting to trace out-of-state energy to each of the sales involved or facts from which such a conclusion could be reasonably inferred. In the *Penn Water* case, 343 U.S. 414, 420, there was involved an interstate power pool involving two hydroelectric projects on the Susquehanna River in Pennsylvania owned and operated by the Safe Harbor Water Power Corporation and the Penn Water Company and the steam generating plants of Consolidated Gas Electric Light and Power Company of Baltimore. A question arose as to jurisdiction over sales made by Penn Water to its utility customers in Pennsylvania. The Supreme Court recited that these sales included about 83 percent of Pennsylvania generated power but quoting from a portion of the Commission's Opinion (8 FPC 1, 12, 15), which discussed the nature of the pool and not the supporting tracing, approved the finding of jurisdiction on the following basis (343 U.S. at p. 420):

> The central fact disclosed by the record about Penn Water's sales in Pennsylvania is that they are not sales of the output of Penn Water's own plant, but sales of output of the integrated and coordinated interstate electric system of which Penn Water's facilities are an integral part * * *.
>
> In this manner energy crossing the State boundary, with other system energy, is used to fulfill system requirements. There result times when system energy generated in Pennsylvania is used, mixed or unmixed, in meeting system requirements in Maryland. Similarly, there are occasions when system energy from Maryland is used, mixed or unmixed, in meeting system requirements in Pennsylvania. Energy flows in, across, and out of the system transmission network as the needs of the interconnected members develop from minute to minute and day to day.
>
> It is accordingly evident that the operations of the unified system enterprise are completely interstate in character, notwithstanding the fact that system energy transactions at some particular times may involve energy never crossing the State boundary. 8 FPC 1, 12, 15.

The Supreme Court then added:

> We hold that the Federal Power Commission has complete authority to regulate all of this commingled power flow. [Citing *Safe Harbor Water Power Corp.* v. *Federal Power Commission*, 179 F. 2d 179, affirming 5 FPC 221.] The Commission's power does not vary with the rise and fall of the Susquehanna River.

Other cases cited by the staff and examiner involve similar reasoning. In *Otter Tail Power Co.*, 8 FPC 392, 397, we found jurisdiction noting that "The generation from plants in each of the three States contributes to the requirements of the system in all three of those States. No attempt or effort is made at any time to limit generation to any plant because of State Boundaries." In *Wisconsin Michigan Power Co.*, 10 FPC 170, 176[4] the Commission, in determining jurisdiction over sales for resale, again noted that the "generation from plants in each of the states contributes to the requirements of the system in all of the states."

Turning to the present record we find that AEP forms a physically integrated and centrally controlled interstate system for the generation, transmission and sale of electric energy. This conception is well defined by Philip Sporn in his book "The Integrated Power System". Mr. Sporn has been associated with the development of the AEP system, and is a Director of American Electric Power Company, Inc. and Chairman of its System Development Committee.

> From a technical standpoint, what is meant by 'integration' is this: that all facilities of the system are connected physically into or gathered within the system, and that they all are made to work continuously as part of the system. The presumption is that no facility is needlessly idle; no part of the system is left hanging loose, so to speak; no part of the system is left without the resources and support of the system as a whole.
>
> Applied to energy generation, this means the ability to develop all energy resources capable of economic exploitation and the development of all the resources to their maximum, as well as the elimination of all barriers to development such as local inability to absorb the resources. Again, it means the ability to use the largest units justified by the requirements of the system for any particular station or source, regardless of the requirements of the local area. Still further, it means the ability, as the system grows and develops, to exploit the most efficient units capable of technical projection because other units relatively recently installed but perhaps not so technically advanced can be relegated to a lesser system use. The combined or integrated effect of these is conservation on a vast scale.

Mr. Sporn then discusses the AEP system as an example of an integrated system and considers its growth and development, its ability to serve all requirements of any part of the area and its contribution to operating economies and resource conservation.

It is our opinion that the record in this proceeding supports Mr. Sporn's definition and shows that the AEP system is truly an integrated operation. The management of the holding company located in New York controls the development and operation of the system. For instance, the management appoints all of the directors of the operating subsidiaries; nearly all the directors of the subsidiaries are also directors of the holding company or the service corporation; and the same persons hold the positions of president, vice-president, and treasurer in the holding company, the service corporation, and in each of the six operating subsidiaries. The service corporation provides management, engineering, and supervisory services for the system; it plans and supervises the construction of facilities throughout the system; through its dispatching office in Columbus, Ohio, it arranges economical loading of the generating facilities; it plans necessary outages; and it arranges interconnection agreements between the subsidiaries and with other systems. We, of course, do not consider these intercorporate relationships significant except as they indicate the extent of integrated operations of these companies.

---

[4] Affirmed as *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472 (CA7), certiorari denied 345 U.S. 934.

Physically, the AEP system includes a network of 14,000 circuit miles of transmission lines which extends from Lake Michigan to North Carolina and connects the generating facilities with the loads and interconnects the subsidiaries of AEP with each other and with 19 other systems at 66 locations. The AEP system was developed and operated as a coordinated unit to provide full service, to provide economy in capital outlay and to achieve economy in operations by using the lowest cost sources of power based on the needs of the entire system, and these objectives have been carried forward to present day operations. In effect, all of the electric energy generated by the generating units is delivered to the seven state AEP transmission system from which all of the customers in the pool are supplied.

The AEP system is normally operated as a single integrated unit so that the generation within the entire interconnected system is economically loaded on a minute to minute basis for the most economical operation of the system. The record shows that the scheduling of generation on the AEP system and power and energy transactions between AEP and other systems is done at the central dispatching office at Columbus, Ohio (now moved to Canton, Ohio). The dispatching office schedules the output of each generating unit on a lowest cost basis to supply each increment of load. Thus, while IM's generating units may have sufficient capacity to supply its load when all are in operation, for particular hours the load dispatcher may find that it is less costly to move energy into Indiana by loading generating units of other members of the AEP system. Conversely, whenever to do so is in the interest of overall system economy, generating units on the IM system will carry the load for other system members.

These transactions between members of the pool are recorded on forms kept by the AEP system, many examples of which have been presented in evidence in this proceeding. For instance, an AEP system form (1A9) shows the hour by hour classification of electric energy supplied to or taken from the AEP pool and also of transactions with nonaffiliated electric systems. The basic data from this form are used by AEP to determine the amount of benefits to be allocated among the companies. The forms show what generating units were loaded to displace the higher cost of energy of other generating units, for in billing it is necessary to take into consideration the incremental loading of the generators in the system. They show that frequently out-of-state generation of other members of the AEP system was used to meet IM's load.

IM's share in the benefits of pool transactions is shown in the AEP monthly "Interchange Power Statements" which set forth interstate energy either received or delivered by IM. Credits and charges are allocated among IM, Ohio Power Company and Appalachian Power Company on the basis of a "Member Load Ratio" representing the proportion that the individual company load bears to the system load. Through these methods IM obtains the benefits of the operating economies of the entire system, and its costs of power are not only its own but are partly the costs of other companies in other states. The statements indicate that every day of the year electric energy is transmitted to or from IM across the Indiana-Ohio and Indiana-Illinois borders, and IM also transmits energy daily across the Michigan-Indiana border.

To determine jurisdiction in such circumstances, we need not know the precise nature of the flow of electric current. It may be true that electric current involves the movement of particles known as electrons in the conductors, but that is not significant here. The Power Act applies to the transmission and sale of "electric energy", which represents an attribute of electric current, and its practical effect. We know further that, whatever its physical nature, this electric energy moves from generation to load with the speed of light. Practically it cannot be stored as such, but must be generated as needed. In accordance with the practice of all modern systems in the United States, the generation occurs in the form of 60 cycle alternating current. Its voltage is increased by transformers; it is transmitted in accordance with the system's electrical characteristics, which change from minute to minute; its voltage is reduced by other transformers in various substations; and it is delivered to the system customers. In determining whether sales of electric energy generated by the system are in interstate commerce, we must consider the physical characteristics of integrated system operation as well as the administrative and contractual aspects.

In practice all of the generators on a closely knit system like AEP are interlocked electromagnetically, and the frequency of all generators must be the same. They must all be synchronized with one another and change speed at the same time. Otherwise, the circuit breakers would open, and the system could no longer operate. Apart from these serious consequences of frequency deviation, contracts between IM and other systems require sixty cycle current. Furthermore, the smaller the deviation in frequency the less will be the inadvertent transfer of energy between systems; the more nearly perfect will be the time kept by clocks; and the more reliable will be the service to many precision electrical instruments and industrial operations. When a time error develops, the frequency of the system is increased or decreased until the time error becomes zero.

Frequency, in fact, is the means by which the integrated system of the AEP type is automatically controlled. Thus deviations in frequency, caused by changes in load, activate the tie line control equipment, which, in turn, controls the governors on the turbines throughout the system so that generation is continually matched with net system load, and frequency is maintained at sixty cycles per second. The very fact that IM is a member of a system requires that it meet the requirements of its load without the large variations in frequency which would result if its generators alone took care of major load changes of its customers.

A modern electric system, such as AEP, involves a continuous variation in electric load throughout the network and a continuous effort by generating units, controlled by the central dispatching office and by the automatic equipment to bring total power generation in balance with total electric load plus losses and at the same time maintain voltage and frequency control within narrow limits. When a new load develops at any given point it may not be possible to determine the precise energy flows involved but it is clear that the power resources of the whole interstate system and of interconnected systems are used to meet this load and all other loads. In fact, all loads must, in effect, be supplied from total generation, for it is not possible to supply one load without supplying all the other loads.

Thus, we are not dealing merely with a single flow of energy or multiple flows of energy, but an interstate pool of energy to which the generators of the system, or other interconnected systems contribute power, and from which all loads, and sometimes the loads of other systems, are supplied. The network of generators and high voltage transmission lines extending over seven states is only the visible evidence of the pool in which currents changing from minute to minute can be measured but where often there is no way to determine, or need to determine, the way the needs of each power customer will be supplied. The manner in which this pool is operated is such that exact tracing of energy flow would require the installation of expensive meters and the expenditure of an excessive amount of time. Even if it could be done practically, a slight change in line design or operating technique would lead to a claim that jurisdiction needed to be demonstrated all over again. Thus in a very real sense tracing does not necessarily reflect the physical realities of the movement of electric energy, but is rather based on an analogy to the flow of liquids. Of course, there may still be some power systems in which the flows are simple enough to be susceptible of the tracing analogy. The showing of the inherently interstate pool operations made in this record better describes physical and engineering realities than the somewhat artificial assumptions used in tracing.

Moreover, while it is not practicable to trace the energy flows precisely from specific generating plants to specific loads, the company records show conclusively that energy generated outside Indiana and Michigan pervades IM's facilities and is delivered to those portions of IM's system serving the municipals and cooperatives, and we so find. Thus, IM receives electric energy from Ohio Power Company, The Cincinnati Gas & Electric Company, Commonwealth Edison Company, Ohio Valley Electric Corporation, and probably Illinois Power Company, all of whose generation is located outside of Indiana or Michigan, and transmits this energy on its high voltage transmission network. For instance, the energy from Commonwealth Edison is received at IM's Olive substation in northern Indiana, and, when the IM generating units at the Twin Branch station are not operating, commingled energy through Olive supplies practically all of the electric needs of the north central Indiana and Michigan area. From this type of evidence the staff witness demonstrated that at some times all of the municipal and cooperative electric systems involved in this proceeding receive electric energy which is transferred into Indiana across the Indiana state line from outside the State of Indiana. It may also be noted that IM transmits large amounts of energy from Indiana into Michigan where the amount of energy delivered to each of the wholesale customers exceeds IM's total generation in Michigan. To conclude, sales for resale from the constantly changing mass of electric energy extending over the borders of many states and infusing the facilities of IM and the other AEP companies are sales in interstate commerce and subject to our jurisdiction under the Federal Power Act.

There are several additional issues raised by IM which bear on the question of jurisdiction over its sales for resale. IM argues that, as its system is constructed, there are transformers interposed between the out-of-state sources of power and the delivery points to the customers so that the sources of power are really the transformers. Although, in many cases the electric current in the primary winding of a transformer induces a new current in the secondary winding the transformation process does not block the transmission of energy and that is what is significant within the meaning of Section 201 of the statute. Furthermore, IM's argument proves too much, because if it were well-founded there could be no interstate sales of electricity, at least where transformation was interposed between the buyer and seller. The argument has been previously rejected by the courts. *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472 (CA7), certiorari denied 345 U.S. 934; *Hartford Electric Light Co.* v. *F.P.C.*, 131 F. 2d 953, 960 (CA2), certiorari denied 319 U.S. 471.

IM argues that for each hour studied during a period of more than two years the total Indiana net generation of the interconnected utilities in the state exceeded the Indiana load of these utilities, that IM's Indiana generation exceeded the load of its Indiana wholesale customers, and that its electric facilities in Indiana are physically capable of serving the total demands of all its Indiana customers. (This is, of course, not true for IM's generators in Michigan.) In like vein IM cites *Peoples Natural Gas Co.* v. *P.S.C.*, 270 U.S. 550 (1926), where it was held that gas deliveries to a city from a pipeline carrying mixed in-state and out-of-state gas was in intrastate commerce since the volume of in-state gas was large enough to supply the city. IM also notes that the Power Act, as explained in *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515, 525, was "to extend only to those matters which are not subject to regulation by the States" (Section 201(a)), and points out that the Indiana and Michigan Commissions have been regulating these sales for many years. The Indiana Commission, while not filing a brief, instituted an investigation, held a hearing, and found that the energy delivered by IM to its Indiana municipal and cooperative customers was energy generated, transmitted, and consumed solely within Indiana.

None of these arguments are persuasive. That all of the wholesale utility companies in Indiana could have met all loads in Indiana and that IM could have supplied all of its Indiana customers, including the wholesale customers, is not relevant because that is not the way the system is operated. IM is a member of an interstate pool and meets the needs of its customers with the assistance of energy received from out-of-state sources in order to obtain power at lower costs than could have been produced within the state. IM's argument that its Indiana generation was in fact at all times greater than its wholesale loads to the cooperatives and municipalities is not meaningful. What IM is, in effect, arguing is that the generators within Indiana are supplying the resale customers while the out-of-state energy is being used to supply the nonjurisdictional retail sales. The record does not support such a segregation of supplies and markets; in fact it would be contrary to the engineering design of Indiana-Michigan's system. IM's reliance on the *Peoples* case is unfounded. That case, which predated the Power Act, does not involve sales from the kind of integrated wholesale system involved here. The gas was flowing into the state and the question was only that of separating in-state from out-of-state gas, neither of which left the State after the mixture occurred. Here, because of the nature of electricity, and the physical inability to control the direction of its transmission, no such simple separation can occur. *Cf. California* v. *Lo-Vaca Gathering Co.*, 379 U.S. 366. Furthermore, if a sale is at wholesale in interstate commerce, the State does not have jurisdiction under *P.U.C.* v. *Attleboro Steam & Electric Co.*, 273 U.S. 83, whose holding was embodied in the Power Act. The purported exercise of State regulation is not relevant. *United States* v. *P.U.C.*, 345 U.S. 295, 303–304. Congress meant to draw a "bright line" leaving this Commission with jurisdiction over all wholesale sales in interstate commerce except where expressly exempted by the Federal Power Act. *F.P.C.* v. *Southern California Edison Co. (Colton)*, 376 U.S. 205, 215.

IM argues that even if the sales are in interstate commerce they are not subject to Commission jurisdiction because they are made from facilities used in local distribution or at least the Commission has not demonstrated to the contrary. However, as the examiner points out, there is nothing in the Power Act that makes Commission jurisdiction over sales dependent on whether the facilities used are local distribution facilities. The exemption in Section 201(b) for facilities used in local distribution relates solely to the question of the facilities over which the Commission has jurisdiction—a matter which in turn is relevant to the determination of the public utility status of an electric power company pursuant to the standards of Section 201(e). However, if a company owns or operates *any* jurisdictional facilities it is a public utility despite the fact that it might also own or operate facilities exempted by Section 201(b), and *all* wholesale sales for resale in interstate commerce made by a public utility are subject to the provisions of Sections 205 and 206 of the Act regardless of whether the particular sale involved jurisdictional facilities. See *Interstate Light and Power Co.*, 10 FPC 225, 230, affirmed *sub nom. Wisconsin* v. *F.P.C.*, 201 F. 2d 183 (CADC), certiorari denied 345 U.S. 934; *Wisconsin Michigan Power Co.*, 10 FPC 170, 176–177, affirmed 197 F. 2d 472 (CADC), certiorari denied 345 U.S. 934. The *Connecticut* case cited by IM is not in point: the issue there was public utility status and the court held only that the Commission had failed to find that certain facilities which it had concluded supported public utility status of the company were "not used in local distribution." It did not suggest that a company which admittedly was a public utility could exempt its wholesale sales in interstate commerce from the Commission's jurisdiction under Sections 205 and 206 because those sales were made over local distribution facilities.

Even on its own terms IM's local distribution argument is essentially that the lower voltage lines over which it ultimately delivers power to the facilities owned and operated by at least some of its municipal and cooperative customers are also used for direct retail sales to certain of IM's industrial, commercial or residential customers; therefore these lines are local distribution facilities. There are at least two answers to this contention. First it cannot be suggested that the only IM facilities involved in the sales to their municipal and cooperative wholesale customers are the ultimate lines leading directly to the connection with the facilities of the customers; obviously many other clearly jurisdictional facilities are also involved in the sale. See *Hartford Electric Light Co.* v. *F.P.C.*, 131 F. 2d 955 (CA2), certiorari denied 319 U.S. 471. Second, as the Supreme Court expressly noted in the *Colton* case, *supra* at p. 210, note 6, the fact that a company may make a few direct sales off a line transmitting power to a wholesale customer does not convert the line into local distribution facilities. As the Court of Appeals stated in *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472, 477, certiorari denied 345 U.S. 934: "at no point before delivery (to a wholesaler) has been completed, has interstate transmission terminated" and "there is no ground for the position that local distribution includes any transmission occurring before the wholesaler who sells at retail is reached."

DUE PROCESS

IM argues that it has been deprived of due process by failure of the Commission and examiner to grant it pre-hearing discovery and by the examiner's cutting off cross-examination. As already noted, IM sought a subpoena directed to the Chairman, Secretary and a staff member and also applied for a subpoena requesting the production of the materials underlying the show-cause order. These requests were denied by the Commission by its order of July 23, 1963 (30 FPC 391), on the ground that Commission members may not be examined and that the Commission's files were available. The Commission did indicate that at the hearing the parties might request specified material, and this would be considered by the examiner.

At the first day of the hearing, July 29, 1963, IM made a similar request for subpoena, and further requests on October 8, 1963 and December 28, 1963. In the December 28, 1963 application, IM made an all-inclusive request for, among other things, the bases, criteria, expert opinions, and analyses relating to the jurisdiction questions in this proceeding, and the writings of the principal staff witness concerning his theories in this proceeding and 17 other proceedings. All these requests were denied by the examiner. The Commission rejected an appeal from one of them (30 FPC 1286) on the ground that there was no need for an interlocutory appeal.

IM also requested a subpoena for materials supporting the Commission's published list of public utilities,[5] and this was denied by the examiner. Counsel for IM was not permitted to cross-examine the staff witness who prepared the lists as to what data was used, on his testimony at a 1947 Congressional hearing on a bill[6] to amend the Power Act where he indicated that certain companies were classified intrastate although connected to interstate networks, and on whether other members of the staff agreed with his theories.

In our opinion the examiner was entirely proper in his rulings. IM has shown no need for pre-hearing discovery, nor does the evidence sought to be adduced by such means or through proposed cross-examination have any relevancy to the issues here involved. The facts in this case deal exclusively with the operations of the IM and the AEP system, facts which were of course in the exclusive possession of the company. It is the facts dealing with the company's own system and not the mental processes of the Commission, or the theories of other members of the Commission staff, which lead to a determination whether the sales for resale here are sales in interstate commerce. Furthermore, once the facts are known the question as to what kind of utility activity represents a sale in interstate commerce is a legal question. It involves the interpretation of Section 201(b) of the Federal Power Act with the assistance of previous cases, not facts allegedly hidden in the Commission's files. Moreover, evidence in the Commission's files that the staff had changed its theory or had adopted a new theory would in no way affect the result in this proceeding, where we are basing our determination on the present record in the light of our opinions as to the meaning of the Federal Power Act. We may note further that the formulation of the lists of public utilities are not relevant; there is no contention here that IM is not a public utility. Likewise, cross-examination of the witness on the 1947 Congressional committee hearings deals with the irrelevant question of public utility status and is very remote in time.

In any case the hearing provided IM with full opportunity to test the staff's theories and the evidence on which they were based. The staff had the burden of going forward with its evidence and this afforded IM opportunity for cross-examination and ample time thereafter to rebut staff's case. While the show-cause order was issued on April 16, 1963, the hearing sessions on July 29, 1963, September 4, 1963, October 2, 8, 14, and 18, 1963, were concerned with preliminary matters such as the preparation of evidence and the matter of the subpoenas. The staff originally filed its direct case on November 4, 1963, but after postponement by Commission order, IM did not file its direct case until December 9, 1963, when it moved to strike the staff's direct case. The examiner required that the staff revise its presentation, and the staff's case was eventually submitted in revised form on February 4, 1964. Cross-examination did not begin until March 18, 1964. Counsel for IM asked one staff witness only about his qualifications, but cross-examined the principal staff witness on thirteen days, ending April 16, 1964. Cross-examination of IM's witnesses began on April 20, 1964. On April 21, 1964, the hearing was recessed to permit preparation and service of the rebuttal evidence which was accordingly completed on May 21, 1964. The hearing reconvened on June 1, 1964, for the receipt of the rebuttal evidence but was again recessed for the preparation of cross-examination which commenced on June 9 with the principal staff witness. The hearing was finally completed on June 11, 1964.

---

[5] A document dated January 1963 and entitled "List of Electric Power Suppliers With Annual Operating Revenues of $2,500,000 or More Classified as Public Utilities Under the Federal Power Act."

[6] Hearings on H.R. 2972, 80th Cong., 1st Sess., p. 654.

IM makes the additional argument that under Section 12 of the Administrative Procedure Act it is entitled to the same "privileges relating to procedure" as the government agencies and that it was therefore improper to grant the staff's subpoenas at the same time IM's requests therefor were being denied. This contention ignores the nature of the proceeding. The Commission was acting to secure access to information in the possession of a regulated utility essential to meet its burden of showing that the utilities' sales were jurisdictional. The subpoenas sought and secured were an admittedly appropriate manner of securing such information (See Federal Power Act Section 307). Subpoenas were also available to IM if it could show the need for their issuance. As we have indicated, however, IM did not seek subpoenas herein to secure evidence of any facts relevant to the issues in the case but rather to examine into the motives of the Commission and the memoranda and ideas of its staff. These requests were properly refused as both unnecessary and inappropriate.

This is not a case where it can be suggested that only the Commission's staff possessed the knowledge or expertise necessary to permit IM to prepare its case. On the contrary, IM and its associated companies are among the leaders in utility development in this country and have at their disposal world renowned experts to testify on all aspects of system operation. IM's total failure to show the invalidity of the staff's case does not indicate that it was unfairly handicapped in presenting a contrary case but rather that the staff case was sound. It is clear that the facts of IM's operations are not and never have been seriously in issue and that its wholesale sales are in interstate commerce.

The Commission further finds:

(1) IM is a corporation organized and existing under the laws of the State of Indiana. It is also qualified under the laws of the State of Michigan to transact business as a foreign corporation in that State. It owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Indiana, Michigan, Illinois, Ohio and Kentucky and consumed outside the State in which it is generated, all of which facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter. IM is, therefore, a public utility within the meaning of that term as used in the Federal Power Act, as heretofore found by the Commission, 10 FPC 1315 at 1316, 9 FPC 617 at 618, 4 FPC 783 at 785.

(2) IM is a member of the power pool composed of several companies further organized into the AEP system and such pool is an integrated and coordinated interstate electric system, and the sales of system energy, such as those by IM to the 24 municipals and cooperatives referred to in (3) below, are pool sales, and hence, in the light of the interstate nature of the pool are sales in interstate commerce.

(3) IM sells electric energy to Niles and Sturgis, Michigan, and to the Fruit Belt Electric Cooperative in Michigan. It also sells electric energy to fourteen Indiana municipals, namely, Albion, Anderson, Auburn, Avilla, Bluffton, Columbia City, Fort Wayne, Frankton, Garrett, Gas City, Mishawaka, New Carlisle, Richmond and Warren, and to seven Indiana cooperatives, namely, Allen-Wells County REMC, Huntington County REMC, Jay County REMC, Noble County REMC, Paulding-Putnam Electric Cooperative, Inc., Wayne County REMC, and Whitley County REMC.

(4) Each of the twenty-four sales, referred to in (3) above, is a sale at

wholesale for resale in interstate commerce within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(5) The facilities of IM by which it delivers electric energy to its municipal and cooperative customers are used for the transmission and sale at wholesale of electric energy in interstate commerce and are not facilities used in local distribution within the meaning of Section 201(b) of the Federal Power Act.

(6) IM has not filed rate schedules for service to the municipal and cooperative customers referred to in (3) above. It therefore has been violating and continues to violate the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

The Commission orders:

(A) Within 60 days of the date of this order IM shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, its contracts in effect as of April 16, 1963, with each of the twenty-four municipal and cooperative customers, referred to in (3) above, as its rate schedules for its sales at wholesale of electric energy to those twenty-four customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3 of the Regulations thereunder, or changed pursuant to order of this Commission.

(B) The decision of the presiding examiner, to the extent not inconsistent herewith, is approved as the decision of the Commission.

(C) Exceptions not granted herein are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN ORDER TO SHOW CAUSE

(Issued December 16, 1964)

HALL, *Presiding Examiner:* Indiana & Michigan Electric Company (Indiana & Michigan) sells electric energy at wholesale for resale to twenty-four[1] distributing municipal and rural electric cooperative customers located in the States of Indiana and Michigan. The question for decision in this show cause proceeding is whether these wholesale sales are, in the circumstances of this case. in interstate commerce and therefore subject to the filing requirements of Part II of the Federal Power Act (Act).

Indiana & Michigan is one of six affiliated operating electric utilities comprising the seven-state American Electric Power System (AEP System).[2] It provides retail and wholesale service in northern and eastern Indiana and southeastern Michigan. The other five states served by the AEP System are Ohio, West Virginia, Virginia, Kentucky and Tennessee.

The "operations and facilities" of the six operating companies making up the seven-state AEP System have "been integrated into a single power network". Each power plant on the system "supports, and in turn is supported by, the others. Furthermore, the AEP System is interconnected with 19 other electric power systems at 66 locations, including 39 major high-voltage interconnections."[3]

An extensive integrating transmission network is the means by which the electric generating facilities of the six AEP affiliates are interconnected, integrated and operated as a power pool to adequately supply all system loads with maximum over-all economy, efficiency and reliability. Of importance in this connection is the fact that electric energy cannot feasibly be stored. All demands must be satisfied by capacity capable of producing electric energy instantaneously as customers switch on their lights, motors, and other appliances. As applied to the AEP System, this means that this system supplies instantly on customer demand every minute of every day unlimited quantities of electric energy—the energy generated as needed being delivered at the speed of light, or about 186,000 miles per second.

The operations of the AEP System are carried out by highly skilled coordinators through complex computations and communications in the centralized system dispatching office located in Columbus, Ohio. The coordinators are able to trace the minute-to-minute fluctuations in the generating output of the AEP System's major plants, and the minute-to-minute power flow over its interconnections with the nineteen non-affiliated systems.

---

[1] While twenty-five sales are listed in the order to show cause, the number in issue has been reduced to twenty-four by Indiana & Michigan's purchase of the Portland, Indiana electric system. The twenty-four sales are made to fourteen municipals and seven cooperatives in Indiana, and to two municipals and one cooperative in Michigan.

[2] The AEP System's six operating companies are: Indiana & Michigan, Appalachian Power Company, Kentucky Power Company, Kingsport Utilities, Inc., Ohio Power Company, and Wheeling Electric Company.

[3] The nineteen non-affiliated systems interconnected with the AEP System are: Commonwealth Edison Company of Illinois, Northern Indiana Public Service Company in Indiana; Public Service Company of Indiana in Indiana; Indianapolis Power and Light Company in Indiana; The Cincinnati Gas & Electric Company in Ohio; Illinois Power Company in Illinois; Cleveland Electric Illuminating Company in Ohio; Columbus and Southern Ohio Electric Company in Ohio; Ohio Valley Electric Corporation in Ohio and Kentucky; Indiana-Kentucky Electric Corporation in Indiana; West Penn Power Company in Pennsylvania; Monongahelia Power Company in West Virginia; Duquesne Light Company in Pennsylvania; Tennessee Valley Authority; Carolina Power & Light Company in North Carolina; Duke Power Company in North Carolina; Virginia Electric & Power Company in Virginia; Michigan Gas and Electric Company in Michigan; and Toledo Edison Company in Ohio.

At the time of the hearing the Duquesne interconnection was not in service.

Because the planners of the AEP System were early aware of the fact that it was technologically possible to transmit power over long distances, they gradually incorporated in system operations the techniques and economic advantages of exchanging power between their own plants and those of non-affiliates.

The AEP System has in fact for many years "been the most interconnected electric power system in the nation" and it is "constantly carrying out technical and economic studies aimed at developing and strengthening [its] high-voltage ties with neighboring utilities and making maximum use of them. The result is increased mutual benefits in lower production costs and reduced capital expenditures for new generation and transmission facilities that otherwise would be required." (Exhibit 48, p. 21)[4]

The AEP System is properly represented as "one of the world's principal and most progressive electric systems". It has achieved this prominence because the efforts of its creators seem never to have been directed at a terminal point. Rather the system's future has always been regarded as an open vista, the result being that it has evolved as the kind of electric system which creates the groundwork for progress and accelerates the nation's economic growth the most.

Because those responsible for the creation and continued expansion of the AEP System and its widening interconnection with nonaffiliates appear to have envisioned, aspired and achieved more than the management of any other electric system, this system is more representative than any other of the striking changes, interconnections, rearrangements, improvements and technological progress that have taken place in the nation's rapidly expanding systems and power pools.

---

[4] The AEP System is a system which works in coordination with other systems from construction of generating plants to the delivery of power.

AEP's 1962 Annual Report (Exhibit 48) discusses the manner in which it is continuing to strengthen its interconnections, stating in part:

Every hour the AEP System and neighboring interconnected utilities project operating costs for the coming hour and schedule interchanges to minimize these costs. For 1962 alone, the resultant reduction in AEP production expenses was an estimated $500,000. Another measure of interconnection value is the fact that our emergency interchanges with other power systems reached a maximum of 600,000 kw in 1962.

The highlight of our interconnection work in 1962 was the execution of a 50-year agreement with the Duquesne Light Company of Pittsburgh. It provides for our firm sale of a minimum of 35,000 kw to Duquesne for a two-year period, as well as for mutual standby energy, exchange of energy for coordinated maintenance, short-term power and economy energy. We estimate that about 250 million kwh of economy energy will be sold annually to Duquesne. To facilitate this exchange, a 36-mile, 345,000-volt line will be constructed by 1965 to interconnect the AEP and Duquesne systems.

Contractual arrangements were completed for a 345,000-volt interconnection with Northern Indiana Public Service Company and an increase in our firm sale to that utility. We also made arrangements for the sale of 150,000 kw to Commonwealth Edison Company of Chicago during the Summer of 1965, similar to our previously announced sale of 300,000 kw during the summer of 1964.

Two 138,000-volt interconnections with Public Service Company of Indiana are under construction, and a lower-voltage emergency interconnection with the Dayton Power and Light Company is under way. In addition, we are studying and negotiating with a three-company Ohio pool on the coordinated development of 345,000-volt transmission between the AEP System and the pool, made up of the Cincinnati Gas & Electric Company, Columbus and Southern Ohio Electric Company, and the Dayton utility. We are also looking into possible arrangements for the interchange of power with the Virginia-Carolina Pool, comprising Carolina Power and Light Company, Duke Power Company, Virginia Electric & Power Company and South Carolina Electric & Gas Company.

Finally, we are engaged in study and negotiation with the Allegheny Power System with special attention being given to a future 500,000-volt interconnection between Allegheny and AEP at our Kammer Plant. This line would be the western tie of a $350 million coordinated construction program involving over 2 million kw of new generating capacity and 600 miles of 500,000-volt transmission lines being planned by 18 investor-owned electric companies of the Middle Atlantic region, including those serving New York City, New Jersey and eastern Pennsylvania.

Complete integration and pooling of power producing and transmitting facilities has been achieved under the AEP System arrangement. Power flows throughout the system on the basis of need. The operations of this system are therefore fundamentally and predominantly interstate in character from beginning to end, with all parts of the area served being put on the same basis, it being designed, operated, expanded, and continues to be expanded, to serve any part and all parts of the seven-state area equally well (see *infra*, pp. 767-774).

The AEP System, like all integrated power systems, was created for the benefit of the area served and the systems serving it, and secures for its members the economic benefits of the diversities of time, load, reserves and resources. It is for this reason that integrated system operation is being rapidly expanded by additional interconnections and facilities that are economically feasible and physically practicable. Such interconnection and coordination of facilities by whomsoever owned accomplishes not only reduced overall investment and large operating economies, but opens up new territory to the benefits of electric service, aids in the progressive decentralization of industrial activity, including war plants and military bases, and makes available on a regional scale reliable electric service at the lowest cost.

Expanding power pools, such as that of which the AEP System is a part, are not only inseparable from further development of the nation through increasing production and better living, but are an absolute necessity for emergency purposes. Moreover, such power pools are essential to the health of the electric industry itself for the industry must meet competition from other fuels fast reaching out to challenge.[5]

The operations and progress of the AEP System, like that of many other systems, make it apparent that change and technological progress in the industry is so swift, so wide, and the prospect of acceleration so great, as to make regulatory guides of the past misleading as guides for the future. In this day and time, for the Commission to be up to date on energy flows over major systems such as AEP's means no more than to be on the verge of becoming out of date. Yet the Commission has the responsibility of coping with change and technological progress in carrying out the intent of the Act to protect consumers. It must therefore find the means of maintaining regulatory order in the midst of change and progress.[6] (See *infra*, p. 766.)

In this case the Commission Staff deems use of the tracing method employed in prior cases to be unnecessary to establish Commission jurisdiction over the wholesales sales here in issue. Each of the twenty-four sales is a pool sale, and, in the light of the interstate nature of the pool, Staff counsel contend that these sales are in interstate commerce subject to Sections 201, 205 and 206 of the Act. The Staff therefore requests that Indiana & Michigan be ordered to file as rate schedules the contracts which it has with the twenty-four municipals and cooperatives.

---

[5] It is because of the beneficial results produced by power pool operation that the Commission is empowered and directed by Section 202 of the Act to divide the country into regional districts for the voluntary interconnection of facilities for the generation, transmission and sale of electric energy.

[6] It is a matter of common knowledge that the use of electric energy in this country has followed a long-term growth rate of approximately doubling every ten years. During the post-war years this rate of increase has been about two and one-half times the average growth of the whole economy, as measured by the Gross National Product. To continue to meet the growing demand for electricity, the industry will probably have to build as much electric generating capacity in the next ten years as has been built in its entire history.

Not only is use of the tracing method out of place in modern large-scale integrated operations, but unnecessary (see *infra*, pp. 764–766) in the light of the decision of the Supreme Court in *Pennsylvania Water & Power Co.* v. *Federal Power Commission*, 343 U.S. 414, hereinafter referred to as the *Penn Water* case, holding that "the Federal Power Commission has complete authority to regulate all of this commingled power flow." Moreover, the omission of the use of the tracing method in power pool operations is clearly desirable to keep rate jurisdictional determinations within timely, manageable and sensible bounds.

If, as counsel for Indiana & Michigan contend, the Commission may not legally omit use of the tracing method in the circumstances of this case, the matter is one with which Congress must deal if the Commission is ever to have any hope of meeting its statutory responsibility of protecting consumers and otherwise causing compliance with the Act.

It has, of course, long been recognized that effective regulation requires expertness not possessed by Congress at the time it enacts legislation. Moreover, the solution of many regulatory problems can be worked out only by the use of appropriate and, at times, different methods; by trial and error; and with the aid of court decision. What method, formula or procedure may be appropriately used by the Commission in various types of cases arising under the Act depends upon the intent of the statute and many circumstances. The circumstances vary with time, economic conditions and technology as the industry evolves and the need for service grows.

It is because effective regulation does not permit a rigid and detailed statute that Congress has delegated to the Commission wide latitude in order to keep regulation sufficiently flexible and adapted to varying conditions and methods. Such flexibility also enables the Commission to accomplish, to the extent possible, the purposes of the statute by avoiding methods which have a tendency to clog the administrative process. To borrow the words of the court in *Public Service Comm'n of State of New York* v. *Federal Power Commission*, 327 F. 2d 893, 897, equally applicable here, Congress realized "that the Commission would be confronted with unforeseen problems of administration in regulating this huge industry and should have a basis for coping with such confrontation. While the action of the Commission must conform with the terms, policies and purposes of the Act, it may use means which are not in all respects spelled out in detail."

While the Commission, in administering the Act, must keep its feet on the ground and within statutory objectives, it must likewise keep them moving with actions and procedures that keep pace with the change taking place in the industry so as not to become smothered by change. Its task is not just to keep up, rather it is to try to keep ahead by continuous formation and reappraisal of its policies and procedures. Change, of course, has always been a part of the industry's progress. What is different now is the pace of change and the clear prospect that it will continue to accelerate with time.

Because the power industry is growing faster than ever, and since the Commission in large measure finds its justification in meeting and properly handling changing conditions and problems in the total public interests, it should come as no surprise that, in living up to the responsibilities entrusted to it, the Commission does not and cannot always regard regulatory methods as being encased in the cement of the past. It must realize that time does not ease its problems but proliferates them; that progress not only provides opportunity but creates new and even more difficult problems requiring updated thinking matching industry progress. Accordingly, the Commission has no alternative but to keep moving toward better ways of doing things if the intent of the Act is to be given continuous vitality in terms of current conditions.

The unique and inherent characteristics of the power pool and the nature of the product not only distinguish the instant case from *Peoples Natural Gas Co.* v. *Public Service Commission*, 270 U.S. 550, relied on by Indiana & Michigan to exempt the sales made by it in the State of Indiana from Commission regulation (see *infra*, pp. 776–779) but also support the conclusion that the twenty-four sales here involved are in interstate commerce although they involve varying amounts of energy never crossing State lines. In this regard it should be noted that the commingling of energy flowing interstate with that generated intrastate does not destroy the interstate character of the resulting mixture over which sole jurisdiction is vested in the Commission. Furthermore, the fact that out-of-state energy may at times be small in proportion to the total amount sold by the wholesaler is unimportant (*Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U.S. 515, 535–536; *Wisconsin Michigan Power Co.* v. *Federal Power Commission*, 197 F. 2d 472, 478, cert. denied 345 U.S. 934).

Filing Requirement

The procedure for filing individualized arrangements entered into between public utilities (such as Indiana & Michigan) and resale customers is set forth in Section 205 of the Act and Part 35 of the Commission regulations issued thereunder. To borrow the words of the Supreme Court in *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp. et al.*, 350 U.S. 332, 339, equally applicable here, the Act "permits the relations between the parties to be established initially by contract, the protection of the public interest being afforded by supervision of the individual contracts, which to that end must be filed with the Commission and made public."

Acting pursuant to the filing requirement, Indiana & Michigan filed with the Commission its contracts and schedules covering wholesale sales made by it to private utilities. Such filings, however, did not embrace the wholesale sales made to the twenty-four municipals and cooperatives here in issue. This proceeding was therefore initiated to determine whether these twenty-four sales are wholesale sales for resale in interstate commerce subject to regulation under the Act.

As has long been held, the Commission's rate jurisdiction extends to all interstate wholesale sales for resale made by a "public utility", regardless of whether made to private utilities, cooperatives,[7] or public bodies such as municipals, counties and the Department of the Navy (*Federal Power Commission* v. *Southern California Edison Co.*, 376 U.S. 205, herein referred to as the *Colton* case: *Penn Water*, 343 U.S. 414; *United States* v. *Public Utilities Commission of California*, 345 U.S. 295 (1953); *California Electric Power Co.* v. *Federal Power Commission*, 199 F. 2d 206 (1952), cert. denied 345 U.S. 934; *State of Wisconsin* v. *Federal Power Commission*, 201 F. 2d 183, cert. denied 345 U.S. 934 (1952); *Wisconsin Michigan Power Co.* v. *Federal Power Commission*, 197 F. 2d 472

---

[7] The fact that a cooperative resells only to its members is of no more significance, insofar as Commission rate jurisdiction is concerned, than the fact that the Department of the Navy in a prior case resold only to occupants of a housing project which was built for and occupied by civilian employees of the Depot (*California Electric Power Co.* v. *Federal Power Commission*, 199 F. 2d 206, aff'd 345 U.S. 295).

Whether a cooperative sells to members or non-members has no relevance to the issue of whether Indiana & Michigan's sales to cooperatives are subject to Commission regulation. The Commission is here regulating sales to cooperatives—not the cooperatives.

(1952), cert. denied 345 U.S 934). For example, in the *California Electric* case it was held, *inter alia*, that while Section 201(f) of the Act exempts the public bodies enumerated therein from the regulatory requirements of the statute, such bodies are nevertheless protected by the Commission's power to regulate jurisdictional sales and services by a "public utility" to them. In the words of the court (199 F. 2d at 208–209):

> Nor is § 201(f) of help to the petitioner. This section states that "No provision in this Part shall apply to, or be deemed to include, United States, a state or any political subdivision of a State * * *." It is clear that the intended exclusion or exemption is from the regulatory burdens of the statute. * * * But it would be inconsistent with the policy of the legislation * * * to hold that, as wholesale purchasers of power they are excluded from the benefits of the regulation of the utilities from which they buy. The entire thrust of Part II is toward the seller at wholesale, not the buyer.

And as held in the *Michigan Wisconsin* case, *supra*, 197 F. 2d at 479:

> To exempt municipal corporations would mean, as the Commission states in *Otter Tail Power Co.*, 2 FPC 134, 137, 33 PUR NS 257, 260, that "a utility may not discriminate in rates charged private persons or corporations, but is at complete and unfettered liberty to indulge in the rankest discrimination as between municipalities, or as between private customers and municipalities, receiving the same service." We cannot conceive that Congress intended to deprive consumers served by municipally owned distribution systems of the protection it was providing customers of other corporations against unjust and unreasonable rates. To construe the Act otherwise would fail to give effect to other provisions, such as Section 306, allowing municipalities to file complaints before the Commission on account "of anything done or omitted to be done" in contravention of the Act and Section 313(a), which authorized review of Commission orders at the behest of any aggrieved municipalities. We agree with the Commission's comment in *Otter Tail Power Co.* v. *F.P.C.*, *supra*, at 138: "Since the most serious, if not the only real complaint a municipality could have against a public utility would involve the rates charged it for electric energy at wholesale (the Commission has no power to regulate the retail rates of a public utility), it is most persuasive Congress intended that we have jurisdiction over such wholesale rates."

In considering the instant proceeding it should be borne in mind that until about 1953 the Commission was making rather long strides in regulating public utilities, but beginning about that time the Commission's work under the Natural Gas Act was accelerating at such a rate that it siphoned off most of the Commission's staff which had been handling power matters. Now that the Commission has staffed a division for the handling of electric power rate work, it has renewed activity in this field. As stressed in the Commission's Press Release No. 12,326, dated November 14, 1962, the "new emphasis on electric rate work is not in any sense an attempt to broaden its jurisdiction, 'but is merely a more effective exercise of a jurisdiction which was conferred in 1935 and which has been carried out with varying degrees of intensity since that time.'"

In view of the prior lack of Commission personnel to handle power matters, and because of the Commission's obligation to fulfill its statutory duty of causing compliance with the Act, the Examiner attaches no significance to the fact, asserted by Indiana & Michigan to be of importance, that it was not until the institution of this proceeding that the Commission has sought to establish jurisdiction over the twenty-four sales here in issue. Nor is it of any consequence, as Indiana & Michigan further contends, that the Public Service Commissions of Indiana and Michigan have exercised jurisdiction over these sales. As held in the 1952 *Wisconsin case, supra*, 201 F. 2d 183, 185, cert. denied 345 U.S. 934, and as reaffirmed by the action taken in numerous other Commission and court decisions, "a history of previously unchallenged regulation by the State does not oust the Commission of jurisdiction."

Clearly the Commission's authority does not evaporate through nonuse. Moreover, it would be inconsistent for the Commission to regulate interstate wholesale sales for resale made by the public utilities to cooperatives and municipals considered in prior cases and not regulate the twenty-four sales here in issue for which filings have not as yet been made, assuming, of course, such sales are sales at wholesale in interstate commerce and therefore subject to regulation under Part II of the Act.

Interveners

By orders of the Commission, the Public Service Commissions of Indiana, Michigan, Wyoming, Pennsylvania, Georgia and Maryland, and the Indiana Municipal Electric Association[8] were permitted to intervene. However, the Wyoming, Maryland and Indiana Public Service Commissions were allowed to withdraw "without prejudice to their continued participation in this proceeding if they so desire to do so". None of them elected to continue participation. In fact, no appearance was ever entered for the Wyoming, Pennsylvania, Georgia and Maryland Commissions.[9] (See *infra*, p. 766, n. 15.)

Moreover, none of the interveners offered any evidence or filed briefs in this proceeding, nor did any of them participate in the cross-examination of any of the witnesses. A statement of position was, however, filed by the Indiana Municipal Electric Association on August 25, 1964, in which it adopted "the arguments, conclusions and proposed findings of fact advanced by the staff in its opening brief."

Procedural Background

By letter dated January 2, 1963, the Commission advised Indiana & Michigan of facts indicated in its files relating to its operations and customers and requested it to undertake appropriate action to establish rate schedules for its wholesale sales to municipals and cooperatives pursuant to the requirements of Section 205 of the Act and Part 35 of the regulations issued under the Act.[10] Thereafter counsel for Indiana & Michigan requested an extension of time within which to take the matter under consideration and were given until February 28, 1963, to complete the company's rate filings. No further response having been received by April 16, 1963, 29 FPC 746, the Commission on that date issued its order to show cause initiating this proceeding.

---

[8] The members of the Indiana Municipal Electric Corporation include all of the Indiana municipalities to which Indiana & Michigan sells electric energy at wholesale.

[9] An example of the valuable assistance which the Commission is at times able to render to State agencies and ultimate consumers is represented by the *Penn Water* rate case in which Penn Water was required to reduce its interstate wholesale rates and charges for electric energy by approximately $2,000,000 annually. That proceeding was instituted at the urgent request of Maryland authorities and, from the standpoint of rate making and jurisdiction, has had one of the most profound and lasting effects of any Commission case. As the Supreme Court stated in part (343 U.S. at 416–417):

> In 1944 the Maryland Public Service Commission, the Mayor and Council of the City of Baltimore, the Baltimore County Commissioners, and several private purchasers of electric power decided to ask the Federal Power Commission for help. They requested the Commission to investigate allegedly "excessive rates" the Pennsylvania Water & Power Company (Penn Water) was charging Consolidated Gas Electric Light and Power Company of Baltimore (Consolidated). The Maryland interests wanted the Federal Power Commission to reduce these charges so that the State commission could lower Consolidated's rates to its Maryland customers. The Federal Commission held many months of extensive hearings and found that Penn Water had charged its customers almost three times what it should have in 1946. In that year it had a net operating income of $3,477,408, as contrasted with $1,300,672 which the Commission found would have been a fair return (5¼%) on a fair rate base ($24,774,712), allowing Penn Water "about 8.64 percent for common stock and surplus, which is adequate." The Commission ordered Penn Water to file a new schedule of rates and charges to bring about the reductions required.

The Commission rarely, if ever, has advance notice as to companies which will challenge its jurisdiction. But the Commission is always aware that if its jurisdiction is challenged it must meet that challenge, if it believes it unwarranted, not only through the issuance of a show cause order, but also on a hearing record reflecting the true operations and capabilities of the electric system involved. The applicable operating facts in any particular case will not only be facts common to all parties but facts which are, and have always been, in possession of the company resisting Commission jurisdiction—as Indiana & Michigan continues to do here.

The show cause order issued April 16, 1963 required Indiana & Michigan to respond thereto on or before May 6th and fixed June 3, 1963, as the date for commencement of the hearing. Indiana & Michigan was directed to show cause, through written answer and orally at a public hearing, why the Commission should not: (1) find it to be a "public utility"; (2) find its sales for resale to municipals and cooperatives to be sales at wholesale for resale in interstate commerce subject to regulation under Sections 205 and 206 of the Act, for which Indiana & Michigan must file rate schedules in the manner set forth in Part 35 of the regulations; (3) find that at least since January, 1961, Indiana & Michigan has been violating and threatens to continue violating the Act and the regulations; (4) order Indiana & Michigan to file schedules for service to the twenty-four municipals and cooperatives; and (5) take such further action as may be necessary and appropriate to cause Indiana & Michigan to comply with the Act.

On May 3, 1963, the Public Service Commission of Indiana filed a motion for a concurrent hearing on the order to show cause, reserving its right to intervene, and requesting a continuance of the hearing.

As required by the order to show cause issued April 16, 1963, Indiana & Michigan, on May 6, 1963, responded thereto by denying that the wholesale sales made to the municipalities and cooperatives are jurisdictional sales and requested that the order "be forthwith vacated and that this proceeding be terminated and dismissed." The Commission, believing that an evidentiary hearing was needed, denied Indiana & Michigan's request, stating in its order issued May 29, 1963, 29 FPC 1094:

> The request * * * that the Commission vacate its order of April 16 is predicated upon legal conclusions based, in large measure, upon factual allegations which the Commission is unprepared to accept unless they are established at a hearing. The Commission's original order directed a hearing for just this purpose. We are therefore denying the motion * * * *and shall decide the issues raised by the motion upon the record after hearing.* [Italics supplied.]

The order of May 29, 1963, also denied the request of the Indiana Commission for a concurrent hearing, but granted it intervention in this proceeding. In so doing, the Commission noted that—

---

[10] During the time that the Commission had the *Colton* case (376 U.S. 205) under consideration it sent a number of letters to companies inquiring as to the lack of filed rate schedules for all interstate wholesale sales for resale, particularly sales made to municipals. Many public utilities thereafter voluntarily filed previously unfiled rate schedules covering interstate wholesale sales for resale. Others, including Indiana & Michigan, failed to do so.

> * * * since this proceeding concerns the requirements of the Federal Power Act and not the provisions of the company's contract for service to wholesale customers, we do not believe that a concurrent hearing would be helpful.
>
> A concurrent hearing on such a matter has previously resulted in unnecessary, multiple litigation. *United States* v. *Public Utilities Commission of California*, 345 U.S. 295 (1953).
>
> This is not to say that in future proceedings concerning rates of the Company, the concurrent hearing procedure may not be appropriate. We, therefore, deny the motion of the Indiana Commission, but will treat its moving papers as a notice of intervention * * *.

Further, the order of May 29, 1963, continued the commencement of the hearing from June 3 to July 29, 1963, doing so for the following reason:

> We have been informed by staff that a representative of the Company, as well as the State Commission, feels that additional time is required to prepare for the hearing. A reasonable opportunity should certainly be afforded to prepare the material which the parties wish to present.
>
> We have granted more than the full time requested in order that the hearing may proceed without further adjournment.

By order issued July 23, 1963, 30 FPC 391, the Commission denied two applications dated July 16, 1963, in which Indiana & Michigan had applied to take testimony by deposition and for the issuance of subpoenas *ad testificandum* and *duces tecum*. The first application requested and ordered for subpoenas *ad testificandum* for taking the testimony, by deposition, of the Chairman of the Commission, its Secretary, and a Commission engineer. The Commission ruled that—

> To the extent Indiana-Michigan wants to examine staff witnesses who may appear in this case to testify as to material matters, it will have opportunity to do so at the trial. Commission members, however, may not be examined either by deposition or at the hearing. * * * Data in the public files and records of the Commission are now and have been available to Indiana-Michigan.[11]

Concerning the second application filed by Indiana & Michigan the Commission pointed out:

> The reasons for the depositions and the subject matter of the requested examination are set forth in the second application, titled Application of Subpoena Duces Tecum.
>
> The Application for Subpoena Duces Tecum is in the nature of a blanket request for data relating to "the bases, criteria, expert opinion, studies and analyses" underlying the issuance of the Order to Show Cause initiating this proceeding. * * * But the relevance or materiality of such material to the facts upon which the issue of Commission jurisdiction must be determined is not demonstrated.[12]

---

[11] In a ruling issued March 3, 1964, the Examiner stated in part:

"Clearly parties to a Commission proceeding may not properly probe the mental processes, or invade the Commission's right of privacy, in connection with its deliberations relating to the issuance of Show Cause or other Orders initiating proceedings authorized or required by the Act. Any agency which permitted such an invasion would likely open itself up to 'the evil of harassment', the result being that the function of initiating and 'deciding controversies might soon be overwhelmed by the duty of answering questions about them'." (*National Labor Relations Board* v. *Botany Worsted Mills*, 106 F. 2d 263, 267.)

[12] The Examiner further pointed out in his ruling of March 3, 1964, that:

Indiana & Michigan sought the issuance of a subpoena *duces tecum* for the production, prior to the commencement of hearings, of certain data relating to issues raised by the

As already pointed out, the hearing, initially scheduled to commence June 3, 1963 was, by the Commission's order issued May 29, 1963, adjourned to July 29, 1963. Sessions of the hearing were held on that day, on September 4, October 2, 8, 14, and 18, 1963. No evidence was taken at any of the first six preliminary sessions.

At the initial session held July 29, 1963, counsel for Indiana & Michigan, instead of presenting the company's case-in-chief, as the Commission's order issued May 29, 1963 contemplated it would do—such order having delayed the commencement of the hearing from June 3 to July 29, "in order that the hearing may proceed without further adjournment" (*supra*, p. 760) countered the Commission's order by repeating requests of Indiana & Michigan for subpoenas and depositions which had been denied by the Commission's order issued six days earlier, or on July 23, 1963. The Examiner, by ruling issued August 9, 1963, again denied the requests on the basis set forth in such ruling (Tr. 120–124), pointing out that the circumstances had not changed during the six-day interval and that the "Commission contemplated that the Examiner would take appropriate action during the course of the hearing" on the evidence, not prior thereto. In the Examiner's view, the requests of counsel for Indiana & Michigan, repeated to the Examiner, put counsel for the company in "the untenable position of requesting a Hearing Examiner to overrule the Commission."

At the initial or preliminary session of the hearing held July 29, 1963, the Examiner fixed September 4, 1963, as the date on which Indiana & Michigan would file its direct case. This was more than thirty days in excess of that contemplated in the Commission's order issued May 29, 1963 (*supra*, p. 760). In so directing Indiana & Michigan the Examiner was not only mindful of what the Commission's order issued May 29, 1963 contemplated, but was also aware of the ruling of the court in *United Gas Pipe Line Co.* v. *Federal Power Commission*, 206 F. 2d 842, which sustained a Commission order requiring a company not having the burden of proof to go forward first with the presentation of evidence. In this connection it may appropriately be pointed out that the controlling facts governing the determination to be made in this proceeding were, and had always been, within the intimate knowledge of those comprising the AEP organization, of which Indiana & Michigan was an integral part, and could

Order to Show Cause herein and various orders and official communications of the Commission.

At the outset of this proceeding, the Commission made it clear that statements made by it in its Order to Show Cause, insofar as their evidentiary value is concerned, must be considered in accordance with the directions laid down by the Commission in its Rules of Practice and Procedure (Tr. 15). Section 1.6(d) of such rules proves in pertinent part that statements in orders to show cause—

> * * * shall be deemed to be tentative and for the purpose of framing issues for consideration and decision by the Commission in this proceeding * * *

In substance, Section 1.6(d) recognizes that statements of fact or conclusions of law contained in Orders to Show Cause are not to be taken as proven to be correct simply because they are set forth in such orders but are tentative, *i.e.*, subject to proof as issues in the proceeding. If the situation were otherwise, there would be no point in holding a hearing since the case would be established simply through the issuance of a Show Cause Order.

Not only do the rules of the Commission provide that statements made in Show Cause Orders do not have the characteristics of evidence, unless admitted by the respondent, but the Commission also made this abundantly clear in its order issued May 29, 1963, by pointing out that the decision in this proceeding will be based solely on the evidence contained in the record made and on no other basis. * * * (See *supra*, p. 759.)

> * * * since this proceeding concerns the requirements of the Federal Power Act and not the provisions of the company's contract for service to wholesale customers, we do not believe that a concurrent hearing would be helpful.
>
> A concurrent hearing on such a matter has previously resulted in unnecessary, multiple litigation. *United States* v. *Public Utilities Commission of California*, 345 U.S. 295 (1953).
>
> This is not to say that in future proceedings concerning rates of the Company, the concurrent hearing procedure may not be appropriate. We, therefore, deny the motion of the Indiana Commission, but will treat its moving papers as a notice of intervention * * *.

Further, the order of May 29, 1963, continued the commencement of the hearing from June 3 to July 29, 1963, doing so for the following reason:

> We have been informed by staff that a representative of the Company, as well as the State Commission, feels that additional time is required to prepare for the hearing. A reasonable opportunity should certainly be afforded to prepare the material which the parties wish to present.
>
> We have granted more than the full time requested in order that the hearing may proceed without further adjournment.

By order issued July 23, 1963, 30 FPC 391, the Commission denied two applications dated July 16, 1963, in which Indiana & Michigan had applied to take testimony by deposition and for the issuance of subpoenas *ad testificandum* and *duces tecum*. The first application requested and ordered for subpoenas *ad testificandum* for taking the testimony, by deposition, of the Chairman of the Commission, its Secretary, and a Commission engineer. The Commission ruled that—

> To the extent Indiana-Michigan wants to examine staff witnesses who may appear in this case to testify as to material matters, it will have opportunity to do so at the trial. Commission members, however, may not be examined either by deposition or at the hearing. * * * Data in the public files and records of the Commission are now and have been available to Indiana-Michigan.[11]

Concerning the second application filed by Indiana & Michigan the Commission pointed out:

Order to Show Cause herein and various orders and official communications of the Commission.

At the outset of this proceeding, the Commission made it clear that statements made by it in its Order to Show Cause, insofar as their evidentiary value is concerned, must be considered in accordance with the directions laid down by the Commission in its Rules of Practice and Procedure (Tr. 15). Section 1.6(d) of such rules proves in pertinent part that statements in orders to show cause—

> * * * shall be deemed to be tentative and for the purpose of framing issues for consideration and decision by the Commission in this proceeding * * *

In substance, Section 1.6(d) recognizes that statements of fact or conclusions of law contained in Orders to Show Cause are not to be taken as proven to be correct simply because they are set forth in such orders but are tentative, *i.e.*, subject to proof as issues in the proceeding. If the situation were otherwise, there would be no point in holding a hearing since the case would be established simply through the issuance of a Show Cause Order.

Not only do the rules of the Commission provide that statements made in Show Cause Orders do not have the characteristics of evidence, unless admitted by the respondent, but the Commission also made this abundantly clear in its order issued May 29, 1963, by pointing out that the decision in this proceeding will be based solely on the evidence contained in the record made and on no other basis. * * * (See *supra*, p. 759.)

obviously be presented with comparative ease and at any time counsel for Indiana & Michigan elected to do so.[13]

When the hearing reconvened on September 4, 1963, the Examiner again delayed the presentation of Indiana & Michigan's case until the "date that the staff and the other parties presented their direct cases" (Tr. 125–126). However, at a later session of the hearing held October 18, 1963, the Examiner fixed November 4, 1963, as the date on which the Commission Staff would file its direct case by mail, giving Indiana & Michigan and the interveners almost an additional month, namely, until December 2, 1963, to file their direct cases (Tr. 679). The Commission's order issued December 5, 1963 (Tr. 706–709), further extended the time within which Indiana & Michigan could file its direct case until December 9, 1963, and it was filed on that date.

As pointed out in the Examiner's ruling issued February 20, 1964 (Tr. 1157), Indiana & Michigan, in submitting its direct case pursuant to order of the Commission, "stated it reserved the right 'to offer additional evidence, to withdraw all or any part of the testimony and exhibits, which are hereby submitted conditionally, and to offer evidence in substitution therefor.' Since the Commission's order of December 5, 1963, makes no provision for submitting a direct case on any such conditional basis, and no good reason appearing for accepting such evidence on a conditional basis, the evidence submitted by Indiana & Michigan on December 9, 1963, will be treated by the Examiner as Indiana & Michigan's direct case. Staff counsel have already filed their exceptions thereto. It seems appropriate to point out here that Indiana & Michigan, since it filed its answer on May 3, 1963 to the Order to Show Cause, has been fully aware that it would have to submit a complete direct case on the date fixed by the Commission or the Examiner appointed to hear this case. It has therefore had ample opportunity to prepare a complete direct case" (Tr. 1157).

On December 9, 1963, counsel for Indiana & Michigan moved to strike the Staff's original direct case which had been filed on November 4, 1963. The Examiner, in granting this motion on the basis set forth in his ruling issued December 27, 1963 (Tr. 757–760), required, *inter alia*, the Staff to file a revised direct case on January 20, 1964, with the hearing to reconvene on February 18, 1964, for rulings on motions to strike and for cross-examination (Tr. 760). By a subsequent ruling issued January 16, 1964 (Tr. 696), the Examiner extended the time for filing of the Staff's revised direct case to February 4, 1964, and extended the date for reconvening the hearing to March 10, 1964. By another ruling issued February 20, 1964 (Tr. 1157), the Examiner had directed that "rebuttal testimony be filed thirty days after cross-examination on the direct cases is completed."

The hearing reconvened on March 10, 1964, and hearings were held on that date and at various dates thereafter until the hearing was concluded on June 11, 1964.

---

[13] At the preliminary session of the hearing held July 29, 1963, counsel for Indiana & Michigan stated his conception of this case and recognized that the business carried on by Indiana & Michigan give it a "public utility" status under the Act:

> The way I conceive this case, we are dealing with a jurisdictional fact and the jurisdictional fact is: Does this Commission have jurisdiction over the rates of Indiana and Michigan insofar as we are dealing with wholesale sales to municipalities and rural electric cooperatives.
>
> That is the jurisdictional fact. (Tr. 53)
>
> * * * * * * *
>
> We don't disagree that Indiana and Michigan * * * has in the past and now transmits some electric energy in interstate commerce within the meaning of the Act. (Tr. 73)
>
> * * * * * * *
>
> The order to show cause directs Indiana and Michigan * * * to show cause why these sales should not be held to be jurisdictional sales. (Tr. 74)

The argument of counsel for Indiana & Michigan that they did not have ample opportunity to meet the Staff's evidence is untenable. They, in fact, had six weeks in which to prepare their cross-examination after the service of the Staff's revised direct case on February 4, 1964. Furthermore, they had been aware of the nature of the Staff's presentation since the filing of its original direct case on November 4, 1963.

The Staff presented its case through two witnesses. Cross-examination of these witnesses began on March 18, 1964. Cross-examination of the first witness was limited to two questions (Tr. 1381–82). Company counsel then proceeded to cross-examine the Staff's engineering witness for fourteen hearing days, such cross-examination covering 1128 pages of the transcript, and was completed on April 17, 1964 (the subsequent cross-examination of this witness, insofar as his rebuttal testimony was concerned, covers an additional 294 pages of the transcript).

Following the completion of all cross-examination on the direct cases on April 21, 1964, the Examiner, consistent with his prior ruling made on February 20, 1964, gave counsel for Indiana & Michigan and the Staff thirty days, or until May 21, 1964, in which to prepare and serve their rebuttal evidence (Tr. 2946). Accordingly, the hearing was recessed on April 21, 1964 until June 1, 1964, at which time the rebuttal evidence was incorporated in the record and June 9, 1964 was, with the agreement of counsel (Tr. 3068), fixed as the date for beginning cross-examination thereon. As stated above, the hearing concluded on June 11, 1964.

Main and reply briefs were filed simultaneously by counsel for the Commission and for Indiana & Michigan on July 20 and August 21, 1964, respectively. The Examiner's ruling with reference to the filing of briefs was made at the conclusion of the hearing and was affirmed by the Commission.[14]

---

[14] Counsel for Indiana & Michigan complain that the time allowed by the Examiner for the filing of briefs did not enable them "to make the exhaustive analysis of the vast record in this proceeding which the rights of [Indiana & Michigan] and the importance of the matters involved require." The time allowed was longer than requested by Staff counsel. That it was adequate seems amply demonstrated by the fact that counsel for Indiana & Michigan include in their briefs, and request the Examiner to rule upon, a total of 552 proposed findings set forth on 141 pages of their briefs (see *infra*, p. 794). These proposed findings, exorbitant in number, are accompanied by record and other citations, and appear to cover every conceivable phase and aspect of this case from the point of view of company counsel.

That the briefing time allowed was fully justified is also shown by the large number of able company counsel—six—who entered their appearances in the record and presumably were available for brief writing and consultation; by the limited number of issues actually involved; the intimate familiarity of counsel and their technical assistants with the history and method of operation of the AEP System; and the familiarity of counsel, as shown by what transpired during the course of the hearing, with the legal questions involved.

Furthermore, as Staff counsel, in their answer to the appeal of Indiana & Michigan of the Examiner's ruling directing the simultaneous filing of briefs on specified dates, pointed out to the Commission:

> The time for briefing is adequate and reasonable. Simultaneous main briefs are to be filed * * * 39 days after the close of the hearings * * *. Simultaneous reply briefs are due 35 days [later] * * *.
>
> Although the transcript in this case contains 3400 pages, the first 750 pages all relate to procedural matters. Staff presented two witnesses and their direct and rebuttal testimony comprises only 390 pages. Most of the large exhibits consist of operating records of [Indiana & Michigan] or its parent * * * (AEP), or reports to the FPC filed by AEP or its subsidiaries. Respondent is intimately familiar with these records.
>
> The size of the exhibits is deceptive. Most of them illustrate a single condition obtaining over a long period of time and contain a few data sheets for each day of the year for the number of days selected from the AEP records for that year. This makes the exhibit large, but not necessarily complicated.

In requiring simultaneous filing of briefs the Examiner followed his normal procedure adhered to over many years. Past experience had demonstrated to the Examiner that briefs simultaneously filed proved far more helpful.

Standard of Proof Required

Counsel for Indiana & Michigan, contending that the pertinent standard of proof required by *Colton*, 376 U.S. at 209 n. 5, has not been met by the Commission Staff, request that this proceeding be dismissed. Their untenable position is rejected.

Before discussing the standard of proof referred to, it will be helpful to point out that a power system can be developed and operated in a number of ways and different ways are now and have been in use. Of all of these, the integration and pooling of power producing and transmitting facilities, even though the most complex and getting more so, has nevertheless become the soundest mechanism for dependable power supply and is the most economical because this method of coordinated operation enables the combined facilities to carry a combined utility load which exceeds the aggregate capacities of independent plants and to do so at a lower production cost than independent operation can achieve.

Turning now to the standard of proof which counsel for Indiana & Michigan refer as being established by *Colton* and prior cases. As declared in *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U.S. 515, 529:

> * * * Federal jurisdiction was to follow the flow of electric energy, an engineering and scientific, rather than a legalistic or governmental test. Technology of the business is such that if any part of a supply of electric energy comes from outside a state it is, or may be, present in every connected distribution facility.

In *Colton* the Supreme Court reiterated what it had previously declared, namely, that federal jurisdiction follows the flow of the energy; the test under Part II of the Act being "engineering and scientific, rather than * * * legalistic or governmental." (376 U.S. at 209 n. 5.)

As the record makes abundantly clear, while there are limited situations in which it is possible to trace the flow of electric energy, the complex AEP System does not constitute such a situation. There are in fact no means presently known to science for identifying the particular source or sources of energy delivered by the AEP System to any particular point of sale. But this proceeding is not searching for an answer to what the experts so far find unanswerable. Rather it is concerned with the end result of what the experts have bound together with knowledge that it would function, and has functioned, to serve a seven-state area in such a manner as not to leave any part of the system without the resources and support of the system as a whole. This system of generation, transmission and distribution is part of an organic whole in which the development of one influenced the development of the other. It is therefore too late in the day for counsel for Indiana & Michigan to attempt to underplay the results attained in view of past substantiated pronouncements of the AEP System to the world that it has, for example, formed "a single major power system" in which "Each plant supports, and in turn is supported by the others."

The failure of the Staff to attempt to use the tracing method in this case can in no sense be regarded as a "legalistic or governmental" approach doing violence to the rule laid down in *Connecticut* and reiterated in *Colton*, for there is nothing "legalistic or governmental" involved in a recognition of the farsighted planning, basic engineering, advanced technology and scientific factors behind the development of the unrivaled AEP System that have been carried through to accomplish the purpose of enabling the system's operation as a single integrated unit by skilled coordinating personnel fully understanding and conversant with the anatomy thereof. The coordinating personnel possess and use the tools and techniques required to carry on continuously the minute-to-minute hour-to-hour, and day-to-day control operations which keep the system efficiently operating as an integrated unit to furnish the requirements of the portions of the seven-state area it serves, as well as to accomplish the interchange of power with other systems to assure maximum use of facilities and optimum economy.

Clearly, the development of the AEP System required the efforts of talented and dedicated men at every step of the way, in which their engineering and scientific decisions have been fundamental. For the Commission to recognize this fact constitutes adequate compliance with the "engineering and scientific" test, for the system demonstrates that it meets the objectives sought in its creation.

Subsequent to *Connecticut*, but prior to *Colton*, the Supreme Court handed down its decision in *Penn Water* sustaining the Commission's finding that the combined operations of the power pool there involved were completely interstate in character, notwithstanding the fact that at some particular times the sales transactions involved energy never crossing a state boundary.

Since all of the resources of the AEP System power pool are available to meet the combined load of its members, without reference to state boundaries, such a pool, as the Commission held in *Penn Water*, 8 FPC 1, constitutes an "integrated and coordinated interstate electric system." In that case the Commission further found that the sales of system energy, such as those by Pennsylvania Water & Power Company to its Pennsylvania utility customers, made without reference to the state of origin of the energy, were pool sales, and hence, in the light of the interstate nature of the pool, were sales in interstate commerce. The Commission accordingly concluded that Pennsylvania Water & Power Company was a "public utility" under Part II of the Act by virtue of its ownership and operation of facilities for the transmission and sale at wholesale of electric energy in interstate commerce, and that its sales for resale to Consolidated Gas Electric Light and Power Company of Baltimore, as well as its three Pennsylvania customers, were subject to Commission jurisdiction under Part II of the Act.

The Supreme Court, in affirming the Commission in *Penn Water*, ruled that "the Federal Power Commission has complete authority to regulate all of this commingled power flow." While the Commission in the simple operations involved in *Penn Water and other cases* (*Wisconsin Michigan Power Co.* v. *Federal Power Commission*, 197 F. 2d 472, cert. denied 345 U.S. 934; *State of Wisconsin* v. *Federal Power Commission*, 201 F. 2d 183, cert. denied 345 U.S. 934; *Otter Tail Power Co.*, 8 FPC 393), expended the necessary time and effort, and with the use of assumptions was able to trace out-of-state energy to each of the sales in question, no court has held that, to sustain the burden of proof concerning pool sales made without reference to the state of origin, the Commission is required to trace out-of-state energy to each of the sales made from the pool energy comprised of multistate sources. Nor is there reason or justification for such a requirement in the light of the fact that the Commission, as held in *Penn Water*, has "complete authority to regulate all" the commingled power flow. Having the authority to regulate "all" the commingled flow, the Commission, *a fortiori*, has the authority to regulate each part thereof comprising wholesale sales for resale without the necessity of tracing each part to the point of sale, even assuming this to be possible.

The Staff's engineering witness testified that the tracing method cannot be used to determine particular sources of power supply to particular loads on the AEP System. This is so because of the lack of meter readings of hour to hour loadings on all of Indiana & Michigan's transmission lines. The limited number of meter readings that are maintained by Indiana & Michigan are in evidence as Exhibit 1. This exhibit shows that meter readings are only taken by Indiana & Michigan at points of interconnection with other electric systems, at voltage transformation stations involving 345 or 138 kilovolts, and at generating stations.

But even if adequate meter readings were available, the Staff engineer not only had serious reservations as to whether a tracing study of Indiana & Michigan's system could be completed in less than a year—because of the complicated integrated network supplying the loads, but was of the further view that such a study would be meaningless because of the constantly changing loads, new additions of power plants and transmission lines, and retirement of old plants on such a modern integrated system. That is to say, by the time a tracing study was completed, the situation on the system could have changed completely.

Thus, as the Examiner has already observed (*supra*, p. 754), "In this day and time, for the Commission to be up to date on energy flows over major systems such as AEP's means no more than to be on the verge of becoming out of date."

Order Issued by Indiana Commission

Indiana & Michigan participated in a one-day hearing held by the Indiana Public Service Commission on December 5, 1963. Fifteen days later, or on December 20, 1963, the Indiana Commission issued an order classifying the energy delivered by Indiana & Michigan to its Indiana municipal and cooperative customers as energy generated, transmitted and consumed solely within the State of Indiana.[15] The inconsistency of action of the Indiana Commission with the belief of counsel for Indiana & Michigan is demonstrated by the fact that in their proposed finding No. 465, counsel request the Examiner to find—

> By reason of the practical day-to-day operation of the American Electric Power System, including the system of [Indiana & Michigan], it is impossible to determine which particular source of energy supplies a particular load on the system of [Indiana & Michigan] or on the American Electric Power System.

---

[15] The action of the Indiana Commission was summarized by its counsel in the following manner: "On November 29, 1963, Indiana Commission instituted a proceeding to investigate the standards for, and classification of, the electric service rendered by I. & M. to its municipal and REMC wholesale customers operating in Indiana. A public hearing was held and on December 20, 1963, Indiana Commission found that it had jurisdiction of the matter before it; that it had for many years exercised continuous and uninterrupted jurisdiction over the wholesale sales by I. & M. to the Indiana municipal and REMC utilities; that it had regulated the measurement and classification of electric energy furnished by I. & M. to said wholesale customers; that Indiana generation was considerably more than sufficient to permit the proposed classification and that it was in the public interest to do so. Thus, Indiana Commission ordered that, for any applicable period of measurement, the electric energy furnished by I. & M. to said municipal and REMC wholesale customers be classified as energy generated in the State of Indiana and that in the event, in any such period, sufficient Indiana generated energy was not available to supply said customers, such municipal and REMC utilities would receive the amount of Indiana generated energy available, in proportion to the total amount delivered during such period. * * * It is Indiana Commission's view, therefore, having determined its jurisdiction, now and in the past, in fair and impartial public hearings, that no advantage could be gained by proceeding further in this cause."

It was by a subsequent order issued February 11, 1964, that the Federal Power Commission granted the requests of the Public Service Commissions of Indiana, Wyoming and Maryland "to withdraw from any further participation in these proceedings, without prejudice to their continued participation in this proceeding if they desire to do so." (See *supra*, p. 758)

The unrealistic order issued by the Indiana Commission[16] is nevertheless relied upon by counsel for Indiana & Michigan to support their argument that the twenty-one Indiana sales made by Indiana & Michigan are subject to regulation by Indiana Commission.[17] But it is obvious that such an order assigning Indiana loads to Indiana generation cannot deprive the Federal Power Commission of jurisdiction over sales of electric energy in interstate commerce where in fact the sales will not and cannot be made from the AEP System in the manner assumed in the State Commission order. For the inescapable fact is that energy sold by Indiana & Michigan in Indiana is an indistinguishable part of electric energy emanating from multi-state sources. As already noted, the AEP System operates as a single system. It is impossible for it to operate differently without sacrificing the benefits inherent in its completely integrated operations—benefits solely accounting for the existence of the system in its advanced state of development and interconnection.

The governing statutory language and the decisions of the Supreme Court compel the conclusion that the jurisdictional status of sales depends upon the realities of electric energy flow rather than upon declarations or assumptions. In interpreting both the Natural Gas and Federal Power Acts, the Court has consistently relied upon the physical facts in determining whether sales are in interstate commerce. *Jersey Central Power & Light Co.* v. *Federal Power Commission*, 319 U.S. 61; *Interstate Natural Gas Co.* v. *Federal Power Commission*, 331 U.S. 682, 687; *Federal Power Commission* v. *East Ohio Gas Co.*, 338 U.S. 464, 467. As declared in *Connecticut Light & Power Co.* v. *Federal Power Commission*, and reiterated in *Colton*, 376 U.S. at 209 n. 5, federal jurisdiction follows the flow of energy; the test under Part II of the Act is "engineering and scientific, rather than * * * legalistic or governmental."

As the record clearly shows, Indiana & Michigan's generating facilities, together with those of its affiliates comprising the AEP System, are operated as an integrated and coordinated interstate electric system. The output of this system or pool, part of which is sold to Indiana & Michigan's customers in Indiana, is peculiarly the interstate product of the integrated system, functioning as a single multistate electric and economic unit, for the existence and nature of the product are wholly dependent upon the operation of the integrated interstate system. The product Indiana & Michigan sells to its customers is a product which would not be available but for the interstate pool which enables Indiana & Michigan to draw on out of state generation at times of need, and would not be available at the low production cost involved but for the operations of the interstate pool.

Integrated and Coordinated Operations of the AEP System

Since Indiana & Michigan's operations and facilities are an essential part of and are fully integrated with those of the total AEP System, and in view of the fact that this system is interconnected with nineteen non-affiliates, the Commission Staff necessarily offered evidence showing the integrated method of operation of the entire AEP System in order to reflect the interstate character of the twenty-four wholesale sales for resale made by Indiana & Michigan to its municipal and cooperative wholesale customers.

---

[16] Staff counsel point out in their reply brief that "Similar orders were issued by the Indiana Commission to Southern Indiana Gas & Electric Co. in cause No. 30289 on April 2, 1964, and to Public Service Company of Indiana in cause No. 30255 on February 6, 1964. Significantly, Northern Indiana Public Service Company and Indianapolis Power & Light Company, both of which are interconnected with out-of-state facilities of other companies and with [Indiana & Michigan], have filed with the FPC their rate schedules for their Wholesale sales, including sales to municipalities and cooperatives."

[17] In compliance with this order Indiana & Michigan promulgated and filed with the Indiana Commission a set of Terms and Conditions of service incorporating the provisions of the order among the standards and other requirements of its service to its Indiana municipal and cooperative customers. Since December 30, 1963, each of Indiana & Michigan's Indiana customers here in issue has been receiving electric service and paying therefor under the provisions of the Indiana Commission order and the Terms and Conditions of Service issued thereunder.

Following the incorporation of the Staff's evidence in the record, the Examiner stated his understanding of the Staff's theory by pointing out *inter alia* (Tr. 1368–1369):

> * * * [I]t is the Staff's view * * * that it is the inherent characteristics and purposes of the integrated system, not with an element or segment thereof located in one state, with which we must deal * * *.
>
> Perhaps if I borrow the words of the Supreme Court in *Southern Pacific Terminal Co.* v. *I. C. C.*, 219 U. S. 498, I can best express the staff's position as I understand it. At pages 523–524 * * * the Court states that "It is with the system that the law must deal, not with its elements. Such elements may, indeed, be regarded from some standpoints as legal entities, and may have, in a sense, separate corporate operation; but they are directed by the same paramount and combining power and made single by it."

The individual who has been and continues to be intimately associated with, and who appears to be as much responsible as any other for the development of the AEP System from an engineering and scientific standpoint, is Mr. Philip Sporn, who was recognized by the Staff's engineering witness as an authority on power systems. One of his books, published in 1950, is entitled "The Integrated Power System".[18] In this book Mr. Sporn discusses the characteristics of the integrated operation of power systems and, after doing so, relates the objectives and principles discussed in the first eight chapters to the creation, design and operation of the AEP System to the extent developed up to 1950. The testimony of the two witnesses for the Commission Staff, together with the documents they sponsor, brought the development and method of operation of the system down to date. They show the AEP System of the 1940's to be essentially the same as it is today, with improvements.

As Mr. Sporn explains, the ability to serve an entire area or region "is inherent in the concept of an integrated power-supply system. As a corollary, the system must be capable of serving any portion of the area, and all portions equally well. Thus, the development of any part of the area will not be restrained by an inadequacy of power supply. At least as far as power is concerned, all parts of an area are put on the same basis."

In exploring the bases and technical requirements of an integrated system, Mr. Sporn points out that—

> From a technical standpoint, what is meant by "integration" is this: That all facilities of the system are connected physically into or gathered within the system, and that they are made to work continuously as part of the system. The presumption is that no facility is needlessly idle; no part of the system is left hanging loose, so to speak, no part of the system is left without the resources and support of the system as a whole.
>
> Applied to energy generation, this means the ability to develop all energy resources capable of economic exploitation and the development of all the resources to their maximum, as well as the elimination of all barriers to

---

[18] The book entitled "The Integrated Power System" was received in evidence as Item KKK. It is very instructive, particularly to the uninitiated, as to the inherent characteristics of the integrated operation of a power system. Mr. Sporn concludes the preface of his book with the hope "that while the book will find interest among technical students and power-system executives and engineers, a study of it will prove rewarding to economists, investment analysts, legislators, administrators, and all those engaged in advancing the welfare of modern industrial societies."

development such as local inability to absorb the resources. Again, it means the ability to use the largest units justified by the requirements of the system for any particular station or sources, regardless of the requirements of the local area. Still further, it means the ability, as the system grows and develops, to exploit the most efficient units capable of technical projection because other units relatively recently installed but perhaps not so technically advanced can be relegated to a lesser system use. The combined or integrated effect of these is conservation on a vast scale.

As to load centers, the integrated system makes possible the integration of loads of diverse characteristics; it should make available any practical amount of power to any point on the system independent of the local resources; and, finally, it should make available multisource supply, without any appreciable economic burden, to all principal points of the system. From that follows the corollary gain: no appreciable amount of capacity need be installed—except where the advantages are large—ahead of market demand in order to utilize reasonably sized units or to avoid piecemeal development of a site. Capacity is, therefore, not kept idle pending its future use. With all load centers placed on that basis, it becomes possible to develop and conserve all the local resources and, therefore, from that angle also a major contribution to conservation is made.

From the standpoint of the power system as a whole and its operation as a technical economic entity, the integrated system makes possible the translation of skill and experience from one part of the system to the rest, permits the fullest utilization of equipment that would otherwise be retired as inadequacy or other obsolescence develops, and leads to minimum requirements in reserves of equipment, supplies, and personnel. And here, too, a contribution to conservation of resources is brought about.

* * * * * * *

The integrated power system itself is an integration of three principal components: the generating system, the transmission system, and the distribution system. These are kept in functioning order by the coordinating personnel and made effective by what has been referred to as "tools" of the integrated system: the protective elements and the regulating elements. * * *

* * * * * * *

* * * It is not imperative that the ties between generation centers be direct. It is important that the interconnected transmission be able to discharge the full technical responsibility of making possible shifts of load and transfer of power for economical loading, for unit outage and for completely coordinated operation.

* * * * * * *

* * * The distribution system might be thought as being outside the scope of the main considerations of an integrated power system, but such delimitation is only theoretical. Actually the distribution system is vitally tied to the transmission system and must be coordinated with it.

* * * * * * *

There is no question that the success of a system, no matter how well engineered and built, will be impossible without an efficient coordinating personnel fully understanding and conversant with the anatomy of the system and possessing the necessary techniques for carrying on continuously the minute-to-minute, hour-to-hour, and day-to-day control operations that are so necessary to keep the system functioning as an integrated unit.

* * * * * * *

> Past experience has amply demonstrated that properly planned and operated interconnections between integrated systems will increase the efficiency—the ability to give optimum service at lowest cost—and hence the economic soundness of each system. * * *

Chapter 9—the last chapter—of Mr. Sporn's book, is entitled "An Example Of An Integrated System—Discussion And Pointing Up Of Some Of The Principles Discussed" He introduces this chapter by stating that "there are fortunately available a considerable number of outstanding examples of integrated-system development. It should prove profitable, therefore, to examine one such system, particularly from the standpoint of how closely the principles developed in the theoretical discussion of integrated-system requirements were followed, and to see what kind of system resulted therefrom. More specifically, it should be possible to examine such a completed system and to see how well it met the social-economic objectives postulated as a basis for its existence."

As Mr. Sporn proceeds to point out—

> Since the author is most familiar with the system with which he is associated, and with whose planning, building, and operation he has been intimately connected for the past thirty years, he has taken this as an example.
>
> This is first of all, a privately owned system; it has been in successful operation for over forty years. It serves a region covering portions of seven states—Michigan, Indiana, Ohio, West Virginia, Virginia, Kentucky and Tennessee—the outside perimeter of which embraces an area of approximately 80,000 square miles. In this area, the system serves slightly over 2,000 communities * * *.

In order to develop the illustration sought, Mr. Sporn examines the AEP System from three standpoints. First, "The growth and development of the system and its ability to expand economically and to serve adequately the area requirements." Second, the "Ability to serve all the requirements of any part of the area." Third, the "Contribution to operating economies and to resource conservation." In so doing, Mr. Sporn makes it clear that the AEP System meets the objectives sought in its creation and discussed in the preceding eight chapters of his book, pointing out that the "period from 1925 to 1940 was one of intensive integration by the development and extension of the high-voltage network and the carrying forward of a program of coordinated expansion of generation facilities"; that during "this period, there was also considerable expansion of system transmission facilities and building of new interconnections with neighboring utility systems carrying with them the many advantages to be gained by interconnecting adjacent system"; that it "was also during this period that the training of personnel was carried through and the techniques and tools required for the integrated-system operation were developed"; that the "present-day integrated system functions in its highly economical and reliable manner only by virtue of the fact that planning has been forward-looking, that there has been proper basic engineering behind its building, and that the development of tools and techniques and the training of skilled personnel required to operate such a system have been carried through."

In discussing the period 1940 to 1949, Mr. Sporn calls attention to the fact that this period "was one of rapid load expansion * * * which placed extraordinary burdens on the system. This experience clearly demonstrated that the planning, design, construction, and operation of the integrated system were sound in that it was able to take on very heavy loads at practically any point on the system at a minimum of expense"; that when "it became necessary to locate additional plant sites, the integrated system was utilized in a search for other sources of generation. For example, the location of the new Sporn Plant was determined entirely by the existence of the integrated system", and that during "this period, the high-voltage network was strengthened, a notable example being the looping of the system between Ohio and Indiana by building lines from Portsmouth, Ohio, to Muncie, Indiana."

In projecting the AEP System to 1958, Mr. Sporn pointed out that "The development of the high-voltage system will enormously increase the load that can be transferred between sections of the system and the growth in load which can be served. During this period, there will be some additional strengthening of the 132,000-volt system, additional capacity will be installed at the Philip Sporn Plant, the new Tanners Creek Plant will be placed in service, and three new plant sites, the exact location of which has not been determined, will be developed. This great expansion of the system can be carried out without any major changes in, or obsolescing of, the existing system."

In discussing the growth and development of the AEP System, Mr. Sporn states:

> The growth of this system is typical of others in that, in the beginning, it comprised a few isolated operations so located that they could be economically coordinated; later, as other isolated operations were acquired, they were in turn coordinated and all were integrated to form the present system. The main growth, however, was the result of internal, i.e., intensive, rather than external, or extensive, development. Further, the development of integration was gradual over many years. Integration measures were first taken within the isolated groups, and the then nucleus of the present integrated system was started. Thereafter, growth and integration proceeded until an integrated system was developed and subsequently it was perfected and extended.
>
> * * * It is worth noting, however, that there can be no question that the growth shown and projected clearly demonstrates the ability of combining gradual or evolutionary development with farsighted planning, so as to bring a power supply to the integrated area large enough to serve all its requirements. Such, as a matter of fact, has been the experience within the area served by this integrated system.

And concerning the ability of the AEP System to serve all the requirements of any part of the seven-state area, Mr. Sporn states in part:

> The basic principles followed in the planning and building of this integrated system, and the many studies made of different parts of the system and of the system as a whole during the years, all gave reason for the conviction that a practically unlimited supply of electric power could be furnished to almost any community on the system.
>
> * * * * * * *
>
> A recent review of this study showed that, since the study was first made in 1939, the load in a great many of these communities has doubled, in quite a number of cases it has tripled, and in one case it has increased almost five times. But the conclusions reached prior to and confirmed in 1939 are still valid: a very large block of power could be economically served to any of these communities.
>
> The ability of the integrated system, well planned and efficiently operated to furnish a supply of electric power in almost any practical amount to every community throughout the area covered by it, would seem to constitute an asset of major proportions from the standpoint of the broad social and economic welfare of the area and the country.

A recent brochure published by the AEP System summarizes facts and facilities pertinent to the decision in this case, with which summary the testimony of the Commission's engineering witness is in agreement (Exhibit 42, pp. 1, 19–20):

> The AEP System is a group of six investor-owned electric utilities, each interconnected with the others by high-voltage transmission lines, permitting their operations to be fully integrated *and thus forming a single major power system.* All told, the AEP System [which has available for its customers' use more than 8,000,000 kilowatts of electric power generating capability] provides unexcelled electric service to more than 5,400,000 people and 2,370 communities in a 48,600-square-mile area covering parts of seven East-Central states * * *. [Italics supplied]
>
> To provide this service, the AEP System has built a giant chain of power plants—large, modern and efficient—and is constantly adding new, bigger and better plants to this chain. Annually these plants produce more electricity than those of any other private power system in the world. Each of the plants, in its own way and in its own time, was an engineering achievement, and a number of them are world renowned for their advanced technology.
>
> * * * * * * *
>
> All of the plants and the companies' customer load centers are tied together by a network of some 14,000 circuit miles of transmission lines, extending from Lake Michigan to the border of North Carolina and including more than 1,500 circuit miles of 345,000-volt lines—the highest voltage in general use in the United States. *Each plant thus supports, and in turn is supported by, the others.* Furthermore, the AEP System is interconnected with 19 other electric power systems at 66 locations, including 39 major high voltage interconnections. [Italics supplied]
>
> Three main dispatching points—at Canton, Ohio; Roanoke, Va., and Fort Wayne, Ind.—working closely with a central AEP System coordinating group located in Columbus, Ohio, direct the generation and flow of power throughout this seven-state network, as well as the interchange of power with other systems, to assure maximum use of facilities and maximum economy.
>
> * * * * * * *
>
> The AEP System through the years has maintained a reputation for outstanding performance in this field. For example, during nine years of a recent 11-year period, an AEP-designed power plant was the nation's—and thus the world's—most efficient steam-electric station. * * *
>
> Setting the pace in power generating efficiency, an AEP System plant (Philip Sporn) in 1950 became one of the first two in the world to generate power at a heat rate below 10,000 Btu per kwh. Exactly 10 years later, another AEP plant (Clinch River) in 1960 was the first to operate at a heat rate below 9,000 Btu. And in the years since then, even this record has been bettered.
>
> All of this didn't just happen. It was brought about by dedicated exploration of every promising technological avenue leading to more economical electric energy. Many concepts developed by our pioneering have become standard in the design of most major power plants. * * *
>
> * * * * * * *
>
> A major factor in the cost of electricity is the cost of fuel and its transportation to the power plant. The AEP System uses more coal than any other investor-owned power system—some 16,000,000 tons a year by 1964, for example. In order to keep costs to a minimum, all except one of the AEP System's plants are located in close proximity to fuel sources and

> several are virtually minemouth plants. Highly efficient transmission facilities, including a System-wide backbone network of 345,000-volt lines (pioneered by the AEP System after extensive testing of lines up to 500,000 volts during the period 1946–51), bring power economically from these plants to the various load centers.
>
> * * * * * * *
>
> But progress will not stop here. The AEP System today is carrying out extensive research and development work in several fields, none more significant than power generation—always seeking improvements in the art and, in turn, lower-cost electric power for its customers.

On the AEP System, as on all integrated power systems, all loads are supplied from total system generation (plus energy received over interconnections) which always matches total system load, including scheduled loads on interconnection ties. It is in this manner that the AEP System functions as a single unit, making it impossible to determine which source of energy supplies a particular load. The electric energy, generated as needed and delivered instantaneously—at the speed of light, is supplied in the form of either 120 pulsations or 120 positive plus 120 negative pulsations per second per phase for the 60 cycle system.

All operating electric generators on the network are interlocked electromagnetically. Accordingly, under ordinary operating conditions, they run either at exactly the same speed or at a speed ratio such as 1800 or 3600 revolutions per minute. No operating generator changes its speed itself. All the generators connected to the network must follow each other as to speed whenever there is a change in speed, and the frequency of all interlocked generators is always exactly the same. Every change in load on the system affects every generating unit connected to the network.

As already made clear, the six operating electric companies comprising the AEP System, "with their power plants and transmission lines interconnected and their operations completely integrated, operate as a single major electric system." "A major factor in this integrated operation is the American Electric Power Service Corporation, another subsidiary which provides management and technical service for the AEP System, with one of the most important services being the principal design and engineering work required by all System companies." "The AEP Service Corporation * * * employees provide research, planning, engineering, design, and construction services needed by the operating companies, together with commercial, financing, accounting, legal and other operating services." [19]

An important function of the Service Corporation is to economically load the generating facilities throughout the seven-State area served by the AEP System. This function is performed through the Columbus, Ohio dispatching center by skilled power coordinators who also operate the load frequency control facilities to maintain continuous parallel operation with interconnected non-affiliated systems.

The scheduling or production of electric energy from Indiana & Michigan's generators is carried out by the Columbus dispatching office on the basis of relative costs, including transmission losses, of electric energy available from all AEP System generating sources for serving the total system load.

Every day of the year there are transfers of energy to and from Indiana & Michigan across the Indiana-Ohio and Indiana-Illinois borders. Indiana &

---

[19] The quoted excerpts are from a brochure entitled "Indiana & Michigan Electric Co. and the American Electric Power System" (Exhibit 47). They accord with the testimony of Staff witnesses.

Michigan also transmits electric energy daily across the Michigan-Indiana border.[20]

Facilities Used by Indiana & Michigan In Making Sales to Its Municipal and Cooperative Customers

The broad purpose of Part II of the Act is to bring about effective regulation of interstate wholesale sales of electric energy for resale. This clear and specific grant of jurisdiction cannot be nullified by any other provision of the Act which might at first blush seem inconsistent therewith (*Colton*, 376 U.S. at 215; *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U.S. at 527).

In an effort to avoid the purpose of the Act to regulate interstate sales for resale, counsel for Indiana & Michigan contend that nineteen of the twenty-four sales in issue are made from facilities used in local distribution; as such are expressly excluded from the Commission's jurisdiction by the "but" clause of Section 201(b); [21] and, hence, the nineteen sales made from those facilities are exempt from Commission jurisdiction. That is to say, counsel seek an interpretation of the Act which will enable the company to continue interstate wholesale sales for resale without becoming subject to regulation under the Act.[22]

The position of counsel for Indiana & Michigan is untenable. In the first place, nothing in the Act makes Commission jurisdiction under Part II over sales of electric energy dependent upon the nature of the facilities involved in effecting sales. "Sale of electric energy at wholesale" is defined only as "a sale of electric energy to any person for resale" (Section 201(d)). Under the statute the nature of facilities applies only to the determination of the status of an electric company as a "public utility" under Part II. That term is defined in Section 201(e) as "any person who owns or operates facilities subject to the jurisdiction of the Commission under this part," which facilities are, in turn, defined in Section 201(b) as excluding "facilities used in *local* distribution".

---

[20] Indiana & Michigan's facilities are interconnected directly with a number of non-affiliated systems: Public Service Company of Indiana, Inc., Northern Indiana Public Service Company, Indiana-Kentucky Electric Corporation, and Indianapolis Power & Light Company, all operating in Indiana; The Cincinnati Gas & Electric Company in Ohio, Commonwealth Edison Company in Illinois, Michigan Gas & Electric Company in Michigan, and Illinois Power Company in Illinois—and through it to the Illinois-Missouri Power Pool. Indiana & Michigan is also interconnected with its affiliate, Ohio Power Company, at a number of points on the Indiana-Ohio border.

The agreements entered into between Indiana & Michigan and its non-affiliates recognize the free flow of energy from one system to the other because of the characteristics and operations of the network.

[21] Section 201(b) defines the coverage of Part II of the Act and the scope of the Commission's jurisdiction thereunder. It first provides that Part II "shall apply to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce." It then commits to the Commission jurisdiction over "all facilities for such transmission or sale," but not, except as specifically provided in Parts II and III, "facilities used for the generation of electric energy or * * * used in local distribution or only for the transmission * * * in intrastate commerce, or * * * for the transmission of electric energy consumed wholly by the transmitter."

[22] The further contention of counsel for Indiana & Michigan that by Section 201(a) of the Act Congress intended Indiana & Michigan's Indiana sales to be subject to state regulation is without merit. As the Supreme Court stated in *Colton*, 376 U.S. at 215–216, "We reiterated this view in *United States* v. *Public Utilities Commission, supra*, 345 U.S. at 311, where we also said, "to conceive of it [§ 201(a)] now as a bench mark of the Commission's power, or an affirmation of state authority over any interstate sales for resale, would be to speculate about a congressional purpose for which there is no support."

Under no circumstances may the Commission permit itself to become trapped in a situation where interstate wholesale sales for resale will not be regulated.

Furthermore, as made clear in *Hartford Electric Light Co.* v. *Federal Power Commission*, 131 F. 2d 953, cert. den. 319 U.S. 741, the "but" clause in Section 201(b) only exempts the non-interstate facilities grouped therein (generating facilities and facilities used in local distribution or for intrastate transmission) when not used for interstate purposes such as wholesale sales for resale.

Even if it be assumed, *arguendo*, that the nature of the facilities is relevant as indicating whether the sales are in interstate commerce, the fact is that the facilities used by Indiana & Michigan in making sales to its municipal and cooperative customers are not facilities used in *local* distribution.

The facilities used by Indiana & Michigan in making sales for resale to its municipal and cooperative customers include, of course, more than the facilities located immediately adjacent to the points of delivery to those customers. The facilities would include all the generating stations, the high voltage transmission grid, the subtransmission facilities, and all other equipment which is necessary for the system to operate and the sales to be made. The facilities also include the "corporate organization, contracts, accounts, memoranda, papers and other records, insofar as they are utilized in connection with such sales" (131 F. 2d at 961). The intervening apparatus between the generators and the points of delivery are the means by which the electric energy is delivered to the purchasers, and the business facilities the means by which the practical commercial aspects of the transactions are effected.

It should also be pointed out that the interposition of transformers and other equipment does not affect the Commission's jurisdiction over interstate wholesale sales for resale (*Wisconsin Michigan Power Co.* v. *Federal Power Commission, supra*, 197 F. 2d at 477–478; *Hartford Electric Light Co.* v. *Federal Power Commission, supra*, 131 F. 2d at 960). Moreover, the fact that some of the facilities used to serve the nineteen customers are also used to serve large industrial and other customers at retail does not exempt facilities used for dual purposes (*Colton*, 376 U.S. at 210 n. 6). In view of the state of the art, facilities simply cannot be rigidly divided between "transmission" and "distribution".

There is obviously a transmission function involved in the bulk transfer of energy even where the transmission facilities are also used to effect distribution at retail, the bulk transfer being for delivery to a point for subsequent *local* distribution in the retail market. Pertinent here is the decision in *Wisconsin Michigan Power Co.* v. *Federal Power Commission, supra:*

> As we have seen, it was the intent of the Congress to place in the Federal Commission, jurisdiction which never belonged to the states, that is, sales from interstate commerce to wholesalers for resale. The question is essentially, when does interstate commerce transportation end and where do the local distribution facilities first become operative. * * * Thus the interstate transmission of electric energy continues from Michigan through the transformers in reduced voltage of the wholesaler; upon delivery to him local distribution begins when he resells. His sales and distribution at retail are clearly local in character, and constitute only local distribution, but at no point before delivery to him has been completed, has interstate transmission terminated. In other words, "facilities used in local distribution" means facilities used for making resale and distribution to consumers, jurisdiction over which is left to the states. It was only because of this conclusion that the Supreme Court said in *Panhandle Eastern Pipe Line Co.* v. *P. S. C. of Indiana*, 332 U.S. 507, 517 * * * the Act "cut(s) sharply and clearly between sales for resale and direct sales for consumptive uses." We think there is no ground for the position that local distribution includes any transmission occurring before the wholesaler who resells at retail is reached. *F.P.C.* v. *East Ohio Gas Co.*, 338 U.S. 464 * * *. (197 F. 2d at 477)

Therefore, as the Staff engineering witness testified, the electric facilities used to supply electric energy for resale to the municipal and cooperative electric systems "are transmission facilities since they supply bulk energy for further transmission by the wholesale purchasers"; that "by my definition of transmission" there is no situation in which he would regard delivery to a wholesale customer as constituting distribution rather than transmission of electric energy.

The Staff engineer's definition is manifestly correct for no definition of transmission can ignore the purpose of the Act to regulate wholesale sales for resale in interstate commerce. Accordingly, the facilities used by Indiana & Michigan to serve its municipal and cooperative customers, described in detail by its engineering witness (Tr. 1231–62), are not facilities used in local distribution within the meaning of the Act. While counsel for Indiana & Michigan prefer to rely upon the conclusions of its expert engineering witness, it need only be stated in this connection that, as held in *Central Illinois Public Service Company* v. *Federal Power Commission*, 338 F. 2d 682, 7 Cir., Nos. 14454 and 14628, decided November 3, 1964, "the Commission is not required to depend on conclusions of expert witnesses in deciding technical matters within the Commission's area of expertise, and may make such determinations from the evidence in the record. *Market Street Railway Co.* v. *Railroad Commission of California*, 324 U.S. 548; *Spitzer* v. *Commissioner of Internal Revenue*, 8 Cir., 153 F. 2d 967, 972." In the cited *Market Street* case the Supreme Court had made it clear that an expert's judgment does not bind a regulatory commission, stating (324 U.S. at 560):

> * * * Experts' judgments, however, would not bind the Commission. Their testimony would be in the nature of argument or opinion, and the weight to be given it would depend upon the Commission's estimate of the reasonableness of their conclusions and the force of their reasoning. * * *

In view of the matters placed under Commission administration, with consequent Commission responsibilities, any current definition of facilities which prevents the Commission from performing its tasks consistently with the purposes of the Act must be rejected. No such definition may be permitted to open the door to ready evasion of the Commission's jurisdiction over wholesale sales for resale in interstate commerce.

The Peoples Case

Relying upon the doctrine of *Peoples Natural Gas Co.* v. *Public Service Commission*, 270 U.S. 550,[23] counsel for Indiana & Michigan claim that the company's twenty-one Indiana sales are intrastate commerce and therefore not subject to regulation under Part II of the Act.[24] While their reliance upon

---

[23] *Peoples* was concerned with a local problem, namely, a proposed abandonment of natural gas service to a distribution company in Johnstown, Pennsylvania, the state's regulation of which neither burdened interstate commerce nor prejudiced any other state.

The Pennsylvania Commission's order upheld by the Supreme Court required the Peoples Company to continue supplying natural gas to a company distributing gas in Johnstown. The order had proceeded on the theory that the Peoples Company could be required, irrespective of contract terms, to continue supplying gas to the local company.

In another case decided three years later, also involving a State order compelling continuation of gas service in conjunction with a demand which the supplier had created, the Supreme Court held that a public service company may not "pick and choose" its customers, leaving others "to get along without the service which it alone is in a position to give." *United Fuel Gas Co.* v. *Railroad Commission of Kentucky*, 287 U.S. 300, 309 (1929).

[24] The argument here is limited to the twenty-one Indiana sales. Counsel do not appear to challenge the fact that the three sales made by Indiana & Michigan in the State of Michigan are subject to the Federal Power Commission's jurisdiction.

Peoples is clearly misplaced, such reliance stems from the contention that "there is more than enough generation in Indiana to cover all of [Indiana & Michigan's] sales to its municipal and cooperative customers in Indiana."

In connection with *Peoples* it should first be observed that natural gas can be captured, compressed and stored. Electric energy, on the other hand, cannot be feasibly stored or produced before the instant it is used. It can be so produced and used because it is delivered to points of need at the speed of light, or about 186,000 miles per second. Thus captured gas moving slowly through pipelines has different characteristics than instantaneous transfers of energy from electromagnetically interlocked generators via a multi-state transmission grid to various and varying multi-state loads. In the Examiner's view, the Power and Natural Gas Acts are not susceptible of analogous interpretation in this regard (See *Amerada Petroleum Corp.* v. *Federal Power Commission*, 334 F. 2d 404, 409 n. 4).

Counsel for Indiana & Michigan, in leaning heavily on *Peoples*, ignore the integrated nature and characteristics of the operations of the AEP System, no part of which is left without the resources and support of the system as a whole. As the evidence makes clear, whatever the available Indiana generation and the capability of Indiana & Michigan,[25] it is not used solely to supply Indiana loads. It supplies out-of-state loads as well. Likewise, out-of-state generation is used in part to meet Indiana loads. Transfers of energy into and out of Indiana occur moment to moment because of the characteristics of the system and the constantly changing network loads. Frequently, the total of the Indiana loads exceed the available Indiana generation, the energy deficiency being made up of out-of-state energy flowing into Indiana.

Not only is the *Peoples* decision clearly inapplicable to Indiana & Michigan's integrated operations,[26] which are controlled by *Penn Water*, but *Peoples* assumed a breadth of State regulatory power inconsistent with *Public Utilities Commission* v. *Attleboro Steam & Electric Co.*, 273 U.S. 83, herein referred to as the *Attleboro* case, decided in 1927, or one year after *Peoples*. It was on the authority of the *Attleboro* line of cases that Congress provided the comprehensive regulation embodied in Part II of the Act.

Peoples was decided at a time when there was no full appreciation of the limits of State power over sales at wholesale for resale, for it was not until the following year in *Attleboro* that the jurisdictional lines between local and national authority were determined, and it was not until *Penn Water*—after passage of Part II of the Act by Congress—that the Supreme Court had an opportunity to determine the scope of federal power which Congress had asserted with reference to pool sales of electric energy. As stated in *Colton*, 376 U.S. at 314:

> * * * What Congress did [in Part II of the Federal Power Act] was to adopt the test developed in the *Attleboro* line which denied state power to regulate a sale "at wholesale to local distributing companies" and allowed state regulation of a sale at "local retail rates to ultimate consumers."

---

[25] Counsel for Indiana & Michigan point out in their brief that "witness McDaniel testified and sponsored exhibits which proved that for each hour of each month from January 1, 1962, through April 30, 1964 [Indiana & Michigan] had available to it Indiana steam generation more than adequate to serve, and to cover any losses involved in serving, the maximum possible demands of all of the Indiana municipalities and cooperatives it serves. * * * He further testified that it is his opinion, unchallenged by Staff, that [Indiana & Michigan's] facilities are physically capable of furnishing [Indiana & Michigan's] Indiana municipal and cooperative customers with [Indiana & Michigan's] Indiana steam generation during each hour of that period * * *."

[26] *Lone Star Gas Co.* v. *Texas*, 304 U.S. 224, cited by counsel for Indiana & Michigan, is also readily distinguishable.

Peoples can now only be read having in mind the situation there presented and the nature of the order approved—which had no impact upon the national interest in commerce; the fact that it was not until a year after *Peoples* that the Supreme Court in *Attleboro* drew the bright and easily ascertainable line between State and Federal jurisdiction;[27] and the absence of conflicting Federal legislation.[28]

The *Peoples* decision upholding the State Commission order there involved was based on the fact that there was more than enough Pennsylvania-produced gas in the mixture flowing in the pipeline in Pennsylvania from which the City was supplied to meet all of the City's requirements.[29] That natural gas pipeline was located entirely in Pennsylvania and served only customers in that State. Indiana & Michigan, on the other hand, operates in both Indiana and Michigan, and its facilities and operations are an integral part of a seven-state integrated system. On that system large-scale, properly located generation, tied together by high-voltage transmission, is the foundation for an adequate and economical power supply for the entire area served. Such an integrated operation constitutes a break with the past type of limited operation, resulting in federal rate authority applying to all wholesale sales for resale made from the integrated system, despite the fact that the electric energy sold is made up of power transmitted across state lines as well as that produced locally. It was so held in *Penn Water*, 343 U.S. at 420, and as further pointed out in this connection in *United States* v. *Public Utilities Commission of California*, *supra*, "The impossibility of separating interstate from intrastate electricity consumed by each purchaser is patent. In such a case, federal rate jurisdiction must attach to each distributor's negotiated agreement with the seller" (345 U.S. at 317).

The Peoples Company purchased two-thirds of its gas requirements from a producing company at the Pennsylvania-West Virginia border. It produced the other one-third from its own wells in Pennsylvania. The gas from both sources became commingled in Pennsylvania by being fed into the same pipeline. However, unlike Indiana & Michigan's method of integrated and coordinated operation, none of the commingled gas left Pennsylvania. In these circumstances, and "As respects to *Peoples* gas", the Supreme Court ruled that such gas "must be held to be in intrastate commerce only", observing in this regard that (270 U.S. at pp. 554–555)—

---

[27] As stated in *Colton*, *supra*, 376 U.S. at 215–216:

> * * * Congress meant to draw a bright line easily ascertained, between state and federal jurisdiction * * *. This was done in the Power Act by making FPC jurisdiction plenary and extending it to all wholesale sales in interstate commerce except those which Congress had made explicitly subject to regulation by States. There is no such exception covering the Edison-Colton sale.

[28] It should be noted that the *Peoples* case was decided prior to federal occupancy of the field. Under the Natural Gas Act as originally enacted in 1938, all of *Peoples* sales for resale would have been subject to Federal Power Commission jurisdiction. After 1954 all the sales would have been subject to state commission jurisdiction under the Hinshaw amendment.

As pointed out in *Colton*, *supra*, 376 U.S. at 201, n. 9: "In 1954 Congress amended the jurisdictional provision of the Natural Gas Act to exempt persons receiving natural gas within a State and transmitting or selling it for consumption solely within the same State. 68 Stat. 36, 15 U.S.C. § 717(c). A proposal which would have similarly limited FPC jurisdiction in the electric power field died in Committee. See Hearings before House Subcommittee of the Committee on Interstate and Foreign Commerce on H.R. 2972 and 2973 80th Cong., 1st Sess."

[29] It does not appear from *Peoples* that there would be any reason for denying similar effect to the Commission order approved if the Commission had been a Federal instead of a State Commission. Furthermore, the opinion did not decide how many, if any, other sales from the pipeline could be regulated by the State Commission on the same theory.

As already indicated, in *Peoples* the Court had no occasion to consider the question of pool sales presented in *Penn Water* and the instant proceeding. Moreover, the language of the *Peoples* decision is to be read in the context of the limited abandonment issue actually before the Court. In short, the considerations which give force for Federal jurisdiction in the present case were absent in *Peoples*.

> * * * the proportions of both in the mixture are known and that of either readily may be withdrawn without affecting the transportation or the sale of the rest. So for all practical purposes the two are separable, and neither affects the character of the business as to the other. * * *

The same, however, is not true of the electric energy produced by Indiana & Michigan which is automatically a part of a completely integrated and coordinated seven-state electric system of which Indiana & Michigan is an integral part and in which system energy crossing state boundaries, with other system energy, is used to fulfill system requirements—an operation wholly national in character which can only be reached, insofar as wholesales for resale are concerned, by the exercise of power vested in Congress. As held in *Penn Water*, where these circumstances exist, "the Federal Power Commission has complete authority to regulate all of this commingled power flow." The reasoning underlying this case is directly applicable here and disposes of the argument of counsel for Indiana & Michigan.

It is noteworthy that no case considered by the Supreme Court prior to the passage of Part II of the Federal Power Act involved pool sales of electric energy made without reference to the state of origin of the energy. But in *Penn Water* the Court was required to determine the scope of federal power which Congress had asserted in Part II of the Act. As stated above, it did so by ruling that federal rate authority applies to all wholesales for resale made from the integrated system. In a different type of case, *Railroad Commission of Wisconsin* v. *Chicago, B. & Q.R.R. Co.*, 257 U.S. 563, 588, cited in *Wisconsin Michigan Power Co.* v. *Federal Power Commission*, 197 F. 2d 472, 478, cert. den., 345 U.S. 934, the Supreme Court had previously stated: "Commerce is a unit and does not regard state lines, and while under the Constitution, interstate and intrastate commerce are ordinarily subject to regulation by different sovereignties, yet when they are so mingled together that the Supreme authority, the Nation, cannot exercise complete effective control over interstate commerce without incidental regulation of intrastate commerce, such incidental regulation is not an invasion of state authority or a violation of the proviso."

Procedure Followed by the Commission Staff in Conducting its Investigation

Under normal procedure the Staff carries out a thorough field investigation pursuant to a general order of investigation issued by the Commission and is able to complete such investigation prior to the initial session of the hearing. Such procedure enables the Staff to prepare its case-in-chief and present it at the initial session or serve it by mail prior thereto. But in this proceeding the Staff followed a different procedure in which they, without the benefit of a general order of investigation, completed their investigation through the hearing process (Tr. 401) by means of subpoenas issued by the Commission and by the Examiner in compliance with the orders of the Commission.

While the procedure followed by the Staff is not violative of due process, it is cumbersome and time consuming. It prompted the Examiner to express concern at the third session of the hearing "about the way this case is being stretched out" (Tr. 206), and to state at the sixth session of the hearing (Tr. 616–617):

> Although the Commission, in the exercise of its authority under Section 301 of the Act, could have overcome the resistance of Indiana & Michigan * * * and its affiliates by compelling them to give members of its Staff free access to the information they possess, the Commission, instead, in

> its order issued July 23, 1963, resorted to the subpoena process. I assume that in taking this limited course of action it believed that adequate data could be obtained by this means, making the usual general and complete investigation in the field unnecessary.
>
> Resort to the subpoena appears to have resulted in companies and the individuals involved supplying only the data called for in the subpoena, which is all they were required to do, with the Staff at no time having had full and free access to the information they are empowered by the Act upon order of the Commission to review.
>
> By being denied full access to their normal right to inspect and examine all data and to obtain copies where necessary, the Commission Staff, in requesting the issuance of subpoenas, has in some instances subpoenaed files and data which upon production and examination were found to contain certain data not necessary for the Staff's factual presentation in this case, and that some additional data for certain dates, etc., not covered by the subpoena would be necessary.
>
> The discovery of additional leads led to requests for additional subpoenas issued by the Commission and the Examiner. In issuing subpoenas in this proceeding, both the Commission and the Examiner have in each instance, and as required by Section 307(b) of the Act, determined that good ground exists for believing that the data requested by the Staff is relevant and material to the issues raised in this proceeding. However, as to several of the requests made by Staff Counsel the Examiner was unable to make the required finding of relevancy and materiality on the basis of the representations made by Staff Counsel, his representations being based upon limited knowledge in many instances.
>
> Being unable to make the required finding for the purpose of issuing a subpoena, the Examiner denied the requested subpoenas in certain instances. * * *
>
> * * * * * * *
>
> * * * It is obvious from the explicit character of the Commission's order [issued October 4, 1963, 30 FPC 967 at 969, Tr. 493–505] that it intends that "The Presiding Examiner shall issue all subpoenas or orders as are necessary to enable the Staff to make a thorough and complete investigation and obtain all necessary data." [See Tr. 494]
>
> From the day this hearing started it has seemed that the effort of the Staff to obtain evidence a little bit at a time through the route of the issuance of subpoenas and subpoenas duces tecum has slowed down the * * * disposition of the jurisdictional issues in this case to a walk. This apparently was fully understood by the Commission when it issued its order of October 4, 1963. For example, the emphasis upon the plenary authority of the Commission together with the statement that the Commission and the Examiner possess "all necessary authority to compel the production" of all necessary evidence "by order or ruling" indicates clearly to me that the Commission has authorized me to exercise on its behalf the plenary authority which the Commission possesses.

The procedure followed by the Staff in this proceeding is one which the Examiner could not commend for the reasons already indicated and for the further reason that it provided counsel for Indiana & Michigan with the opportunity, of which they took advantage, to give color to their unjustified contention that, insofar as prehearing discovery is concerned, the "Examiner and the Commission have evidenced an apparent bias in favor of the Staff." Their argument is that Indiana & Michigan had discovery rights equal to that of the Staff; that the granting of some of the discovery sought by the Staff and the denial of the type of discovery sought by counsel for the company deprived the company of procedures prescribed by law and that the company has thereby been denied due process of law.

Congress was aware of the fact that the Commission must have a proper starting point by being given access to the evidence upon which its decisions must be based. It therefore provided the Commission with plenary authority to obtain such evidence. This, of course, is where good regulatory action begins, for without such authority regulation could become paralyzed through a company's simple denial of the needed information.

While it cannot be denied that Indiana & Michigan is entitled to a reasonable opportunity to know the proposals of the Staff and meet them,[30] it is impossible for Indiana & Michigan or anyone else to know and to meet the Staff's proposals until the Staff itself is given access to the necessary evidence and formulates its proposals based thereon. As the record shows, the Examiner, at the first session of the preliminary hearing held July 29, 1963, inquired as to Staff's position and was advised that it had not been formulated (Tr. 66):

> Presiding Examiner: * * * Now let me ask staff counsel: Do you know what your final position in this case is going to be?
>
> [Staff Counsel]: No, sir. * * *
>
> Presiding Examiner: Why don't you know that?
>
> [Staff Counsel]: We have not had access to the data. We were trying to get the engineering data to work up a case. How can we present anything when the company has within its possession all of the engineering and other data which the staff sought access to to formulate its case, assuming it presents one?

And at the second session of the hearing Staff counsel stated that he was asking the Examiner to "direct these corporate affiliates of Indiana & Michigan to make available the facts within their knowledge from which we can develop a case to determine the public utility status of Indiana & Michigan; that is all" (Tr. 146). At the next session of the hearing held October 8, 1963, Staff counsel stated (Tr. 416):

> * * * Sir, I don't want to try my theory of the case when I am not sure exactly what it is going to be because I don't have the data yet before me and I am not prepared at this time. I think, however, that an understanding of the whole system will be necessary to understand this jurisdictional question here. * * *

He further pointed out that "You make your theories as you get your data. You don't start out on a theory and try to document it without facts" (Tr. 425).

The Examiner, being unaware of even the Staff's theory of this case during the first six preliminary sessions of the hearing, was in no position to exercise a reliable judgment of the relevance of the discovery sought by counsel for Indiana & Michigan to the issues which had not then been formulated. Furthermore, the Examiner was controlled by orders of the Commission which had denied some of the same discovery requests. The Commission sustained the Examiner's rulings with respect to others (Tr. 701–702).

---

[30] As the Supreme Court noted in *Morgan* v. *United States*, 304 U.S. 1, 18–19:

> * * * The right to a hearing embraces not only the right to present evidence but also a reasonable opportunity to know the claims of the opposing party and to meet them. The right to submit argument implies that opportunity; otherwise the right may be a barren one. Those who are brought into contest with the Government in a quasi-judicial proceeding aimed at the control of their activities are entitled to be fairly advised of what the Government proposes and to be heard upon its proposals before it issues its final command.

Definition of issues and control of discovery are, of course, closely interrelated and, if confusion and possible fishing expeditions are to be avoided, must be coordinated. Prehearing discovery is therefore not available merely for the asking. The discovery sought must not only be shown to be relevant and material to the issues and useful for defensive purposes, but it must also be shown that there is a need for eliciting the information by discovery procedures rather than by testimony at the hearing. As already indicated, it was impossible for counsel for Indiana & Michigan to make a convincing showing in this regard during the first six sessions of the hearing at which no evidence was offered.

The hearing in this proceeding was not a continuous court-type hearing necessitating prehearing discovery. Rather the hearing was conducted at intervals with breaks to (1) prepare and serve the direct evidence; (2) prepare for cross-examination after service of the direct cases; (3) prepare and serve rebuttal evidence; and (4) prepare for cross-examination on the rebuttal evidence. Thus adequate opportunity to defend without prehearing discovery was available to counsel for Indiana & Michigan. As has been pointed out by a former General Counsel and Chairman of the Federal Trade Commission, in discussing adjudicative hearings before that agency which are now continuous, court-type:

> * * * Interval hearings provided an opportunity for respondents to balance the investigatory power of the Commission. Elimination of interval hearings, in a sense, removes certain rights of respondent, which are reinstated through allowance of discovery. * * *[n]

It was in the light of the Examiner's knowledge in this connection that, in acting upon Indiana & Michigan's motions filed December 28, 1963 and March 2, 1963, the Examiner ruled (Tr. 1158–1166):

> * * * [T]he Staff recommended denial of the application [of December 28, 1963] * * * and also took the position that since the Examiner had directed the Staff to file a revised direct case, the basis for the application had disappeared. By a motion filed March 2, 1963, Indiana & Michigan states that in view of the similarity of the Staff's revised case filed February 4, 1964, with the original direct testimony filed November 4, 1963, "We hereby republish that application and request a ruling thereon prior to March 10, 1964." * * *
>
> * * * * * * *
>
> In the Examiner's view, Indiana & Michigan's application, to a considerable extent, goes beyond the latitude of scope of discovery which should be permitted any respondent. Moreover, the Commission made it clear that the facts in this case will not be based upon what is in the Commission's files, or what may or may not have been in the minds of Staff members at one time or another, but upon what is placed within the four corners of the record made.
>
> While counsel for Indiana & Michigan attempt to convey the impression that extensive discovery is required before cross-examination begins, it is clear to the Examiner that adequate opportunity to defend is available without the discovery sought. The hearing is being conducted at intervals * * *. While the Commission in pipeline cases, for example, has recently established a procedure for continuous, court-type hearings, involving only brief recesses of the type involved in court litigation, and in which the use of the principle of discovery may to some extent become

---

[n] Kintner, Discovery in Administrative Adjudicative Proceedings, 16 Adm. L. Rev. 233–42 (1964); "The Forum", December 1963, Published by the District of Columbia Chapter of the Federal Bar Association.

necessary, the hearing in the instant proceeding, by ruling of the Examiner, is not of that type. The hearing procedure being followed diminishes, if it does not avoid altogether, the necessity for the discovery sought.

Discovery is allowed when indispensable, relevant to the issues, necessary for defense, and when it cannot be elicited by testimony at the hearing. Counsel should not be permitted to do by subpoena what should and can properly be accomplished at the hearing. They will have ample opportunity to test the statements of the two Staff witnesses on cross-examination, and it is to be expected that such witnesses will make full disclosure, it being their duty, upon appropriate inquiry, to cover any point omitted, or insufficiently explained in their prepared direct testimony. The Examiner has no reason to anticipate that such witnesses will seek refuge in undisclosed sources of information. However, should it appear during cross-examination that there is a need for discovery by means other than testimony, the Examiner will direct the Staff witnesses, or their counsel, to produce and permit the inspection and copying of non-privileged documents or other physical evidence which constitute or contain evidence relevant to the issues to be decided, and which are in the possession, custody or control of the Commission Staff. The Examiner will not, of course, grant discovery to gratify curiosity, to engage in a fishing expedition, to enable any undue inquisition into the internal affairs of the Commission's operations, or to permit prying into the official performance of the Commission's duties.

For the reasons hereinabove set forth, Indiana & Michigan has not shown a necessity for discovery by means other than testimony at the hearing. It may, however, have whatever discovery is necessary when need therefor is shown. In no prior hearing in which the Examiner has presided has there ever been an occasion to grant discovery of the type sought by Indiana & Michigan, nor has discovery of this or any other type even been sought.[32]

While Indiana & Michigan also renews its motions for discovery previously made on July 29, October 8 and October 18, 1963, which were denied by the Examiner, the Examiner sees no reason to change, or expand upon, those rulings at this time.

It will also be helpful to point out that, in the Examiner's view, parties to a Commission proceeding may not properly inquire into the official performance of the Commission's duties, as counsel for Indiana & Michigan sought to do (see *supra*, p. 760, n. 11); allegations in the Commission's Show Cause Order do not have the characteristics of evidence (see *supra*, p. 760, n. 12); the Commission had ruled that its members "may not be examined either by deposition or at the hearing" (Tr. 14); that prior regulation of Indiana & Michigan's activities by the Public Service Commissions of Indiana and Michigan was of no significance insofar as the jurisdictional issue is concerned (see *supra*, pp. 757–758); and that material relating to the internal operation of a government agency, including intra-agency conversations and reports of investigation reflecting research and analysis preliminary to official action, are not the proper subject of disclosure in a Commission proceeding (*Appeal of United States Securities & Exchange Commission*, 226 F. 2d 501, 519; *North American Airlines* v. *Civil Aeronautics Board*, 240 F. 2d 867).

On July 23, 1963, the Commission denied the applications in which Indiana & Michigan applied to take testimony by deposition and for the issuance of subpoenas *ad testificandum* and *duces tecum* (Tr. 13–16). On the same day the Commission, acting on its own motion, found it necessary to issue an order

---

[32] See also statements of the Examiner at pages 50–51, 147, 208–209, 217, 295 of the transcript.

(Tr. 16–22) directing its Secretary to issue a subpoena *duces tecum* directed to American Electric Power Company, Inc., and affiliates, and the President of each of the corporations. As the Commission stated, its—

> * * * review of communications between its staff and counsel for Indiana & Michigan indicates that certain data requested by the staff in preparation for the forthcoming hearing in this matter will not be made available without an order of this Commission.

In issuing its order the Commission recognized that it might be necessary, as it was, to issue additional orders for the same purposes. Thus it ruled (Tr. 22):

> (D) This order is without prejudice to the issuance of any further orders for the production of other data relevant and material to the inquiry * * *.

In a subsequent order issued October 4, 1963 (Tr. 493–505), the Commission said—

> The facts which will determine the issues in this case are by their very nature in the possession or knowledge of the respondent or of any person who controls the respondent or of any other company controlled by such person. In addition, facts may be in the possession of other, interconnected public utilities or persons and companies outside the Commission. A full knowledge of all the facts is essential to intelligent decision making by the Examiner and the Commission. To that end the Presiding Examiner shall issue all subpoenas or orders as are necessary to enable Staff to make a thorough and complete investigation and obtain all necessary data.
>
> * * * Hereafter the Examiner * * * should issue such subpoenas or orders.

Counsel for Indiana & Michigan assert in their brief (1) that the "Examiner and the Commission have evidenced an apparent bias in favor of Staff, and a prejudgment of the merits adverse to Respondent"; (2) that "Prehearing discovery was totally withheld from [*Indiana & Michigan*]"; and (3) that "Reasonable discovery during the course of the hearing although seemingly promised was similarly denied [Indiana & Michigan]". As has been shown, these claims are without merit. What the Commission and the Examiner actually did without violating rights of Indiana & Michigan was (1) to make it possible for the Staff to have access to the facts, which by their nature were in possession of those subject to the subpoenas, and (2) require counsel for Indiana & Michigan to stay within the bounds of orderly procedure. The jurisdictional problem in this case is peculiarly one for expert administration and that the statute has lodged in the Commission.

The need of the Commission to know all the facts, conditions, and practices of an electric system is particularly acute in a jurisdiction case involving a determination of whether certain sales are interstate or intrastate; for in such a case the Commission has said:

> * * * [N]arrow "tests" should be avoided and instead * * * the entire spectrum of pertinent factors should be examined. (*United Gas Pipe Line Co.*, 30 FPC 560, 563)

The procedure followed was wholly consistent with the standards of a full and fair hearing; kept the strategy and tactics of company counsel in their place; and allowed detachment, enabling the requests and contentions made to be viewed from the outside where Congressional intent and Commission motive, duty and regulatory purpose stand clear and tall. Equally applicable here are the words of the Court in *National Labor Relations Board* v. *Baldwin L. Works*, 128 F. 2d 39, 45, 46–48:

> * * * [R]espondent now * * * urge[s] upon us its * * * attorney's own partisan imputation of bias and prejudice as being fatal to the proceeding

* * * * * * *

> The examiner's refusal of the respondent's request for subpoenas was warranted. The witnesses whom respondent's trial attorney thus sought to summon [which included two members of the National Labor Relations Board], he intended to use in an effort to build up a record of irrelevancy and immateriality * * *. The examiner's action with respect to the particular subpoenas requested properly served to confine the hearing to the issues and, at the same time, it eliminated nothing that was either material or relevant to the case.
>
> * * * * * * *
>
> It is now urged by the respondent that the Board was biased and prejudiced * * *. To support the charge the respondent relies on articles written and speeches made by members of the Labor Board. But nowhere is there an allegation or showing that either the Board or any member thereof ever acted in respect to the subject matter of the instant complaint other than official and directly. The * * * current charge of bias and prejudice stands unsustained.
>
> * * * * * * *
>
> Whether there was due process in this case depends, therefore, upon whether the respondent was accorded the hearing which the law required. From the record before us, we are unable to see how the answer could be otherwise than in the affirmative.
>
> * * * * * * *
>
> * * * Surely, the respondent cannot justly say that it was not given an "opportunity to know the claims of the opposing party and to meet them." * * *

See also *Federal Trade Commission* v. *Cement Institute*, 333 U.S. 683, 700–703.

Decision of United States District Court For Northern District of Indiana

As pointed out, no evidence was offered, or could have been offered by the Commission Staff, at the first six preliminary sessions of the hearing, those sessions being concerned only with procedural matters. Because the Staff had not then been able to formulate their proposals, the discovery requests made by counsel for Indiana & Michigan at those sessions necessarily has to be regarded by the Examiner as speculative. For this reason alone, the requests were properly denied. There are, however, additional good and sufficient reasons for the denial of those requests and these have been set forth hereinabove and in the rulings made (*supra*, pp. 779–785).

Prior to the sixth preliminary session of the hearing held October 18, 1963, counsel for Indiana & Michigan initiated the complaint proceeding in *Indiana & Michigan Electric Co.* v. *Federal Power Commission*, 224 F. Supp. 166, seeking (1) judgment directing the Commission to issue subpoenas *duces tecum* and *ad testificandum* previously denied in this proceeding, and (2) an injunction enjoining the Commission or its agents from taking any further action in this proceeding pending a final determination of the issues.[33]

---

[33] With reference to the complaint proceeding, Staff counsel has stated (Tr. 1177–1178): "The District Court Judge had before him a complaint * * *. The record and pleadings * * * before the Examiner were not considered by the Judge. The Commission did not answer * * *; instead * * * filed a motion to strike and dismiss. For purposes of that motion only, the Judge had to assume, as a matter of law, that the facts alleged in I. & M.'s complaint were true. The question of whether the allegations were true was never resolved * * *. The Judge's characterizations of the Commission proceedings were based solely upon * * * allegations in * * * complaint. Examples of supposed inequities before

Footnote continued on following page.

Although granting the Commission's motion to dismiss the complaint, the Court characterized rulings of the Examiner referred to in its opinion as a "misunderstanding" of the "obvious invitation of the Commission" to Indiana & Michigan to move for prehearing discovery before the Examiner. In so characterizing the Examiner's action as a "misunderstanding" the Court seems not to have been aware of the fact that the Commission on November 13, 1963, or sixteen days prior to the issuance of the Court's decision on November 29, 1963, had rejected appeals of Indiana & Michigan from rulings of the Examiner for the production of data (see Tr. 701–702). This Commission action in the Examiner's mind, placed the Commission's stamp of approval upon the course followed by the Examiner in carrying out the intent of the Commission's prior orders. The Commission stated:

> Indiana-Michigan's motions * * * requesting the examiner to order the production of data, seek no material essentially different from that earlier rejected by the Commission nor are any significant new grounds advanced for seeking material. Further, the material requested by Indiana-Michigan in these motions is not at all comparable to the factual information as to its operations previously secured by the staff but instead consists of the intra-agency working papers of the Commission leading to the institution of this proceeding along with other material of even more questionable relevance. It is doubtful whether such material could ever properly be subject to examination by Indiana-Michigan. *A fortiori*, it can hardly be said that its inspection was necessary prior to the filing by the staff of its direct case, which was accomplished on November 4, 1963. Thus, were this material properly before us we would not be predisposed to reverse the examiner. * * *
>
> However, we do not reject the merits of these motions. We recognize that in a few recent situations we have accepted and considered interlocutory appeals * * *. But in those cases the pleadings submitted to us demonstrated a real need for early Commission intervention as well as probable cause for modifying the action taken below. Here there is no such showing: certainly the strong presumption against interlocutory appeals is not met by the mere allegation of extraordinary circumstances nor by a score card tally of the number of motions granted to other parties. Indiana-Michigan's appeals should * * * be rejected.

The District Court, on the basis of the information available to it, concluded that the Examiner's "misunderstanding" of what the Commission intended was reflected in the Examiner's initial ruling on the discovery requests made by Indiana & Michigan at the first session of the hearing held July 29, 1963. The Court stated:

> * * * On July 23, 1963, the Commission denied applications of Indiana & Michigan for the issuance of subpoenas duces tecum and ad testificandum. In the order denying [Indiana & Michigan's] application, the Commission recognized [Indiana & Michigan's] right to apply to the Examiner for the production of documents during the course of the Commission proceeding. In accordance with the obvious invitation of the Commission, the plaintiff addressed a motion to the Examiner on July 29, 1963 for an order granting the issuance of the subpoenas previously sought in the application to the Commission. The motion addressed to the Examiner was opposed by the

---

Footnote continued.

this Examiner are quoted * * * from I. & M.'s complaint, not from the record in this proceeding before the Examiner. Likewise, the Judge's statement * * * that the record before him shows that I. & M. will be denied 'fair play' clearly illustrates that the Judge was unaware of the actual proceedings * * *. Furthermore, the Judge's opinion shows that he was completely unaware of the body of law holding that inter-agency memoranda are not subject to discovery."

> Commission's staff, which alleged that the Examiner did not have authority to overrule the Commission, and the Examiner denied [Indiana & Michigan's] motion on August 9, 1963. Whatever the reason for the Examiner's misunderstanding, it has resulted in a complete and effective denial of any prehearing discovery for the plaintiff in the Commission proceeding.

The Commission admittedly left the Examiner the authority to permit discovery when the circumstances warranted.[34] But in so doing the Commission had said (Tr. 15):

> It may be that in the course of the hearing the parties may request certain specified material. Whether such request will or will not be granted is of course a matter to be considered by the hearing examiner in the first instance. Currently the staff has presented nothing.

This Commission ruling clearly contemplated, and orderly procedure required, that the Examiner act only within permissible limits when the circumstances warranted during the course of the hearing on the evidence, or at a time when the Examiner at least had a workable understanding of the issues which mark the bounds of possible discovery.[35] At the first session of the hearing the Examiner was in no position to know whether the Staff would be able to formulate a case, he having been advised by Staff counsel (Tr. 66), "the company has within its possession all of the engineering and other data which the staff sought access to formulate its case, *assuming it presents one?*" (see *supra*, p. 781).

As the Examiner has pointed out (*supra*, p. 781), discovery is not available merely for the asking. In fact, the Commission itself, in denying the same discovery requests repeated to the Examiner within six days of the Commission's action, had done so because *inter alia* "the relevancy or materiality of such material [sought in the subpoena duces tecum] to the facts upon which the issue of Commission jurisdiction must be determined is not demonstrated." That the relevancy or materiality could not have been demonstrated to the Commission is clear from the fact that the Commission pointed out that "Currently the staff has presented nothing." (Tr. 15) In so doing the Commission was making it clear that Indiana & Michigan could not know what, if anything, it had to discover until it knew the evidence it had to meet. The situation faced by the Examiner at the initial session of the hearing, as well as at all sessions of the hearing held prior to the District Court's decision on November 29, 1963, was no different. In denying Indiana & Michigan's initial discovery requests the Examiner stated, *inter alia* (Tr. 123–124):

> The requests of Indiana & Michigan * * * were repeated * * * in an effort to have the Examiner grant relief which the Commission has denied, it being

---

[34] The Commission had, on May 29, 1963, continued the commencement of the hearing from June 3 to July 29, 1963, to "afford reasonable opportunity * * * to prepare the material which the parties wish to present", and by so doing "granted more than the full time requested in order that the hearing may proceed without further adjournment" (*supra*, p. 760). Although the Commission's order contemplated that the parties would present their cases-in-chief on July 29, 1963, the Staff, by being denied access to evidence, was unable to do so. Indiana & Michigan, instead of complying with what the Commission's order contemplated, countered that order by repeating to the Examiner the requests which the Commission had denied six days earlier (*supra*, pp. 759–761).

[35] The last session of the hearing held prior to the District Court's decision was held on October 18, 1963. At that session the Examiner fixed November 4, 1963, the date requested by Staff counsel, as the date on which the Staff would serve its direct case by mail. Indiana & Michigan was allowed about a month longer, or until December 2, 1963, to file its case-in-chief. As to the rebuttal evidence, the Examiner overruled the suggestion of Staff counsel that Indiana & Michigan be required to file their rebuttal case, to the extent possible, as a part of their case-in-chief. Instead the Examiner ruled that "During the period of cross-examination or upon completion of that cross-examination the Examiner will fix a date on or before which the Staff and the parties are to file rebuttal evidence, if any." (Tr. 667–669, 679–680). This ruling made it clear that the hearing was to be held at intervals, not as a continuous, court-type proceeding.

> contended * * * by counsel * * * that the Commission has reserved to the Examiner the right to address himself to the matter "at the time that the hearing was formally convened."
>
> The Commission's order does not support counsel's contentions. The circumstances which existed on July 23rd when the requests were denied by the Commission were no different from those which existed only six days later * * * when the hearing convened. The Commission contemplated that the Examiner would take appropriate action during the course of the hearing, not prior thereto as requested by counsel. The Commission held that "Commission members * * * may not be examined either by deposition or at the hearing;" that staff witnesses may be cross-examined at the hearing as to material matters; and that data "in the public files and records of the Commission are now and have been available to Indiana-Michigan." Indiana-Michigan's argument that the Commission's ruling was erroneous is not a matter for Examiner determination. If Indiana-Michigan considers itself aggrieved and that the order is appealable its remedy lies in the Court of Appeals. As pointed out in the Commission's Rules * * * the Examiner is authorized —
>
> > to rule upon any motion *not* formally acted upon by the Commission prior to the commencement of the hearing * * *
>
> The clear meaning of this rule is that where the Commission has acted formally on a motion, the Examiner is not authorized to act upon such motion except to accept such action as binding upon him. In substance the motion puts Indiana & Michigan in the untenable position of requesting a Hearing Examiner to overrule the Commission.

While recognizing that "it is not within the scope of the issues now before this Court to review a discretionary order of the Commission," the District Court illustrated "the inequities presented by the Commission's rulings on matters of discovery" by stating that such—

> * * * inequities * * * are perhaps best understood by the following example:
>
> In the hearing before the Examiner on October 14, 1963, the Examiner granted a request by the Commission's staff for, among other things, "a general order of investigation authorizing the staff to obtain such documents *as they find necessary* in the files of Indiana and Michigan Electric Company and affiliated companies." [Italics added.]
>
> On October 18, 1963, the Examiner denied plaintiff's request for subpoena requiring production of documentary evidence relating to the engineering studies or other supporting written data upon which the Commission made its decision to publish a document issued in July 1963 containing a list of public utility companies (including plaintiff) which the Commission indicated it had, on the basis of available information, classified as public utilities under the Federal Power Act.

The example given is comprised of two parts. Each part will now be separately considered.[30]

---

[30] At the session of the hearing held March 10, 1964, counsel for Indiana & Michigan (Tr. 1181–1182), had marked for the record in the instant proceeding the record of the proceedings in the District Court (Exhibit 82), and the District Court's decision (83). But neither at that time, or at any other time, has the Examiner ever been made aware of the contents of the complaint filed with the District Court which served as the basis for the Court's action. As the Examiner stated (Tr. 1180), he "would welcome the review of this case by any court on its merits, and would welcome any court to scrutinize the procedure for errors. I don't have the slightest doubt as to what would be the decision of a court if it considered the case on the merits. Of course, the District Court couldn't do that. It found it didn't have jurisdiction."

I

The District Court's reference to a ruling made by the Examiner on October 14, 1963, actually refers to one of the Examiner's rulings made on October 18, 1963 (Tr. 614–621). That ruling, however, did not, as the Court believed, grant a request made by the Commission's staff but, as counsel for Indiana & Michigan pointed out on the day the ruling was made (Tr. 672), was "the unsolicited order of the Examiner". While the Examiner requested Staff counsel to prepare the order for issuance by the Examiner, so far as the Examiner is aware, no draft of order was ever prepared and no general order of investigation was ever issued by either the Examiner or the Commission (see *supra*, p. 779).

The Examiner's reasons for requesting the Staff to prepare a general order of investigation is set forth in his extended statement appearing at pages 614–621 of the transcript. An adequate portion of those reasons for this decision is hereinabove set forth (*supra*, pp. 779–780). The Examiner concluded his extended statement:

> In view of these circumstances, and in lieu of adopting and issuing the draft of order presented to me this morning by Staff Counsel, the Examiner will direct the issuance of a general order of investigation authorizing the Staff to obtain such documents as they find necessary in the files of Indiana & Michigan * * * and affiliated companies and the two individuals named by the Commission in prior orders * * *.
>
> The Staff will, therefore, submit to the Examiner for his signature a draft of order authorizing the Staff to conduct such general investigation as it finds necessary to place itself in possession of complete data.
>
> In thinking about this matter since the last hearing, the thought occurred to me that unless the Staff had free access to the company's files it is conceivable that it might be greatly hampered in connection with presenting rebuttal evidence. The task of the Commission Staff and the parties to a proceeding of this kind is to know the facts at the outset, and unless they do, the hearing—as I think the record here indicates—is likely to be unduly drawn out. The Commission has too much work to perform to permit the proper procedures authorized by the Act to be hampered in any manner.

While the District Court was of the opinion that it was "Following exhaustive discovery of [Indiana & Michigan's] records and data," that "the Commission directed [Indiana & Michigan's] * * * and six operating subsidiaries to permit inspection of and to produce additional voluminous documentary evidence" (224 F. Supp. at 167), the Examiner's understanding was different. In fact, Staff counsel had advised the Examiner at the last session of the hearing held prior to the Court's decision (Tr. 629–630):

> It is true that when we were in Indiana, at the properties of Indiana & Michigan * * *, Staff was permitted to see those specific documents or papers that it asked to see, also those specific properties.
>
> It is not true that we were given free access to all of the records of Indiana & Michigan and all the properties.
>
> * * * And data that was requested from Indiana & Michigan * * * by the Staff was very, very slow in coming. * * *

The following additional excerpt from the transcript covering the sixth session of the hearing speaks for itself (Tr. 636):

> [Staff Counsel]: * * * In the guise of saying [company counsel] is willing to cooperate and that these companies are willing to cooperate and give us access to the data they can think of many, many arguments where Staff should not have access to the data. And the conclusion this leads me to is in two parts, really.

> First, the companies are trying to delay the proceeding, and secondly, and this bothers me, there is some data which these companies have which they are trying to hide from the Commission. I don't think reasonable men would draw other conclusions from what has gone on here so far.
>
> Presiding Examiner: Well, regardless of what the situation is, the Commission has said in its latest order that its original show-cause order contemplated a full and complete access to information bearing upon the issues in this proceeding, and it has referred to the fact that Indiana & Michigan carries on, among other things, an integrated operation indicating that energy comes from other sources. And it is simply to put you in a position to do what the Commission says you have a right to do that I am going to issue the orders, the general investigation orders to which I have referred.[37]

II

With reference to the Examiner's ruling of October 18, 1963, referred to by the District Court, the transcript shows *inter alia* (Tr. 642, 645–646):

> [Company Counsel]: * * * Mr. Examiner let me now make a motion * * * that the Examiner issue subpoena duces tecum addressed to the Secretary of the Commission or the Records Officer * * * directing—
>
> * * * * * * *
>
> * * * the Secretary or such Records Officer, sir, to produce at the offices of the Commission in Washington at a hearing session to be designated by the Examiner, all books, records and writing containing or relating to the engineering studies and other supporting written data upon which the decision was made to publish the name of the * * * Commission a document dated January 1963, issued in July of that year, and entitled "List of Electric Power Suppliers With Annual Operating Revenues of $2,500,000 or more Classified as Public Utilities under the Federal Power Act."
>
> * * * * * * *
>
> We also respectfully request the Examiner to order the Secretary of the Commission, or the records retention officer, to advise respondent of the identity of the person or persons under whose authority this pamphlet was prepared and issued.
>
> * * * * * * *
>
> Presiding Examiner: * * * [W]as this publication to which you referred * * * the subject of a news release on the part of the Commission? If so, is that one of the news releases you previously called to my attention? And I have specific reference to Release No. 12759.
>
> [Company Counsel]: I am afraid I honestly can't recall, Mr. Examiner. I do understand that there is a release ,and that the release is No. 12759. It appears that the release was issued on July 1, 1963. Now I believe I recall that there has been in the proceedings so far a reference to this release.
>
> Presiding Examiner: * * * [A]pparently you have a copy of this release before you.
>
> [Company Counsel]: I do, sir.
>
> Presiding Examiner: Do I correctly read paragraph 5 as follows:
>
> > The Commission pointed out that omission of any suppliers from the list does not mean that they are not subject to jurisdiction but only that

---

[37] As has been pointed out, the general investigation order which the Examiner authorized to be issued was not in fact issued because no such order was ever prepared and presented to the Examiner for issuance. Staff counsel apparently decided to rely on the evidence that they had been able to obtain up to that date.

> they have not been classified as public utilities for the purposes of the * * * Act. Conversely, the Commission said it recognized the legal right of electric power suppliers classified as public utilities to challenge that classification in FPC proceedings.
>
> Do I correctly read that?
>
> [Company Counsel]: I see those words in Release 12759.

Counsel for Indiana & Michigan here sought to inquire into a tentative classification which had been made for Commission purposes. In making this tentative classification the Commission was careful to recognize "the legal right of electric power suppliers classified as public utilities to challenge the classification in FPC proceedings", and this is the right here being provided to Indiana & Michigan. Significant in this connection is the fact that at the very first session of this proceeding counsel for Indiana & Michigan had recognized that the business of Indiana & Michigan gave it a "public utility" status under the Act. He stated (Tr. 73; see *supra*, p. 762 n. 13):

> We don't disagree that Indiana and Michigan * * * has in the past and now transmits some electric energy in interstate commerce within the meaning of the Act.

And as the Examiner had occasion to observe later in the hearing (Tr. 1667), "if the Commission did as good a job as to the other companies as they did with respect to Indiana & Michigan * * * the list must be accurate." But whether the list is accurate as to the other companies is not, in the Examiner's view, relevant and material to the issues in this proceeding. Each company challenging the Commission's tentative classification will have its day in court.

In denying the motion, the Examiner stated in part:

> * * * As I indicated at page 482 of the transcript, parties before the Commission are not entitled to examine into the official performance of the Commission's duties. Moreover, tentative conclusions reached by the Commission in its publications must, as the Commission has made abundantly clear by its orders in this proceeding, be supported solely on the evidence in the record to be made in this proceeding, and not on any other basis. * * *
>
> Counsel will have ample and complete opportunity to cross-examine any witness presented * * *, and the Examiner does not believe that denial of this motion in any way hampers Indiana & Michigan * * * in the presentation of evidence in this proceeding. (Tr. 652)
>
> * * * * * * *
>
> The decision to be made in this case is a decision with respect to the facts of operation. * * * Indiana & Michigan * * * now possesses and apparently has always possessed full information concerning its complete operations. Congress authorized the Commission to take whatever appropriate methods it authorized to ascertain what those facts are. And what the Commission and the Staff have been doing is seeking access to the facts. The matter you are referring to, unless you can classify a tentative designation as being relevant, is not concerned with the specific matter involved in this proceeding.
>
> For those reasons * * * I disagree with the statement [company counsel] made. (Tr. 654)
>
> * * * * * * *
>
> Well * * * [the Commission] may use different methods as to different companies, but that doesn't mean any of the methods used is not a proper one for a tentative designation. (Tr. 655)

While the District Court has expressed the view that—

> * * * this Court is not unmindful of the fact that the record in the instant case constitutes an alarming example of how a private litigant before an administrative agency may be denied the opportunity to pursue the orderly procedures so vital to our traditional notions of fair play. * * *

the Examiner believes that if the Court had had the benefit of a consideration of the case on the merits its views would be similar to those expressed by the Examiner herein. As the Examiner has stated (*supra*, p. 788 n. 36), he welcomes "the review of this case by any court on its merits."

INDIANA & MICHIGAN'S MOTION TO EXAMINER TO DEFER ISSUANCE OF INITIAL DECISION

After the briefs were filed herein, counsel for Indiana & Michigan, on August 24, 1964, moved that the Examiner follow a course parallel to that prescribed by the Commission in the *Dairyland* proceeding and defer any further action until Congress has had an opportunity to consider legislation in the 89th Congress of the type embodied in S. 2028 and S. 3038, 88th Congress. This motion, vigorously opposed by Commission counsel, is denied for the reasons hereinafter set forth.

Consideration will first be given to S. 2028 and the Commission's order issued in the *Dairyland* case.

As counsel for Indiana & Michigan point out, by its order "issued August 6, 1964 [32 FPC 529] in the *Dairyland* * * * proceeding, Docket No. E-7113 * * * the Commission directed the examiner [in that case] to defer issuing his initial decision until January 1, 1966 in order that 'further Congressional consideration' could be given to * * * S. 2028. That bill, in substance, would amend the Federal Power Act by adding 'any nonprofit cooperative engaged in rural electrification' to the list of organizations expressly exempted from the regulatory jurisdiction of the Commission. S. 2028 would, if enacted, also direct the Commission to suspend any proceeding, such as the *Dairyland* proceeding, instituted for the purpose of establishing jurisdiction over cooperatives." "The Commission order deferring further proceedings in the *Dairyland* case followed two requests from the Senate Committee on Commerce."

The decision herein, however, is not concerned, as is S. 2028 and the *Dairyland* proceeding, with Commission jurisdiction over cooperatives. Rather it is directed to the Commission's performance of its duty to provide cooperatives and municipalities with the benefits of regulation of the public utility from which they buy (see *supra*, pp. 756–757). Then, too, no Congressional committee has requested the Commission to defer action in this type of case, nor has the Commission issued an order requiring the Examiner so to do.

As to S. 3038, it was presented to the Senate late in the 88th Congress and counsel for Indiana & Michigan call attention to the fact that if enacted into law this legislation would limit Commission jurisdiction in the manner set forth in the margin.[38] In this connection there have been few sessions of Congress in which members have not introduced legislation affecting Commission jurisdiction. Only a small part thereof has become law. Accordingly, deferral of Commission action pending possible enactment of legislation would effectively tie the hands of the Commission and prevent it from exercising the authority Congress intended it to exercise in the public interest, particularly consumer interest. Normally it is much better for the Commission to continue exercising the authority it has while proposed amendments to the law are being considered by Congress.

---

[38] S. 3038, introduced on July 28, 1964, would amend the Federal Power Act in respect of the jurisdiction of the Commission. It would amend Section 201 of the Act by adding the following new subsection:

(g) Notwithstanding any provision contained in subsection (b) of section 201 of this part, the provisions of this Act applicable to a public utility shall not apply to, and the Commission shall not have jurisdiction over, the transmission of electric energy in interstate commerce or sale at wholesale of electric energy in interstate commerce hereafter described, or over facilities by reason of their use for: (1) the transmission of electric energy in interstate commerce or sale of electric energy in interstate commerce or both to the extent transmitted by a local electric system of a State from a point within or at the boundary of such State and either sold at retail, or sold or delivered to another local electric system in said State, at another point within the same State, even though a part

S. 3038 raises jurisdictional questions and problems of great importance to the nation, particularly in the light of the fact that, as the facts in the instant case sharply illustrate, production of electric energy is fast losing its company and system identity and becoming area and national business. This is being accomplished by the proper location of large generating plants[39] and improved methods of operation and interconnected transmission enabling generating plants located in one State to serve many States through integrated power pools. Moreover, this is being done in a way in which only the initiated may have anticipated. Accordingly, in the Examiner's view, issuance of this decision may aid consideration of proposed legislation, assuming legislation of the type embodied in S. 3038 is reintroduced in the 89th Session of Congress.

The motion requesting the Examiner to defer issuance of this decision is tantamount, in the Examiner's view, to an admission that the Commission, on the basis of the record made, has jurisdiction over the sales to the cooperatives and municipals involved in this proceeding, otherwise the filing of the motion would have been meaningless. Thus what counsel for Indiana & Michigan have strongly asserted in resisting Commission jurisdiction appears to be effectively denied by the motion filed.

The order accompanying this decision does not exceed the power, but makes effective the duty, of the Commission in the circumstances of this case. As the

---

or all of the electric energy so transmitted and sold or delivered was generated outside of said State by the transmitter or another or a part thereof is subsequently transmitted to another State: Provided, however, That whenever the seller, purchaser or transmitter is a local electric system of more than one State, and the States directly concerned are unable to agree through their properly constituted authorities on the terms of any such transmission of electric energy in interstate commerce, or sale at wholesale of electric energy in interstate commerce, or on the rates or charges of payment therefore, jurisdiction is hereby conferred upon the Commission, upon the request of any State concerned, to regulate and control that portion of such transmission of electric energy in interstate commerce or sale at wholesale of electric energy in interstate commerce and of the rates or charges of payment therefor, upon which such States are unable to agree; or (2) the passage of electric energy between two or more electric systems incidental to the operation of such systems in parallel with each other or other systems and resulting from or associated with power pulsations, changes in frequency or power factor, inadvertent interchange, outage of equipment, or abnormal operating conditions. The term 'local electric system' when used in this subsection means any person, or other entity, operating in any State where all of the electric facilities of such person or entity are located or where the major portion of the electric revenues of such person or entity from operations within such State is derived, either directly, or indirectly through one or more agencies or members, from the sale of electric energy at retail within such State. The matters exempted from the provisions of this Act applicable to a public utility, by this subsection are declared to be matters primarily of local concern and subject to regulation by the States, and permission for the exercise of this power by the several States is hereby specifically granted.

[39] As Mr. Sporn has pointed out (see *supra*, p. 770), when "it became necessary to locate additional plant sites, the integrated [AEP] system was utilized in a search for other sources of generation. For example, the location of the new Sporn Plant was determined entirely by the existence of the integrated system." Furthermore, as has also been pointed out (*supra*, pp. 772–773), "In order to keep costs to a minimum, all except one of the AEP System's plants are located in close proximity to fuel sources and several are virtually minemouth plants."

Supreme Court pointed out in *Penn Water*, "Part II [of the Federal Power Act] proceeds on the assumption that regulation of public utilities transmitting and selling power at wholesale in interstate commerce is a matter which must be accomplished by the Federal Government." (343 U.S. at 418.)

Findings Not Relevant Or Material To This Decision Need Not Be Made

The proposed findings of fact and conclusions of law, upon each of which counsel for Indiana & Michigan request a ruling, total 552 in number and cover 141 pages of their main and reply briefs. Staff counsel had an opportunity, in their reply brief, to express their views only as to the 454 proposed findings set forth in Indiana & Michigan's main brief, and in doing so object to each and every one of these proposed findings as not being "necessary or appropriate to a decision in this case; * * * not relevant to the issues; they do not accurately reflect what is in the record; they frequently distort the evidence, either directly or by out-of-context selection."

The Examiner's understanding and consideration of the relevant evidence and applicable law is, of course, set forth hereinabove. Considerably less and different findings than the 552 proposed by counsel for Indiana & Michigan are sufficient and justified in this case.

There is no valid reason why an administrative agency should make findings related to theories not adopted by the agency, or upon issues not material or relevant to its decision. This is so even where the rejected findings are considered by a party to be relevant to the decision it desires. It is sufficient that the agency find the facts on which its conclusions rest and that such findings be supported by substantial evidence (*Hartford Electric Light Co.* v. *Federal Power Commission*, 131 F. 2d 935, cert. den. 319 U.S. 741). This, of course, does not leave Indiana & Michigan without the means with which to maintain its contentions. They are fully set forth in its briefs. Accordingly, any claimed deprivation of the opportunity and means of presenting its position would be mere obfuscation.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it has been found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Indiana & Michigan is a corporation organized and existing under the laws of the State of Indiana. It is also qualified under the laws of the State of Michigan to transact business as a foreign corporation in that State. It owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Indiana, Michigan, Illinois, Ohio and Kentucky and consumed outside the State in which it is generated, all of which facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution or only for transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Indiana & Michigan is, therefore, a public utility within the meaning of that term as used in the Federal Power Act, as heretofore found by the Commission, 10 FPC 1315 at 1316, 9 FPC 617 at 618, 4 FPC 783 at 785.

(2) Indiana & Michigan is an integral part of the AEP System. It is one of six affiliated operating electric utilities making up the AEP System. The six companies, with their power plants and transmission lines interconnected and their operations completely integrated, operate as a single major electric system serving a region covering portions of seven States—Michigan, Indiana, Ohio.

Tennessee, Kentucky, Virginia and West Virginia. To provide service to this area, the AEP System has built a giant chain of properly located generating plants.

(3) All the generating plants and the load centers of the AEP System are tied together by a network of some 14,000 circuit miles of transmission lines, extending from Lake Michigan to the border of North Carolina and including more than 1,500 circuit miles of 345,000-volt lines. Each plant thus supports, and in turn is supported by, the others. Furthermore, the AEP System is interconnected with 19 nonaffiliated electric power systems at 66 locations.

(4) Three main dispatching points—at Canton, Ohio; Roanoke, Virginia; and Fort Wayne, Indiana—working closely with a central AEP System coordinating group located in Columbus, Ohio, direct the generation and flow of power throughout the seven-state network, as well as the interchange of power with other systems, to assure maximum use of facilities and maximum economy.

(5) The facilities of the AEP System, including the facilities of Indiana & Michigan, are at all times operated as an integrated power pool.

(6) The central dispatching office regularly engages in firm, economy, and emergency energy transactions between the AEP System and neighboring interconnected electric utilities. Maintenance outages are regularly scheduled and coordinated among the constituent companies of the AEP System to assure an adequate and continuous supply of electric energy to all customers.

(7) Since the resources of the AEP System power pool are available to meet the combined load of its members, without reference to State boundaries, such a pool is an integrated and coordinated interstate electric system, and the sales of system energy, such as those by Indiana & Michigan to the twenty-four municipals and cooperatives referred to in (8) below, are pool sales, and hence, in the light of the interstate nature of the pool are sales in interstate commerce.

(8) Michigan & Indiana sells electric energy to Niles and Sturgis, Michigan, and to the Fruit Belt Electric Cooperative in Michigan. It also sells electric energy to fourteen Indiana municipals, namely, Albion, Anderson, Auburn, Avilla, Bluffton, Columbia City, Fort Wayne, Frankton, Garrett, Gas City, Mishawaka, New Carlisle, Richmond and Warren, and to seven Indiana cooperatives, namely, Allen-Wells County REMC, Huntington County REMC, Jay County REMC, Noble County REMC, Paulding-Putnam Electric Cooperative, Inc., Wayne County REMC, and Whitley County REMC.

(9) Each of the twenty-four sales, referred to in (8) above, is a sale at wholesale for resale in interstate commerce within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(10) The facilities of Indiana & Michigan by which Indiana & Michigan transmits and delivers electric energy to its municipal and cooperative customers are not facilities used in local distribution within the meaning of Section 201(b) of the Federal Power Act even if this were relevant.

(11) Michigan & Indiana has not filed rate schedules for service to the municipal and cooperative customers referred to in (8) above. It therefore has been violating and continues to violate the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

(12) Indiana & Michigan should therefore be ordered to file with the Commission its rates and charges for service to the twenty-four municipal and cooperative customers and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services, pursuant to the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission:

Within thirty days after this order becomes the final act of the Commission, Indiana & Michigan shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, its contracts in effect as of April 16, 1963 with each of the twenty-four municipal and cooperative customers, referred to in (8) above, as its rate schedules for its sale at wholesale of electric energy to those twenty-four customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3(a) of the Regulations thereunder, or changed pursuant to order of this Commission.

FRANCIS L. HALL,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHWEST GAS CORPORATION, DOCKET NO. CP65-99

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 14, 1965)

Southwest Gas Corporation (Applicant) filed on October 13, 1964, in Docket No. CP65-99 an application and supplements thereto on January 4 and February 15, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the operation of its existing northern Nevada Transmission system as an interstate transmission pipeline; (2) the continuation of the sale and delivery of natural gas to its existing resale customer, Sierra Pacific Power Company (Sierra); (3) the construction and operation of natural gas facilities; and (4) the sale of natural gas to the South Tahoe Gas Company, all as more fully set forth in the application.

Under proposals of Applicant the operation of the said facilities will cease to be intrastate. The facilities now sought to be certificated consist of (1) 307 miles of 16-inch, 12-inch and 8-inch O.D. pipelines and extension; (2) 330 miles of 8-inch, 6-inch and 4-inch lateral pipeline facilities serving and proposed to serve various city gate distribution metering points and direct sale customers; and (3) metering and regulating facilities operated in connection with the aforementioned pipelines and lateral lines.

Applicant further proposes to (a) construct and operate metering and regulating facilities necessary to deliver natural gas to South Tahoe Gas Company at the Nevada-California state line for resale to approximately 5,000 customers at the south end of Lake Tahoe in El Dorado County, California, and (b) continue the sale and delivery of natural gas to the Sierra Pacific Power Company (Sierra) on a firm and interruptible basis for distribution in the Reno-Sparks area of Nevada, and for electrical generation at Sierra's Tracy Steam Plant.

The northern Nevada system of Applicant commenced operations on January 17, 1963, under the operation of Nevada Northern Gas Company with natural gas supplied by El Paso Natural Gas Company pursuant to authorization issued August 28, 1962, in Docket No. CP62-233, 28 FPC 371. Applicant will purchase natural gas daily from the Northwest division of El Paso at the Nevada-Idaho boundary line under El Paso's PL-4 tariff paying 38.0 cents per

Mcf (3.58 cents per therm for 1,060 Btu gas). Applicant will transport the gas in a southwesterly direction to its principal market approximately 275 miles from the point of receipt.

The estimated annual and peak day requirements of Applicant for the calendar years 1965, 1966, and 1967 are summarized as follows:

Annual Volumes, MMcf			Peak Day Volumes, Mcf		
1965	1966	1967	1965	1966	1967
10,204	12,937	14,211	49,685	52,000	52,000

The tariff proposed by Applicant provides for a Wholesale Firm Service (G–1) for Nevada, a Wholesale Firm Service (G–2) for California, a Large Volume Interruptible Service (I–1) for Nevada, and a Large Volume Interruptible Service (I–2) for El Dorado County, California. The G–1 rate is a four-step block rate of 90 cents per Mcf for the first 25,000 Mcf each month, 65 cents per Mcf for the next 25,000 Mcf, 55 cents per Mcf for the next 25,000 Mcf, and 50 cents per Mcf for usage above 75,000 Mcf per month and is currently on file with the Nevada Commission. The G–2 Rate available to South Tahoe is 7 cents per therm (approximately 70 cents per Mcf). The I–1 Rate is 48.0 cents per Mcf with a minimum annual requirement of 2,500,000 Mcf for the first three years and 3,250,000 Mcf each year thereafter (currently filed with the Nevada Commission). The I–2 Rate available to South Tahoe is 5.238 cents per therm, with no minimum bill provision.

Notice of Intervention filed by The People of the State of California and the Public Utilities Commission of the State of California on January 7, 1965, was withdrawn on February 8, 1965.[1]

The estimated 1967 average net and gross plant for the Northern Nevada System, including distribution, transmission, intangible and general will be $19,879,895 and $23,117,309 respectively. The estimated cost of metering and regulating facilities to be constructed by Applicant at the south end of Lake Tahoe, Douglas County, Nevada, is $5,392, and will be defrayed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, other than that filed and withdrawn by the State of California and the Public Utilities Commission of the State of California have been filed.

At a hearing held on April 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application, supplements and exhibits submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southwest Gas Corporation, a California corporation having its principal place of business in Las Vegas, Nevada, upon commencement of the proposed transportation of natural gas in interstate commerce and the sale of natural gas in interstate commerce for resale will be engaged in the business of transporting and selling natural gas in interstate commerce subject to the jurisdiction of the Commission and will therefore be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed continued operation of facilities, construction and operation of facilities, transportation and sale of natural gas in interstate commerce as

---

[1] Withdrawal acknowledged by Commission letter dated March 16, 1965.

hereinbefore described, and as more fully described in the application, supplements and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed continued operation of facilities, construction and operation of facilities, transportation and sale of natural gas in interstate commerce as hereinbefore described are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding authorizing the continued operation of facilities, construction and operation of facilities, transportation and sale of natural gas in interstate commerce as more fully described in the application, supplements and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within six months of the date on which this order issues.

(D) Southwest Gas Corporation shall file within 30 days after the issuance of this order its tariff and appropriate service agreements executed in accordance with the Commission's Regulations reflecting the terms and conditions of the transportation, sale and delivery of natural gas on its proposed system to the Sierra Pacific Power Company and South Tahoe Gas Company.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65–249

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued April 14, 1965)

On February 23, 1965, United Gas Pipe Line Company (Applicant), filed in Docket No. CP65–249 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities originally installed to serve Spencer Chemical Company (Spencer), as more fully described in the application.

The facilities which are proposed for abandonment consist of an orifice meter, regulator and separator installation located near Spencer's property located in Orange County, Texas.

The reason for the proposed abandonment is that the most recent contract between Applicant and Spencer, dated July 27, 1956, expired by its own terms on January 1, 1965, and no renewal or extension of the agreement has been made. Applicant has been advised that Spencer will purchase its gas supply from another source.

Due notice of the filing of the application was published in the Federal Register on March 11, 1965 (30 F.R. 3335). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described and as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by United Gas Pipe Line Company of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

M. M. ARGO, DOCKET NO. RI65-221

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued April 15, 1965)

On March 5, 1965, M. M. Argo (Argo) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for sales of natural gas to Tennessee Gas Transmission Company (TGT) by Argo made under Supplement No. 6 to Argo's FPC Gas Rate Schedule No. 2 in Panola and Harrison Counties, Texas (Texas R.R. Com. District #6). The proposed increased rate was suspended by order of the Commission for the statutory period in Docket No. RI65-221, and has not been made effective.

Under the terms of the offer, Argo proposes to eliminate the periodic escalation, favored-nation and price redetermination provisions from the rate schedule and to establish a 15¢ per Mcf rate for the subject sale. No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Argo's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Argo's rate and rate schedule.

The Commission finds:

The proposed settlement by Argo of the above-designated proceeding on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Argo on March 5, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Argo on March 5, 1965, is hereby approved in accordance with the provisions of this order.

(B) Argo shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 2 eliminating the favored-nation, price redetermination and periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Argo has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement shall be effective as of the date of issuance of this order and the above designated proceeding shall be deemed terminated.

(D) The acceptance by the Commission of Argo's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Argo, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LANDS WITHDRAWN IN POWER SITE RESERVE NO. 8 AND PROJECT NO. 2273, DOCKET NO. DA-567-IDAHO, BOISE LAND OFFICE, BUREAU OF LAND MANAGEMENT

ORDER DENYING APPLICATION UNDER SECTION 24 OF THE FEDERAL POWER ACT

(Issued April 15, 1965)

Application was filed by the Boise Land Office of the Bureau of Land Management (Applicant) Department of the Interior, seeking restoration to entry, under

Section 24 of the Federal Power Act of the following described lands of the United States withdrawn for power site purposes:

Boise Meridian, Idaho

T. 27 N., R. 1 E., sec. 3, Lots 2, 6, 7, and 10

Applicant advises that portions of the lands will be sold under the Small Tract Act of June 1, 1938 for residence sites; that a small portion will probably remain in public ownership for recreation purposes and access to the Salmon River, and that the remaining portions will be sold as isolated tracts under Section 2455 of U.S. Revised Statutes for unknown uses.

The lands lie on the east bank of the Salmon River about 58 miles above its mouth at the Snake River and about 5 miles upstream from the Village of Whitebird, Idaho.

The lands are withdrawn in Power Site Reserve No. 8 dated July 2, 1910, and were also withdrawn pursuant to the filing on August 22, 1960 of an amended application for license for the proposed Nez Perce Project No. 2273. According to maps filed as part of the application for the latter project, approximately one-fourth of the subject lands would be flooded by the backwaters of the main reservoir. While in our Opinion No. 418, of February 5, 1964, 31 FPC 247, we denied the application for Project No. 2273 in favor of the application for Project No. 2243 (High Mountain Sheep), our action did not affect the power value of the subject lands. Moreover, the lands would be affected by flowage of the U.S. Corps of Engineers' suggested Lower Canyon site project near the mouth of the Salmon River or any of the suggested several alternate sites, such as Whitebird, the dam of which would be located in the reach of the Salmon River herein involved.

The subject lands have flowage value for power development. The use of the lands for residence sites and for other costly improvements could materially impair their power value. Consequently, on the basis of available information, neither the power withdrawals pertaining to the lands should be revoked or cancelled nor a restoration of the lands be made under the provisions of Section 24 of the Federal Power Act.

The Commission finds:

The subject lands are valuable for power purposes.

The Commission orders:

The aforesaid application is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

CITY OF NORWICH DEPARTMENT OF PUBLIC UTILITIES, PROJECT NO. 2441

ORDER ISSUING LICENSE (MINOR)

(Issued April 15, 1965)

Application was filed on January 27, 1964, by the City of Norwich Department of Public Utilities (Applicant) of Norwich, Connecticut, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2441, located on the Shetucket River, in the City of Norwich, in New

London County, Connecticut. No lands of the United States are affected by the project.

The dam, known as the Greenville Dam, and the project were constructed in 1888 and major repairs were made thereto in 1915. The hydroelectric plant was added in 1927. No major alterations or new installations have been made since the latter date.

According to available records, the range between high and low tide at Norwich, on the Shetucket River measured about 2 miles downstream from the Greenville dam, is about 3 feet, and full discharge from the existing plant, which is located within the tidewater reach, is capable of fluctuating the stream below the powerhouse as much as a foot or two at high tide.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application recommended, for inclusion in any license for the project, a special condition concerning fish passage facilities.

The Department of Health, Education and Welfare has advised that the project has no adverse effects on water supply or water pollution control and none is anticipated.

By Article 13 herein we are requiring Applicant to cooperate with State, local agencies and individuals in the interest of recreation in connection with the use of project lands and waters by the public and that it shall report the results of such cooperation and development to the Commission at six year intervals from the date of its license.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a terminating date of December 31, 1993.

The Commission finds:

(1) The Shetucket River is a navigable water of the United States from its mouth at least up to the Greenville dam.

(2) The project affects navigable waters of the United States.

(3) Applicant is a municipal corporation organized under the laws of the State of Connecticut, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resource for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1067 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the cost of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to City of Norwich Department of Public Utilities (Licensee), of Norwich, Connecticut, under Section 4(e) and 10(i) of the Federal Power Act (Act) for the continued operation and maintenance of the Greenville Hydro Plant Project No. 2441, located on the Shetucket River, a navigable water of the United States, in New London County, Connecticut, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2441 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) (1) a wood crib dam faced with planks; (2) a canal 3,150 feet long extending to the powerhouse, known as the Second Street Hydro Station, containing 2 water wheels each connected to a 500 kva generator, and (3) appurtenant facilities.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part thereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall, for the conservation, and development of fish resources, construct, maintain, and operate, or arrange for construction, maintenance and operation of such fish passage facilities and comply with such reasonable modifications of project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Connecticut State Board of Fisheries and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 13. Licensee shall cooperate with State and local agencies and individuals in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation development at the project.

Article 14. The Licensee shall pay to the United States the following annual charge, effective April 1, 1962:

For the purpose of reimbursing the United States for costs of administration of Part I of the Act, $53.35 per annum.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

CITY OF NORWICH DEPARTMENT OF PUBLIC UTILITIES, PROJECT NO. 2508

ORDER ISSUING LICENSE (MINOR)

(Issued April 15, 1965)

Application was filed on March 15, 1965 by City of Norwich Department of Public Utilities (Applicant) of Norwich, Connecticut, for a license under Section 4(e) of the Federal Power Act (Act) for proposed Project No. 2508, known as the Tenth Street Hydro Station, located on the Shetucket River, in New London County, Connecticut. No lands of the United States are affected by the project.

The dam which the proposed project will utilize, known as the Greenville Dam, was constructed in 1888 and major repairs were made thereto in 1915. This dam was not included in the application for license for Project No. 2508 and we are not including it under this license. The dam was included in an application for license filed by Applicant for constructed Project No. 2441 on the Shetucket River since the Greenville Dam is and has been utilized by that project. By our order of even issuance date, we are issuing a license for Project No. 2441, *supra*, p. 801.

In our license order relating to Applicant's constructed Project No. 2441, we found that the Shetucket River is a navigable water of the United States from its mouth at least up to the Greenville Dam, and that full discharge from the power plant of Project No. 2441 is capable of fluctuating the Shetucket River below the powerhouse as much as a foot or two. The full discharge from the power plant of proposed Project No. 2508 would be capable of fluctuating the Shetucket River to even a greater extent than the discharge from the existing Project No. 2441 since the latter project has a greater hydraulic capacity than Project No. 2441. As stated above, Project No. 2508 utilizes water from the Greenville Dam.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of the Interior was invited to report on the application, but to date no report has been received. However, the Department has informed our staff orally that the report has been mailed and recommends for inclusion in any license for the project a special condition concerning fish passage facilities similar to the condition recommended by the Department in reporting on Applicant's application for license for Project No. 2441.

The Department of Health, Education, and Welfare has advised that the project is not expected to have any adverse effects on water supply, water pollution control or vector control.

By Article 13 herein we are requiring Applicant to cooperate with State, local agencies and individuals in the interest of recreation in connection with the use of project lands and waters by the public and that it should report the result of such cooperation and development to the Commission at six-year intervals from the date of its license.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a municipal corporation organized under the laws of the State of Connecticut, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the proposed project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The proposed project will not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the proposed project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the proposed project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1867 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the proposed project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to City of Norwich Department of Public Utilities (Licensee) of Norwich, Connecticut, under Sections 4(e) and 10(i) of the Federal Power Act (Act), for a period effective as of the date of issuance of this license and terminating December 31, 1993, for the construction, operation, and maintenance of the Tenth Street Hydro Station Project No. 2508, located on the Shetucket River, a navigable water of the United States, in New London

County, Connecticut, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2508 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) (a) a reinforced concrete flume approximately 30 feet wide, 15 feet deep, and 80 feet long;

(b) a turbine and generator at the end of the flume with a concrete structure approximately 45 feet by 23 feet. The total installed capacity of the project is 1867 horsepower.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the following terms and conditions designated as Article 1 through 15:

Article 1. The project shall be subject to all the provisions, terms and conditions of the license.

Article 2. Except when emergency shall require for the protection of life, health, or property, no substantial alteration or addition shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct.

Article 3. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 4. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 5. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with navigation, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purpose of navigation on the navigable waterway affected; and the operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligations under this license.

Article 8. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 9. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines to a condition satisfactory to the Commission's authorized representative and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 10. The right of the Licensee and of its transferees and successors to use or occupy navigable waters of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 11. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressely waived in the license.

Article 12. The Licensee shall, for the conservation, and development of fish resources, construct, maintain, and operate, or arrange for construction, maintenance and operation of such fish passage and protective facilities and comply with such reasonable modifications of project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Connecticut State Board of Fisheries and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 13. Licensee shall cooperate with State and local agencies and individuals in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation development at the project.

Article 14. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $100.00 per annum.

Article 15. The Licensee shall commence construction of the project within 6 months from the effective date of this license, shall thereafter with due diligence prosecute such construction, and shall complete the project and place it in operation on or before November 30, 1967.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CLEGG & HUNT (OPERATOR), ET AL., DOCKET NO. RI60-405

ORDER REJECTING OFFER OF SETTLEMENT

(Issued April 16, 1965)

Clegg & Hunt (Operator), *et al.*, (C&H) filed an offer of settlement in the above-docketed proceeding which we now have before us for consideration. The offer relates to a sale of natural gas by C&H to Union Texas Petroleum (Union) in the Marrs McLean and Gilbert Woods Fields, Jefferson County, Texas (Texas Railroad Commission District No. 3). Under its FPC Gas Rate Schedule No. 5, C&H filed a proposed increased rate of 17.38982¢ per Mcf of gas at 14.65 psia for the subject sale, which proposed increased rate was suspended by order of the Commission, and subsequently made effective, subject to refund, upon motion of C&H filed in accordance with the applicable provisions of the Natural Gas Act.

C&H now proposes a life-of-contract settlement rate of 15.0¢ per Mcf of natural gas under the subject rate schedule, and to eliminate the price redetermination and periodic price escalation clauses contained therein. Additionally, it would refund the monies collected subject to refund in excess of the proposed settlement rate. It reserves only the right to file for three-fourths reimbursement of any possible tax increase until the contract expires in December, 1976. No protest or objection has been filed to the proposed settlement.

The natural gas sold by C&H to Union is gathered and processed by Union, along with other volumes purchased by Union in the area, prior to sale by Union to Texas Eastern Transmission Corporation. We have considered offers of settlement similar to C&H's in other instances where the gas is gathered and processed by the purchaser prior to ultimate sale to a natural gas pipeline company for transmission in interstate commerce, and have rejected the same because we consider the area price levels set forth in the Statement of General Policy No. 61-1, as amended (18 CFR, Chapter I, Part 2, Section 2.56) to be applicable to the sale of residue gas after processing, *Foster Petroleum Corporation*, Docket Nos. RI64-17 and RI64-24, 30 FPC 672; *H. N. Burnett*, Docket No. RI64-334, 30 FPC 1384-A (order issued November 22, 1963) and *H. F. Sears*, Docket Nos. G-10494 and G-10752, 31 FPC 585. Therefore, we shall reject the offer of settlement filed by C&H herein.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to reject the offer of settlement filed by C&H with the Commission in this proceeding.

The Commission orders:

The offer of settlement filed by C&H in this proceeding is hereby rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

WILLARD ECKERT, D/B/A ECKERT GAS COMPANY, DOCKET NO. CP65-231; GRAINVILLE GAS COOPERATIVE, DOCKET NO. CP65-230

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTIONS OF FACILITIES AND SALES OF NATURAL GAS

(Issued April 16, 1965)

On December 30, 1964, Willard Eckert, d.b.a. Eckert Gas Company (Eckert), filed in Docket No. CP65-231 an application pursuant to Section 7(a) of the Natural Gas Act, for an order of the Commission directing Cities Service Gas Company (Cities) to establish physical connection of its natural gas transmission facilities with the distribution facilities of Applicant, and to sell and deliver natural gas to Eckert for resale and distribution in the community of Peckham, Oklahoma, all as more fully set forth in the application on file with the Commission.

The estimated volumes of natural gas to meet Eckert's annual and peak day requirements for each of the initial three years of operations are stated to be 7,000 Mcf and 478 Mcf, respectively.

On January 11, 1965, Grainville Gas Cooperative (Grainville) filed in Docket No. CP65–230 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities to establish physical connection of its natural gas transmission facilities with the distribution facilities of Applicant, and to sell and deliver natural gas to Grainville for resale and distribution in the community of Grainville, all as more fully set forth in the application on file with the Commission.

The estimated volumes of natural gas to meet Grainville's annual and peak day requirements for each of the initial three years of operations are stated to be 2,000 Mcf and 125 Mcf, respectively.

The communities of Peckham and Grainville have heretofore been served from another source of supply. On August 21, 1964, Cities agreed to provide the service and advised the Commission pursuant to Section 157.22 of the Commission's regulations of its intent to install metering and regulating facilities for the sale of natural gas to these Applicants on an emergency basis. Such facilities were completed on September 3, 1964.

The total cost of facilities for Eckert is $3,777 and was paid out of personal funds of Mr. Willard Eckert; the cost for Grainville's facilities are $2,150 and have been financed by advances from individual members, to be reimbursed by issuing stock therefor.

On February 15, 1965, Cities filed letters advising that it has no objection to the service requested herein.

Due notice of the filing of the applications and opportunity for hearing thereon has been given by publication in the Federal Register on February 17, 1965 (30 F.R. 2166). No protest or petition to intervene has been filed in these proceedings.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, Willard Eckert, d.b.a. Eckert Gas Company, an individual residing in Blackwell, Oklahoma, is operating a gas distribution system within the local laws and the laws and regulations of the State of Oklahoma.

(3) Applicant, Grainville Gas Cooperative, is a non-profit corporation under the laws of the State of Oklahoma. It is operating within local laws and regulations and within the laws and regulations of the State of Oklahoma.

(4) It is necessary and desirable in the public interest that Cities be directed to establish physical connections of its gas transmission system with the existing facilities of Applicants, Eckert and Grainville, and to sell and deliver the volumes of natural gas, all as hereinbefore described and as more fully described in the applications in this proceeding.

(5) The requirement that Cities serve Eckert and Grainville, as proposed, will not place any undue burden upon Cities nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the respective facilities of Eckert and Grainville and to sell and deliver natural gas to Eckert and Grainville, as hereinbefore described, all as more fully described in the applications filed herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-259

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1965)

On March 1, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-259 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of natural gas to City of Naturita, Colorado (Naturita) for resale and distribution in said city and environs, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate a sales measuring and regulating station, together with necessary appurtenances, located adjacent to its Northwest Division Uravan-Nucla lateral in Montrose County, Colorado. The total estimated cost of Applicant's proposed facilities is $3,800, which cost will be financed with current working funds.

The estimated third-year peak day and annual requirements for Naturita are 390 Mcf and 43,020 Mcf, respectively. Applicant and Naturita have entered into a service agreement, dated January 26, 1965, under Applicant's firm Rate Schedule GS-1 providing for the proposed service.

The application shows that Naturita will construct and operate a 3½-inch and 2⅜-inch transmission line approximately 3.6 miles in length and the necessary distribution facilities for said city. The estimated cost of Naturita's facilities is $125,000.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described, in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the proposed sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

KANSAS-COLORADO UTILITIES, INC., DOCKET NO. CP65-248

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1965)

On February 23, 1963, Kansas-Colorado Utilities, Inc. (Applicant) filed in Docket No. CP63-248 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate approximately 20 miles of 4-inch pipeline extending westwardly from a point of connection with Applicant's 6-inch Hugoton-Lamar main line in Hamilton County, Kansas, to a point in Prowers County, Colorado. Applicant also proposes to install a check meter at the interconnection of its 6-inch line with the proposed 4-inch line.

The proposed facilities will be used for the sale of natural gas to Plateau Natural Gas Company (Plateau) for resale for irrigational purposes under Applicant's existing Rate Schedule G-1. There will be no increase in contract demand. Estimated peak day and annual volumes of gas to be delivered through the subject facilities are 3,483 and 488,070, respectively.

Total estimated cost of Applicant's proposed construction is about $130,000, and will be financed with cash on hand or with funds provided by Plateau, parent company of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Colorado Utilities, Inc., a Kansas corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" as heretofore found by the Commission in its order of December 8, 1958, in Docket No. G–15991 (20 FPC 793).

(2) The facilities heretofore described, as more fully described in the application in this proceeding, are to be used for the transportation, sale and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Kansas-Colorado, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Kansas-Colorado's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kansas-Colorado Utilities, Inc., to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Kansas-Colorado's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in operation, as provided by paragraph (b) of Section 157.20 above mentioned, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65–71

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1965)

On September 14, 1964, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65–71 an application, as supplemented on November 6, 1964 and February 1, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition and operation of natural gas facilities in Parke County, Indiana, all as more fully set forth in the application on file with the Commission.

Applicant proposes to acquire and operate approximately 5.7 miles of 4-inch line, from Applicant's main line measuring and regulating station to the Mecca, Indiana, plant of American Vitrified Products Company (American), all in Parke County, Indiana.

The line was originally installed by Clay City Pipe Company(Clay City) to serve the plant. Funds were loaned by Applicant to Clay City, pursuant to an agreement giving Applicant the option to purchase the line at cost. Clay City sold the plant to American, and American has asked Applicant to exercise its option to purchase the line, thus obviating the necessity of its operation by American. No change in service is proposed.

In Docket No. G-1723 (11 FPC 661, 665 and 666) Applicant was authorized, among other things, to construct and operate a measuring and regulating station on its main pipeline in Parke County, Indiana, together with a meter or meters and such other equipment as may be necessary to measure the proposed deliveries to be made up to 1,540 Mcf per day of natural gas to Clay City's Mecca plant for a period of three years.

Applicant in requesting authority to purchase and operate the above-described pipeline also seeks authorization for the delivery of the above quantity of gas and for permanent operation of all the necessary facilities to render the service to American.

The cost to Applicant of the subject 4-inch line is stated to be $103,443.74, to be defrayed by cancelling the promissory note held by Applicant in that sum. Clay City had made no payments nor has any depreciation been taken.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the applications has been filed.

At a hearing held on April 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, as supplemented, and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The proposed acquisition and operation of facilities, as hereinbefore described and as more fully set forth in the application, as supplemented, and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The delivery of up to 1,540 Mcf per day to American, and the operation of the measuring and regulating station on its main pipeline in Parke County, Indiana, together with a meter or meters and such other equipment as may be necessary to measure the proposed deliveries of such gas to American, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid delivery of natural gas and acquisition and operation of facilities are required by the public convenience and necessity, and the certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon the Applicant's compliance with all applicable Commission Regulations under the Natural Gas

Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (d), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant authorizing the acquisition and operation of facilities and the delivery of natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder is hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (d), and (e) of Section 157.20 of such Regulations.

(D) Pursuant to Section 155 of the Regulations under the Natural Gas Act, Panhandle is hereby required to file, within 20 days, the letter agreement between Panhandle and Clay City dated February 23, 1961, and the letter agreement between Panhandle and American Vitrified dated December 11, 1963, as supplements and/or amendments to the original industrial contract.

(E) The acquisition authorized in paragraph (A) above shall be consummated and the facilities placed in actual operation as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act within 30 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-246

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1965)

On February 19, 1965, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP65-246 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of miscellaneous natural gas gathering facilities necessary to take into its certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing transmission system, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of such facilities is not to exceed a maximum of $2,000,000, with no single project to exceed a cost of $500,000, which cost Applicant proposes to finance from general funds or from revolving credit.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by pargraph (A) above a statement in compliance with Subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65–232; TEXAS GAS EXPLORATION CORPORATION, DOCKET NO. CI64–739

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF SERVICE AND FACILITIES AND TERMINATING TEMPORARY CERTIFICATES

(Issued April 16, 1965)

On February 2, 1965, Texas Gas Transmission Corporation (Texas Gas) and Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP65–232 a joint application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the exchange of natural gas, all as more fully set forth in the application.

On the same date, Texas Gas Exploration Corporation (Texas Exploration) filed in Docket No. CI64–739 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the sale of natural gas and the facilities used in connection therewith, all as more fully set forth in the application.

The above filings are related, and involve a transaction whereby natural gas sold by Texas Exploration to its parent, Texas Gas, was received by Transco in exchange for equivalent volumes delivered by Transco to Texas Gas.

Texas Exploration received a temporary authorization for the sale of up to 1,000 Mcf of natural gas per day to Texas Gas on January 9, 1964, in Docket No. CI64–739. Texas Gas and Transco received temporary authorization for the exchange of up to 1,000 Mcf on the same date, January 9, 1964, in Docket No. CP64–147.

The proposed abandonment is being sought due to the failure of production of gas on the acreage involved, and the gas sales contract dated December 20, 1963, between Texas Gas and Texas Exploration has been terminated by letter agreement dated January 27, 1965, which has been filed as a notice of cancellation of Texas Exploration's related rate schedule.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on April 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicants, Texas Gas Transmission Corporation, Transcontinental Gas Pipe Line Corporation, and Texas Gas Exploration Corporation, are all "natural-gas companies" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The service and facilities to be abandoned as hereinbefore described, as more fully described in the applications in this proceeding are subject to the jurisdiction of the Commission and their abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid service and facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered and conditioned.

(4) The permission and approval granted hereinafter should be conditioned upon cancellation by Texas Gas and Transco of their Rate Schedules Nos. X–31 and X–37 respectively.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicants of the service and facilities hereinbefore described, as more fully described in the applications in this proceeding, be and the same are hereby granted.

(B) The temporary certificates issued January 9, 1964, in Docket Nos. CI64–739 and CP64–147 be and the same are hereby terminated.

(C) Notice of cancellation dated January 27, 1965, is designated as Supplement No. 2 to Texas Gas Exploration Corporation FPC Gas Rate Schedule No. 11, and is hereby accepted for filing effective on the date on which this order issues.

(D) The permission and approval granted herein by paragraph (A) above are hereby conditioned upon cancellation by Texas Gas and Transco of their Rate Schedules Nos. X–31 and X–37 respectively.

OPINION NO. 449–A

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–222

MEMORANDUM OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING

(Issued April 16, 1965)

Syllabus

1. Lead-in line from pipeline is integral part of refinery facilities and as plant facility does not require a certificate. P. 819.
2. Should it be determined that continuance of interruptible service was so non-remunerative to pipeline as to be contrary to public interest, ample authority exists under Section 5(a) to effect adequate remedy. P. 819.
3. Instant authorization clearly has applicability only where there has been no direct producer sale and where producer proposes to use its own gas. P. 820.
4. Commission *denies* application for rehearing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

By Opinion No. 449 and order issued February 17, 1965, 33 FPC 237, we granted a certificate under Sections 7(c) and (e) of the Natural Gas Act authorizing Transcontinental Gas Pipe Line Corporation to transport natural gas for Texaco Inc. from producing fields in the Texas-Louisiana Gulf Coast area to the producer's Eagle Point refinery at Westville, New Jersey. Texaco will use the gas solely in its refinery operations, none being resold. The issuance of the certificate was opposed by a group of seven gas distribution companies and by the Board of Public Utility Commissioners of the State of New Jersey, each of which had requested and was granted intervention in the proceeding.

On March 17, 1965, a joint petition for rehearing of our Opinion and order was filed by the same gas distributors.[1] The previous day, March 16, 1965, the New Jersey Board of Public Utility Commissioners also filed for rehearing, adopting the joint petition being filed by the distribution companies. Most of the issues argued in the rehearing application are simply restatements, often in similar terms, of arguments previously advanced by these parties and adequately covered in the examiner's decision and in the Opinion. However, the Interveners make four contentions which we shall discuss further.

1. The Interveners contend that Texaco should be required to secure a transportation certificate for the operation of the approximately 4½ miles of lead-in line through which the gas will flow after it leaves Transco's line and is redelivered to Texaco, and the refinery grounds proper. They refer to a requirement imposed upon Public Service Electric and Gas Company in Opinion No. 231[2] requiring it to obtain a certificate to construct an 11.3 mile lateral line needed to enable it to receive natural gas into its gas plant.

In our opinion Texaco need not apply for and secure a certificate for the reason that the lead-in line is an integral part of the refinery facilities. The simple fact that the point of delivery will be a relatively short distance from the refinery grounds and that the line runs through public and private lands is not controlling. Texaco has used the line for refinery purposes ever since its construction and it will continue to be used only for these purposes. Once the gas enters the Texaco lateral it will be able to be utilized only in the plant operations. Under no circumstances could Texaco sell the gas. Accordingly, Texaco's lateral is held to be a part of the plant facility and does not, therefore, require a certificate.

2. Interveners also contend that the Commission will be unable to regulate effectively the interruptible rate once the certificate is in effect, even though it may subsequently be determined that the rate is discriminatory and unduly preferential. This same argument was made in the exceptions filed to the initial decision. Under Section 5(a) of the Act, the Commission is always free, whether on complaint or on its own motion, to investigate the rates charged by any natural-gas company in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission and, if found to be unreasonable, to determine the just and reasonable rate thereafter to be in effect. Should it ever be determined that the continuance of the interruptible service was so nonremunerative to Transco as to be contrary to the public interest, ample authority exists under Section 5(a), as clarified in *F.P.C.* v. *Sierra Pacific Power Co.*, 350 U.S. 348 (1956), to effect an adequate remedy.

Parenthetically, we note that the possibility of the interruptible rate ever becoming noncompensatory to Transco is remote. The interruptible rate charged is only 0.04 cent per Mcf less than the rate for firm service at a 100 percent load factor and, further, only about 2 cents of the total 22 cents per Mcf charged represents the variable cost of rendering the service. We agree with the Examiner, for these and other reasons cited, that adequate protection for Transco's consumers does not require a more detailed determination of the just and reasonable nature of the proposed rates.

3. The Interveners also argue that a field sale is involved in that some of the gas to be transported by Transco will be gas purchased by Texaco from other

[2] *Texas Eastern Transmission Corp., et al.*, Docket No. G-1693, et al., 11 FPC 211, 225.

producers. As noted at a number of points in the initial decision, which we adopted, Texaco intends to have transported only its own produced natural gas. The gas will be entirely from leases owned and operated by Texaco in Texas and Louisiana. The Examiner's decision, and our order authorizing the service, clearly has applicability only in a situation, as here, "where there has been no direct producer sale in the field" and involving "a proposal by a bona fide producer to use its own gas which was produced in the normal course of its business."

4. Public Service, pointing to Section 1.18(e) of the Rules of Practice and Procedure which permits the filing of settlement offers "at any time," objects to our characterization of the settlement offer filed by it on November 18, 1964, as an attempt by it to put on a new case almost a full year after the record had been closed. It also takes issue with our questioning of the reliability of the offer of settlement.

In questioning the reliability of Public Service's offer of settlement, we were referring only to the legality of the special contract which would be involved in the settlement proposal. We did not intend to express any doubts, nor have we any, as to the good faith of Public Service in submitting its offer. As noted in the initial decision, there is some question whether Public Service could lawfully file a special contract with the Board of Public Utility Commissioners for service to one customer without offering the same rate to other customers in the same circumstances. Although the State agency adopted both the exceptions and application for rehearing of the distributor interveners, it has at no time stated that the contract proposed would be lawful if applicable only to the service to Texaco. Conversely, there was no indication in the offer that Public Service was proposing a new rate schedule of general applicability. In essence, then, it can best be said that a question existed whether the rate offered in the settlement was or was not unduly preferential, and we were giving Public Service the benefit of the doubt.

Public Service is correct in pointing out that a settlement offer may be filed at any point in the proceeding. However, Texaco, an indispensable party, stated that it was not agreeable to the terms of the proposed settlement. The Commission therefore could not accept the offer of Public Service. Since Public Service continues to press for acceptance of the terms proposed in the offer, we can only conclude that it was seeking to put on a new case.

Moreover, a consideration of the settlement proposal indicates that under the terms thereof the supply of natural gas provided Texaco would not be at a price which would justify its conversion of the Eagle Point refinery from liquid fuel. As computed by Texaco in its answer opposing the offer, Public Service is proposing rates potentially as high as 53.2 cents per Mcf for firm service and 44.4 cents per Mcf for interruptible gas. Yet, as the record shows, as long ago as 1951 Public Service was advised that in order for Texaco to be induced to effect the conversion the price would have to be equivalent to 5 cents per barrel below the price for Bunker-C oil. The standard price for this fuel was found by the Examiner to be $2.35 per barrel, which is equivalent to approximately 36 cents per Mcf. It is apparent, therefore, as stated by Texaco, that under no circumstances would the present offer, even allowing for minor adjustments, be sufficient to induce it to contract with Public Service. Public Service has had numerous occasions for a period of over 10 years within which to effect an agreement with Texaco. Although the present offer seems to be more favorable to Texaco than any previously made, it nevertheless provides no basis for our finding that any purpose would be served either by remanding the case for additional consideration or by ordering a settlement conference to be convened.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 449 and accompanying order.

The Commission orders:

The applications for rehearing filed by the New Jersey Board of Public Utility Commissioners on March 16, 1965, and jointly by the distribution company interveners on March 17, 1965, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-96; CITY OF WASHINGTON, GEORGIA, DOCKET NO. CP64-304

ORDER VACATING ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS AND AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 16, 1965)

On January 22, 1965, Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP64-96 an application pursuant to Section 7(c) of the Natural Gas Act to amend the order heretofore issued in said docket by authorizing Transco to sell and deliver an additional 1,643 Mcf of gas per day to Atlanta Gas Light Company (Atlanta) for resale and distribution in the City of Washington, the Town of Tignall, and environs, Wilkes County, Georgia all as more fully set forth in the application to amend. The Commission has heretofore issued an order in Docket No. CP64-304, 32 FPC 731, directing Transco to connect its facilities with a distribution system which the City of Washington has proposed to construct and operate and to sell and deliver to the City of Washington up to 1,643 Mcf of gas for resale and distribution. Atlanta proposes to sell and distribute gas in the same area heretofore proposed to be served by the City of Washington. On February 16, 1965, the City of Washington filed a motion for the Commission to vacate the order heretofore issued in Docket No. CP64-304 directing the physical connection of facilities and sale of natural gas.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the application to amend filed in Docket No. CP64-96 has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issued in Docket No. CP64-304 directing physical connection of facilities and sale of natural gas should be vacated and that the order issuing a certificate in Docket No. CP64-96 should be amended as hereinafter ordered.

The Commission orders:

(A) The order issued in Docket No. CP64-304 directing physical connection of facilities and sale of natural gas be and the same is hereby vacated.

(B) The order issuing a certificate to Transco in Docket No. CP64-96 be and the same is hereby amended by authorizing Transco to sell and deliver up to an additional 1,643 Mcf of natural gas per day to Atlanta for resale and distribution in the City of Washington, Town of Tignall, and environs, Wilkes County, Georgia, and to construct and operate the necessary tap, meter, and regulator facilities therefor; and in all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. RP65–46

ORDER ACCEPTING PROPOSAL TO REDUCE RATES AND MAKE REFUNDS

(Issued April 19, 1965)

On March 1, 1965, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), tendered a proposal to reduce its rates and charges effective January 1, 1965, by approximately $460,000 per year. The proposed reduction is the net effect of a decrease in Michigan Wisconsin's cost of gas purchased from Midwestern Gas Transmission Company effective as of December 1, 1964, the decrease in the Federal income tax effective as of January 1, 1965, and the increase in the purchase gas cost from Phillips Petroleum Company (Phillips) which was filed on February 5, 1965.[1]

Michigan Wisconsin proposes to (1) file revised tariff sheets to its presently effective FPC Gas Tariff to reflect a reduction of three (3) cents per Mcf and in the demand component of its ACQ–1 rate schedule and a reduction of one mil (0.1 cents) per Mcf in its SGS–1 and development rates; (2) to refund to its customers the amount of $93,220 per month for the period beginning December 1, 1964, until the date upon which Phillips proposed increased rates become effective subject to refund; and (3) to expand the refund and rate reduction obligations set out in Opinion No. 387, 29 FPC 932, to include any refunds and reductions which may hereafter be required by Commission order in the proceedings concerning the Phillips rate increases referred to above.

Upon due notice given, no objection or protests to Michigan Wisconsin's proposal have been received.

The Commission finds:

(1) The proposal filed herein on March 1, 1965, by Michigan Wisconsin is appropriate and in the public interest in carrying out the Natural Gas Act, and should be approved and made effective subject to the terms and conditions herein provided and ordered.

(2) Good cause exists for the Commission to waive its applicable rules and regulations under the Natural Gas Act in order that the tariff sheets herein required to be filed may become effective as of January 1, 1965, as hereinafter ordered.

The Commission orders:

(A) The aforementioned proposal filed by Michigan Wisconsin on March 1, 1965, is approved subject to the following terms and conditions.

(B) Within thirty (30) days from the date of issuance of this order, Michigan Wisconsin shall file revised tariff sheets, subject to the approval of the Commission, to be effective as of January 1, 1965, reflecting the terms and conditions set out in the proposal filed on March 1, 1965, and approved by paragraph (A) above.

(C) Within thirty (30) days from the date of issuance of this order, Michigan Wisconsin shall refund to its customers the difference between the revenues actually collected under the rates currently effective and the revenues which would have been collected under the rates set out in the proposal, for all gas delivered to its customers for the period from January 1, 1965 to the date on which the refunds hereby required are made, plus $93,220 per month for the period from December 1, 1964 to the date of the refund.

---

[1] By Commission order issued March 5, 1965, the tendered increases were suspended until August 8, 1965, in Docket Nos. RI65–626 and RI65–627.

(D) For each month beginning with the date upon which the refund required by paragraph (C) above is made and ending with the date on which the aforementioned Phillips' increased rates become effective subject to refund, Michigan Wisconsin shall credit each customer's monthly bill with the proportionate share of $93,220.

(E) Within 20 days of making the refunds required by paragraph (C) above, Michigan Wisconsin shall report to the Commission, in writing and under oath, the amount of the refunds made to each customer together with a computation showing the manner in which such refunds were determined, and concurrently therewith, shall serve a copy of such report upon each of its customers and upon interested State Commissions. Within 20 days after final crediting of customers' bills as required by paragraph (D) above, Michigan Wisconsin shall submit a similar report thereon and shall serve such report as herein provided.

(F) Upon compliance with the terms of the proposal and this order, the proceeding in Docket No. RP65-46 shall be considered terminated.

(G) This order, except as herein specifically set forth, shall not be construed to change or otherwise affect the existing obligations of Michigan Wisconsin to make refunds and rate reductions under orders heretofore issued by the Commission in proceedings involving Michigan Wisconsin; and further, this order is without prejudice to any findings or orders which have been made or which may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, Michigan Wisconsin, the Commission Staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Michigan Wisconsin or any other persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64-96; EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP65-193

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 19, 1965)

On December 30, 1964, Eastern Shore Natural Gas Company (Eastern Shore) filed in Docket No. CP65-193 an application as supplemented on February 9, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the delivery of natural gas as hereinafter described and as more fully described in the application as supplemented.

Eastern Shore proposes to construct and operate 150 feet of 2-inch pipeline, a meter and a regulator to render initial firm service to Zaffere's Sally Ann

Bakery, Inc., Federalsburg, Maryland, for use in bakery ovens. Estimated peak day and annual requirements are 40 Mcf and 13,000 Mcf of gas, respectively. Estimated cost of the proposed facilities is $4,600 which will be financed from funds on hand.

Eastern Shore proposes to increase firm deliveries to the Stauffer Chemical Company, Delaware City, Delaware, from 4,600 Mcf to 5,200 Mcf of gas per day. Of the proposed increased deliveries, 200 Mcf of gas will be used in the manufacture of carbon bisulfide in the purchaser's existing plant and 400 Mcf of gas will be used for space heating and film processing in a new plant constructed nearby. The new plant will be connected to Eastern Shore's existing facilities at the expense of the purchaser.

Eastern Shore proposes to increase firm deliveries to the General Foods Corporation, Dover, Delaware, from 300 Mcf to 350 Mcf of gas per day. The additional deliveries of gas will be used to dry cocoa beans. No additional facilities are required.

Eastern Shore proposes to tap its existing 6-inch transmission line in Townsend, Delaware, to provide an additional delivery point for an existing resale customer, Chesapeake Utilities Corporation, Dover Gas Light Division. The proposed delivery point will be used to sell and deliver approximately 4,000 Mcf of gas per year to Chesapeake for resale to Townsend Grain and Feed Company for use in a grain dryer. Eastern Shore will sell the gas under the terms of its present agreement with Chesapeake and there will be no increase in contract demand.

On January 22, 1965, Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP64–96 an application pursuant to Section 7(c) of the Natural Gas Act to amend the order issuing a certificate of public convenience and necessity in said docket by authorizing the sale and delivery of an additional 690 Mcf of gas per day to Eastern Shore, all as more fully described in the application to amend.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the applications has been filed.

At a hearing held on April 15, 1965, the Commission received and made a part of the record in this proceeding all evidence, including the applications as supplemented and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G–12200 (18 FPC 710).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in Docket No. CP65–193, are to be used in the transportation and delivery of natural gas in interstate commerce, and the construction and operation of said facilities and the transportation and delivery of natural gas by Eastern Shore are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Eastern Shore is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities and the transportation of natural gas by Eastern Shore are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Eastern Shore's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity to Transco in Docket No. CP64–96 should be amended as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Eastern Shore to construct and operate facilities and to transport natural gas as hereinbefore described, all as more fully described in the application filed in Docket No. CP65–193, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Eastern Shore's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the deliveries of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) The certificate issued by paragraph (A) above shall not entitle the industrial customers to whom firm deliveries are authorized therein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) The order issuing a certificate of public convenience and necessity in Docket No. CP64–96 to Transco be and the same is hereby amended by authorizing the construction and operation of facilities and the sale of an additional 690 Mcf of natural gas to Eastern Shore as hereinbefore described, all as more fully described in the application in this proceeding; and in all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP65–233

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 20, 1965)

Mountain Fuel Supply Company (Applicant), filed in Docket No. CP65–233 an application on February 4, 1965, together with a supplement thereto on March 1, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas and the construction and operation of (1) 26.5 miles of 20-inch diameter pipe from Green River, Wyoming to Crossover No. 16 near Little America, Wyoming, paralleling the existing 18-inch pipeline between these points, (2) 17.4 miles of 20-inch diameter pipe from Eaking Compressor Station (Wyoming) to Biglow Bench, paralleling the existing 18-inch pipelines between these points, and (3) 14.8 miles of 16-inch diameter pipe in two sections, 10.9 miles and 3.9 miles respectively between Morgan, Utah, and the Sunset terminus near Ogden, Utah, replacing the existing 14-inch line between these points.

The proposed facilities are required to enable Applicant to meet increased firm peak load requirements expected for the 1965-1966 winter season due to growth within its present service area and will increase the capacity of its interstate transmission system by 29,000 Mcf daily. The 16-inch replacement will complete Applicant's program of reconditioning and upgrading on its transmission line between Coalville and Ogden, Utah.

The estimated cost of Applicant's proposed construction is $2,884,000, and will be financed with funds on hand and from short-term bank loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application, supplement and exhibits submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 15, 1940, in Docket No. G-154 (2 FPC 288).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application, supplement, and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application, supplement and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 12 months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRIBUNE OIL CORPORATION, ET AL., DOCKET NOS. G-4335, G-6279, G-13032, G-17660 AND RI60-138

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued April 20, 1965)

On February 15, 1965, Tribune Oil Corporation, *et al.* (Tribune) filed an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, and in conformity with the policy set forth in our order issued August 6, 1964, in *Jack W. Grigsby (Operator), et al.*, Docket Nos. RI61-96 and RI62-536, 32 FPC 529. The offer involves proposed increased rates for the sale of natural gas to Transcontinental Gas Pipe Line Corporation (Transco) in the Egan Field, Acadia Parish, Louisiana, under Tribune's FPC Gas Rate Schedule No. 1.[1] Each of the proposed increased rates were suspended by order of the Commission for the statutory period, were made effective by Tribune, or its predecessors, and have been charged and collected subject to refund.

Under the terms of the settlement offer, Tribune proposes to reduce its rate for the subject sale from the 23.55¢ rate now in effect subject to refund to 15.75¢ per Mcf of gas at 15.025 psia, and to make refunds of the monies collected subject to refund consistent with the procedure set forth in *Grigsby, supra*, with applicable interest thereon. Approval of the proposed settlement will result in Tribune refunding approximately $167,520, exclusive of interest, and a decrease in its annual revenues of approximately $59,420 below that which it currently charges and collects.

On March 1 and 9, 1965, Consolidated Edison Company of New York, Inc., and the United Gas Improvement Company filed their respective comments to the settlement proposal. Each agreed to the proposal, but urged that the moratorium, which Tribune had proposed to extend to January 1, 1968, be extended by order of the Commission to run 36 months from the first day of the month in which the order of the Commission approving the settlement be issued. However, in *Grigsby, supra*, we specifically provided that the filing moratorium of 36 months imposed therein run from the first day of the month in which Grigsby filed its settlement proposal. Accordingly, we shall condition our approval of Tribune's proposal to impose a filing moratorium of 36 months commencing February 1, 1965.

We note that Tribune, in its offer, proposes that it be dismissed as a respondent in the area rate proceeding AR61-2. However, as we stated in *Southwest Gas Producing Company, Inc. (Operator), et al.*, Docket No. G-16714, *et al.*, 31 FPC 192, 193:

> **All of our orders approving settlement proposals or agreements are unqualifiedly subject to final determination in area proceedings, or proceedings of a similar nature, and we will make no exception here.**

---

[1] **Tribune's two other sales are being rendered under permanent certificates at approved rates.**

That unchanged policy appertains here.

For all of the reasons set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49, we shall require Tribune to retain the amount of refunds, with interest, ordered herein in trust until further order directing the nature of their disposition and also to submit within 45 days of this order to the Commission and to Transco a detailed report setting out the amount of refund related to the instant rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct Transco within ten days from the receipt of such report to submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its customers and the names of such customers and amounts of refund each would receive, or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Tribune (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Transco (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

We find that approval of the proposed settlement, as conditioned herein would serve the public interest.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Tribune on February 15, 1965, and as herein conditioned is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Tribune on February 15, 1965, is hereby approved in accordance with the provisions of this order.

(B) Tribune shall compute the difference between the rate collected subject to refund and the related settlement rate for the period such rate was collected subject to refund, to the date of this order, together with interest as specified in the above dockets to the date of this order, in accordance with the percentages set forth in Tribune's offer. Tribune shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on Transco setting out the amount of refund related to the subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination and the period covered.

(C) Tribune shall retain the refund amounts shown in the report required under paragraph (B) above, subject to further order of the Commission directing the disposition of those amounts.

(D) Tribune shall tender for filing on or before June 4, 1965, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon Transco. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Tribune and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Tribune, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(E) Tribune shall, over the signature of a responsible officer file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the requirement that it agree to a 36 month filing moratorium upon each of its presently filed rate schedules commencing February 1, 1965.

(F) Any party to the proceedings having objection to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission (original and one copy) and by serving copies on the other parties.

(G) If as a result of any objections filed pursuant to paragraph (F) hereof, the Commission by subsequent order changes Tribune's duties and obligation hereunder, Tribune's acceptance of this settlement order shall not be binding on it without its express agreement.

(H) Upon compliance by Tribune with all the terms and provisions of this order, the Section 4(e) proceedings in Docket Nos. G-4335, G-6279, G-13032, G-17660, and RI60-138 shall terminate.

(I) Upon termination of the Section 4(e) proceedings set forth in Paragraph (H) above, the proceedings in Docket Nos. G-6279, G-13032, and RI60-138 shall be severed from the area rate proceeding AR61-2 without further order of the Commission, and RI60-138 shall be severed from the consolidated proceedings, Docket No. G-17613, *et al.*, Texaco Inc., et al.

(J) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Tribune, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Tribune or any other companies, person or parties affected by this order.

ORDER RELEASING REFUNDS IN PART

(Issued April 21, 1965)*

The Commission by order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, approved the settlement of Humble's rate proceedings and among other things, directed Humble to retain the amounts computed to be refundable to its jurisdictional customers pending our further order with respect thereto. We therein noted that the purpose of the action taken was to assure that within the limits of our jurisdictional reach the amounts to be refunded would actually flow to those parties legally and equitably entitled thereto. As we there said, that purpose and the action taken to effectuate that purpose arises from "our duty to insure that the ultimate consumers of gas actually receive all of the benefits of our rate regulation to which they may be entitled."

Some of the pipeline customers of Humble and other pipelines purchasing gas from them in the resale chain between the producer and the ultimate consumer have an express obligation pursuant to prior Commission orders to flow-through the jurisdictional portion of any amounts to be received as a result of the Humble settlement. Other pipelines are not specifically obligated and without further action on our part would retain the amounts received unless they voluntarily flow them through to their customers.

As an aid in ascertaining which of these pipelines would assert a right to retain all or part of the amounts to be refunded by Humble, we directed Humble's pipeline customers[1] and other pipelines in the resale chain[2] to report their intended disposition of these funds.

---

*Order issued June 14, 1965, rejecting application for rehearing and denying reconsideration, 33 FPC 1263. Petition for review dismissed, *sub nom. Texas Eastern Transmission Corp.* v. *F.P.C.*, 357 F. 2d 232 (CA5–1966) and *United Fuel Gas Co.* v. *F.P.C.*, 367 F. 2d 34 (CA4–1966).

[1] "Order Requiring Report of Intended Disposition of Refunds" issued September 29, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 873

[2] "Order Requiring Report of Intended Disposition of Refunds" issued January 5, 1965, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 33 FPC 19.

Analysis of the reports filed by Natural Gas Pipeline Company of America, (RP65-7), Trunkline Gas Company (RP65-8), Mississippi River Fuel Corporation (RP65-9), and Humble Gas Transmission Company (RP65-12), indicated that, except for insignificant amounts, these companies would flow-through the jurisdictional portion of any amount they might receive from Humble. Accordingly, by order issued January 5, 1965[3] we directed Humble to release the amounts refundable to each of these companies. Analysis of the reports filed by Tennessee Gas Transmission Company (RP65-6), Lone Star Gas Company (RP65-10),[4] Northern Natural Gas Company (RP65-14), Kansas-Nebraska Natural Gas Company, Inc. (RP65-17)[5] and American Louisiana Pipe Line Company (RP65-23) and review of the existing flow-through obligations of these companies and of other pipelines in the resale chain reveals that the amounts refundable by Humble to this group of its customers will also flow-through to the limit of our jurisdictional reach. We therefore provide hereinafter for the release of funds by Humble to these pipelines and the referenced dockets are deemed closed.

The reports filed by Colorado Interstate Gas Company (RP65-19), El Paso Natural Gas Company (RP65-20), the Cities Service Gas Company (RP65-21), state that these companies would retain substantially all of the amounts which Humble might refund to them. The retention of these amounts by Humble is therefore continued pending further order of the Commission prescribing the procedure for determining the relative rights of all parties to such funds.

The reports of Southern Natural Gas Company (RP65-13), United Gas Pipe Line Company (RP65-15), Panhandle Eastern Pipe Line Company (RP65-18), and United Fuel Gas Company (RP65-22) indicate that these companies are obligated to and will flow-through only a portion of the amounts refundable by Humble and are not so obligated and would retain a remaining substantial portion. We have therefore provided that Humble release to these companies only those portions of the refundable amounts which are covered by an existing flow-through obligation and retain those amounts which our analysis shows is outside the coverage of such obligations.

The reports[6] and our analysis of the flow-through obligations of the other pipeline companies purchasing gas from Humble's immediate customers indicated that, except for amounts attributable to purchases by Florida Gas Transmission Company, Southern Natural Gas Company, and Texas Eastern Transmission Company, all substantial, jurisdictional amounts would flow-through. We therefore provide for the release of the funds which will ultimately flow-through and for the retention of amounts by the supplier of any company which denies or might deny an obligation to flow-through such amounts. Thus while Texas Gas Transmission Company (RP65-16) reports that it would flow-through substantially all of the jurisdictional portion of the refund it might receive, we herein provide that it defer its flow-through to Texas Eastern (RP65-27) which denies an obligation to further flow-through the amounts it would receive from Texas Gas.

---

[3] "Order Releasing Refunds in Part", *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 33 FPC 18.

[4] Including the report of its pipeline customer, Natural Gas Pipeline Company of America (RP65-25).

[5] Including the report by its pipeline customer, Northern Natural Gas Company (RP65-30).

[6] Southern Natural Gas Company (RP65-33), Texas Gas Transmission Corporation (RP65-34), American Louisiana Pipe Line Company (RP65-28), Florida Gas Transmission Company (RP65-26), Texas Eastern Transmission Company (RP65-27), The Ohio Fuel Gas Company (RP65-29), Mississippi River Fuel Corporation (RP65-32).

Finally, it should be noted that the refund to one of Humble's customers, Gas Gathering Corporation, is being retained in escrow pending further order of the Commission because that company has indicated that it is in the process of filing a reduction in the rate under which it resells the gas purchased from Humble and the refund and the rate reduction filing will be disposed of together. Action on the report filed by its pipeline customer, Transcontinental Gas Pipe Line Corporation (RP65-31) is also deferred until that time.

The public interest will best be served if the amounts to be retained and not distributed at this time are limited to the precise amounts which are beyond the terms of a previously ordered flow-through obligation. To accomplish this end we have set forth with specificity the details from which these amounts may be determined. For example a customer of Humble's may be obligated to flow-through refunds received under one of Humble's rate schedules. As generally written, the customer would be obligated to flow-through an amount representing the difference between the rate level which the customer had incorporated in its cost of purchased gas for purchases under that rate schedule and Humble's settlement rate. This obligation is not terminated by Humble's filing a superseding rate increase in that rate schedule but would continue throughout Humble's refund period.[7] However the incremental amount of such an increase, *i.e.*, the segment between Humble's existing rate at time of the settlement and the level of such rate incorporated by the customer in its rates, would not be within the terms of the flow-through obligation and we have provided that the refundable amounts attributable to that increment of rate increase be retained.

We recognize the possibility that a pipeline may disagree with our conclusions regarding its flow-through obligations. We shall provide, therefore, that in such cases the disputed amounts shall be held by the recipient subject to our further order. In other instances, a pipeline may wish to voluntarily assume an obligation to flow-through the refund it would receive though it is not so obligated by prior Commission order, or a pipeline may disagree with our interpretation of its obligation and be able to show that an obligation to flow-through the refund exists. Where such conditions exist we shall provide for the release of the funds which we have herein ordered to be retained upon the filing of an assumption of an obligation to flow-through the refund or a report detailing the obligation to flow-through the refund.

The Commission orders:

(A) Humble and Empire Trust Company (Escrow Agent), the escrow agent appointed by Humble pursuant to Paragraph (H) of our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, are jointly directed to release and pay over to Tennessee Gas Transmission Company, Lone Star Gas Company, Northern Natural Gas Company, Kansas-Nebraska Natural Gas Company, Inc. and American Louisiana Pipe Line Company, the amounts indicated to be refundable to those customers in the refund report filed by Humble on September 21, 1964, together with the net earnings of the escrow account attributable to each of these principal sums.

(B) Humble and the Escrow Agent are jointly directed to release and pay over to Southern Natural Gas Company, United Gas Pipe Line Company, Texas Gas Transmission Corporation, Panhandle Eastern Pipe Line Company, and United Fuel Gas Company the amounts indicated to be refundable to those customers in the refund report filed by Humble on September 21, 1964, together with net earnings of the escrow account attributable to each of these principal sums,

---

[7] Midwestern Gas Transmission Company, *et al.*, Docket No. G-16841, *et al.*, Opinion No. 394, issued July 12, 1963, 30 FPC 150.

except that, the Escrow Agent shall retain the following principal sums together with the associated escrow earnings:

1. That portion of the refund which is attributable to purchases by Southern Natural Gas Company prior to April 1, 1964 under Humble's Rate Schedule No. 39 and which represents the difference between rates of 16.17¢ per Mcf at 15.025 psia for Mississippi and 16.0¢ per Mcf at 15.025 psia for Louisiana and rates collected subject to refund in excess of these rates and that portion which is attributable to purchases prior to April 1, 1964 under Humble's Rate Schedule No. 126 and which represents the difference between a rate of 20.0¢ per Mcf at 15.025 psia and rates collected subject to refund in excess of this rate.

2. That portion of the refund which is attributable to purchases by United Gas Pipe Line Company prior to January 1, 1963 under Humble's Rate Schedule Nos. 123, 149 and 154.

3. That portion of the refund which is attributable to purchases by Panhandle Eastern Pipe Line Company prior to April 1, 1964 and which represents the difference between (a) a rate of 12.2828¢ per Mcf at 14.65 psia and rates collected subject to refund in excess of this rate under Humble's Rate Schedule Nos. 198, 199, 205 and 206, (b) a rate of 16.8¢ per Mcf at 14.65 psia and rates collected subject to refund in excess of this rate under Humble's Rate Schedule No. 202, (c) a rate of 15.5¢ per Mcf at 14.65 psia and rates collected subject to refund in excess of this rate under Humble's Rate Schedule No. 204, and (d) a rate of 16.0¢ per Mcf at 14.65 psia and rates collected subject to refund in excess of this rate under Humble's Rate Schedule No. 211.

4. That portion of the refund which is attributable to purchases by United Fuel Gas Company under Humble's Rate Schedule Nos. 24, 25, 26, 135, 145 and 166 and which represents the difference between a rate of 19.9¢ per Mcf at 15.025 psia and rates collected subject to refund in excess of this rate and that portion which is attributable to purchases under Humble's Rate Schedule No. 324 and which represents the difference between a rate of 18.5¢ per Mcf at 15.025 psia and rates collected subject to refund in excess of this rate.

(C) United Gas Pipe Line Company with respect to the amounts received pursuant to Paragraph (B) above shall, pending further order of the Commission, retain and defer the flow-through of those portions which are attributable to purchases by:

1. Southern Natural Gas Company between January 1, 1963 and April 1, 1964;
2. Texas Eastern Transmission Corporation subsequent to June 14, 1961.

(D) Southern Natural Gas Company shall, pending further order of the Commission, retain and defer the flow-through of those portions of the amounts received pursuant to Paragraphs (B) and (C) which are attributable to purchases by Florida Gas Transmission Company and Texas Eastern Transmission Corporation.

(E) Texas Gas Transmission Corporation shall, pending further order of the Commission, retain and defer the flow-through of those portions of the amounts received pursuant to Paragraphs (B) and (C) which are attributable to purchases by Texas Eastern Transmission Corporation.

(F) Except as specifically ordered to retain amounts and defer the flow-through to specified parties, each company shall flow-through the refunds received pursuant to this order in accordance with the applicable Commission orders itemized in Appendix A.

(G) Within 10 days of this order, Humble shall file a report with the Commission showing the computation of the amounts to be retained by the Escrow Agent pursuant to Paragraph (B). Humble shall concurrently serve copies of such report on the Escrow Agent, Panhandle Eastern Pipe Line Company, Southern Natural Gas Company, United Fuel Gas Company, and United Gas Pipe Line Company.

(H) Where amounts have been retained pursuant to Paragraph (B) through (E) and the party which otherwise would have received such amounts is presently obligated to pass on such amounts by prior order of the Commission or will voluntarily assume the obligation to pass on such amounts, a report setting forth the details of such obligation or an agreement assuming obligation to pass on the refund shall be filed by such a party within ten days.

(I) Where any pipeline subject to the jurisdiction of this Commission and named herein receives a refund pursuant to this order, either directly from Humble or indirectly from an intermediate pipeline supplier, and contrary to our conclusion that the jurisdictional portion thereof will flow-through to its customers, claims the right to retain such amounts, that pipeline shall report to the Commission within ten days of the date of this order the basis of such claim, and when the amount is received, that pipeline shall retain, in accordance with Paragraph (J), the amount in dispute subject to our further order.

(J) The amounts ordered to be retained pursuant to Paragraphs (C) through (E) and (I) shall be retained by the pipeline under the following methods. The choice of method is optional to the pipeline required to retain the funds:

1. Commingled with its general assets but interest at 6 percent per annum shall be paid from the date the funds would flow-through, if not so retained, to the date on which they are paid to the person ultimately determined to be entitled thereto in a final order of the Commission.

2. Deposited in savings accounts in any bank or savings and loan association where deposits are insured by the Federal Deposit Insurance Corporation, with all interest earned thereon to be credited to the savings accounts. Each savings account shall not exceed $10,000, or

3. Deposited in a special escrow account on or before the date the funds would flow-through, if not so retained. If the fund is deposited in such an escrow account, the following conditions must be met:

(a) The retaining party shall submit 45 days prior to the date the funds are to be deposited, an executed escrow agreement conditioned as set out below with a certificate showing service on the party to whom the fund would otherwise be payable. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between retaining party and any bank or trust company used as a depository for funds of the United States Government and the agreement shall be conditioned as follows:

(b) The retaining party, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(c) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(d) Such bank or trust company shall be liable only for such interest as the invested funds described in Subparagraph (c) above will earn and no other interest may be collected from it.

(e) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(f) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(K) Pending further order of the Commission, Humble and the Escrow Agent shall retain all remaining amounts to be refunded in accordance with Paragraphs (F) and (H) of the order of July 8, 1964.

MIDWESTERN GAS TRANSMISSION COMPANY, RP61–19 AND RP62–7; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP63–6

ORDER PROVIDING FOR HEARING ON REMANDED ISSUE

(Issued April 21, 1965)

The Commission in its Opinion No. 444, issued October 13, 1964, 32 FPC 993, determined the cost of service issues relating to Midwestern Gas Transmission Company (Midwestern) and prescribed the just and reasonable rates and charges to be thereafter in force subject to further adjustment upon disposition of certain reserved issues. Among these was the question of the depreciation to be used as a deduction in computing the tax allowance in Midwestern's cost of service and the design of the rates for both Midwestern and Natural Gas Pipeline Company of America (Natural). The Presiding Examiner deferred passing on the rate design issue in his initial decision in the interest of bringing the cost of sevice issues to the Commission at the earliest possible date.

On November 12, 1964, Midwestern filed an application for rehearing and reconsideration of Opinion No. 444 and as a part of that application included a proposal for final disposition of the cost of service issues. That proposal, as modified in certain respects by Midwestern, was approved by Commission order issued December 30, 1964, 32 FPC 1548, as a settlement of Midwestern's rate proceeding (RP61-19 and RP62-7) on all but the two aforementioned issues.

In its Opinion No. 444, the Commission remanded the tax depreciation issue to the examiner for further hearing and set forth the aspects of that issue on which the parties were given an opportunity to present further evidence (Opinion No. 444, at p. 996). The hearing on the rate design issue has been completed and the briefs thereon have been filed but the examiner's decision thereon was deferred as heretofore noted.

The Presiding Examiner who has been assigned to these proceedings and who issued the initial decision on the Midwestern cost of service issues has become unavailable because in addition to his administrative duties as the new Chief Examiner of the Commission, he is also currently presiding in hearing one of the area rate proceedings. Under these circumstances and pursuant to Section 1.30(j) of the Commission's Rules of Practice and Procedure, it is appropriate that another examiner be designated to preside at the hearing hereinafter ordered and to issue the initial decision on the depreciation issue pursuant to our remand of that issue in Opinion No. 444. It is also appropriate under these circumstances that the Initial Decision be waived with respect to the rate design issue, and that the Presiding Examiner who heard the evidence on that issue be directed to certify to the Commission that portion of the record in these proceedings which relate to the rate design issue.

The Commission orders:

(A) The Initial Decision with respect to the rate design issue in these proceedings is hereby waived and the Presiding Examiner is hereby directed to certify to the Commission that portion of the record related to that issue.

(B) Pursuant to the Commission's Rules of Practice and Procedure, particularly Sections 1.27, 1.30(j), and 3.4(e)(6) thereof, the Chief Examiner shall designate a hearing officer to preside at the hearing hereinafter provided and any prehearing conferences which he may deem appropriate in these proceedings and to render an Initial Decision on the depreciation allowance to be used in computing the income tax to be reflected in Midwestern's cost of service.

(C) Midwestern shall serve its complete case in chief with respect to the aforementioned reserved issue upon all parties of record, including the Commission Staff, on or before May 14, 1965.

(D) All other parties of record, including the Commission Staff, desiring to present evidence on this reserved issue shall serve their testimony and exhibits on or before May 31, 1965.

(E) Midwestern shall serve any rebuttal evidence which it desires to tender, upon all parties of record, including the Commission Staff, on or before June 15, 1965.

(F) Pursuant to the aforementioned remand, the Commission's Rules of Practice and Procedure, and the Commission's Regulations under the Natural Gas Act, a hearing be held in the above-designated proceedings commencing on June 22, 1965, 10:00 a.m. (EDST), in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., for the purposes hereinbefore stated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued April 21, 1965)

On May 12, 1964, Sacramento Municipal Utility District, licensee for the Upper American River Project No. 2101, filed for Commission approval Exhibit K-28 (FPC No. 2101-189), together with a 9-page typewritten supplemental metes and bounds description entitled "Exhibit K-28 (Supplement) Project No. 2101 Slab Creek Reservoir Proposed Project Boundary."

Approval of the exhibit and supplement thereto would effect a reduction (except in the vicinity of Slab Creek Dam) in the project boundary to approximate the contour at Elevation 1870, which is the estimated flood flow line for the Slab Creek reservoir. The normal high water line is Elevation 1850.

The lands involved are within Eldorado National Forest. By letter dated April 13, 1965, the Forest Service has advised that the proposed project boundary as delineated on Exhibit K-28 is satisfactory to the Service.

Inasmuch as Article 27, of the license, as amended, does not require the Licensee to file Exhibit F earlier than one year after the completion of the project works of Slab Creek development, annual charges for occupancy of lands within the boundary for Slab Creek reservoir are reserved for future determination as contemplated by Article 46 of the license.

The Commission finds:

The afore-mentioned exhibit and supplement thereto conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and superseded Exhibit K-9 (FPC No. 2101-147) should be eliminated from the license for the project.

The Commission orders:

The afore-mentioned exhibit and supplement thereto is hereby approved as part of the license for Project No. 2101 and Exhibit K-9 (FPC No. 2101-147) which is superseded is hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

UNITED GAS PIPE LINE COMPANY, RP61-18, RP63-1, RP65-1; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP65-54; SOUTHERN NATURAL GAS COMPANY, RP65-55; TENNESSEE GAS TRANSMISSION COMPANY, RP65-56; TEXAS GAS TRANSMISSION CORPORATION, RP65-57

ORDER RELEASING CERTAIN REFUNDS AND REQUIRING REPORTS OF INTENDED DISPOSITION OF OTHER REFUNDABLE AMOUNTS

(Issued April 21, 1965)

The Commission by order issued December 23, 1964, 32 FPC 1515, approved a rate settlement in the United Gas Pipe Line Company dockets captioned above and, among other things, directed United to retain all amounts refundable to its customers, pending further order prescribing the disposition of those amounts.

That order also provided for certain procedures and the filing of reports to aid us in the disposition of the retained amounts. The procedures prescribed contemplated effectuation of our purpose that there be a proper and equitable distribution of the funds of money created by our own process (Opinion No. 428-A, issued September 2, 1964, 32 FPC 687 at p. 695).

On January 6, 1965, United filed the report required by paragraph (C) of our order issued December 23, 1964. No objections thereto have been received. United sells natural gas for resale at rates subject to our jurisdiction to the distributor customers listed in that report and to the following natural gas pipeline companies: Mississippi River Fuel Corporation, Mississippi River Transmission Corporation, Natural Gas Pipeline Company of America, Southern Natural Gas Company, Texas Eastern Transmission Corporation, and Texas Gas Transmission Corporation. United also renders a transportation service, at rates subject to our jurisdiction, to Southern Natural Gas Company and Tennessee Gas Transmission Company. Pursuant to our order issued December 23, 1964, United has retained the amounts refundable to its jurisdictional distributor customers and to the listed pipeline customers applicable to gas purchased or transportation service received during the period June 15, 1961 through August 31, 1964. In Appendix A to the settlement agreement approved by that order, the amount thus being retained by United is shown to aggregate $17,053,785.

In addition, that appendix also reveals that certain producer suppliers of United are retaining $3,104,097 of refundable amounts. This sum includes some $2,187,315 refundable to United by Humble Oil & Refining Company pursuant to the rate settlement in Docket No. G-9287, *et al.*, approved by our order issued July 8, 1964, 32 FPC 49, which will be separately dealt with in orders to be issued in that producer docket. Accordingly the actions taken in the instant order have no application to monies which United or its customers may receive as an outgrowth of the release of the retained refunds now in the hands of Humble.

It now appears that it would be appropriate to authorize United to flow-through the amounts refundable to those of its jurisdictional customers which are distribution companies, and to Mississippi River Fuel Corporation (Fuel) and Mississippi River Transmission (Transmission)[1] Company. Fuel and Transmission, by the terms of the agreement in Docket No. RP61-21, *et al.* and the Commission's order issued August 7, 1964, 32 FPC 547, in those dockets, are obligated to flow-through the total amount of such refunds allocable to their jurisdictional customers and none of those customers are subject to the rate regulatory authority of this Commission with respect to the transmission herein involved.

The refunds thus released to Fuel or Transmission and United's immediate distributor customers, amount to more than $6,684,000 as indicated in Appendix A to the stipulation and agreement dated December 16, 1964. Such released refunds include those suppliers refunds already paid to United subject to the express condition that they shall be retained by United until further order of the Commission.

It is also our purpose to expedite the release and payment of refundable amounts presently being retained by producer-suppliers of United. Accordingly, United is hereby authorized to flow-through to its distributor customers and to Fuel and Transmission the proportionate part of the amounts received by way of refund from such producer-suppliers attributable to gas purchases between June 15, 1961 and August 31, 1964.

---

[1] Pursuant to a Commission order issued on August 7, 1964, 32 FPC 551, Transmission acquired the pipeline facilities of Fuel as of October 1, 1964. Accordingly, refunds attributable to gas purchases made prior to that closing date are payable to Fuel, and those made subsequently are payable to Transmission.

Our action in requiring retention by suppliers of refundable amounts is intended to serve only the limited purpose of eliminating the possibility that the immediate release and payment of refunds to a pipeline which claims that it is not obligated to flow through such refunds, or portions thereof, to its own customers would create a permanent and irremediable gap in the refund line.[2] Where no such gap in the refund line is indicated, we will authorize the release and payment of retained amounts to the pipeline customers of United to the extent that the recipient pipeline will actually flow-through the refunds to its own distributor customers. Further, if one of United's primary pipeline customers is obligated to refund certain amounts to another pipeline within our rate regulatory jurisdiction which is, in turn, similarly obligated to flow-through to its own jurisdictional customers we will permit such release and payment.

In order to implement this policy, it is necessary and appropriate that each of the jurisdictional pipeline purchasers listed in the caption of this order which may receive refunds from United shall submit the report hereinafter required; indicating whether it is expressly obligated to flow-through the amounts received, whether it proposes voluntarily to pass on such refunds or whether it intends to retain the whole or any portion thereof. No such reports are necessary, however, with respect to refundable amounts now in the hands of Humble Oil & Refining Company (Humble), Docket No. G-9287, *et al.*

Inasmuch as Texas Eastern has advised the Commission that it proposes to retain all amounts refundable to it applicable to gas purchases during the period herein involved, the issues raised by Texas Eastern's position will be the subject of a separate proceeding.

We are herein expressly reiterating our prior requirement[3] that United shall retain certain refundable amounts now or later frozen in its hands or received from a producer supplier (other than Humble) which have not been expressly released herein for payment to Fuel or Transmission and to its own immediate distributor customers.

The Commission orders:

(A) United and its duly authorized escrow agent are hereby authorized to distribute and pay, within ten days from the date of this order, to Fuel and Transmission and to those of its customers listed in the designation of distributor customers which United filed on January 6, 1964, all amounts (shown in Appendix A to the settlement agreement approved by our order issued December 23, 1964), being retained by either of them (including supplier refunds), which are attributable to gas purchased from United by any of such jurisdictional customers during the period covered by United's rate increase filings in Docket No. RP61-18 and Docket No. RP63-1.

(B) Within 10 days of the date of payment of the refunds identified in ordering paragraph (A) above, United shall submit to this Commission a copy of the releases received from each of its pipeline and distributor jurisdictional customers with respect to the refunds authorized herein.

(C) United shall retain refunds frozen by prior order of the Commission which have not been specifically released by this order, under the terms and conditions specified in ordering paragraphs (H) and (I) of Opinion No. 428-A entered in Docket No. RP63-1 on September 2, 1964, until the issuance of a further order directing or authorizing the disposition of such refunds. Provided, however, that any amounts received by United from Humble in Docket No. G-9287, *et al.*, shall be retained and disposed of in accordance with the provisions of the order being issued this day in said docket, *supra*, p. 830.

---

[2] See settlement orders imposing refund retention requirements in *Hunt Oil Company*, Docket No. G-9065, *et al.*, July 16, 1963, 30 FPC 220; *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, July 8, 1964; *United Gas Pipe Line Company*, Docket No. RP63-1, September 2, 1964.

[3] Pursuant to Ordering Paragraphs (C) and (D) of our order of December 23, 1964, captioned "Order Approving Rate Settlement and Requiring Retention of Certain Refunds."

(D) Natural Gas Pipeline Company of America, Southern Natural Gas Company, Tennessee Gas Transmission Company and Texas Gas Transmission Corporation, in their respective dockets captioned above, shall submit, in triplicate within twenty days of the date of issuance of this order, a detailed report showing:

(i) The amount received from each of its suppliers, the portion if any, of each such amount which the reporting pipeline claims it has a right to retain, together with a full explanation of the basis for such claim, including any pertinent factual circumstances.

(ii) The portion of the amounts refundable under Appendix A to the settlement agreement approved by our order issued December 23, 1964, in Docket No. RP61-18, *et al.*, which each proposes to flow-through to its jurisdictional customers, together with a detailed explanation of the methods and allocation factors used in determining the jurisdictional portion of such refunds.

(iii) The proposed plan of distribution of the respective total amounts received from each producer-supplier, setting forth by months, by rate schedules, and by purchasers, the amount to be refunded to each jurisdictional customer, the billing determinants used to compute the refunds to each customer and the aggregate amount attributable to non-jurisdictional sales in each such reporting period.

Provided, however, that such reports need not include refunds attributable to amounts now being retained by Humble in Docket No. G-9287, *et al.*

The reporting pipeline shall serve a copy of each such report on every one of its jurisdictional customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

THE CITY OF ARLINGTON, KENTUCKY, DOCKET NO. CP65-271

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 22, 1965)

On March 8, 1965, The City of Arlington, Kentucky (Applicant) filed in Docket No. CP65-271 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Trunkline) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Arlington, Kentucky, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Arlington and approximately two miles of 2.5-inch transmission lateral extending therefrom in an easterly direction to a proposed point of interconnection with Trunkline's main transmission system.

Applicant's estimated third year annual and peak day requirements are 39,898 Mcf and 524 Mcf respectively.

Total estimated cost of the proposed project is $105,000, and will be financed through the issuance and sale of Natural Gas Revenue Bonds.

Trunkline has filed no objection to the issuance by the Commission of an order as requested by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant, The City of Arlington, Kentucky, is a municipal corporation incorporated under the laws of the State of Kentucky and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in said city.

(3) It is necessary and desirable in the public interest that Trunkline be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 524 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Trunkline, as proposed, within one year from the date on which this order issues.

(5) The requirement that Trunkline serve Applicant, as proposed, will not place any undue burden upon Trunkline nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Trunkline Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 524 Mcf of natural gas to Applicant, all as hereinbefore described and as set forth in the application.

(B) Trunkline shall report to the Commission in writing the date of commencement of service to Applicant, within ten days thereof.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Trunkline, as proposed, within one year from the date on which this order issues.

(D) Trunkline shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITY OF BISMARCK, MISSOURI, DOCKET NO. CP65–254

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 22, 1965)

On February 23, 1965, the City of Bismarck, Missouri (Applicant) filed in Docket No. CP65–254 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Transmission

Corporation (Mississippi) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Bismarck, Missouri and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Bismarck, and approximately nine miles of 3½-inch transmission lateral extending in a northeasterly direction therefrom to a point of interconnection with Mississippi's main transmission system at Desloge, Missouri.

Applicant's estimated third year annual and peak day requirements are 71,050 Mcf and 716 Mcf respectively.

Total estimated cost of the proposed project is $255,000, and will be financed through the issuance and sale of gas revenue bonds.

On March 17, 1965, Mississippi filed its answer to the application, stating that it has no objection to the issuance by the Commission of an order as requested by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) Applicant is an incorporated community of the State of Missouri, and is legally authorized to construct and operate the proposed facilities and to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest that Mississippi be directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver up to 716 Mcf of natural gas per day to Applicant for resale and distribution as hereinbefore described, upon the terms and conditions of this order.

(4) The requirement that Mississippi serve applicant, as hereinafter ordered, will not place an undue burden upon Mississippi, require it to enlarge its transportation facilities, or impair its ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Mississippi for resale and distribution in Bismarck, Missouri within one year from the date on which this order issues.

The Commission orders:

(A) Mississippi River Transmission Corporation be and it is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver up to 716 Mcf of natural gas per day to Applicant as hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) Mississippi shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service from Mississippi as directed herein, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

BROWN COMPANY, DOCKET NO. E-7212

ORDER AUTHORIZING DISPOSITION OF FACILITIES

(Issued April 22, 1965)

Brown Company (Brown-Maine), a corporation organized under the laws of the State of Maine and authorized to do business in the States of Alabama, California, Florida, Illinois, Massachusetts, Missouri, New Hampshire, New York. Oregon and Vermont with its principal place of business at Berlin, New Hampshire, filed an application on March 16, 1965, with the Federal Power Commission, pursuant to Section 203 of the Federal Power Act, requesting authority for the sale of certain electric facilities to Brown-New Hampshire, Inc. (Brown-New Hampshire). By separate application of even date, Brown-Maine sought authority to transfer its hydroelectric licenses to Brown-New Hampshire.

Brown-Maine is an industrial corporation which is engaged primarily in the manufacture of wood pulp, paper, cellulose fibre products and plywood. The electrical facilities of Brown-Maine, which it wishes to dispose of, are located in Coos County, New Hampshire and are used to supply power to mills of the company in Gorham and Berlin, New Hampshire. According to the application, the company makes no sales of power at retail but, on occasion, sells secondary power on a split increment basis to the Public Service Company of New Hampshire. Brown-Maine owns and operates steam and hydro generating systems with associated facilities to connect its generating units to its industrial plants. Deliveries of energy generated by Brown-Maine to the Public Service Company of New Hampshire are made over the Brown-Maine system to a tap located on the 22 kv line which is part of the system between Gorham, New Hampshire and Berlin, New Hampshire.

Brown-New Hampshire, at present, neither owns nor operates any facilities, but when the proposed transfer becomes effective, it will own and operate the facilities of Brown-Maine described below without change in manner of operations.

The facilities to be transferred consist of three steam generators, one internal combustion plant, 15 miles of 22 kv lines, 72,850 kva of substation transformer capacity in 8 substations, and six hydroelectric generating plants, all of which are located in the State of New Hampshire. Four of the hydroelectric plants, Project Nos. 2300, 2311, 2326, 2327, are operating under Commission licenses. In a separate order issued concurrently herewith, *Brown Company and Brown-New Hampshire, Inc., Project No. 2300, et al., infra*, p. 845, the transfer of the licenses for these facilities from Brown-Maine to Brown-New Hampshire is approved.

According to the application, Brown-Maine plans to transfer the facilities to Brown-New Hampshire in return for all the Common Stock of Brown-New Hampshire. Brown-Maine represents that the depreciated original cost on its books as of November 30, 1964 of all the facilities to be transferred, including the generating plants, was $2,539,944. Applicant further represents that the value of the stock of Brown-New Hampshire to be issued to Brown-Maine on the transfer of facilities will equal the depreciated original cost of those facilities to Brown-Maine at the time of transfer and that no other consideration will be given for the transfer.

Brown-Maine represents that it is consistent with the public interest to transfer such of its properties as are used for the generation and distribution of electric energy to a wholly-owned subsidiary to which regulations pertaining to public utilities would be more nearly applicable, rather than to subject the entire Brown Company to public utility regulation. After the above described transaction is completed, Brown-Maine will no longer own or operate facilities subject to the jurisdiction of the Commission within the meaning of Section 203 of the Federal Power Act. According to the application, at the end of Brown-Maine's 1964 fiscal year, its total assets amounted to $60,354,117, of which only $2,539,944 represented electric facilities; but because it owns and operates an electric generation and distribution system, Brown-Maine is now subject to or may become subject to various provisions of state and federal regulatory statutes administered by regulatory commissions.

Written notice of the application has been given to the Public Service Company of New Hampshire and to the Governor of that State. Notice was also published in the Federal Register on March 27, 1965 (30 F.R. 4082), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before April 12, 1965, file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Brown-Maine, a corporation, owns and operates an electric system in New Hampshire which is interconnected with and sells electric energy generated in New Hampshire to Public Service Company of New Hampshire (Public Service). Some of this electric energy is transmitted by Public Service into and is consumed in states adjoining New Hampshire. Brown-Maine therefore owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated within the State of New Hampshire and consumed outside the state in which it is generated. Brown-Maine is, therefore, a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission.

(2) By the proposed transaction, as described above, Brown-Maine will dispose of facilities subject to the jurisdiction of the Commission within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) After the above-described transaction is completed, Brown-Maine will no longer own or operate facilities subject to the jurisdiction of the Commission within the meaning of Section 203 of the Federal Power Act.

(4) Upon the acquisition of Brown-Maine's facilities, subject to the Commission's jurisdiction, Brown-New Hampshire will become a public utility within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(5) The proposed disposition of facilities, as recited above upon the terms and conditions set forth in the application, subject to the provisions of this order, will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons stated above.

The Commission orders:

(A) The proposed disposition by Brown-Maine of the above-described facilities subject to the jurisdiction of the Commission, as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application, subject to the provisions of this order.

(B) Brown-New Hampshire shall record the proposed transactions and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions herein authorized and approved are consummated within 60 days from the date of issuance of this order.

(D) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

BROWN COMPANY AND BROWN-NEW HAMPSHIRE, INC., PROJECT NOS. 2300, 2311, 2326 AND 2327

ORDER APPROVING TRANSFER OF LICENSES

(Issued April 22, 1965)

Joint application was filed on March 16, 1965, pursuant to Section 8 of the Federal Power Act (Act) by Brown Company, a Maine corporation, and Brown-New Hampshire, Inc., a New Hampshire corporation for Commission approval of transfer of the licenses for the above-designated projects from the former to the latter. The licenses issued in Project Nos. 2300, 2311, 2326 and 2327 are all major licenses for constructed projects located in Coos County, New Hampshire, on the Androscoggin River, a navigable water of the United States.

The application is the result of a proposed transfer by Brown Company to Brown-New Hampshire of certain of its electric facilities in exchange for all of the authorized capital stock of Brown-New Hampshire, Inc. Commission authorization of this transaction has been granted by our order of even issuance date in Docket No. E-7212 *supra*, p. 843. Notice of this application for the transfer of license was given by publication in the Federal Register on March 27, 1965.

The Commission finds:

(1) The proposed transferee is a corporation organized under the laws of the State of New Hampshire, is domesticated in the State of New Hampshire, and has submitted satisfactory evidence of compliance with the requirements of all applicable state laws as necessary for the operation of Project Nos. 2300, 2311, 2326, and 2327.

(2) Approval of transfer, upon compliance with the conditions set forth herein, of the licenses for the projects designated in finding (1) above to the proposed transferee will not be inconsistent with the public interest.

The Commission orders:

(A) The transfer of the licenses for the projects designated in finding (1) above from Brown Company to Brown-New Hampshire, Inc. is hereby approved, effective as of the effective date of the transfer referred to above, subject to Section 9.3 of the Commission's Regulations under the Federal Power Act, and subject to the further condition that the net investment in the projects shall not be increased on account of the transfer: provided that the transferee shall be subject to the conditions and obligations of the licenses and to all of the provisions of the Act to the same extent as though it were the original licensee for the projects.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the licenses for the projects designated in finding (1) above by Brown-New Hampshire, Inc. In acknowledgment of the acceptance of such licenses, this instrument shall be signed for Brown-New Hampshire, Inc., the new licensee, and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

VILLAGE OF DAHLGREN, ILLINOIS, DOCKET NO. CP65–250

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 22, 1965)

On February 23, 1965, the Village of Dahlgren, Illinois (Applicant) filed in Docket No. CP65–250 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Trunkline) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Dahlgren, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Dahlgren and approximately 3.5 miles of 2-inch lateral extending therefrom in an easterly direction to a proposed point of interconnection with Trunkline's main transmission system in Hamilton County, Illinois.

Applicant's estimated third year annual and peak day requirements are 31,316 Mcf and 413 Mcf respectively.

The total estimated cost of the proposed project is $150,000, and will be financed with proceeds from the issuance and sale of gas revenue bonds.

Applicant states that as a municipal corporation incorporated under the laws of the State of Illinois, full authorization was given by action of the Village President and Board of Trustees, as approved by the electors, and that no other authorization is required.

Trunkline has filed no objection to the issuance by the Commission of an order as requested by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant, the Village of Dahlgren, Illinois, is a municipal corporation incorporated under the laws of the State of Illinois and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in said village.

(3) It is necessary and desirable in the public interest that Trunkline Gas Company be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 413 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive natural gas from Trunkline, as proposed, within one year from the date on which this order issues.

(5) The requirement that Trunkline serve Applicant, as proposed, will not place any undue burden upon Trunkline nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Trunkline Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 413 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Trunkline shall report to the Commission in writing the date of commencement of service to Applicant, within ten days thereof.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Trunkline, as proposed, within one year from the date on which this order issues.

(D) Trunkline shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

KANSAS-COLORADO UTILITIES, INC., DOCKET NO. CP65-263

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 22, 1965)

On March 2, 1965, Kansas-Colorado Utilities, Inc. (Applicant) filed in Docket No. CP65-263 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 7,500 feet of 2-inch lateral pipeline together with a metering station to enable Applicant to receive gas purchased from the Anadarko Production Company in the Hugoton Field, Hamilton County, Kansas, all as more fully set forth in the application.

The proposed gas purchase from Anadarko in said Hugoton Field will total approximately 100 Mcf daily, and will be at a price of 13.5¢ per Mcf (14.65 psia).

The cost of the proposed facilities is estimated to be $7,850 which will be defrayed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement thereto, and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Kansas-Colorado Utilities, Inc., a Kansas corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 24, 1945, in Docket No. G-577 (4 FPC 1026).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Kansas-Colorado Utilities, Inc., authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LAKE SUPERIOR DISTRICT POWER COMPANY, PROJECT NO. 2475

ORDER ISSUING LICENSE (MINOR)

(Issued April 22, 1965)

Application was filed on June 1, 1964 by Lake Superior District Power Company (Applicant) of Ashland, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2475, known as the Thornapple Hydro Plant, located on the Flambeau River, in Thornapple, Rusk County, Wisconsin. No lands of the United States are affected by the project.

The project dam was originally constructed in 1909 and in 1920 the spillway of planked sheeting was replaced with a concrete apron. Applicant acquired the project in 1928 and made substantial remodeling in that year. No substantial alterations to the project have been made thereafter.

Applicant does not believe a license is required for its project. However, Applicant requests that if a license is issued, it should have a current effective date. In a proceeding on an application for license filed by Dairyland Power Cooperative for Project No. 1960 on the Flambeau River, the Commission on November 17, 1949, found, among other things, that the Flambeau and Chippewa Rivers, together with the Mississippi River were used for a number of years as a highway for the floating and rafting of quantities of logs and lumber in interstate commerce, and that the Flambeau River, at least from a point above Project No. 1960, and the Chippewa River, at least from its confluence with the Flambeau River constitute navigable waters of the United States (8 FPC 1276, 1278). Project No. 1960 is located at mile 25.5 on the Flambeau and Project No. 2475 is located 17½ miles downstream therefrom.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, the conditions in the interests of fish and wildlife and recreation usually included in licenses for the type of project herein under consideration.

The Department of Health, Education, and Welfare has advised that pollution problems do not occur in the Flambeau River and it does not believe the operation of the Thornapple dam has a significant effect on water quality.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

By Article 13 herein we are requiring Applicant to file within one year from the date of issuance of this license a recreational use plan.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of November 1, 1949 and a terminating date of December 31, 1993.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for

the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,870 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Lake Superior District Power Company (Licensee) of Ashland, Wisconsin, under Sections 4 and 10(i) of the Federal Power Act (Act) for a period effective as of November 1, 1949 and terminating December 31, 1993, for the continued operation and maintenance of the Thornapple Hydro Plant Project No. 2475, located on the Flambeau River in Rusk County, Wisconsin and affecting navigable waters of the United States, subject to the terms and conditions of the Act, insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2475 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) project works consisting of: (1) a rock-filled timber crib dam 522 feet long, the westerly 157 feet containing the powerhouse and the remaining 365 feet being the spillway section; (2) twenty-two tainter gates with hydraulic gate lifters, twenty of which are 14 feet wide, one 17 feet wide, one 16 feet wide, and one of which is 8 feet 2 inches wide and 8 feet 5 inches high; (3) a storage reservoir of 295 acres extending 2 miles from the dam which operates under a normal head of 13.5 feet; (4) a powerhouse of brick construction 72 feet long, 30 feet wide and 25 feet high containing 2 generators rated at 700 kilowatts at 0.8 power factor connected to 2 turbines 1170 horsepower each; and (5) appurtenant facilities; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. For the purpose of reimbursing the United States for the costs of Administration of Part I of the Act the Licensee shall pay to the United States the following annual charges:

(i) From the effective date of the license, November 1, 1949, through March 31, 1962, $5.00 per annum; and

(ii) From April 1, 1962, $93.50 per annum.

Article 13. The Licensee shall, within one year from the date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

CITY OF WETMORE, KANSAS, DOCKET NO. CP64-177

ORDER ADOPTING INITIAL DECISION

(Issued April 22, 1965)*

Syllabus

1. Based upon new showing of economic feasibility, Commission *directs* Michigan Wisconsin Pipe Line Company under Section 7(a) of the Natural Gas Act, to establish physical connection of its facilities with those proposed to be constructed by applicant and sell natural gas to applicant. PP. 852, 855.

Albert J. Feigen for City of Wetmore, Kansas.

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Co.

Agnes Mae Wilson for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

This proceeding is before us on Examiner Arthur H. Fribourg's decision issued March 25, 1965, on an application by the City of Wetmore, Kansas for an order under Section 7(a) of the Natural Gas Act directing Michigan Wisconsin Pipe Line Company to establish a connection and to deliver and sell certain specified quantities of natural gas to serve a proposed municipal gas system. Applicant, Michigan Wisconsin and the staff are the only parties to the case.

The application was denied initially by the Examiner on the ground that the record did not show that the project as proposed would be economically sound. The denial was without prejudice to a further showing with respect to its feasibility. No exceptions were taken to that decision; instead, the City of Wetmore submitted additional evidence to meet the deficiencies cited by the Examiner. Based on this new evidence the Examiner has now recommended approval of the project. By letter to the Commission dated April 6, 1965,

---

*Initial decisions appear on pp. 852, 855.

Michigan Wisconsin, which earlier had challenged the economic soundness of the project, has stated that it does not except to the supplemental decision.

On our consideration of the evidence we conclude, as has the Examiner, that the record is now sufficient to support the claim of economic feasibility. The findings of the Examiner, and his conclusions based thereon, will be adopted by us as the decision of the Commission.

The Commission orders:

The decision issued in this proceeding by the Examiner on March 25, 1965, is hereby adopted by and as the decision of the Commission as of the date of issuance of this order.

SUPPLEMENTAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION UNDER SECTION 7(a) OF THE NATURAL GAS ACT

(Issued March 25, 1965)

FRIBOURG, *Presiding Examiner:* By decision dated September 22, 1964, the Presiding Examiner denied the application of the City of Wetmore for an order directing Michigan Wisconsin Pipe Line Co. to establish a physical connection with a lateral which the city proposed to construct to serve a proposed municipal gas system, to deliver and sell to the city the gas requirements of the proposed system, and to construct a portion of the lateral in accordance with the pipeline's so-called "10¢ formula".

The order embodied in the September 22 decision suggested that the city be permitted a chance to offer "further evidence in support of the economic and financial feasibility" of the project, mainly because the record was insufficient with respect to the probable future use of gas and the relation of the cost of the project to the size of the bond issue. No exceptions were taken to that decision.

The Commission, in accordance with the suggestion so submitted, allowed the city to come forward with additional evidence, which has now come in. No participant objects to the receipt of the proffered evidence or requests any further hearing.

The record is reopened for the purpose of receiving the following evidence:

Final revisions to Exhibit No. 1.
  Sheet F, page 2
  Sheet G, pages G-1 and G-2
  Sheet X-1
Revised Exhibit No. 2
Final revisions to Exhibit No. 3
  Sheet I, pages 1 through 5
  Sheet K
  Sheet N, pages 1, 2 and 3
Exhibit 11 Folder, "Survey Sheets, etc."
Exhibit 12 Map—Diagrams of City of Wetmore.

In addition, the Presiding Examiner designates the following as items by reference to the files of the Commission:

Item D Letter, February 18, 1965, from Charles V. Shannon, counsel for intervener, to Presiding Examiner

Item E Letter, March 17, 1965, from Louis Flax, counsel for intervener, to Presiding Examiner

The new evidence (Exh. 1, p. 1) reiterates the city's original claim of 220 potential customers, based on a new survey of the community. Included among the 220 were 156 who made deposits and who signed agreements to convert their heating systems to natural gas and to buy natural gas from the city in the event that it becomes available. The survey showed, person by person, 170 potential residential customers, 48 potential commercial customers, and 2 schools. The figures showing the number of potential customers were disputed at the hearing, but the pipeline does not now seek to controvert any of the new evidence in which they are contained. The city's new evidence shows the potential and estimated number of customers as follows:

	Potential	Year of operation—estimated number of customers		
		1st	2d	3d
Residential	170	126	134	140
Commercial	48	28	31	34
Schools	2	2	2	2
Total	220	156	167	176

In the light of the new evidence, the Examiner now accepts the estimate of 220 potential customers.

The staff, in its comments on the new evidence, estimates the number of potential customers at 127 residential, 28 commercial and 2 schools, and it uses these figures as its estimate of the probable number of customers for the first year and each year thereafter. Its calculations thus are based on the assumption that every potential customer will sign up at the beginning of the first year and that there will be no subsequent change. The estimate is derived from its count of the agreements signed by those who have agreed to take gas from the city and have paid deposits. Nothing is allowed for any possible future growth, despite the staff's own comment that "It appears reasonable to expect some increases," and despite the showing that there are numerous properties not included in the initial load which may add to it in future years.

The staff questions the propriety of including the two schools, pointing out that "the commitments for the schools are signed only by the school principal." The Examiner disagrees with the staff in this regard, seeing no reason to go behind the written agreements of persons whose position commands respect and betokens responsibility.

The city estimates that by the third year 176 customers, or 80 percent of the potential, will be connected to the system. This is the same percentage as found by the Presiding Examiner in his first decision. The percentage there found was unchallenged. Upward revision in the first and second years (from 50 percent and 65 percent to 70 percent and 76 percent, respectively) is justified by the signed agreements, but is in any event not of major consequence in relation to the thirty-year term of the proposed bond issue.

Since 156 customers have made deposits, and since 23 more owners have stated that the need for gas exists, though they did not wish to pledge themselves at the time of the survey to connect to the system, and since there are 40 more potentially gas-using properties whose owners were not reached by those making the survey, it is found as a fact that the city's estimate of the number of customers as given in the table shown above, is a reasonable one.

The principal deficiency in the city's proof which the Examiner found in his September 22 decision was in the failure to show that the prospective customers would use gas for space heating. It was generally assumed that they would, but the Examiner, for reasons stated, refused to accept that assumption. Examination of the agreements of the persons who have agreed to connect with the proposed system during the first year shows that with a single exception—a new house which will use gas for standby purposes only—everyone signing such an agreement with respect to a residential property has agreed to use gas for space heating. The same is true of the commercial customers with two minor exceptions. The agreements show, moreover, that these signatories were informed of the cost of changing over. The Examiner therefore accepts the city's position as to the probability of changeover, and for that reason is now able to accept the city's estimate of probable average annual use per customer, which is 135 Mcf for residential and 167 Mcf for commercial. Applying these figures to the estimated number of customers shown in the tabulation on page 853 of this decision, the estimated annual consumption is as follows:

	1st year	2d year	3d year
Residential	17,010	18,090	18,900
Commercial	4,676	5,177	5,678
Schools	4,300	4,300	4,300
	25,986	27,567	28,878
Unaccounted for (estimate)	814	833	922
Total Annual Requirements	26,800	28,400	29,800

The third year maximum daily requirement is 329 Mcf.

Based on a minimum charge of $2.50 for the first Mcf each month and 75 cents per Mcf above that, gross revenues would be $22,766 in the first year, $24,182 in the second year and $25,355 each year thereafter. Accepting the city's unchallenged estimates of administrative and distribution expenses[1] and allowing 45 cents per Mcf for the cost of purchased gas, the net revenues of the project available for service of the proposed 30-year 5 percent bond issue would be $8,219 in the first year, $8,852 in the second year and $9,334 in the third year. Interest on the bond issue would be $4,000 for each of the first two years, after which amortization would begin and the total of interest and amortization would vary between $4,900 and $5,950 in each year. The proposal now involves a bond issue of $80,000 by the city instead of the $90,000 contemplated in the proposal heretofore rejected by the Examiner and the Commission. Over the 30-year life of the issue as so reduced, debt service would be covered 1.75 times.

The "10-cent formula" which, all participants agree, is applicable here if the project is approved, would call for an investment of $19,867 by the pipeline, based on an estimated third-year demand of 29,800 Mcf. The formula calls for multiplying the estimated third-year sales (number of Mcf) by 10 cents and dividing the result by 15 percent, which gives the total amount of dollars the pipeline will spend on the lateral. In the present instance, the pipeline would construct 0.92 miles of line, assuming a construction cost of $21,500 per mile.

Economic feasibility was the sole issue raised in the proceeding, and insufficient proof was the sole reason for rejection of the proposal in the decision of September 22. The pipeline does not object to the additional evidence now received, but maintains its original position that the project is not feasible. The Examiner disagrees. In his view, the record now contains sufficient support for the claim of feasibility.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that:

---

[1] Administrative: first year, $1,387, second year, $1,400, third year, $1,411; distribution, first year, $1,100, second year, $1,150, third year, $1,200.

(1) Michigan Wisconsin Pipe Line Company is a natural-gas company within the meaning of the Natural Gas Act and is subject to the jurisdiction of this Commission.

(2) The City of Wetmore, Kansas, is a municipality legally authorized to engage in the local distribution of natural gas to the public.

(3) The distribution system proposed by the applicant, including the proposed lateral, is immediately adjacent to Michigan Wisconsin Pipe Line Company's transportation facilities and to territory served by that company.

(4) No undue burden would be placed on Michigan Wisconsin Pipe Line Company by requiring it to construct a portion of the lateral as herein provided, and such extension of its facilities, and the sale of natural gas by it to the City of Wetmore as herein provided, are in the public interest and will not impair the pipeline's ability to serve its customers.

ORDER

IT IS ORDERED, that the application of the City of Wetmore be, and it hereby is, granted, and that Michigan Wisconsin Pipe Line Company extend its transportation facilities and establish physical connection of such facilities with the facilities to be constructed by the City of Wetmore, and it is further

ORDERED, that said city be prepared to receive natural gas service from Michigan Wisconsin Pipe Line Company within one year from the date of this order, and it is further

ORDERED, that Michigan Wisconsin Pipe Line Company sell and deliver to said city the volumes of natural gas required to meet the third year maximum daily requirement of 329 Mcf, and it is further

ORDERED, that the extent of the required lateral facilities to be constructed and operated by said pipeline company shall be as determined by its "10-cent formula" as hereinabove set forth, and it is further

ORDERED, that said pipeline company shall report to the Commission in writing the date of commencement of service to the City of Wetmore.

ARTHUR H. FRIBOURG,
Presiding Examiner.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION UNDER SECTION 7(a) OF THE NATURAL GAS ACT

(Issued September 22, 1964)

FRIBOURG, *Presiding Examiner*: The subject of this proceeding is an application by the City of Wetmore, Kansas, (City), for an order under Section 7(a) of the Natural Gas Act directing the Respondent-Intervenor, Michigan Wisconsin Pipe Line Company, (Michigan-Wisconsin), to establish a physical connection with a lateral which the city proposes to construct to serve a proposed municipal gas system, to deliver and sell to the city the gas requirements of the proposed system, and to construct a portion of the lateral in accordance with the pipeline's so-called "10¢ formula." As remarked in *Village of Greenup, Illinois, et al.*, 30 FPC 28, 32:

> **In determining whether such service is necessary or desirable in the public interest, it is the responsibility of the Commission to satisfy itself whether the pipeline company is the applicants' most appropriate source of supply, whether there is a public need for gas service, and a benefit to be derived therefrom in the applicant's community, whether the proposed service can be financed, and whether it is economically sound.**

As to most of these matters there is no issue. The intervenor is obviously the most appropriate source of gas because, as the record shows, the use of either of the two other possible sources would necessitate bringing gas more than three times the 3.85-mile distance here involved. The city's witnesses, including the mayor, testified to the public need for gas service, and a large proportion of the population signed a request that they be supplied with such service. The estimate of the cost of the project is supported by a construction contract, and bond financing has been contracted for in a sufficient amount with a firm long engaged in this type of security flotation. The pipeline's gas supply is fully adequate to meet this small additional demand. The issue here relates to the economic soundness of the project, which is challenged by the intervenor.

The city has a population of approximately 400. The evidence conflicts as to the number of potential residential and commercial customers. The applicant claims 220 potential customers, the pipeline's evidence indicates 197 buildings, of which 159 are residential and 36 commercial, plus two schools, and appears to assume that there is one potential customer per building.

Staff's estimate is based on a portion of the 1963 report (FPC Form 1, page 410-5) of Kansas Power & Light Company, Wetmore's supplier of electricity. That evidence shows 142 as the average number of residential customers and 45 as the average number of commercial customers served with electricity in 1963. If this be taken as a reasonable guide to the number of potential customers the total would be 187. To this, eight should be added, four for electric customers served by an R.E.A. cooperative and four for additional gas meters to serve buildings now served by a single electric meter, making a total of 195. The item of evidence on which this calculation is based was introduced by the pipeline, and the applicant concurs in staff's calculations made from it. Staff classifies the 195 as 161 residential, 32 commercial and two schools. The Examiner finds that this is a reasonable estimate of the total number of potential customers, and of their classification.

The next difference among the parties concerns the percentage of saturation of the potential market which may reasonably be expected. The applicant estimates that 50 percent of the potential residential and commercial customers will be attached in the first year, 70 percent in the second year and 90 percent in the third year. The pipeline's estimate is 50 percent in the first year, 60 percent in the second year and 70 percent in the third year. Staff accepts the applicant's figures.

The applicant's engineer testified that in the projects with which he has been connected and which are in operation there have been attachments of 75 percent to 80 percent the first year and 95 percent to 97 percent in the third year. Later he stated that 50-percent-70-percent-90-percent was "a fair estimate of the number of hook-ons that we will have in those years" based on past experience. His figures were not supported by any work sheets and no over-all presentation was made to show the details of his experience with like systems. His statement was supported, however, by a document signed by residents of the town stating that they would connect to the proposed system during its first year. The document indicates 157 connections, or some 80 percent of the 195 potential customers.

The pipeline's witness testified in support of a 50-percent-60-percent-70-percent saturation ratio for the first three years and cited Maitland, Missouri, as a community comparable to Wetmore. Maitland, like Wetmore, has no industry, and includes many retired persons among its inhabitants. It is of comparable size. After seven years of natural gas service 67 percent of its residential buildings and 50 percent of its commercial buildings are connected. Consumption was somewhat lower in the latest year than during the third year of service.

This witness also gave figures relating to eight customers in Missouri and Iowa—two towns in Missouri plus one company serving three small communities in that state, and five towns in Iowa. In only one case did the actual third-year residential connections reach a 95 percent level, the others ranging from 40 percent to 82 percent of the estimated potential. In the ten communities, 56 percent of the 5,530 potential residential customers had connected by the end of the second year of service, and 63 percent by the end of the third year. (The first-year figures were incomplete.)

Wetmore has shown little, if any, growth. There is some record evidence of residences having been added in the past few years, but the census figures over the longer term have been: 1930, 452 persons; 1940, 425; 1950, 397; 1960 390. There is no showing that the third-year connections are likely to exceed the 80 percent of potential shown by the document referred to above which was signed by the town residents and which indicated 157 requests for service. The long-term growth which might cause a long-term rise in customers seems to be lacking. The Examiner, accepting the estimate of applicant's engineer for the first year, finds, based on all the evidence of record, that the proposed system may be expected to connect 50 percent of the potential customers in the first year, 65 percent in the second year and 80 percent in the third year, as follows:

	1st year	2d year	3d year
Residential	81	105	129
Commercial	16	21	26
Schools	2	2	2

Further differences between the parties arise with respect to the average use to be expected from the prospective customers. The applicant estimates an average annual use of 135 Mcf for residential customers and 167 Mcf for commercial customers. The residential estimate consists of 105 Mcf for space heating and 30 Mcf for general use. The 105 Mcf for space heating is based on the amount used by an average five-room house and it is assumed that all customers would use that amount, on the average, for space heating.

The Examiner is unable to accept this unsupported assumption. The agreement by prospective customers to connect with the proposed system is not the same as an agreement to use gas for space heating. It is reasonable to suppose that a householder now using LP gas for cooking and general use would prefer the reliability of natural gas, but it does not follow necessarily that he would throw out an oil-burning, or even a coal-burning, heating system and make the substantial investment necessary to convert to natural gas for space heating. Even granting that natural gas is cheaper, it seems probable that some persons will refrain from converting, either because of inertia, or unwillingness to spend the money, or for other reasons. To be shrewd and rich makes for economical living, but not everyone behaves as though he were so favored. It is even possible that some people, though switching to natural gas for cooking, will find their present space heating arrangements sufficiently economical and quite satisfactory. The mayor of the city testified that he would spend six or seven hundred dollars to supersede his present oil-burner with natural gas from the proposed system even though his savings would be only $22.50 per year.[1] He conceded, however, that others might be more disposed to compare the investment with the potential savings, but thought that this would not be the general rule. In such a community as Wetmore, which has a large proportion of retired people, it would not be surprising to encounter some reluctance to making a long-term capital investment.

---

[1] Revised evidence submitted after he testified indicates that the saving would be $32.31 per year.

Staff accepts the assumption of a complete changeover and the intervener's brief makes no special point of the matter, merely alluding to it in passing. The Examiner considers that an important hole has been left in the applicant's proof.

The testimony of the pipeline's market witness, Mr. Merton W. Lincoln, though not specifically addressed to this point, indicates that such an assumption was not made when the pipeline was estimating probable demand in the Missouri and Iowa communities previously referred to. In both Bethany, Missouri, and Stansberry, Missouri, where it was estimated that 75 percent of the potential residential customers would be connected by the end of the third year, only 80 percent of that 75 percent were expected to be space heating customers. In Allerton, Iowa, expected residential connections were 74 percent of the potential and only 64 percent of that 74 percent were expected to be space heating customers. In New London, Iowa, 91 percent were expected to connect and only 59 percent of that 91 percent were expected to take gas for space heating.[2] On the other hand, the same pipeline witness stated that in Maitland, Missouri, which was described as comparable to Wetmore, all natural gas customers were space-heating customers, but that was in the seventh year of service in that community. Without drawing any conclusions from these figures with respect to Wetmore, the Examiner believes that the absence of such presentation by the applicant may have resulted in a serious overstatement of the potential market.

The record is bare of material with which the hole could be patched,[3] and even were we to make the assumption made by the parties, it does not appear that the project meets the Commission's standards of feasibility. Using average annual consumption factors of 135 Mcf for residential and 167 Mcf for commercial, which the applicant and the staff use in their calculations but which the Examiner finds have not been adequately proved, the annual requirements would be:

	1st year	2d year	3d year
Residential	10,935	14,175	17,415
Commercial	2,672	3,507	4,342
Schools	4,300	4,300	4,300
	17,907	21,982	26,057
Unaccounted for (3%)	537	659	782
Total annual requirements	18,444	22,641	26,839

The foregoing requirements would produce revenues as shown below, which compare with gas costs, at 45 cents per Mcf, and other expenses, as shown by the applicant, as follows:

---

[2] The actual third-year in two of these communities exceeded, and in two it fell below, the estimates of total connections, but we are not informed of the showing as to space heating customers.

[3] Compare *Village of Franklin, Illinois*, 17 FPC 118, 120, where the prospective customers made written commitments to take specified services, *i.e.*, cooking, water heating and space heating, should natural gas become available, and where the information from each prospective household customer was much more complete than anything in the present record.

	1st year	2d year	3d year
Gross revenue:			
Residential (a)	$9,902	$12,836	$15,770
Commercial (b)	2,340	3,072	3,803
Schools	3,256	3,256	3,256
Total	15,498	19,164	22,829
Operating expenses:			
Cost of gas at 45¢	8,300	10,188	12,078
Administrative expenses	1,340	1,390	1,448
Distribution expenses	1,100	1,150	1,200
Total	10,740	12,728	14,726
Net revenue	4,758	6,436	8,103

(a) Based on an average bill of $122.25 per customer, Exh. 3-I.
(b) Based on an average bill of $146.27 per customer, as indicated in Exh. 3-I (number of customers) and 3-N (commercial revenues).

The foregoing figures indicate a net revenue of $238,078 over a 30-year period. This is the presently-proposed term of the bond issue.[4] Principal and interest over this term would be $179,400, indicating a debt service coverage of 1.33 times. When it is considered that this is overstated to the extent that any of the customers may purchase only for general use and not for space heating, the margin appears too narrow for reasonable safety.

In this connection the considerations set forth in *Village of Franklin, Illinois, supra*, 17 FPC at p. 123, are well worth noting:

> In passing upon the economic feasibility of a natural-gas service project, no fixed rule or set formula can be applied arbitrarily. The feasibility of the project is dependent upon a number of physical, financial, and economic factors, each of which works as an influence to a greater or lesser extent. All of these factors are to be weighed. A deficiency of one feature may perhaps be compensated for by the adequacy of another, so that a project in its broad perspective stands to be successful and to be desirable from the standpoint of the public affected thereby. Also, the force to be accorded an objection to a project may involve countervailing considerations. Again, it must be recognized that engineering evidence cannot ordinarily be perfected to such a degree as completely to be above adverse comment or criticism, and that exact conformance of estimates with subsequent actualities is an ideal circumstance of coincidental occurrence.
>
> At the same time, the basic essentiality of reliable, detailed evidence to support proposals advanced before this Commission is not to be minimized. Particularly is such evidence required where, as here, the projects under consideration are confronted initially with a limited economic potential. Uncertainties in the evidence, and features of a project which are patently weak, assume greater importance where there are no decidedly strong factors to offset these shortcomings. Of special significance are the reasonableness of the judgment factors used in the preparation of an engineering estimate and the effects of these factors in the proposal in its entirety. For it is axiomatic that the reliability of an estimation—be the estimate one of pipeline capacity required, construction cost or peak market demands—must rest upon the soundness of the judgment factors involved. A showing may be so remiss in one essential feature of judgment as to mean that the project would likely prove to be fatally defective.

---

[4] Originally a 20-year bond issue was proposed, but in its reply brief the applicant suggested a lengthening of the term, which had previously been lengthened to 25 years, by an additional 5-year period to 30 years.

It is generally considered that a debt-coverage ratio of 1.5 is required in order to make a showing of economic feasibility where the engineering estimates are reasonably reliable, *Panhandle Eastern Pipe Line Co.*, 15 FPC 1421, 1427-8. In the instant case, certain figures presented by the applicant's engineer did not stand up under cross-examination of the sponsoring witness, who found it necessary to offer substitute presentations for several of the most important exhibits. Upon further examination, inaccuracies were shown in the substituted figures. Neither the original exhibits nor the substitute ones were supported by work papers. On the whole, the presentation was not such as to inspire the firmest confidence in the applicant's engineering estimates.

The applicant found it necessary to increase the term of the proposed bond issue, first from twenty to twenty-five years and then (after the close of the hearing) to thirty years in order to be able to show a 1.5 coverage. Thirty years is the maximum permitted by Kansas law. Although the original proposal contemplated retirement of the entire $90,000 bond issue in twenty years, the suggested retirement schedule submitted with applicant's brief, and received as Exhibit 10, contemplates that more than half of the issue would be outstanding beyond that period. The census figures showing a slow decline in population since 1930 tend to cast doubt on the soundness and desirability of so long a debt having so low an earnings coverage where the evidence of the coverage is so questionable.

The Examiner observes that the project has been contracted for, subject to Commission approval, for over $10,000 less than the estimated cost shown in the application, but that this apparent saving has not resulted in any cut in the size of the bond issue.

An issue was also raised in the pipeline's answer, but not explored at the hearing, as to whether the pipeline would install regulating facilities or would deliver gas at line pressure. The record does not show what the cost of such facilities would be or who would bear it.

In the light of the record as a whole, as it now stands, the Examiner is unable to find that the applicant has shown its proposal to be necessary or desirable in the public interest. It may be, however, that such a showing could be made, either on the basis of the system as presently proposed or on the basis of a redesigning so as to require a smaller bond issue and consequent better coverage. Any new showing should cover not only the matters already discussed but also the cost of the project and the pipeline's share of that cost. Issues as to this were mentioned in the staff brief but were not gone into because staff felt that other deficiencies made such a discussion unnecessary.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that:

(1) Michigan Wisconsin Pipe Line Company is a natural-gas company within the meaning of the Natural Gas Act and is subject to the jurisdiction of this Commission.

(2) The City of Wetmore, Kansas, is a municipality legally authorized to engage in the local distribution of natural gas to the public.

(3) The distribution system proposed by the applicant, including the proposed lateral, is immediately adjacent to Michigan Wisconsin Pipe Line Company's transportation facilities and to territory served by that company.

(4) No undue burden would be placed on Michigan Wisconsin Pipe Line Company by the granting of the application except in respect to the economic feasibility of the proposed construction.

(5) The applicant has failed to show that the granting of the application is necessary or desirable in the public interest, in that it has failed to show that the proposal is economically feasible.

ORDER

IT IS ORDERED, that the application of the City of Wetmore be, and it hereby is, denied, without prejudice, however, to the filing of any other and different application, and it is further

ORDERED, that if the applicant desires an opportunity to present further evidence in support of the economic and financial feasibility of the present application, it shall, within 20 days from the date of this order, file a statement with the Commission making known such desire and stating fully the nature of the evidence it wishes to present. Any such statement shall be served on the other participants not later than the time of filing, and they may answer it within ten days of service.

ARTHUR H. FRIBOURG,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP65-276

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On March 8, 1965, American Louisiana Pipe Line Company (Applicant) filed in Docket No. CP65-276 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the one-year period commencing June 12, 1965, and operation of routine gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and existing supplies of natural gas in producing areas generally coextensive with its system.

The total cost of the facilities covered by this application will not exceed a maximum of $2,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed with funds from internal sources.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 1, 1954, in Docket No. G-2306, *et al.* (13 FPC 380).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) The authorization hereinafter granted should be limited to construction during the one-year period commencing June 12, 1965, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, American Louisiana Pipe Line Company, to construct during the one-year period commencing June 12, 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the one-year period commencing June 12, 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP65-256

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On February 24, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP65-256 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities necessary to sell and deliver natural gas, on an interruptible basis, to two industrial customers, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate approximately 16,000 feet of 4-inch lateral line from its 18-inch Line "A" to the site of the plant of Robbins Products, Inc. (Robbins) near Prescott, Nevada County, Arkansas, together with the necessary metering and regulating facilities. Applicant and Robbins have entered into a contract, dated January 28, 1965, providing for the proposed sale. Robbins will utilize up to 3,000 Mcf per day and approximately 600,000 Mcf annually as fuel gas for the manufacturing process of vinyl floor coverings and associated products.

Applicant also proposes to construct and operate 3,000 feet of 2-inch lateral line from its 10-inch Line "KT-1" to the site of the plant of Great Lakes Chemical Corporation (Great Lakes) near El Dorado, Union County, Arkansas, together with the necessary metering and regulating facilities. Applicant and Great Lakes have entered into a contract dated January 11, 1965, providing for the proposed sale. Great Lakes will utilize up to 1,100 Mcf per day and approximately 360,000 Mcf annually as fuel gas and raw material in the manufacturing process of bromines and allied products.

The total estimated cost of all of Applicant's proposed facilities is $47,540, which cost will be financed with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G-252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the

services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter is granted on the express condition that the interruptible service authorized should be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Arkansas Louisiana Gas Company to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the proposed transportation and delivery of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP65-253

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

Florida Gas Transmission Company (Applicant) filed an application on February 23, 1965, in Docket No. CP65-253, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 6.63 miles of 6⅝-inch O.D. lateral pipeline for the transportation and delivery of natural gas to a direct interruptible customer, Central Phosphates, Inc., in Hillsborough County, Florida, all as more fully set forth in the application.

Applicant proposes to construct and operate the said facilities to deliver to

Central Phosphates up to 1,500 Mcf of natural gas daily and up to 400,000 Mcf annually on a so-called preferred interruptible basis under the terms of a contract between the Applicant and Central Phosphates dated January 28, 1965.[1] The natural gas will be used as fuel in the processing of phosphate-bearing rock and ammonia in the manufacture of phosphatic fertilizer in Central Phosphates' plant.

The estimated cost of the facilities necessary to the transportation and delivery of the proposed volumes of natural gas to Central Phosphates is $147,700, which will be defrayed from Applicant's current funds.

The natural gas requirements of Central Phosphates' plant will be subject to curtailment when necessary to meet the Applicant's firm service requirements. An appropriate condition to provide for such curtailment will be attached to the certificate issued in this proceeding.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 3, 1963, in Docket No. CP63-277 (30 FPC 27).

(2) The proposed construction and operation of facilities and transportation of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate be granted on the express condition that the interruptible service authorized herein should be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

---

[1] The contract provides for a rate of 40.0 cents per Mcf.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued in paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black

HASSIE HUNT TRUST, CI65–596; HUNT OIL COMPANY, CI65–597; PLACID OIL COMPANY, CI65–598

ORDER GRANTING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On December 24, 1964, Placid Oil Company (Placid), Hunt Oil Company (Hunt) and Hassie Hunt Trust (Trust) filed applications, as supplemented on March 5, 1965, pursuant to Section 7 of the Natural Gas Act for authorization to sell to American Louisiana Pipe Line Company (American-Louisiana) natural gas produced from certain acreage located offshore Louisiana and to transport and deliver this gas to American-Louisiana at a specified delivery point on-shore in Saint Mary's Parish, Louisiana.[1]

Under the terms of the application American-Louisiana is required to pay the aforementioned producers 19 cents for each Mcf of gas taken pursuant to this agreement during the first five year period following the date of initial delivery. The agreement between the producer-applicant and the pipeline purchaser also provides that the base price of 19 cents per Mcf shall be increased 1 cent per Mcf at the beginning of each of the Second, Third and Fourth five-year periods following the period of initial delivery. These prices include present taxes, but American-Louisiana is to reimburse the producer applicants for 50 percent of any new or additional taxes.

The contract contains a proportional downward Btu adjustment provision from a base of 1000 Btu per cubic foot, but contains no provision for an upward Btu adjustment.

The daily contract quantity for the 1st three years from the date of initial delivery is as follows:

Year after initial delivery:	*Contract daily quantity Mcf*
1st	25,000
2d	50,000
3d	75,000

---

[1] Under the terms of a contract dated June 25, 1964, Placid, Trust and Hunt dedicated the natural gas reserves underlying Blocks 62, 63, 76, 77, 198, 199, 202 and 203 in the Eugene Island Area, Off-shore, Louisiana, to American-Louisiana.

After the end of the above-noted third (12) month period, the daily contract quantity shall be the quantity equal to one millon (1,000,000) cubic feet for each eight billion (8,000,000,000) cubic feet of reserves. The contractual arrangements between the parties also make provisions for periodic reserve redeterminations. However, the pipeline purchaser is afforded the option of limiting its takes predicated upon a redetermination ceiling fixed at six hundred billion cubic feet of natural gas. In the event that American-Louisiana decides not to take volumes that can be predicated upon a redetermination that estimates the reserves in excess of six hundred billion cubic feet, the additional take that would correspond to this excess must be released by American-Louisiana and the applicant-producers are free to sell this amount of gas to another purchaser.

The contract also contains take or pay provisions predicated upon 90 percent of the cumulative annual contract quantity; however, the purchaser can make up volumes that it has paid for but not taken over the life of the contract. Buyer may request and seller agrees to deliver 135 percent of the daily contract quantity. In the event that the seller fails to meet the above obligation, the daily contract quantity may be redetermined.

The producer-applicants request authorization to construct facilities capable of transporting a maximum daily capacity of approximately 200,000 Mcf of gas and 10,000 barrels of oil from the Block 77 and Block 198 Fields, Eugene Island Offshore, Louisiana, to a specified point in Section 48, Township 15 South, Range 11 East, Saint Mary's Parish, Louisiana. The producer-applicants propose to construct a two phase 20-inch diameter pipeline 76 miles in length in order to transport the aforementioned production from its offshore platforms to the specified delivery point in Saint Mary's Parish, Louisiana.

The initial base price requested by the producer-applicants herein is 19 cents per Mcf. In *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, Opinion No. 436, 32 FPC 254, issued on July 23, 1964, the Commission found that its prior determination that the in-line initial price of 18.5 cents per Mcf should apply to Offshore Louisiana was proper. In its Opinion No. 437, *The Superior Oil Company*, Docket No. G–6067, 32 FPC 241, issued on the same date, the Commission refused to certificate a sale at a premium of 1.5 cents over the in-line price by reason of the producers transporting the gas some 28 miles to the pipeline on shore instead of making the sale at the off-shore platform.

The circumstances underlying the instant proceedings are not comparable to those relating to Superior. The pipeline to be built is more than two and a half times as long as that contemplated in the Superior case and the price exceeds the normal in-line price by only ½ cent; unlike the situation with Superior we have here a very real question of whether the gas would be dedicated to interstate commerce if a pipeline had to go to the expense of bringing it ashore. We are of the opinion that the initial lease price of 19 cents per Mcf reflected in the purchase gas contract between producer-applicants and American-Louisiana is not out of line with the 18.5 cent price we found to be the appropriate in-line price for sales on the Outer Continental Shelf not involving such major transportation activities by the producer. The Commission will allow this same initial base price to producers having production in such distant offshore fields but who as part of the transaction agree to transport the gas for substantial distances for delivery to a pipeline on shore.

The Commission finds:

(1) Hassie Hunt Trust, Placid Oil Company, and Hunt Oil Company are "natural-gas companies" within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas by Hassie Hunt Trust, Hunt Oil Company, and Placid Oil Company are subject to the jurisdiction of the Commission and such sales, together with the construction and operation of any facilities necessary therefore are subject to the jurisdiction of the Commission.

(3) The sale proposed by Hassie Hunt Trust, Hunt Oil Company and Placid Oil Company, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission and necessary therefor, are required by the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(4) The facilities described above will be used for the transportation of gas in interstate commerce and their construction and operation are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Hassie Hunt Trust, Hunt Oil Company and Placid Oil Company are able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act and the rules and regulations thereunder.

(6) The proposed construction and operation of facilities and transportation proposed by Hassie Hunt Trust, Hunt Oil Company, and Placid Oil Company is required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to Hassie Hunt Trust, Hunt Oil Company, and Placid Oil Company for the sale of natural gas in interstate commerce for resale as proposed in their applications together with the construction and operation of any facilities subject to the jurisdiction of this Commission, all as herein described. The certificates issued by this paragraph are not transferable and shall be effective only so long as Hassie Hunt Trust, Hunt Oil Company and Placid Oil Company continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission and shall be accepted in writing and under oath within thirty days after the issuance of this order.

(B) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

LONE STAR GAS COMPANY, DOCKET NO. CP64-268

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On March 11, 1965, Lone Star Gas Company (Applicant) filed a motion to amend the certificate of public convenience and necessity issued in Docket No. CP64-268 on August 10, 1964, 32 FPC 569, by enlarging to a maximum of 6,000 Mcf of natural gas per day the authorization for the transportation, sale and delivery to Applicant's existing customer, Dierks Forests, Inc. (Dierks), at its insulation board manufacturing plant near the town of Broken Bow, Oklahoma, as set forth more fully in the application.

The certificate issued by the Commission on August 10, 1964, authorized Applicant to deliver and sell up to 4,740 Mcf of natural gas per day to Dierks and to construct and operate facilities through which such gas would be delivered. Dierks has recently expanded its plant to two and one-half times its former production capacity and has requested Applicant to supply natural gas in volumes up to 6,000 Mcf per day. The gas will be used for the same purposes as initially proposed, which are for processing, space heating and as fuel in a gas fired boiler. No additional gas sales facilities will be constructed by Applicant as a result of this increase.

Due notice of the filing of the motion to amend was published in the Federal Register on March 25, 1965 (30 F.R. 3892). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order in Docket No. CP64-268 issued August 10, 1964, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order in Docket No. CP64-268 issued August 10, 1964, be and the same is hereby amended by increasing the authorization granted to Lone Star Gas Company to transport and deliver on an interruptible basis, up to a maximum of 6,000 Mcf of natural gas per day to Dierks Forests, Inc.

(B) The certificate of public convenience and necessity, as amended herein, is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contract maximum delivery obligations of Lone Star Gas Company for firm service to its customers.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

THE MANUFACTURERS LIGHT AND HEAT COMPANY, DOCKET NO. CP65-264

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued April 23, 1965)

On March 2, 1965, The Manufacturers Light and Heat Company (Applicant) filed in Docket No. CP65-264 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain other facilities, all as more fully set forth in the application.

Specifically, Applicant seeks permission and approval or authorization to: (1) construct and operate 3.03 miles of 12-inch pipeline in Lawrence County, Pennsylvania, replacing approximately the same length of 8-inch pipeline; (2) abandon Compressor Units Nos. 1 and 4 totaling 1,000 horsepower at its existing 2,000 horsepower Ellwood City Compressor Station in Beaver County, Pennsylvania; (3) abandon 15.48 miles of 8-inch transmission line in Adams and York Counties, Pennsylvania; and (4) abandon .93 miles of 10-inch transmission line in Marshall County, West Virginia.

Abandonment of the aforementioned pipeline is required due to the age and deteriorated condition thereof, and such abandonment will not impair Applicant's ability to provide service to its customers since it has other lines which will transport the gas formerly transported by the lines to be abandoned. The compressor units to be abandoned are no longer needed since Applicant's pressure requirements can be met from existing line pressures and from the remaining compressors at the Ellwood City Station. The greater portion of all facilities to be abandoned or replaced will be salvaged.

The proposed replacement line will assure dependable service to Applicant's existing markets and will provide a slight increase in capacity for future market requirements.

Total estimated cost of Applicant's proposed construction is $163,000, and will be financed through the issuance and sale of installment promissory notes or common stock to The Columbia Gas System, Inc., parent company of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G-593, *et al.* (4 FPC 821).

(2) The facilities proposed to be constructed as hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction

of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The facilities proposed to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The proposed abandonment by Applicant is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Manufacturers Light and Heat Company, to construct and operate the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(E) Applicant shall advise the Commission of the date of the abandonment of said facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP65-251

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On February 23, 1965, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP65-251 an application pursuant to Section 7(c) of the Natural

Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of natural gas facilities for the sale of natural gas to direct customers and existing distributors for resale and for miscellaneous rearrangements, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct a maximum of 8 lateral or loop lines of up to 6-inch diameter pipe with the maximum length being 15 miles and a maximum of 11 taps and meters in order to transport and sell natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with the Commission, for resale in existing market areas, and in order to deliver natural gas to direct consumers for seasonal industrial purposes. The proposed facilities will also enable Applicant to make a maximum of 2 miscellaneous rearrangements.

The deliveries to any one consumer by means of the proposed facilities will not exceed 100,000 Mcf per year and none of the gas delivered will be used by any consumer for boiler fuel purposes as defined by the Commission in Section 157.7(c) of its Regulations under the Act.

The total estimated cost of the proposed facilities will not exceed a maximum of $300,000, which cost will be financed with internally generated funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G-220 and G-402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Subparagraph (7) of Section 157.7(c) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Co., to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to direct customers and to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Subparagraph (7) of Section 157.7(c) of the aforesaid Regulations and, further, shall not entitle any industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-266

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On March 4, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-266 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation of natural gas in interstate commerce, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate a measuring and regulating station in Sangamon County, Illinois, for the delivery of up to 7,000 Mcf of natural gas per day on an interruptible basis to Commonwealth Edison Company (Commonwealth) for use in the latter's proposed Kincaid electric generating station to be located near Tovey, Illinois. Applicant states that the gas will be used by Commonwealth for boiler ignition.

Total estimated cost of Applicant's proposed construction is $25,000, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware Corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The proposed construction and operation of facilities, and the transportation and delivery of natural gas by Applicant to Commonwealth Edison Company as hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation and delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in Paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized therein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Panhandle Eastern Pipe Line Company, authorizing the construction and operation of facilities and the transportation and delivery of natural gas in interstate commerce to Commonwealth Edison Company, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65–274

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 23, 1965)

On March 8, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65–274 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities for the delivery of natural gas to Pitman-Moore Division of The Dow Chemical Company (Dow) in Boone County, Indiana, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 1,800 feet of 6-inch pipeline and to deliver to Dow up to 3,000 Mcf of natural gas per day on an interruptible basis for use in direct-fired equipment and for steam boiler fuel. The proposed facilities are estimated to cost $35,600 which will be financed from funds on hand.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the application has been received.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation of natural gas by Applicant are required by the public convenience

and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Sections 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Panhandle Eastern Pipe Line Company, to construct and operate facilities and to transport natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(D) The facilities herein authorized shall be completed and placed in actual operation as required by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PORTLAND GENERAL ELECTRIC COMPANY, PROJECT NO. 2195

ORDER AMENDING LICENSE (MAJOR)

(Issued April 23, 1965)

On August 8, 1963, as supplemented on December 3, 1964, and on February 15, 1965, applications were filed under Section 6 of the Federal Power Act (Act) by Portland General Electric Company (Applicant) for amendment of its license issued January 18, 1957 (17 FPC 58) for Project No. 2195, known as the North Fork Hydroelectric Project, located on Clackamas River in Clackamas County, Oregon. The August 8, 1963 and December 3, 1964 filings seek to include in the license the Faraday and River Mill hydroelectric developments located downstream from the North Fork dam. The February 15, 1965 filing seeks authorization to reconstruct the Cazadero diversion dam, to be known as Faraday, which failed January 29, 1965 from flood damage.

The North Fork, Faraday and River Mill hydroelectric developments will be operated hydraulically as a single project so as to achieve maximum utilization of the water power involved. The three developments will be operated from the Faraday powerhouse. All of the fish passage facilities, except those for the River Mill development, are under the present North Fork license.

The Faraday development, which included 3 generating units, a powerhouse and intake facilities to accommodate a total of 5 generating units, a turbine and motor-driven exciter, a fish ladder, and appurtenant facilities, was initiated and subsequently operated by a series of three predecessors of Applicant, and was put into operation in 1907. Since the original installations, replacements and additions have been made of various facilities including three additional generating units, the final of which, a semi-outdoor 19,200-kw unit, was installed in 1958.

Original construction of the River Mill development was undertaken by a predecessor of Applicant with initial operation commencing in November 1911. The plant originally contained three generating units, with provision for two additional units. Subsequent additions and replacements have been made, the final of which, a 5,000-kva unit (No. 5), was installed in 1951 and 1952.

The February 15, 1965 filing seeks to replace the former timber crib rock-filled Cazadero dam by one presently planned as a variable radius concrete arch dam at elevation 526 feet, about 455 feet long and 71 feet high and incorporating an overflow spillway in the 315 feet arch section. Applicant's proposed construction schedule for the reconstructed dam is as follows: solicit bids about April 1, 1965; contract to be let and construction to commence about May 15, 1965; with completion of the dam by November 1, 1965.

The Department of the Army, in commenting on the applications, has advised that Applicant's existing structures are satisfactory insofar as the interest of navigation is concerned and insertion in the license of any special conditions to protect the interest of navigation is not deemed necessary; and that since Applicant indicates no change in operation, no additional comments are considered necessary. However, the Department, pointing to the potential damage to levee structures and private property that could occur during major floods, suggested for inclusion in any amendment of the license an article to the effect that North Fork, Faraday and River Mill developments be operated in such a manner that stages no higher than natural flood peak stage occur downstream from the River Mill dam development.

The Department of the Interior, in commenting on the applications, recommended for inclusion in any license for the project terms and conditions in the interests of fish and wildlife and recreation usually included in licenses for the type of project herein under consideration, and a special condition relating to an extension of the "North Fork Evaluation Program" to include cooperative studies of the existing fish passage facilities at River Mill.* The Department also recommended an additional article for inclusion in any amendment for construction, maintenance and operation by Applicant or on its behalf of permanent upstream and downstream fish-passage and protective facilities as a part of the Faraday Diversion Dam according to specifications determined cooperatively by Applicant and named State and Federal agencies. Upon Applicant's written objection to the recommended article, discussion was had between our staff and Fish and Wildlife Service representatives. Article 29 herein provides adequately for the protection of fish passage at the project.

The Department of Health, Education, and Welfare has advised that the project does not significantly affect water supply or water quality control nor is it expected that the granting of a license [amendment] will create or intensify vector problems.

On December 2, 1963, the State of Oregon acting by and through its State Game Commission and its Fish Commission of Oregon filed a joint petition to intervene in this proceeding. By letter dated March 3, 1965, Petitioners advised that the special article recommended by Interior for inclusion in any amendment (as set forth in Article 43 herein) appears adequate for the purpose intended, and that Petitioners agree to the amendment of the North Fork project as currently proposed and withdraw the objections expressed in their petition to intervene. At the same time, however, Petitioners expressed their desire to remain a party to the proceeding to insure adequate opportunity to communicate with Applicant, the Federal Power Commission, and other parties in all matters of mutual interest. We are by separate order granting the joint petition to intervene.

---

*The North Fork Evaluation Program was established under Article 33 of the license pursuant to the Commission's order issued October 22, 1959 [Unreported].

By letters dated February 11 and March 29, 1965, Representative Beulah Hand, State of Oregon House of Representatives, informally protested the replacement of the Cazadero dam as a single-purpose dam on the Clackamas River, stating that; "High priority consideration for flood control installations is an urgent need, hence this request that permission for replacement of the Cazadero dam as a single-purpose unit be denied until adequate inquiry is conducted into possible utilization of storage for flood control purposes." In this connection, the Corps of Engineers, District Engineer, Portland, Oregon, has advised by letter dated March 10, 1965, that preliminary investigations indicate that there are no sites in the reach of the river that would be affected by replacement of the Cazadero dam which would be suitable for flood control storage, although two or three sites upstream from the North Fork project have a physical potential.

The project works other than the proposed reconstructed Cazadero dam are safe and stable. The Exhibit L drawings for the latter dam are of a preliminary nature and we are providing herein for submission of the final design drawings for Commission approval prior to commencement of such reconstruction.

By Article 42 herein we are requiring Applicant to file an Exhibit R conforming to the requirements of Section 4.41 of the Commission's Regulations, after consultation with appropriate Federal, State and local agencies. In addition, we are including herein terms and conditions in the interests of fish and wildlife and recreation usually included in licenses for the type of project herein under consideration.

This amendment will increase the authorized installed capacity of the project by 19,050 kw for the River Mill development and by 34,450 kw for the Faraday development, or a total of 71,300 horsepower for annual charge purposes. The presently authorized installation of the North Fork development remains at 51,200 horsepower for annual charge purposes. Therefore, we are changing the authorized installation of the entire project for annual charge purposes to 122,500 horsepower.

The Commission finds:

(1) Public notices of the applications have been given. Except for the aforementioned joint petition to intervene and informal protest, no protests or petitions to intervene have been received.

(2) There are no conflicting applications for preliminary permit or license pending before the Commission. The Faraday and River Mill developments do not affect a Government dam.

(3) The increased amount of annual charges to be paid under the license as herein amended for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable.

(4) The exhibits described in paragraph (A) below conform to the Commission's rules and regulations and should be approved as part of the license as amended, and superseded Exhibit K (FPC Nos. 2195-32, -34 and 35), now part of the license should be excluded therefrom.

The Commission orders:

(A) Effective as of April 1, 1965, Project No. 2195 shall consist of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license and applications for amendment of license:

Exhibit	Sheet No.	FPC No. 2195	Showing

	RIVER MILL DEVELOPMENT		
K	15 (Rev.) 16 (Rev.)	-64 -65	River Mill development. River Mill development.

(b) All project works consisting of:

North Fork Development:

A concrete variable radius arch dam in Section 11, T. 4 S., R. 4 E., W.M., constructed to elevation 670 feet with a chute spillway adjacent to the right abutment having fixed crest at elevation 630 feet and control gates in the spillway section to raise the reservoir to normal pool elevation 665 feet; a reservoir about 4 miles long containing 7,700 acre-feet usable storage capacity; two steel penstocks through the base of the dam leading to the powerhouse; a powerhouse at the base of the dam with installation of two units each consisting of a 34,500 horsepower turbine connected to 19,200 kilowatt generator; a fish ladder; and appurtenant facilities;

Faraday Development:

A proposed variable radius concrete arch dam about 71 feet high to elevation 526 feet, with crest length of about 455 feet (including thrust blocks to elevation 552 feet); an overflow type spillway occupying the 315-foot arch section, with capacity of 150,000 cfs at pool elevation 548 feet; a reservoir with capacity of

550 acre-feet; a concrete-lined tunnel 2,450 feet long; an unlined canal 3,300 feet long leading to a forebay; six penstocks supplying five generating units totaling 15,250 kw in an indoor powerhouse and one 19,200-kw unit in an outdoor powerhouse; and appurtenant facilities; and

River Mill Development:

An "Ambursen" hollow type reinforced concrete dam 936 feet long and 85 feet high; a reservoir with capacity of 12,200 acre-feet at normal pool elevation 389 feet; an indoor powerhouse containing five generating units having a total capacity of 19,050 kw; fish facilities; and appurtenant facilities;

Transmission Facilities:

1. The three single-phase 17,500 kva, 120 Y/69.3/13.2 kv transformers which function as the step-up substation for the North Fork plant;
2. The single circuit 115 kv transmission line from the North Fork substation to a switchyard located near Faraday;
3. A 115-kv switchyard near Faraday;
4. The generator leads to the 57 kv step-up substation at Faraday and River Mill and the 57 kv step-up facilities at each of these two developments;
5. Two 115 kv transmission lines from the Faraday switchyard to Oregon City and appurtenant facilities;

the location, nature and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

EXHIBIT M–2

Statement in three typewritten sheets entitled, "General Description of Mechanical and Electrical Equipment—River Mill Development", received in the Commission August 8, 1963.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(B) Article 29 of the license is amended to read as follows:

Article 29. The Licensee shall construct, operate and maintain such protective devices, including fish passage facilities, and comply with such reasonable modifications in project structures and operation in the interest of fish and wildlife resources in connection with the project as may be subsequently prescribed by the Commission upon recommendation of the Secretary of the Interior, the United States Forest Service and the Oregon Fish and Game Commissions. The design and details for fish passage facilities to be constructed shall be determined cooperatively by Licensee, the Oregon Fish Commission, the Oregon State Game Commission, and the U.S. Fish and Wildlife Service in accordance with the existing agreement dated August 21, 1956, with the final design drawings to be approved by the Commission. If the Licensee and the agencies are unable to reach agreement on facility design, the Commission reserves the right to make the final determination after notice and opportunity for hearing. In addition, the Commission may, upon recommendation of the aforesaid agencies, require the Licensee, after notice and opportunity for hearing, to reserve from public access such project waters and adjacent project lands owned by the Licensee and to acquire or arrange for the acquisition of such other lands as may be reasonably necessary for the protection and management of fish and wildlife resources affected by the project.

(C) Article 32 of the license is amended to read as follows:

Article 32. The Licensee shall pay to the United States the following annual charges effective as of April 1, 1965:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 122,500 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those lands used for transmission line right-of-way, $271.56; and

(iii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands used for transmission line right-of-way only, $0.96.

(D) The following articles are hereby added to the license:

Article 34. The Licensee shall submit in accordance with the Commission's Rules and Regulations, revised Exhibit L drawings for the Faraday dam and Licensee shall not begin construction of the project dam until the Commission approves the Exhibit.

Article 35. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, San Francisco, California, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 36. Within six month after the date of this order amending the license for Project No. 2195, the Licensee shall submit for Commission approval plans to increase the spillway capacity at the River Mill Development to 150,000 cubic feet per second. When the Commission has approved these plans, Licensee shall commence construction as soon as river and weather conditions permit and shall complete the work within one year from the date of the start of construction.

Article 37. The Licensee shall operate the North Fork, Faraday and River Mill Developments in such a manner that stages no higher than natural flood peak stage occur downstream from the River Mill Development.

Article 38. The Commission reserves the right to determine at a later date what transmission facilities, if any, shall be included in this license as part of the project works, after notice and opportunity for hearing.

Article 39. Whenever the United States or the State of Oregon shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency or the State of Oregon to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States or the State of Oregon under the provisions of this article. This article shall not be interpreted to place any obligation on the United States or the State of Oregon to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 40. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 41. The Licensee shall commence construction of the Faraday dam prior to November 1, 1965, and shall in good faith and with due diligence complete such construction prior to November 1, 1967.

Article 42. The Licensee shall, within one year from the date of this license, file with the Commission for approval an Exhibit R conforming to Section 4.41 of Commission Regulations under the Federal Power Act. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 43. The North Fork Evaluation Program shall be extended in time and scope to include studies of the existing fish passage facilities at River Mill, such studies to be conducted cooperatively among the Licensee, Fish Commission of Oregon, Oregon State Game Commission, and the U.S. Fish and Wildlife Service for the purpose of determining future action on fish passage facilities at River Mill: *Provided* that, in the event the Licensee and the agencies named herein fail to reach an agreement on a definite study plan, the Commission reserves the right to determine the same after notice and opportunity for hearing.

Article 44. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided*, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 45. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 46. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the application possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(E) Articles 4, 17, and 22 of the license are hereby eliminated from the license.

(F) The exhibits designated as described in paragraph (A) above are hereby approved as part of the license for Project No. 2195, and the superseded exhibit described in finding (4) above is hereby eliminated from the license for the project.

(G) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

(H) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NO. 2481

ORDER GRANTING REHEARING FOR FURTHER CONSIDERATION

(Issued April 23, 1965)

On March 22, 1965, Public Service Company of New Hampshire (Applicant) filed an application for rehearing of the Commission's order issued February 24, 1965, 33 FPC 319, with respect to Applicant's Swans Falls Hydroelectric Plant located on the Saco River in the Town of Fryeburg, Maine, Project No. 2481. The Applicant requests that the termination date of the license be changed from December 31, 1988 to March 1, 1966, and that Article 13 should be deleted. Applicant represents that because of the continued deterioration of the plant, it believes that the plant should be retired from service at the earliest practicable date.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823), that the Public Service Company of New Hampshire's aforesaid application for rehearing of the Commission's order dated February 24, 1965, be granted for purposes of further consideration.

The Commission orders:

The aforesaid application filed by Public Service Company of New Hampshire for rehearing of the Commission's order dated February 24, 1965 is hereby granted for the purposes of further consideration.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

AMERADA PETROLEUM CORPORATION[1] DOCKET NOS. G–16117, G–16118, G–16119, G–16256, G–19488, G–19489, G–19490 AND G–19577; SHELL OIL COMPANY, G–12951, G–12952, G–12953, G–16253, G–16254, G–16255 AND G–17368; SOCONY MOBIL OIL COMPANY, INC., G–12981, G–12982, G–13030, G–13311, G–15448, G–15449 AND G–15995; THE ATLANTIC REFINING COMPANY, G–18565 AND G–18913; THE SUPERIOR OIL COMPANY, G–12949, G–15358 AND G–12950

ORDER TO SHOW CAUSE, GRANTING STAY OF COMPLIANCE WITH LETTER ORDERS, NOTICE OF AND SETTING PROCEDURES FOR HEARING, AND CONSOLIDATING PROCEEDINGS

(Issued April 26, 1965)

By order issued April 3, 1964 in *Phillips Petroleum Company*, Docket Nos. G–11217, G–14115, G–18417, G–18481, *et al.*, 31 FPC 774, the Commission accepted for filing decreased rate proposals of Phillips Petroleum Company (Phillips) which reflected for the locked-in periods involved the rate levels Phillips is currently contractually entitled to retain under the spiral escalation and favored-nation[2] provisions of its contracts with its purchaser, El Paso Natural Gas Company (El Paso). Phillips' spiral escalation rate increases in such proceedings were based on El Paso's rate increases in Docket Nos. G–4769, G–12948 and G–17929. By order issued December 4, 1963, 30 FPC 1400, reduced settlement rates were approved for El Paso in the aforementioned dockets. Phillips' proposed decreased rates thus reflected the present contractual effect on its rates of the El Paso settlement.

---

[1] This order also relates to the proceedings listed in the Appendix which were also involved in the February 26, 1965, letter-orders issued herein. Unlike the producers and proceedings listed in the caption, the producers did not seek rehearing in the proceedings listed in the Appendix.

The Commission by letter-orders issued February 26, 1965, apprised approximately forty-eight producers, whose favored-nation rate increases were based either directly or indirectly on Phillips' aforementioned spiral escalation rate increases, that Phillips had filed spiral rate decreases and had made refunds to El Paso therefor, and ordered said producers to file related decreased rate filings and to make appropriate refunds. Of the forty-eight producers, five have filed applications for rehearing pursuant to Section 19(a) of the Natural Gas Act (Act) and Section 1.34 of the Commission's Rules of Practice and Procedure, and three of these have petitioned for a stay of the provisions of the letter-orders issued to them on February 26, 1965.[3]

The producers in their applications for rehearing contend, *inter alia*, that: (1) the Commission erred in issuing the said letter-orders without notice or hearing; (2) the Commission erred in concluding that the decreased rate filings of Phillips served retroactively to deprive the producers of contractual consent to the favored-nation rate increases involved herein; (3) even if the Commission was legally empowered to issue said letter-orders, the Commission erred in failing to recognize that there were prices paid or payable by El Paso to producers other than those of Phillips during the whole or a portion of the "locked-in" periods involved here which afforded contractual consent to their increased rates; and (4) the Commission erred in attempting to dispose of the rate increases herein which are consolidated with the Permian Basin Area Rate Proceedings, Docket No. AR61–1, *et al.*

In the Permian area rate proceeding we will determine the justness and reasonableness of all of the producer rates in that area. Such a determination is apart from the contractual basis for any producer rate filings involved there. As we stated in the Shell opinion,[4] 29 FPC at 504:

> Any producer filing for an increase under a favored-nation clause of necessity has two hurdles to overcome in ultimately justifying the rate increase. First, his increase is dependent upon the validity of the rate which triggered his favored-nation clause. If the triggering rate is later found to be invalid or unreasonable in whole or in part, then any rate filing based on such triggering is without contractual justification to the extent the triggering rate is reduced. After establishing what rate is valid under the contract clause for the favored-nation increase, it must also be shown that such rate is just and reasonable. In sum, the validity of the filing is at all time subject to the ultimate determination of the validity of the triggering rate as well as the justness and reasonableness of the increased rate.

---

[2] As noted in the footnote at 31 FPC 774, the favored-nation rates of Phillips are based on favored-nation rates of other producers which were allegedly triggered by the Phillips' spiral escalation rates.

[3] Applications for rehearing were timely filed in the above-captioned proceedings by Amerada Petroleum Corporation (Amerada) on March 24, 1965, by The Superior Oil Company (Superior) on March 26, 1965, by The Atlantic Refining Company (Atlantic) on March 26, 1965, by Shell Oil Company (Shell) on March 29, 1965, and by Socony Mobil Oil Company, Inc. (Socony) on March 29, 1965. Concurrent motions for a stay were filed by Amerada, Shell and Socony.

[4] Shell Oil Company, *et al.*, Opinion No. 382, 29 FPC 498.

Accordingly, even if these favored-nation increases are determined to be just and reasonable in the Permian case, the contractual basis for these filings would remain in dispute. Under these circumstances there is no justification for postponing action on these contractual matters until the Permian decision has become final.

At the time of issuance of the letter-orders here complained of, there did not appear to be any factual questions involved in the disposition of these contractual matters since all of the favored-nation filings at the time of filing were based either directly or indirectly on Phillips' spiral escalation increases. In the light of the reduced spiral escalation rates filed by Phillips because of the El Paso settlement, which were accepted by the Commission in its order of April 3, 1964, it seemed clear that there was no contractual support for the favored-nation filings in these cases. Consistent with our decision in the Shell case[5] where we held that favored-nation increases lack contractual support when based on a claimed triggering rate which is later determined to be without contractual justification, we also held in our February 26 orders that there was no contractual basis for these favored-nation filings.

However, some of the producers in their applications for rehearing have raised factual questions concerning the possibility that their favored-nation increases might have been triggered by producer prices other than Phillips' spiral increases. Questions have also been raised with respect to the level of the rate reduction and the period to be covered thereby in light of the contractual right of certain of these producers to file for periodic escalation increases or renegotiated increases during the period covered by these proceedings. In view of the alleged factual problems presented, we think it appropriate to set these contractual matters for hearing and shall stay the requirements of the letter-orders issued February 26 in the above captioned proceedings. We shall provide for a prehearing conference at which the substantive matters to be resolved by formal hearing will be set forth and all matters that can be resolved without formal trial will be eliminated from hearing and settled by stipulation. Thereafter, the Presiding Examiner shall establish the date of hearing and shall prescribe such other procedures as he may deem appropriate in the disposition of these matters.

Because of the alleged factual problems discussed above in connection with the producers' applications for rehearing, we conclude that it would also be appropriate to defer action in those proceedings listed in the Appendix (where the producers did not file applications for rehearing of the February 26, 1965, orders) until a decision has been reached with respect to the proceedings listed in the caption which have been set for hearing. We shall therefore stay the requirements of the February 26, 1965, orders in the proceedings listed in the Appendix until further order of this Commission. In the event any producer involved in the proceedings listed in the appendix desires to comply with the February 26, 1965, orders despite our stay here, in the absence of objection by any interested party, it may do so by filing rate reductions and making refunds in the same manner that Phillips' did in Docket No. G–12117, *et al.* as provided in the February 26, 1965, orders.

The Commission orders:

(A) At the hearing provided for below, Amerada, Shell, Socony, Atlantic, and Superior shall show cause, if there be any, as to why they should not be required to comply with the requirements of the letter-orders issued February 26, 1965, in the above-captioned proceedings.

---

[5] Opinion Nos. 382 and 382–A, affirmed *Shell Oil Company, et al.* v. *F.P.C.*, 334 F. 2d 1003 (CA3–1964); *cf.* order issued July 24, 1963, in *Texaco Inc., et al.*, Docket No. G–17613, *et al.*, 30 FPC 402.

(B) Pursuant to the authority of the Natural Gas Act, particularly Sections 4, 15 and 16 thereof, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act (18 CFR, Chapter I), the above-captioned proceedings are hereby consolidated for the purpose of hearing and a public hearing shall be held pursuant to the procedures prescribed herein.

(C) Presiding Examiner, Harry W. Frazee, or any other officer or officers of the Commission designated by the Chief Hearing Examiner for that purpose, shall preside at the prehearing conference and the hearing in the above-captioned proceedings pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order.

(D) Pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner herein designated shall commence at 10:00 A.M. (EDST) on June 2, 1965, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C. for the purpose of effectuating the intent of the Commission as set forth in the body of this order.

(E) After the prehearing conference, the Presiding Examiner shall give notice of the date of hearing and shall prescribe such other procedures as he deems appropriate in the disposition of these matters.

(F) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37 (f)] on or before May 20, 1965. Answers to petitions to intervene may be filed within 10 days after the date of service of the petition, but in no event later than May 27, 1965.

(G) The requirements of the letter-orders issued on February 26, 1965, in the above-captioned proceedings and in the proceedings listed in the Appendix are hereby stayed until further order of the Commission.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP65–234

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 26, 1965)

On February 5, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP65–234, an application and a supplement thereto on February 23, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of (a) approximately 23.4 miles of 14-inch pipeline to replace existing 10-inch pipeline on Line AM–46, and (b) approximately 19.3 miles of 10-inch pipeline to replace existing 8-inch pipeline on Line AM–151, and (2) the reconditioning and upgrading of approximately 15.1 miles of 12-inch Line E to provide for a maximum operating pressure of approximately 500 psig, all as more fully set forth in the application.

Applicant proposes to increase maximum daily interruptible deliveries to the Arkansas Cement Corporation (Arkansas Cement) from 13,500 Mcf to 22,500 Mcf daily. Estimated annual sales will increase to approximately 6,750,000 Mcf in 1967 from 3,783,000 Mcf in 1964. Deliveries to Arkansas Cement are being made under authorizations issued in Docket Nos. G–13328 and CP61–193, issued February 11, 1958, 19 FPC 224, and May 26, 1961, 25 FPC 1045, respectively.

The estimated cost of new construction is $1,678,900 with a net salvage of $221,100, resulting in a net construction cost of $1,457,800 which will be defrayed from current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 21, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 26, 1943, in Docket No. G-252 (3 FPC 910).

(2) The proposed construction and operation of facilities and transportation and delivery of natural gas as hereinbefore described, and as more fully described in the application, supplement and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities, transportation and delivery are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and transportation and delivery of up to 22,500 Mcf daily of natural gas as more fully described in the application, supplement and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that (1) the facilities authorized hereby shall not be used to transport more than 22,500 Mcf daily of interruptible gas to the Arkansas Cement Corporation and (2) the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER PERMITTING INTERVENTION

(Issued April 26, 1965)

On April 9, 1965, the Cortlandt Citizens for the Hudson River (Cortlandt Citizens), a group of persons who reside in the general area of one of the alternative routes of the overhead transmission lines proposed to be included in the license for the Cornwall Pumped Storage Project, filed a petition to intervene.

Consolidated Edison has filed an answer urging that the petition be denied because the sole indicated basis for Cortlandt's request is its wish to establish the undesirability of overhead transmission lines and to propose alternatives, issues which are outside the scope of the forthcoming hearing. Cortlandt's petition alleges, however, that these issues constitute its "primary" interest in the proceeding, and we note that a citizens' group in that locality obviously has an interest in the routing of the overhead transmission lines. We therefore deem it appropriate to afford Cortlandt an opportunity to introduce evidence with respect to a proposed route to be followed by the project transmission facilities and the necessary width of the right-of-way. Therefore we are limiting the participation of Cortlandt to the issue of the best route for the overhead transmission lines between Nelsonville, N.Y. and the Company's transmission line grid.

The Commission finds:

The participation of the above-named petitioner in this proceeding may be in the public interest.

The Commission orders:

The Cortlandt Citizens for the Hudson River is hereby permitted to intervene in the above-entitled proceeding subject to the rules and regulations of the Commission: *Provided*, that the participation of such intervener shall be limited to the issue of the best route for the overhead transmission lines to be included in the license issued for the Cornwall Pumped Storage Project; *Provided, further*, That the admission of the Petitioner shall not be construed as recognition by the Commission that the intervener might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Commissioner Ross *dissents* to the limitation of Cortland's participation to the issue of overhead transmission lines. For the reasons stated in his dissent to Opinion No. 452, 33 FPC 428 at 458, he would have permitted evidence respecting underground transmission lines.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

SOUTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E-7038

ORDER ON REHEARING

(Issued April 26, 1965)

On March 30, 1965 and April 1, 1965, Southwestern Public Service Company (Southwestern) and Community Public Service Company (Community), respectively, filed applications for rehearing of the Commission's Opinion No. 451 and accompanying order, 33 FPC 343.

In its application, Community reiterates its position that the Commission should either adopt the findings and order of the examiner, or order Southwestern to extend the lower wholesale rate approved for the cooperatives to Community and the other investor-owned companies purchasing electric energy from Southwestern. Community advances no new facts or arguments which we have not previously considered. Its application presents no reasons for granting rehearing or disturbing our original opinion and order and will therefore be denied.

Southwestern does not except to those portions of our opinion and order that deal with rate of return, the rate base, or the cost of service allowed Southwestern on its sales to its three investor-owned distribution customers. In addition, Southwestern does not object to the required overall reduction in revenues applicable to its investor-owned customers, ($552,376.00) or to the demand and energy rates which the Commission applied to Lea County Electric Cooperative. Southwestern's exceptions are limited to the design of the rates for the three investor-owned customers and certain features of the rate schedules prescribed for Lea County.

In its application, Southwestern requests that the Commission stay the effectiveness of the rates prescribed by our order (which Southwestern filed under protest) and substitute rate schedules which it proposes in its application for rehearing, or such other schedules as the Commission shall find will be more equitable and better serve the public interest. The rates which Southwestern proposes were not considered at the hearing or at any previous stage of this proceeding. Before taking final action, we consider it appropriate to give the customers which would be affected by the changes Southwestern suggests, an opportunity to comment thereon.

In view of the fact that Southwestern has not taken exception to the overall level of rates in our original order, we will not stay the effectiveness of our order in this respect. Thus, Southwestern may continue to charge its existing rates until such time as the Commission finally determines the rate schedules which Southwestern may apply to its three investor-owned customers and Lea County. However, such rates will have a retroactive effective date of April 2, 1965, the effective date of the rate level prescribed in our original order.

Southwestern's alternative proposal which it would apply to Lea County would result in a rate increase for that customer which is neither justified by the record in this case nor consistent with the requirements of the Act and our Rules and Regulations. We therefore will not consider this alternative proposal as a possible substitute for the rate schedule ordered by paragraph (C) of Opinion No. 451. However, our consideration of this matter in the light of the Southwestern application for rehearing leads us to believe that two modifications in the rate schedule we ordered Southwestern to file for Lea County may be appropriate. These are retention of the demand ratchet provision now applicable to the Denver delivery point (F.P.C. Electric Rate Schedule No. 35) and the prescription of a rate schedule for the Plains delivery point similar to that applicable to the Denver point of delivery. We shall accordingly grant rehearing as to this part of the proceeding to give both Lea County and Southwestern an opportunity to express their views on this issue.

The Commission orders:

(A) The application for rehearing filed by Community Public Service Company is denied.

(B) The application for rehearing filed by Southwestern Public Service Company is denied in so far as it proposes a rate increase for Lea County Electric Cooperative.

(C) Rehearing of Opinion No. 451 and of the accompanying order is granted for the purpose of considering whether Southwestern's proposed rate schedule for its investor-owned customers is an appropriate and equitable method of bringing the rates of such customers down to the level prescribed in Opinion No. 451 and whether the rate schedule prescribed in Opinion No. 451 for Southwestern's sales to Lea County should be modified as described above.

(D) Community Public Service Company, New Mexico Electric Service Company, Cochran Power and Lighting Company, Lea County Electric Cooperative and any other party to this proceeding may file comments on the rate schedules proposed by Southwestern and Southwestern may file comments on the suggested revisions in the Lea County rate schedule within 30 days of the date of this order.

(E) Southwestern's request that the Commission stay paragraphs (B) and (C) of its original order of March 2, 1965 insofar as those paragraphs prescribe April 2, 1965 as the effective date of the rate schedules to be adopted to achieve the rate levels found therein to be just and reasonable for Southwestern's sales to its three investor-owned customers is denied.

(F) Southwestern shall serve a copy of its application for rehearing upon New Mexico Electric Service Company and Cochran Power and Lighting Company upon receipt of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

UNION OIL COMPANY OF CALIFORNIA, DOCKET NOS. G-16602, G-17673, G-17682, G-17705, G-19609, G-20287, RI61-80, RI62-43, RI63-117, AND RI64-238

ORDER RELEASING REFUNDS

(Issued April 27, 1965)

The Commission by order issued November 18, 1964,[1] approved Union Oil's offer of settlement of certain of its pending rate proceedings and ordered the company to retain the refunds to its pipeline customers pending our further order. This retention was directed in keeping with our policy expressed in the order approving the Humble settlement [2] wherein we stated that it is "our duty to insure that the ultimate consumers of gas actually receive all of the benefits of our rate regulation to which they may be entitled," and that we were taking action "to assure that, within the limits of our jurisdictional reach, the refunds to be ordered actually flow to those parties legally and equitably entitled thereto."

Review of the flow-through obligations of Union Oil's pipeline customers (Tennessee Gas Transmission Company, United Fuel Gas Company, Texas Gas Transmission Corporation and Trunkline Gas Company) shows that each of these pipelines is obligated to flow-through, except for insignificant amounts, the jurisdictional portion of any refund it will receive as a result of this settlement. All pipelines in the resale chain between Union Oil's customers and the ultimate consumer which receive significant amounts are similarly obligated with the exception of Texas Eastern Transmission Corporation. Texas Eastern is obligated to flow-through the amounts it receives from its supplier, Texas Gas, which are attributable to purchases prior to May 6, 1961, but claims that it has no such obligation for subsequent periods. Accordingly we have provided that Texas Gas shall retain and defer its flow-through to Texas Eastern of the amounts which are attributable to purchases by Texas Eastern subsequent to May 5, 1961.

---

[1] Order Conditionally Approving Offer of Settlement, Severing and Terminating Proceedings, and Prescribing Refunds," *Union Oil Company of California*, Docket No. G-16602, *et al.*, 32 FPC 1336.

[2] "Order Conditionally Approving Rate Settlement Proposal, Severing and Terminating Proceedings, and Prescribing Refunds," *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, issued July 8, 1964, 32 FPC 49.

The Commission orders:

(A) Union Oil shall release and pay over to Tennessee Gas Transmission Company, United Fuel Gas Company, Texas Gas Transmission Corporation and Trunkline Gas Company within 30 days of this order, the total amounts assigned to each as specified in Union Oil's refund report filed with the Commission on December 30, 1964 as ordered in Paragraph (E) of the Commission's order of November 18, 1964, together with interest at six percent per annum from November 18, 1964 to the date of this order.

(B) Texas Gas Transmission Corporation shall, pending further order of the Commission, retain and defer the flow-through of that portion of the amounts received pursuant to Paragraph (A) which is attributable to purchases by Texas Eastern Transmission Corporation subsequent to May 5, 1961.

(C) The amounts ordered to be retained pursuant to Paragraph (B) at the option of Texas Gas, may be:

1. Commingled with its general assets but interest at 6% per annum shall be paid from the date the funds would flow-through, if not so retained, to the date on which they are paid to the person ultimately determined to be entitled thereto in a final order of the Commission,

2. Deposited in savings accounts in any bank or savings and loan association where deposits are insured by the Federal Deposit Insurance Corporation, with all interest earned thereon to be credited to the savings accounts. Each savings account shall not exceed $10,000, or

3. Deposited in a special escrow account on or before the date the funds would flow-through, if not so retained. If the fund is deposited in such an escrow account, the following conditions must be met:

(a) Texas Gas shall submit 45 days prior to the date the funds are to be deposited, an executed escrow agreement conditioned as set out below with a certificate showing service on the party to whom the fund would otherwise be payable. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Texas Gas and any bank or trust company used as a depository for funds of the United States Government and the agreement shall be conditioned as follows:

(b) Texas Gas, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(c) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(d) Such bank or trust company shall be liable only for such interest as the invested funds described in Subparagraph (c) above will earn and no other interest may be collected from it.

(e) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(f) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(D) Except as specifically ordered to retain amounts and defer the flow-through to specified parties, each company shall flow-through the refunds received pursuant to this order and submit a report thereon in accordance with the applicable Commission orders governing its flow-through obligation.

(E) Within 45 days of this order, Union Oil shall file with the Commission releases from its customers for the amounts paid to them pursuant to Paragraph (A).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

VIRGINIA ELECTRIC & POWER COMPANY, PROJECT NO. 2462

ORDER ISSUING LICENSE (MAJOR)

(Issued April 27, 1965)*

Application was filed on April 20, 1964, by Virginia Electric & Power Company (Applicant) of Richmond, Virginia, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2462, known as the Belle Isle Project, located on the James River, a navigable water of the United States,[1] within the City of Richmond, Virginia. The project does not affect lands of the United States.

The project dam was constructed in 1904, the powerhouse and the three 1,650 horsepower waterwheels were installed in 1914, and two 1,000 KW generators were installed in 1923. Applicant purchased the project in 1926 and installed a third 800 KW generator unit in 1934. No substantial change in the project has been made thereafter.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned and that the project plans have been approved pursuant to Section 4(e) of the Act. The Corps of Engineers pointed out that the Belle Isle Project had been proposed for redevelopment in the Corps' comprehensive plan for development of the James River Basin[2] which proposed the construction sometime in the future of a 60 foot high dam, the excavation of a tailrace, and the installation of 24,000 kw of generating capacity. In view of the latter proposal, the Corps recommended for inclusion in any license for the subject project a condition to protect the authorized functions of any future development in the James River Basin under the Corps' jurisdiction. The Corps also recommended for inclusion in any license for the project the terms and conditions in the interest of navigation contained in Form L-3 (Revised August 1, 1964) (32 FPC 1114), which is incorporated herein and made a part hereof.

---

*See order on rehearing issued June 23, 1965, terminating order issuing license, 33 FPC 1286.

[1] In our order issued August 12, 1964, Appalachian Power Company, Project No. 2376, 32 FPC 591, we found that the James River from its mouth at Newport News at least to its confluence with Jackson's River at river mile 340 is a navigable waterway of the United States. Project No. 2462 is located in this navigable reach of the river.

[2] House Document No. 207, 80th Cong., 1st Sess., 1945.

The Department of the Interior, in reporting on the application, referred to the aforementioned 1945 Corps of Engineers' comprehensive plan for development of the James River Basin and to the relation of the subject project to such plan. The Department's report expressed concern that the increasing electric power demands in the State of Virginia will foster the early reconsideration and adoption of the Corps' plan, and suggested that the Commission consider such possible future development of the James River Basin in imposing license terms for the Belle Isle Project No. 2462. The Department's report recommended finally that the terms and conditions in the interests of fish and wildlife contained in the aforesaid Form L-3 be included in any license for the project.

The Department of Health, Education, and Welfare has advised that the Belle Isle Project has had no known adverse effects on water quality in the past, and none are expected.

The Department of Conservation, Commonwealth of Virginia, has advised that the project has no significant recreational potential and a recreational use plan for the project is not justified.

The only known recreational value and use of this section of the James River at this time is sport angling, but pollution limits this activity in late summer months. Through Articles 17 and 33 we are providing for needed development of access for fishermen. We are also requiring in Article 33 that the licensee cooperate with local agencies and organizations in the development of other recreational facilities in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the Commonwealth of Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public use, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative

annual charge is 3,700 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Virginia Electric & Power Company (Licensee) of Richmond, Virginia, under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Belle Isle Project No. 2462, located on the James River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2462 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by Exhibit J of the application for license which is designated as follows:

Exhibit J: (FPC No. 2462-1) "General Property Map"

(ii) All project works described as follows: (1) an 1,870 foot long concrete diversion dam; (2) a headrace bound by Belle Isle, on the north, and a 470 foot long masonry and concrete dam joined to a 74 foot long concrete dam; (3) a powerhouse containing two identical horizontal shaft units rated at 1,000 kw each and one 800 KW unit, for a total output of 2,800 KW; (4) a substation including a 4 kv bus and a 13.2 kv bus; (5) appurtenant electrical and mechanical facilities—the location and designation of which are more fully shown on the following exhibits:

Exhibit L: (FPC No. 2462-2) "General Arrangement—Plan and Sections"

Exhibit M: Two typewritten pages entitled, "General Description of Equipment," filed with the Commission on April 20, 1964, and supplemented October 14, 1964.

(iii) All of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof except for Article 25 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 3,700 horsepower.

Article 31. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation, and maintenance of a hydro-electric project which will more completely utilize the water resources of the reach of the James River in which the project is located.

Article 32. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement, made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States or the person or persons hereinafter constructing, operating and maintaining the more complete development or his or their successors and assigns, that said license shall be deemed surrendered at such time as Project No. 2462 becomes inoperative by reason of such more complete development, and that said Licensee, its successors or assigns shall not be entitled to any compensation for damages sustained by reason of such more complete development, other than (1) the right to receive from the owner of said more complete development for the unexpired term of the license for Project No. 2462 an annual amount of electric capacity and energy equal to the average annual amount generated by the project during the last five full years preceding commencement of construction of said more complete development upon payment to the owner of the more complete development of an annual amount equal to the average annual cost to the Licensee of producing the capacity and energy at Project No. 2462 during the last five full years preceding commencement of construction of said more complete development; or (2) in the event the owner of the more complete development is unwilling or unable to provide Licensee with the said amount of capacity or energy, the right to receive the difference, if any, between the annual cost of providing the lost capacity and energy from Project No. 2462 and the lowest reasonable cost of securing equivalent capacity and energy from an alternate source. If the Licensee for Project No. 2462 and the owner of such more complete development are unable to agree, the amount of capacity and energy lost to the Licensee by reason of such more complete development and the annual cost of producing equivalent capacity and energy at Project No. 2462, or the lowest reasonable cost of securing equivalent capacity and energy from an alternate source shall, upon application of the owner of the more complete development, be determined by the Commission.

Article 33. Licensee shall cooperate with State and local agencies and individuals in the development and maintenance of fishing access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and adjacent waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation development at the project.

Article 34. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other projects works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the application possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

VERMONT GAS SYSTEMS, INC., DOCKET NOS. CP65-141, CP65-142 AND CP65-155

ORDER AUTHORIZING IMPORTATION OF NATURAL GAS AND DISMISSING APPLICATION

(Issued April 28, 1965)

On November 17, 1964, Vermont Gas Systems, Inc. (Applicant) filed in Docket No. CP65-142 an application, as supplemented January 14, 1965, pursuant to Section 3 of the Natural Gas Act requesting an order of the Commission authorizing the importation of natural gas into the United States from the Dominion of Canada. On the same date, Applicant filed in Docket No. CP65-141 an application for an original permit pursuant to Executive Order No. 10485 authorizing the construction, operation, maintenance and connection of facilities at the International Boundary between the United States and Canada for the proposed importation.[1] Thereafter, on November 25, 1964, Applicant filed in Docket No. CP65-155 an application pursuant to Section 1(c) of the Natural Gas Act for exemption from the provisions thereof with respect to the construction and operation of facilities and the conduct of its natural gas operations within the State of Vermont. The above applications constitute a proposal by Applicant to import natural gas into the United States from Canada for resale and distribution in the State of Vermont, all as more fully set forth therein.

Applicant proposes to import up to 8,500 Mcf of natural gas per day into Vermont through the facilities covered by the permit concurrently issued in Docket No. CP65-141. Applicant also proposes to construct and operate 45 miles of 10-inch transmission line extending therefrom south to Burlington, Vermont. In addition, Applicant proposes to construct and operate the necessary distribution facilities to provide natural gas service, wholesale and retail, to potential customers along the proposed line, in the towns of St. Albans and Swanton, Franklin County, and the greater Burlington area, Chittenden County, all in Vermont.

Natural gas for the proposed service is to be purchased by Applicant from Trans-Canada Pipe Lines Limited (Trans-Canada). Total estimated volumes of gas involved to meet Applicant's annual and peak day requirements for the initial three year period of proposed operation are stated to be:

---

[1] An appropriate permit is to be issued concurrently with this order.

	First year	Second year	Third year
Annual (Mcf)	1,350,500	2,117,000	3,102,500
Peak day (Mcf)	3,700	5,800	8,500

Applicant's total estimated cost for the proposed project is $2,591,500, and will be financed by the sale of common stock to present stockholders in the amount of $625,000, and the sale of bonds in the amount of $2,500,000.

All necessary state and local authorizations have been received by Applicant.

On December 28, 1964, Falcon Seaboard Drilling Company (Falcon) filed a petition, as supplemented on January 4, 1965, to intervene herein. However, by order issued January 29, 1965, Falcon's petition was denied. Trans-Canada and the Public Service Board of the State of Vermont filed interventions in this proceeding on December 23, 1964, and December 28, 1964, respectively, in support of the authorization sought by Applicant.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

The Commission finds:

(1) Applicant, Vermont Gas Systems, Inc., a Vermont corporation having its principal place of business in South Burlington, Vermont, is a "person" within the meaning of Sections 2(1) and 3 of the Natural Gas Act, and the importation of natural gas proposed by it is subject to the jurisdiction of the Commission under the provisions of Section 3 of the Act.

(2) The importation of natural gas by Applicant, as proposed, is appropriate and consistent with the public interest, provided such importation be upon terms and conditions hereinafter specified, and authorization therefor should be granted as hereinafter ordered.

(3) The application for exemption from the provisions of the Natural Gas Act filed by Applicant in Docket No. CP65–155 is inappropriate and should be dismissed since Applicant is neither engaged nor legally authorized to engage in the transportation or sale of natural gas in interstate commerce, as contemplated by Section 1(c) of the Natural Gas Act.

(4) A permit for the construction, operation, maintenance and connection of facilities at the International Boundary between the United States and Canada for the importation of natural gas into the United States as hereinbefore described, should be issued pursuant to Executive Order No. 10485 in Docket No. CP65–141.

(5) Applicant should file a gas purchase contract with Trans-Canada and any subsequent revisions thereof with the Commission in accordance with Section 153.8 of the Regulations under the Natural Gas Act.

(6) Applicant should notify the Commission in writing upon receipt by Trans-Canada of appropriate authorization from the National Energy Board of Canada for the exportation of natural gas as proposed.

The Commission orders:

(A) Applicant, Vermont Gas Systems, Inc., be and the same is hereby authorized to import up to 8,500 Mcf of natural gas per day from Canada into the United States as hereinbefore described, as more fully described in the applications in this proceeding, upon the terms and conditions of this order.

(B) The authorization granted by paragraph (A) above shall not be transferable or assignable and shall remain in effect only so long as Applicant continues the acts and operations thereby authorized in accordance with the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder, and in accordance with the terms and conditions of this order.

(C) Applicant shall make, keep and preserve full and complete records with respect to the natural gas herein authorized to be imported, and shall file with the Commission annual reports showing, by months, the quantities of gas imported during the preceding calendar year, together with the volumes imported on the peak day of each month, and such other reports with respect to such importation as the Commission may deem necessary and in such form and manner as the Commission may prescribe.

(D) The authorization hereby granted may be modified from time to time or terminated, after opportunity for hearing, upon further order of the Commission, but in no event shall such authorization extend beyond the termination of the permit which is the subject matter in Docket No. CP65–141.

(E) The application for exemption from the provisions of the Natural Gas Act filed by Applicant pursuant to Section 1(c) of the Act in Docket No. CP65–155 be and the same is hereby dismissed.

(F) A permit for the construction, operation, maintenance and connection of facilities at the International Boundary between the United States and Canada for the importation of natural gas into the United States as hereinbefore described shall be issued pursuant to Executive Order No. 10485 in Docket No. CP65–141.

(G) Applicant shall file the gas purchase contract with Trans-Canada and any subsequent revisions thereof with the Commission in accordance with Section 153.8 of the Regulations under the Natural Gas Act.

(H) Applicant shall notify the Commission in writing upon receipt by Trans-Canada of appropriate authorization from the National Energy Board of Canada for the exportation of natural gas as proposed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE JUPITER CORPORATION, DOCKET NO. RI63–212; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65–58

ORDER DENYING MOTION TO DISMISS PROCEEDINGS

(Issued April 29, 1965)

On March 10, 1965, The Jupiter Corporation filed a motion to dismiss the proceedings in Docket No. RI63–212 and in the alternative to consolidate those proceedings with an area rate proceeding instituted by the Commission with respect to independent producers of natural gas. On March 23, 1965 the Commission staff filed an answer requesting denial of Jupiter's motion.

In support of its motion to dismiss Jupiter contends that the Commission's investigation of Jupiter's rates on an individual company basis is incompatible with the Commission's regulation of independent producers on an area basis. Jupiter further contends that such regulation constitutes an unreasonable discrimination against it in violation of its constitutional rights and is unnecessary to protect the public interest. Jupiter's arguments are in large part the same as those which it made to support previous motions filed in these proceedings in which it sought various forms of relief. Specifically Jupiter cites arguments contained in its Alternative Motion to Sever and Stay Proceedings and in its Petition for Rehearing of our denial of Jupiter's motion to terminate.

In its answer, the staff contends that Jupiter's rates can be validly regulated only on a cost basis as the Commission has held that Jupiter is a transporter of gas in the Rollover Field, and that it produces no gas therein. Staff contends that the institution of producer area rate proceedings does not in any way preclude the Commission from regulating Jupiter's rates by an individual company cost of service method. Staff further states that the Commission has denied Jupiter other relief based on the same arguments contained in its motion to dismiss.

In our order issued February 12, 1965, 33 FPC 204, denying Jupiter's motion for continuance, we held that whether Jupiter seeks to present justification for its rates on a cost basis or any other basis is in the first instance a matter of its own selection and second, a question of admissibility to be ruled upon by the Presiding Examiner. We further held that the relevancy of Jupiter's contentions, now repeated in its motion to dismiss, with respect to the issue of "guideline," "in-line" and "area" prices, if any, to the investigation of Jupiter's rates in this proceeding may be appropriate matters which Jupiter would seek to introduce as part of its evidence or matters which they would brief after hearing.

In that order we also considered Jupiter's contention that the public interest will not be advanced by a reduction in its rates in this proceeding for sale and delivery to Tennessee Gas Transmission Company. For the reasons stated therein we held Jupiter's narrow construction of possible benefit to consumers to be without merit.

In our order issued January 18, 1965, 33 FPC 82, denying Jupiter's motion to terminate these proceedings, we held that Jupiter's motion to terminate would result in the Commission's summary disposal of these proceedings without consideration of the contentions advanced and evidenced proposed by the staff. Jupiter's instant motion to dismiss these proceedings would have a like result.

Nothing in Jupiter's present motion convinces us that any of these previous determinations were in error and nothing new has been raised which would otherwise justify dismissal of these proceedings or their consolidation with the area rate proceeding from which Jupiter was, without objection, previously severed.

We denied Jupiter's previously filed motions in these proceedings for the reason that the arguments made therein failed to support the relief requested. Upon consideration of those same arguments now advanced by Jupiter as grounds for its motion to dismiss Docket No. RI63-212, we are of the opinion that they fail to justify dismissal of these proceedings or Jupiter's request for alternative relief.

The Commission orders:

(A) The Motion to Dismiss Proceedings in Docket No. RI63-212, filed by The Jupiter Corporation on March 10, 1965, should be and hereby is denied.

(B) The alternative relief requested in Jupiter's motion to dismiss should be and hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-87

ORDER CLARIFYING AND MODIFYING ORDER AUTHORIZING EXPORTATION OF NATURAL GAS

(Issued April 29, 1965)

On February 4, 1965, 33 FPC 180, the Commission issued its order in Docket No. CP65-87 authorizing Panhandle Eastern Pipe Line Company (Panhandle) to export natural gas from the United States to Canada in accordance with the contract, dated April 21, 1954, as amended, between Panhandle and Union Gas Company of Canada, Limited (Union Gas), as further amended by an agreement, dated December 20, 1963. On February 15, 1965, Union Gas filed a petition for clarification and modification of said order.

On page 181 of the order of February 4, 1965, appears the statement "The proposed and existing sales are interruptible or curtailable." Union Gas requests that such statement be clarified by adding the words "as set forth in the 1954 contract between Applicant and Union Gas as amended December 20, 1963, and in the order of the Commission in Docket No. G-612 issued on April 23, 1946, 5 FPC 472, as amended by order of the Commission issued on August 20, 1946, 5 FPC 718, and by order in Docket No. G-619 issued on April 23, 1946, 5 FPC 476." The Commission agrees that the proposed clarifying words should be added to its statement and, further, it appears to the Commission that the following clarifying statement should also be added:

> The 1954 contract as amended by letter agreement dated December 20, 1963, calls for curtailment and interruption at any time, but such curtailments or interruptions may not reduce the volumes deliverable by more than 15 per cent during the period from November 1 through March 31, inclusive, or by more than 8 per cent during the period from April 1 through October 31. Additionally, the cumulative deficiency on November 1 of any year may not exceed 10 per cent of the annual volume deliverable during the preceding year.

Union Gas also requests that paragraphs (i) and (E) of the order of February 4, 1965, should be modified by substituting certain proposed language of Union Gas in lieu of the present language of said paragraphs.

Paragraph (i) reads as follows:

> The export authorization hereinafter issued is granted on the express condition that the interruptible service authorized hereinafter shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Paragraph (E) reads as follows:

> This export authorization issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Union Gas proposes the following substitute language for paragraphs (i) and (E):

> The authorization hereby granted may be modified from time to time or terminated, after opportunity for hearing, upon further order of the Commission but in no event should ("shall" for paragraph (E)) such authorization extend beyond termination of the Presidential Permit relating to this authorization.

The Commission believes that it would not be in the public interest to modify its order of February 4, 1965, to grant Union Gas' petition and to modify and clarify the order as proposed therein. For the past few months the Commission's orders granting authorization to render service to direct interruptible industrial customers have contained conditions similar to those in paragraphs (i) and (E).

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 4, 1965, in Docket No. CP65-87 be clarified and modified as hereinafter ordered.

The Commission orders:

The Commission's order issued February 4, 1965, in Docket No. CP65-87 be and the same is hereby clarified and modified as follows:

(A) The sentence "The proposed and existing sales are interruptible or curtailable." found on page 181 of the order of February 4, 1965 is hereby deleted and the following language is hereby substituted:

> The proposed and existing sales are interruptible or curtailable as set forth in the 1954 contract between Applicant and Union Gas as amended December 20, 1963, and in the order of the Commission in Docket No. G-612 issued on April 23, 1946, as amended by order of the Commission issued on August 20, 1946, and by order in Docket No. G-619 issued on April 23, 1946. The 1954 contract as amended by letter agreement dated December 20, 1963, calls for curtailment and interruption at any time, but such curtailments or interruptions may not reduce the volumes deliverable by more than 15 per cent during the period from November 1 through March 31, inclusive, or by more than 8 per cent during the period from April 1 through October 31. Additionally, the cumulative deficiency on November 1 of any year may not exceed 10 per cent of the annual volume deliverable during the preceding year.

(B) Paragraphs (i) and (E) of the order of February 4, 1965, are hereby deleted and the following language is hereby substituted:

> (i) The export authorization issued hereby is granted on the express condition that the service authorization herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers, subject to meeting the seasonal and annual minimum obligations of the April 21, 1954 contract, as amended, between the parties.
>
> (E) The export authorization issued hereby is granted on the express condition that the service authorization herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers, subject to meeting the seasonal and annual minimum obligations of the April 21, 1954 contract, as amended, between the parties.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP65-197

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued April 30, 1965)

On December 31, 1964, Alabama-Tennessee Natural Gas Company (Applicant), filed in Docket No. CP65-197 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, as supplemented January 25, 1965, for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the construction and operation of other facilities, the sale of natural gas and initial service to the City of Moulton, Alabama, all as more fully set forth in the application on file with the Commission.

Applicant proposes to abandon, by sale to Decatur, Alabama, 4.8 miles of 3½-inch O.D. lateral pipeline, extending from a point of connection with the existing Decatur 6⅝-inch lateral line to a point north of Flint City, Alabama. In addition, Applicant seeks to abandon and remove 7.7 miles of 6⅝-inch main pipeline extending from a point near Madison, Alabama, to the terminus of Applicant's main transmission pipeline system near Huntsville, Alabama.

Applicant proposes further to construct and operate: (1) approximately 7.7 miles of 12¾-inch O.D. main transmission pipeline paralleling Applicant's existing 10¾-inch O.D. line from Madison, Alabama, to Huntsville, Alabama; (2) approximately 8.0 miles of 6⅝-inch O.D. lateral pipeline extending from Applicant's Hartselle Station in Morgan County, Alabama, to the delivery point for Muscle Shoals Natural Gas Corporation at Flint City, Alabama; and (3) an additional 350 BHP compressor unit at its Sheffield compressor station in Colbert County, Alabama.

The application states that the proposed construction is required to provide an additional 6,650 Mcf of daily system delivery capacity, in order to enable Applicant to serve its existing customers with their natural gas requirements for the winter heating season of 1965-66, and further to enable Applicant to provide initial service and to meet the estimated third-year peak day requirements of 1,225 Mcf for the City of Moulton, Alabama, a new customer of Applicant.

The estimated cost of Applicant's proposed construction is $665,000, and will be financed by short-term loans and the issuance of either bonds or debentures.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Alabama-Tennessee Natural Gas Company, a Delaware corporation having its principal place of business in Florence, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 11, 1948, in Docket No. G-585 (7 FPC 251).

(2) The facilities hereinbefore described, as more fully set forth in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, as well as to provide the initial service and

third-year peak day requirements of the City of Moulton, Alabama, which are subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant by means of the proposed facilities are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned by sale to Decatur, Alabama, and by removal as heretofore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter provided.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Alabama-Tennessee Natural Gas Company, to install and operate the proposed facilities and to sell natural gas as hereinbefore described, including the initial service and third-year peak day requirements of the City of Moulton, Alabama, all as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in operation not later than six months from the date of this order, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations aforesaid.

(D) Permission for and approval of the abandonment by Applicant of the pipeline facilities hereinbefore described and as more fully described in the application, in this proceeding be and same are hereby granted.

(E) Applicant shall advise the Commission of the date of abandonment within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLUMBIA RIVER BASIN, HEADWATER BENEFITS DETERMINATION, DOCKET NO. E-6384

FINDINGS AND ORDER

(Issued April 30, 1965)*

This order determines payments to the United States under Section 10(f) of the Federal Power Act (16 U.S.C. 803 (f)) for benefits provided by its headwater improvements to certain non-Federal projects in the Columbia River basin between January 1, 1957, and August 31, 1961.

No headwater benefits accrued in the Columbia River basin before January 1, 1949.[1] The Commission has fixed payments to the United States for headwater benefits provided from January 1, 1949, through December 31, 1956;[2] from September 1, 1961, through August 31, 1963;[3] and from September 1, 1963, through August 31, 1964.[4] It also approved payments to licensees for headwater benefits provided to non-Federal projects by non-Federal reservoirs from September 1, 1961, through August 31, 1964.[5] With the investigation of benefits covered by this order, studies of headwater benefits in the Columbia River basin have now been made which embrace the entire period during which there was a possibility of such benefits. Henceforth, investigations will be made on a current basis. The staff completed its investigation covering the period of this order and submitted its report to all affected parties, both Federal and non-Federal, for comment by letter dated March 5, 1965.

Comments on the staff's report were filed jointly by The Montana Power Company, The Washington Water Power Company, Puget Sound Power & Light Company, PUD No. 1 of Chelan County, PUD No. 1 of Pend Oreille County, and PUD No. 2 of Grant County on April 2, 1965; by the Department of the Interior on April 7, 1965; and by the Corps of Engineers, Department of the Army, on April 9, 1965.

The non-Federal parties observed that the staff followed the same procedures in its report on headwater benefits during the period herein covered as it did in its report on the 1949–1956 period, except for raising the limit payment per kilowatt-hour from 0.49 mill to 0.55 mill, and they noted their acceptance of the procedures followed in that earlier report.

In addition, the non-Federal parties contend that the value of uncoordinated releases is substantially less than the value of coordinated releases and is 0.25 mill, or less, per kilowatt-hour. They state, however, that in recognition of the fact that the staff employed the same criteria in its study of the later period as it did in its study of the earlier period, except for the limit on the charge per kilowatt-hour, and that in recognition of the importance of settling past controversies so that concentration may be given to more important future problems, they agree to make the payments to the United States proposed in the staff's report, provided the determination is made by the Commission on that basis.

[4] Order of February 19, 1965 (33 FPC 300).

[5] 29 FPC 238 (1963); and order of February 19, 1965 (33 FPC 300).

The Department of the Interior, in its comments, recommends payments to the United States for headwater benefits in the period covered herein of $2,365,000 plus $416,000 for interest charges to January 1, 1965, on past due payments a total of $2,781,000. This figure stems from Interior's contention that, during the period studied, beneficiaries had assured generating capabilities based upon the full release of Federal storage. On this premise, it asserts that payments should be based on the formula in Section 11.27(a) of the Commission's Regulations under the Federal Power Act, using energy gains which would be obtained from the release of storage during an assumed repetition of the critical period.

The staff investigation shows that downstream parties were required to purchase electric energy from the Bonneville Power Administration because stored water was not released from Federal reservoirs. Interior in its computations of proposed payments for headwater benefits has attempted, however, to compensate for the fact that useable storage was not released for use of downstream parties. First, it computed a payment of $3,711,000 for headwater benefits on the basis of total assured storage releases. It then offset this amount by $1,346,000 for energy that the downstream parties would have been able to generate if the stored water in the Federal reservoirs had been released to meet needs of the downstream non-Federal parties. Thus, in fact, the downstream parties did not have assurance of scheduled storage releases from the Federal reservoirs, as contemplated under Section 11.27(a), since these parties were required to purchase energy from Bonneville Power Administration that could have been generated in their own plants if stored water had been released from Federal reservoirs.

The Department of the Interior further objects to our application of a limit of 0.55 mill per kilowatt-hour to the apportionment of Section 10(f) costs to storage. It contends that such a limit, accepted by parties to the coordination agreement as applicable to critical period energy, is inapplicable to actual energy generation. In support of its position, Interior illustrates the case of Grand Coulee during 1959, when out of the annual dam and reservoir costs the staff assigned only $7,500 or about 0.14 percent, to downstream projects. The significance of this particular example is not apparent since the computed unit apportionment of costs to storage for Grand Coulee was less than 0.55 mill per kilowatt-hour for all years of study. In any event, the use of the ceiling did not affect payments computed for Grand Coulee storage. The limit of 0.55 mill per kilowatt-hour is adopted herein since it is the limit most recently specified in Section 13(b) of the September 15, 1964 *Pacific Northwest Coordination Agreement* between all parties involved in this investigation.

The Department of the Army notes that the staff's proposed determination of payments for headwater benefits is consistent with prior Section 10(f) determinations made for other periods under Docket No. E-6384.

We have carefully considered the several submissions of the various interested parties. For the reasons stated above, and those stated in our order issued April 30, 1964,[6] we approve the staff's recommended payments based upon estimates of actual energy gains.

The non-Federal parties state, also, that they will endeavor to make a settlement among themselves concerning payments to non-Federal parties, subject to our approval under Section 13.1 of the Regulations under the Federal Power Act, involving headwater benefits accruing during the entire period January 1, 1949, through August 31, 1961. These parties shall make such filing within ninety days of the issuance of this order.

---

[6] 31 FPC 1044 (1964).

The Commission finds:

(1) The purpose of the present investigation is to determine what payments should be made to the United States in accordance with the provisions of section 10(f) of the Federal Power Act, for headwater benefits received during the period of January 1, 1957, through August 31, 1961, from its headwater improvements in the Columbia River basin.

(2) The three Federal headwater improvement projects included in the present determination are Hungry Horse and Grand Coulee, operated by the Bureau of Reclamation, and Albeni Falls, operated by the Corps of Engineers.

(3) The headwater improvements and the hydroelectric plants, both Federal and non-Federal, benefited are listed in the following tabulation:

Owner	Headwater improvement		
	Hungry Horse	Albeni Falls	Grand Coulee
	Plants benefited		
United States	Hungry Horse		
TMPC	Kerr		
TMPC	Thompson Falls		
TWWPC	Noxon Rapids		
TWWPC	Cabinet Gorge		
United States	Albeni Falls	Albeni Falls	
Pend Oreille PUD	Box Canyon	Box Canyon	
United States	Grand Coulee	Grand Coulee	Grand Coulee.
United States	Chief Joseph	Chief Joseph	Chief Joseph.
Chelan PUD	Rock Island	Rock Island	Rock Island.
Grant PUD	Priest Rapids	Priest Rapids	Priest Rapids.
United States	McNary	McNary	McNary.
United States	The Dalles	The Dalles	The Dalles.
United States	Bonneville	Bonneville	Bonneville.

(4) In computing the benefits and the payments to be made therefor by non-Federal parties to the United States, estimates of actual gains were used and the same procedures were followed as those employed in the investigation of headwater benefits provided during the period January 1949 through December 1956. However, payments were limited to 0.55 mill per kilowatt-hour instead of to 0.49 mill per kilowatt-hour as was done in the earlier period. We approved the payments computed for the earlier period in our order in Docket No. E-6384 issued April 30, 1964. We find that, insofar as the non-assurance of scheduled storage releases is concerned, conditions were the same in both periods. Accordingly, computations should be governed by provisions of Section 11.27(b) of the Commission's Regulations under the Federal Power Act.

Since the purpose of this investigation is to determine payments to be made for headwater benefits occurring in and under conditions existing in past years, annual costs of interest, maintenance, and depreciation, and annual energy gains attributable to releases from upstream storage are used. The apportionment formula employed is similar to the formula described in Section 11.27(a) of the Regulations. The costs apportioned to non-Federal projects constitute the payments to be made to the United States by the several parties.

In making the apportionment of cost, a limit of 0.55 mill per kilowatt-hour was set to insure that costs apportioned to downstream parties would not exceed the value of the energy gains. This same unit value is the limit specified in Section 13(b) of the Pacific Northwest Coordination Agreement executed September 15, 1964, of which all parties involved in this investigation were signatories.

(5) In addition to the charges for headwater benefits computed by the method described in Section (4) of these findings to be payable to the United States by owners of non-Federal hydroelectric projects for the period between January 1,

1957, through August 31, 1961, under Section 10(f) of the Federal Power Act, charges are payable by the same owners to the United States for the cost of the determination made under Section (4) of these findings. Such additional charges are likewise required by Section 10(f) of the Federal Power Act. The combined charges are as follows:

Payer	Payments to the United States		
	For headwater benefits	For FPC costs	Total
The Montana Power Company	$348,400	$1,500	$349,900
The Washington Water Power Co	129,800	550	130,350
PUD No. 1 of Pend Oreille County	102,400	450	102,850
PUD No. 1 of Chelan County	145,000	600	145,600
PUD No. 2 of Grant County	51,700	200	51,900
Totals	777,300	3,300	780,600

(6) The charges assessed in this proceeding for benefits conferred by headwater improvements are equitable, based upon all facts and circumstances existing during the period of January 1, 1957, through August 31, 1961.

The Commission orders:

(A) The payments to the United States for headwater benefits which have accrued to the owners of the non-Federal hydroelectric projects for the period January 1, 1957 through August 31, 1961, and the cost to each non-Federal owner for making such determination, all assessed pursuant to Section 10(f) of the Federal Power Act, are as follows:

Payer	Payments to the United States		
	For headwater benefits	For FPC costs	Total
The Montana Power Company	$348,400	$1,500	$349,900
The Washington Water Power Co	129,800	550	130,350
PUD No. 1 of Pend Oreille County	102,400	450	102,850
PUD No. 1 of Chelan County	145,000	600	145,600
PUD No. 2 of Grant County	51,700	200	51,900
Totals	777,300	3,300	780,600

(B) The payments specified in paragraph (A) above shall be paid within sixty days from the date of issuance of this order.

Commissioner Ross *dissenting.*

Ross, *Commissioner, dissenting:*

In my opinion the comments submitted by the parties are not in sufficient detail to permit a resolution of the issues and I therefore would have set this matter for hearing before making a final determination.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE EMPIRE DISTRICT ELECTRIC COMPANY, DOCKET NO. E-6711

DETERMINATION OF CHARGES FOR HEADWATER BENEFITS

(Issued April 30, 1965)

The Commission by order of October 29, 1956, 16 FPC 1109, instituted an investigation under Section 10(f) of the Federal Power Act to enable it to determine what part, if any, of the annual cost of interest, maintenance, and depreciation on the United States' Table Rock project on the White River, Arkansas, should be charged to The Empire District Electric Company (Company) for headwater benefits received at its downstream Ozark Beach project, licensed as Project No. 2221.

The Corps of Engineers' Table Rock project, located on the White River at river-mile 529, was completed in 1961 for flood control and power production. The gross head at the plant is 204 feet. The average annual generation is estimated to be 493,000,000 kilowatt hours. The storage capacity of the reservoir at elevation 931 feet amounts to 3,462,000 acre-feet. Above elevation 915 feet are 760,000 acre-feet of capacity used for the control of floods, and between elevations 915 feet and 881 feet are 1,181,500 acre-feet of storage capacity which may be utilized for the production of power.

The Company's Ozark Beach project is located on the White River 23 miles below Table Rock Dam. The storage capacity of the Ozark Beach reservoir, Lake Taneycomo, below elevation 697 is 58,891 acre-feet, of which only about 9,000 acre-feet are used for daily or weekly pondage. The power plant consisting of four generating units of 4,000 kilowatts each was placed in operation in 1913.

The Company is charged below only for headwater benefits received from September 24, 1960 when it is estimated that the value of the Company's power gains from streamflow regulation provided by the Table Rock reservoir offset the value of its earlier power losses from the initial filling of the upstream reservoir.

The staff report on its investigation, which recommended the findings and determinations made below, was sent for comment to the Company, the Chief of Engineers of the Department of Army, and the Secretary of the Interior, all of which have submitted comments on the staff report.

Upon Consideration of the Staff Report and the Aforesaid Comments, the Commission Determines:

(1) As of September 24, 1960, the value of The Empire District Electric Company's power gains from streamflow regulation offset the value of its earlier power losses from the filling of the upstream Table Rock reservoir.

(2) The equitable proportion of the annual charges for interest, maintenance, and depreciation on the Table Rock project to be paid by The Empire District Electric Company to the United States for headwater benefits received at its Ozark Beach project between September 24, 1960, and December 31, 1963 is $123,110.

The Commission finds:

The cost to the Commission of making the determination herein is $23,000.

The Commission orders:

Payment to the Commission of the sum of $123,110 and $23,000 for the purposes stated above shall be made by The Empire District Electric Company within sixty (60) days from the date of issuance of this determination.

MICHIGAN CONSOLIDATED GAS COMPANY, DOCKET NO. CP65-38; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP65-39

ORDER ADOPTING DECISION OF PRESIDING EXAMINER

(Issued April 30, 1965)*

Syllabus

1. Commission, upon its own review [no exceptions having been filed] *adopts* initial decision certificating facilities and sales to provide initial gas service in the Upper Peninsula of Michigan. P. 913.
2. Commission *rejects* contention that controlling policy requires pipeline's certificate be conditioned to require renegotiation of distributor-industrial customer agreement to obtain ten-year, rather than five-year, no-escape-clause contract—whether any condition is required depends upon all facts and circumstances of particular case. P. 921.
3. Commission *issues* certificate of public convenience and necessity under Section 7 of the Natural Gas Act.

Arthur R. Seder, Jr. for Michigan Consolidated Gas Company.

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company.

F. Vinson Roach, Justin R. Wolf, C. A. Case, Jr., J. C. Osborne, D. B. O'Brien, Jr. and *Stanley Wanger* for Northern Natural Gas Company.

Frank J. Kelly and *Hugh B. Anderson* for Michigan Public Service Commission.

William E. Torkelson for Public Service Commission of Wisconsin.

James R. Fitzharris for City of Escanaba, Michigan.

Reuben Goldberg and *George Spiegel* for Michigan Gas and Electric Company.

Glen H. Bell for Lake Superior District Power Company.

Albert J. Feigen for Peninsular Gas Company.

John W. Scott and *Louis L. DaPra* for Minnesota Valley Natural Gas Company.

Mark W. Putney for Iowa Power and Light Company.

Jerome J. McGrath for Upper Lake Docks Coal Bureau, Inc.

Edward J. Hartman for Iowa-Illinois Gas and Electric Company.

George C. Pardee for Metropolitan Utilities District of Omaha.

J. F. Kinney for Iowa Public Service Company.

Lloyd J. Marti for Western Power & Gas Company.

George C. Mastor for Minneapolis Gas Company.

John F. Gaston for Iowa Electric Light and Power Company.

Ned Willis for North Central Public Service Company.

Seymour Tabin for Wisconsin Public Service Corporation.

David B. Ward and *Charles R. Brown* for the Staff of the Federal Power Commission.

---

*Initial decision appears on p. 913.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

This proceeding, which is before us on Presiding Examiner Francis L. Hall's decision issued April 12, 1965, involves an application by Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) under Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction of facilities and the sale of natural gas to its affiliate, Michigan Consolidated Gas Company (Michigan Consolidated), for resale in 36 communities in the southern portion of the Upper Peninsula of the State of Michigan. Michigan Consolidated filed a companion application under Section 7(a) to obtain this supply of gas.

The Examiner would certificate the proposed facilities and sales subject to the jurisdiction of the Commission. No party filed exceptions to the Examiner's decision, and the time for filing exceptions has expired. We have reviewed the Examiner's decision in accordance with Section 1.30(d)(2) of the Commission's Rules of Practice and Procedure.

The Commission finds:

Upon consideration of the entire record in this proceeding, the above-described decision of the Presiding Examiner should be adopted as the decision of the Commission.

The Commission orders:

The above-described decision of the Presiding Examiner, issued April 12, 1965, in this proceeding, is hereby adopted and shall become effective as the decision of the Commission as of the date of issuance of this order.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FILED PURSUANT TO SECTION 7 OF THE NATURAL GAS ACT

(Issued April 12, 1965)

HALL, *Presiding Examiner:* Involved here is the joint proposal of Michigan Consolidated Gas Company (Michigan Consolidated) and its affiliate, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), to initiate natural gas service in 36 cities, villages, and townships in Delta, Iron, Dickinson, and Menominee Counties located in the southern part of the Upper Peninsula of Michigan.

The gas supply for the Upper Peninsula area will be provided by Michigan Wisconsin to Michigan Consolidated at a new delivery point near Menominee. Michigan, for transmission and distribution through a system to be constructed by Michigan Consolidated.

As hereinafter pointed out (infra, pp. 917–919), there was an area of mutual exclusiveness between the Michigan Consolidated-Michigan Wisconsin proposal and the application of Northern Natural Gas Company (Northern) as to which *Ashbacker Radio Corp.* v. *Federal Communications Commission*, 326 U.S. 327, required the comparative hearing ordered by the Commission in this proceeding. But the present intention of Northern to serve only the noncompetitive or northern part of the Upper Peninsula area makes it unnecessary to consider the comparative merits of the two proposals.

Because Northern is not now in competition for a certificate to serve the competitive area, the issues to be decided are narrowed to the certificate issues related to each of the two proposals. This prompts the Examiner to consider each proposal in a separate decision. The Michigan Consolidated-Michigan Wisconsin applications to provide natural gas service in the southern portion of the Upper Peninsula is therefore the subject of this decision.

A separate decision, issued by the Examiner simultaneously with this decision, also grants Northern's present proposal to provide service in the noncompetitive or northern part of the Upper Peninsula of Michigan and in northern Wisconsin.

Michigan Consolidated is a present customer of Michigan Wisconsin and is the largest distributor of natural gas in the State of Michigan. It filed its application pursuant to Section 7(a) of the Natural Gas Act (Act) for the purpose of obtaining a supply of gas from Michigan Wisconsin at Menominee. It requests the Commission to authorize and direct Michigan Wisconsin to extend its existing pipeline facilities a distance of 4.8 miles to the vicinity of Menominee and to deliver and sell natural gas to Michigan Consolidated at this point.

Michigan Wisconsin, a natural gas company subject to the Commission's jurisdiction, filed its companion application under Section 7(c) of the Act requesting certificate authority to construct and operate the facilities and to make the sale of gas sought by Michigan Consolidated.

The estimated peak day and annual requirements of Michigan Consolidated for service in the Upper Peninsula area in the third year are 39,973 Mcf and 5,400,000 Mcf, respectively (46,292 Mcf maximum day and 6,213,741 Mcf annually in fifth year).

Treating the Upper Peninsula requirements as part of its over-all market requirements, Michigan Consolidated seeks in this proceeding to increase it purchases from Michigan Wisconsin by 10,000 Mcf per day out of volumes of unallocated gas currently available on Michigan Wisconsin's system, thereby increasing its maximum daily quantity (MDQ) entitlement to 543,627 Mcf. This would have the effect of increasing its annual contract quantity (ACQ) by 1.9 billion cubic feet to 103.3 billion cubic feet.

Because of Michigan Consolidated's unique supply situation (see *infra*, pp. 925-926), the decision to seek an additional 10,000 Mcf of MDQ from Michigan Wisconsin was not dictated by Michigan Consolidated's need for the additional gas but was intended primarily to provide Michigan Wisconsin with additional revenues sufficient to cover the cost of the additional facilities necessary to deliver the quantities of gas required by Michigan Consolidated at Menominee.

The total estimated cost of the new facilities required to serve the southern part of the Upper Peninsula is $15,788,830—$14,126,830 for the transmission and distribution facilities to be constructed by Michigan Consolidated and $1,682,000 for the facilities to be constructed by Michigan Wisconsin.

Michigan Consolidated operates wholly within the State of Michigan, having its principal place of business at Detroit. While not subject to the Commission's jurisdiction, it is regulated by the Michigan Public Service Commission.

The Michigan Commission found Michigan Consolidated's proposed system to be economically feasible and in the public interest and certificated the project contingent upon approval by the Federal Power Commission of the Michigan Consolidated-Michigan Wisconsin proposal involved herein.[1]

In a prior proceeding the Federal Power Commission indicated that natural gas service to the Upper Peninsula of Michigan "would be desirable" (22 FPC at 792). The immediate granting of the present proposals of both Michigan Consolidated-Michigan Wisconsin and Northern assures initiation of service in this area (and in northern Wisconsin) by the Fall of 1965.

---

[1] A public hearing was held before the Michigan Commission on July 22-23 and September 14-18, 1964, at which Michigan Gas and Electric Company, Northern, Upper Peninsula Fuels Research, Inc., and representatives of interested municipalities intervened and participated.

Furthermore, approval of both proposals enables natural gas service to be provided over wider areas and to a substantially larger number of consumers than initially contemplated by either proposal standing alone, and will bring new hope to those receiving the service for it will provide them with help they need to help themselves.

The avid interest shown by those in the Upper Peninsula and northern Wisconsin in obtaining natural gas service is of the type being manifested throughout the country as local areas with economic bottlenecks press their efforts to achieve economic growth, higher standards of living, and make needed contributions to the Nation's economy.[3]

Natural gas has demonstrated that it fits the needs of all communities and areas. It is a part of today's modern way of life and industrial activity. Moreover, the twin pressures of population and industrial expansion make it necessary that all possible areas be developed with extra vigilance.

Background

Michigan Consolidated's interest in serving the Upper Peninsula extends back to 1959. In that year Michigan Wisconsin filed a certificate application (Docket No. G-18316) proposing to deliver and sell 37,200 Mcf per day of natural gas to Michigan Consolidated at Menominee for service in the Upper Peninsula. Michigan Consolidated in turn proposed to transport the gas from Menominee into the Upper Peninsula for sale to Michigan Gas and Electric Company, the City of Escanaba and Cleveland Cliffs Iron Company.

The Commission approved Michigan Wisconsin's application to supply 37,200 Mcf per day at Menominee for service to the Upper Peninsula but concluded that, while Michigan Consolidated's proposal was economically feasible, the allocation of gas should be made to Michigan Gas and Electric Company because it was the local distributor of gas in the area (22 FPC 775, 792-796). However, Michigan Gas and Electric Company was unwilling to purchase gas from Michigan Wisconsin at Menominee under the conditions contained in the Commission's order and instituted litigation in which the action of the Commission was upheld (*Michigan Gas and Electric Co.* v. *Federal Power Commission*, 290 F. 2d 374, cert. den. 368 U.S. 897).[3] Following the litigation the Commission terminated the allocation to Michigan Gas and Electric Company of 37,200 Mcf per day (27 FPC 180).

---

[3] While the additional service proposed to be provided by Northern and Michigan Consolidated-Michigan Wisconsin does not fall into either the marginal or submarginal category, it is clearly desirable and appropriate for any public utility with massive resources and skills, which is willing and able to do so, and which is making either a fair or more than a fair return, to extend service to additional areas even where the proposed additional service falls, in an economic sense, into the marginal or submarginal category when considered apart from the utility's total business.

Where this has happened, and it has happened many, many times, the public utility cements its invaluable relations with the general public and absorbs any losses without encountering financial stresses and strains in its over-all operations. In this regard, the Manager of the Marketing and Forecasting Departments of Michigan Consolidated (and of Michigan Wisconsin and American Louisiana Pipe Line Company (American Louisiana)) testified that "there are many communities and areas that we have extended to on a main line extension basis without looking at the economics" (Tr. 603). In short, Michigan Consolidated has not wasted its ability and capacity to provide needed additional service. This is the type of service which, in the long run, is apt to turn out to be a utility-community partnership of mutual benefit. It is impossible for many distressed areas and communities to improve their economic status unless public utilities are public spirited enough to help them out of their doldrums, when they are able to do so, by providing needed utility services. There are, of course, limits to which any utility may go.

It therefore appears that regulatory agencies might serve the public interest best by encouraging gas utilities to funnel more of their success into wider service areas. "The various parts of a public utility's system need not and cannot be equally profitable", *Minneapolis Gas Co.* v. *Federal Power Commission*, 278 F. 2d 870, 871, cert. den. 364 U.S. 891. It is settled that all that is required is that the over-all operations be sufficient to give the net returns to which the utility is entitled. *Puget Sound Traction, Light and Power Co.* v. *Reynolds*, 244 U.S. 574, 580-581; *St. Louis and San Francisco Railway Co.* v. *Gill*, 156 U.S. 649, 665-666. Any qualified applicant under the Act may, of course, be granted a certificate if (1) it "is able and willing properly to do the acts and perform the service proposed" and (2) the proposed service "is or will be required by the present or future public convenience and necessity." Section 7(c).

However, during the period of litigation, Michigan Wisconsin had constructed a 16-inch line from Weyauwega to Marinette, Wisconsin, in order to supply gas to the Upper Peninsula whereas an 8-inch and 6-inch line would otherwise have been sufficient to serve all the markets up to Marinette. Thus, since 1960 Michigan Wisconsin has had pipeline facilities specifically installed for service to the Upper Peninsula (See 22 FPC at 795).

Michigan Consolidated has now formulated the new project proposed herein.[4]

As stated, Michigan Wisconsin has the transmission facilities to enable it to render the Upper Peninsula service except for the compressor horsepower and the 4.8 miles of pipeline from Marinette (at the Wisconsin-Michigan border) to Menominee. Thus Michigan Wisconsin has had excess and unused capacity in this part of its system, the cost of which has been borne by customers of Michigan Wisconsin deriving no benefit therefrom. Michigan Wisconsin now seeks to put the previously constructed facilities to the same use for which they were originally constructed, namely, service to the Upper Peninsula.

History Of Present Proceeding

The Michigan Consolidated-Michigan Wisconsin proposal to serve the southern part of the Upper Peninsula was filed August 10, 1964, being thereafter supplemented to provide additional information.

On November 9, 1964, the Commission issued its order (1) consolidating the Michigan Consolidated-Michigan Wisconsin proposal with the partially competing proposal of Northern, Docket No. CP64–255 (Phase II), for comparative hearing and consideration; (2) requiring all evidence in support of the two proposals to be served by December 18, 1964; and (3) fixed January 26, 1965 (later changed to February 2, 1965) as the date for the beginning of cross-examination.

Rulings of the Examiner issued December 28, 1964, and January 8, 1965, further organized the hearing procedure. These rulings, issued on the Examiner's own motion, were made for the convenience of the parties and their witnesses and to eliminate possible confusion and causes that otherwise might have existed for a protracted hearing. The rulings established the order in which the 31 witnesses were to be cross-examined; identified all exhibits by number; permitted the witnesses to adopt their prepared direct testimony at the time they appeared for cross-examination rather than at the outset of the hearing; and required all evidence in opposition to either or both proposals, if any, to be served by January 20, 1965. No such evidence was filed. Moreover, all parties waived presentation of rebuttal evidence following completion of cross-examination on the direct presentations.

---

[3] The litigation immobilized all plans for the supply of gas to the Upper Peninsula until after conclusion thereof.

[4] Following termination of the allocation of gas to Michigan Gas and Electric Company, Michigan Consolidated reviewed the possibility of extending natural gas service to the Upper Peninsula. As a result of experience gained in extending gas service into new communities in the Lower Peninsula, it determined that, on the basis of its regular outstate rates, it could convert a very substantial part of the market in the Upper Peninsula to natural gas in the first five years of service.

Michigan Consolidated believed it necessary to obtain a commitment from Hanna Mining Company to use gas in its pelletizing operations before going forward with the project, since the economic feasibility of the project (when considered in isolation from Michigan Consolidated's total business) is dependent, in its initial stages, upon such a sale. Its agreement with the Hanna Mining Company was executed on July 2, 1964, and was the first such contract signed with a mining company in the Upper Peninsula.

Michigan Consolidated then obtained franchises and permits from the communities it proposes to serve and filed its applications with the Michigan Commission and the Federal Power Commission.

Public hearings covering fourteen hearing days were held on January 15[6] and February 2–5, 8–12, 15–18, 1965. The record made consists of 2201 pages of testimony, 78 exhibits, four of which were withdrawn, and Items A through F received in evidence by reference to the official files of the Commission.

Briefs by counsel for Michigan Public Service Commission, Northern, Michigan Wisconsin, Michigan Consolidated, City of Escanaba, Michigan Gas and Electric Company, Lake Superior District Power Company, Peninsula Gas Company, and a statement of position by the Public Service Commission of Wisconsin, were filed on March 1, 1965. Briefs by counsel for the Commission Staff, Upper Lake Docks Coal Bureau, Inc., Minnesota Valley Natural Gas Company, and a joint brief by eight intervener-customers of Northern (Iowa Power and Light Company, Iowa Public Service Company, Metropolitan Utilities District of Omaha, Minneapolis Gas Company, Northern States Power Company (Minnesota), Northern States Power Company (Wisconsin), North Central Public Service Company, and Western Power & Gas Company), were filed on March 15, 1965. Oral argument, in lieu of reply briefs, was heard by the Examiner on March 18, 1965.

Interveners

The Commission permitted intervention in the consolidated proceeding by the Michigan Public Service Commission, Public Service Commission of Wisconsin, Iowa State Commerce Commission, Metropolitan Utilities District of Omaha, Iowa Electric Light & Power Company, Iowa Public Service Company, Peninsular Gas Company, Minnesota Valley Natural Gas Company, Iowa Southern Utilities Company, City of Escanaba, Michigan, Upper Lake Docks Coal Bureau, Inc., Michigan Gas and Electric Company, North Central Public Service Company, Minneapolis Gas Company, Wisconsin Power & Light Company, Iowa Power and Light Company, Iowa-Illinois Gas & Electric Company, Northern States Power Company (Minnesota), Northern States Power Company (Wisconsin), Iron Ranges Natural Gas Company, Lake Superior District Power Company, Western Power & Light Company, Wisconsin Public Service Corporation, and Suburban Rate Authority (an organization of municipalities within the State of Minnesota).

Consolidation Of Applications For Comparative Hearing

As hereinabove pointed out, the Commission's order issued November 9, 1964, consolidated Northern's proposal in Docket No. CP64–255 (Phase II) with the Michigan Consolidated-Michigan Wisconsin proposal, doing so on the ground that these two proposals being partially competitive insofar as initiating service in the Upper Peninsula of Michigan is concerned,[6] required a comparative hearing[7] to enable consideration to be given to all factors (gas supply, design of facilities, economic feasibility, rates, etc.) entering into the determination of which applicant or applicants, if any, should be authorized to initiate service in the competitive area.

---

[6] No representative of any party appeared at the two-minute hearing held January 15, it having been suggested by the Examiner that appearances were not required for the limited purpose of that session which was to incorporate in Volumes I–A and I–B of the transcript the prepared direct testimony served pursuant to the Commission's order. The reporter was directed to incorporate in Volume I–A (1) the Examiner's introductory statement; (2) the order of the Commission and rulings of the Examiner issued prior to January 15, and (3) the direct testimony of witnesses for Michigan Consolidated, Michigan Wisconsin, and the City of Escanaba, Michigan. To facilitate handling of and reference to the transcript, the reporter was directed to incorporate in Volume I–B (1) the Examiner's further introductory remarks concerning the nature and history of Northern's proposal, and (2) the prepared direct testimony of Northern's 22 witnesses.

The competitive issue was removed from consideration near the close of the consolidated hearing. This resulted from Northern's concession that it would not object to the grant of the authorizations requested by Michigan Consolidated and Michigan Wisconsin to enable Michigan Consolidated to provide natural gas service in the competitive area and in the remaining portion of the southern part of the Upper Peninsula it proposes to serve.[8] Northern also stated that in that event it would accept a certificate authorizing it to construct and operate the facilities required to service its proposed customers in the northern part of the Upper Peninsula of Michigan and in northern Wisconsin.[9] Michigan Gas and Electric Company, Northern's proposed distributor in the competitive area, concurred in Northern's amended position.

---

[6] Northern's proposed construction included a branch line extending southward for the sale of gas to distributors for resale in 23 of the 36 cities, villages and townships and the Hanna iron ore plant proposed to be served by Michigan Consolidated.

[7] In *Ashbacker* the Supreme Court held that "where two bona fide applications are mutually exclusive the grant of one without a hearing to both deprives the loser" of the hearing to which he is entitled (326 U.S. at 333). As put by Mr. Justice Reed in his dissenting opinion in *Midwestern Gas Transmission Co.* v. *Federal Power Commission,* 258 F. 2d 660, 671, "Where competing gas companies seek certificates * * * from the * * * Commission for service to the same consumer groups, the law requires as a matter of fairness that the FPC hear all applicants in the same proceeding, with opportunity to all parties to examine the proposals of one another, so as to bring out before the Commission the facts necessary for the Commission to properly appraise the public interest as between the contending suppliers. This is the doctrine of *Ashbacker* * * *. No one questions its soundness, where applicable."

[8] Northern's concession did not constitute an amendment of its application at Docket No. CP64–255 (Phase II). Rather it proceeded on the basis that the Commission may authorize only part of what is requested in its application, pointing out that under Section 7(e) of the Act the Commission may issue a certificate "authorizing the whole or any part of the operation, sale service, construction * * * covered by the application * * *."

[9] Northern's concession was made in response to remarks of the Examiner appearing at transcript pages 1653–1654 and 1656–1661 concerning the desirability of the earliest disposition of these proceedings. The Examiner stated in part:

> If counsel anticipate that the end result will be the approval of [the Michigan Consolidated-Michigan Wisconsin] proposal, or are now willing to make the necessary concessions, it may be that there will be no objection to the separate and immediate consideration and disposition thereof in the same manner as the Commission disposed of Phase I of Northern's construction program.
>
> * * * * * * *
>
> What the Examiner is searching for is the most efficient and responsible action that can now be taken, particular interest being centered on the possibility of converting the remainder of this hearing into a certificate proceeding * * *.
>
> * * * * * * *
>
> If service could be provided in the Upper Peninsula area through both proposals, that is, with Northern serving the upper segment and Michigan Consolidated * * * the lower segment, it is clear that service would cover a wider area * * *.
>
> * * * * * * *
>
> The Examiner's remarks have to some extent been dictated by the fact that weather conditions in the Upper Peninsula area permit a limited construction period, so that it is entirely possible that a delay of as much as thirty to sixty days in reaching a decision could effectively foreclose initiation of natural gas service in any part of the Upper Peninsula for at least a year, assuming such service is found to be justified.
>
> Accordingly any delay that can be circumvented should be circumvented to provide adequate lead time, perfection of plans, holding costs and efforts to a minimum, and last, but by no means least, avoiding further disappointment to the general public * * *.
>
> The Examiner's remarks may seem strange to anyone accustomed to extended trials

The record is clear that construction of Michigan Consolidated's project enhances the economic feasibility of the remaining portion of Northern's proposal. Northern's proposed distributor-customers, Michigan Gas and Electric Company, Peninsula Gas Company, and Lake Superior District Power Company have demonstrated markets supporting the present Northern project, and Northern has a firm contract to serve Cleveland Cliffs Iron Company at various points near Marquette, Michigan, complementing such utility markets.

Operations Of Michigan Wisconsin And Michigan Consolidated

Michigan Wisconsin owns and operates an interstate pipeline system extending from the Hugoton Field, in Texas, to its termini in Michigan and Wisconsin and sells natural gas at wholesale to 33 distribution utilities, its largest sales being made to two affiliates, one being Michigan Consolidated.

Michigan Wisconsin obtains its gas supply from (1) producers in some of the states traversed by its pipeline, (2) American Louisiana,[10] (3) Northern, and (4) Midwestern Gas Transmission Company (Midwestern). In addition to the ownership and operation of its interstate transmission system, it also operates extensive underground storage fields.

Michigan Consolidated purchases gas from Michigan Wisconsin; American Louisiana, and Panhandle Eastern Pipe Line Company (Panhandle). It also has substantial production and storage of its own in Michigan. Michigan Consolidated transmits and distributes natural gas in the State of Michigan, being the largest distributor in that State, serving Detroit, Ann Arbor, Muskegon, Grand Rapids, Traverse City, Mt. Pleasant, Petoskey, Alpena and numerous other communities.

As hereinabove noted, Michigan Consolidated has for a number of years sought to provide natural gas service to the Upper Peninsula area, this being another step in the progressive development of the company to meet the requirements of the growing public demand for gas.

As of December 31, 1963, Michigan Consolidated served natural gas in 193 communities, operated 9,000 miles of pipeline facilities and sold over 250,000,000 Mcf of natural gas annually. Its net plant totaled $361,444,247 at December 31, 1963, and it supplied over 900,000 customers.

Michigan Consolidated, Michigan Wisconsin and American Louisiana are all wholly-owned subsidiaries of the American Natural Gas System.

---

by battle, but in a Commission proceeding an Examiner's task no longer can be considered to be simply to sit, listen and ultimately to decide.

He must, if he thinks there may be justification for his action, attempt to bring the proceeding to the earliest conclusion consistent with the facts, issues and the public interest involved.

* * * [T]here can be situations in which the merits are compelling and which can cause prudent action to be taken during the hearing which will provide strength and efficiency all along the line.

The friendly opposition which has been reflected in this proceeding might very well be converted into friendly cooperation. * * *

The Examiner hopes that his suggestion will commend itself to those involved * * *.

In this connection, experience has too often shown that action delayed may mean service denied.

Parties can act in the public interest when not standing on their private rights and sinking into narrow private concerns.

[10] American Louisiana owns and operates an interstate natural gas pipeline running from southern Louisiana to Michigan. Currently, it sells over 95 percent of its natural gas to Michigan Consolidated and Michigan Wisconsin.

Issue Presented

The issue presented is whether the public convenience and necessity requires the construction of the Michigan Consolidated-Michigan Wisconsin project. The evidence clearly supports the finding that the public convenience and necessity does so require.

Near the close of the hearing, and in connection with Northern's statement that it would not object to the certification of the Michigan Consolidated-Michigan Wisconsin project, it was agreed that, in deciding the issue presented, Northern would be permitted to argue and obtain a ruling upon the question of whether the certificate issued to Michigan Wisconsin should be conditioned so as to require Michigan Consolidated to obtain a ten-year (instead of a five-year) industrial gas sales contract with the Hanna Mining Company containing no escape clauses, it being alleged that controlling Commission policy requires execution and filing of such a contract as a condition for the issuance of a certificate.[11]

The circumstances of this certificate proceeding are such as to make necessary the Commission's consideration of the total of the Michigan Consolidated-Michigan Wisconsin proposal even though the Commission lacks jurisdiction over Michigan Consolidated (22 FPC at 794). Appropriate regard is had, of course, for the prior action of the Michigan Commission in finding Michigan Consolidated's project economically feasible and in the public interest.

Had it not been for Northern's partially competing application, the Michigan Consolidated-Michigan Wisconsin proposal involved herein would undoubtedly have been processed unopposed in the same manner as the Commission, on June 2, 1964, in Docket No. CP64-154, *et al.*, 31 FPC 1333, enabled Michigan Consolidated to proceed with its new project in the northern part of the Lower Peninsula of Michigan known as the Alpena-Gaylord project.

The present proposal to serve the Upper Peninsula area is very similar in cost and markets to Michigan Consolidated's $15,000,000 expansion into Alpena, Gaylord and a number of other communities. Michigan Consolidated accordingly formulated its project to act both as a transporter and distributor of gas in the Upper Peninsula based upon charging consumers the rates paid by customers throughout the company's outstate districts in the lower Peninsula.

---

[11] Initially Northern conditioned its withdrawal from the competitive area upon a Commission requirement that Michigan Consolidated obtain a firm ten-year contract with the Hanna Mining Company with no escape clauses. This led the Examiner to observe in part (Tr. 2105-2107):

> The certificate issues cannot be reached until the answer to the competitive issue is known. At this stage of the proceeding it is within Northern's prerogative to determine for itself whether it will or will not withdraw its proposal to the extent that it relates to the competitive area. If it does determine to withdraw, the competitive issue is eliminated from further consideration.
>
> But it does not appear appropriate for any applicant to attempt to make a determination as to the merit or lack of merit of any part of the certificate issues, for that would invade the province of the Commission. * * *
>
> * * * * * * *
>
> It is for the Commission, and for the Commission alone, to determine what is or is not consistent with its policy and whether and under what circumstances a departure therefrom is justified.
>
> * * * * * * *
>
> If Northern does not see its way clear to withdraw [from] * * * the competitive area, without insisting upon the type of industrial contract referred to, it is still free to make its own decision.
>
> The point of the Examiner's remarks is that it seems clearly inappropriate for Northern to condition its withdrawal from the competitive area in the manner indicated.
>
> If Michigan Consolidated chooses to stand on the type of agreement it has, it appears that it should have a right to do so subject to Commission action.

Subsequent to these remarks by the Examiner, Northern amended its position in the manner hereinabove indicated. That is to say it reserved only the right to argue and obtain a ruling on the point.

The rates to be charged by Michigan Consolidated reflect the "rolled-in" concept of rate making, this being a method which "has many apparent advantages and the Commission has repeatedly stated a general preference for it whenever it may equitably be used" (*Battle Creek Gas Co.* v. *Federal Power Commission*, 281 F. 2d 42, 46). As the court further points out, "Use of the rolled-in method * * * serves the interest of equal treatment for customers receiving equal service."

What Michigan Consolidated has in effect done is determine the economic feasibility of the Upper Peninsula project on an isolated basis, then causing this project to lose its separate identity by merging its costs, gas supply, operations, etc., into Michigan Consolidated's system-wide operations. Having thus diffused these items among its total operations, Michigan Consolidated is then able to apply rates of general applicability to the additional service to be rendered in the Upper Peninsula.

Northern's Claim Relating To Michigan Consolidated's Contract With Hanna

Citing *Northern Natural Gas Company, et al.*, 22 FPC 164, and *Midwestern Gas Transmission Company*, 22 FPC 775, in support of their position, counsel for Northern contend that controlling Commission policy requires that the certificate issued to Michigan Wisconsin be conditioned to require Michigan Consolidated to renegotiate its agreement with the Hanna Mining Company and obtain a ten-year, rather than a five-year, no-escape-clause contract.

A review of the two decisions relied upon by Northern, as well as other decisions cited by counsel opposing Northern's contention,[13] makes it abundantly clear that Northern is in error in claiming that the Commission has an inflexible rule requiring a contract for a specified number of years. On the contrary, the Commission has held that the question of whether any contract is required, and if so, what terms and conditions must be satisfied, depends upon all the facts and circumstances of the particular case. The root question is one of economic feasibility.

The Commission's approach to the question of requiring industrial contracts was well stated in *Northern Natural Gas Company*, 30 FPC 859, 864:

> The Commission concluded long ago in *Kansas Pipeline & Gas Co.*, 2 FPC 29, that there is no reason to require certificate applicants in all cases to obtain firm commitments from their anticipated customers. It is sufficient, the Commission held, "if the applicants show that, on the basis of experience in similar territory, there are reasonable grounds for anticipating that customers will be attached to the proposed facilities." 2 FPC at 45. Stated generally, the rule which has developed for expansions which include sales to large volume industrial customers is that firm commitments will be required only where the contemplated sales appear to have a strong bearing on the economic feasibility of the project and where there is reason to question whether in fact the sales will be made. See *Kansas-Nebraska Natural Gas*

---

[13] *Atlantic Gulf Gas Company*, 10 FPC 79; *Southern Natural Gas Company*, 31 FPC 789, 1387, Opinion Nos. 424 and 424–A; *Panhandle Eastern Pipe Line Company*, 15 FPC 1421; *Northern Natural Gas Company*, 30 FPC 859; *Northern Natural Gas Company*, 25 FPC 540; *Transcontinental Gas Pipe Line Corporation*, 17 FPC 360; *Houston Texas Gas and Oil Corporation*, 16 FPC 118; *City of Grant City, Missouri*, 29 FPC 754; *Kansas-Nebraska Natural Gas Company, Inc.*, 29 FPC 1058; *Kansas Pipeline & Gas Company*, 2 FPC 29; *General Gas Pipe Line Corporation*, 2 FPC 705; *El Paso Natural Gas Company*, 29 FPC 984.

Co., Inc., 29 FPC 1058, 1067 * * *; *City of Grant City, Mo.*, 29 FPC 754, 758 * * *; *Midwestern Gas Transmission Co.*, 22 FPC 775.

The Commission's primary concern is the economic feasibility of the pipeline's project and the effect of the loss of a substantial load upon its existing customers and their customers. One type of case in which the Commission sometimes requires contracts between distributors and large-volume industrial customers involves the situation in which the ability of distributors to purchase gas from the pipeline—and thus, in turn, the economics of the pipeline's project—is dependent upon consummation of the industrial contracts. This is the situation involved in both of the decisions relied upon by counsel for Northern. Thus, in *Northern Natural Gas Company*, 22 FPC 164, the Commission required Iron Ranges Natural Gas Company, which was a "paper" company with no existing operations, to obtain a contract with Reserve Mining Company before Northern was authorized to construct pipeline facilities to supply gas to Iron Ranges. Clearly the collapse of Iron Ranges' proposed operations, which in fact occurred when it failed to obtain a contract with Reserve Mining Company (see *Northern Natural Gas Company*, 25 FPC 540) would have had a serious effect upon the Northern-Iron Ranges project. In the other case, *Midwestern Gas Transmission Company*, 22 FPC 775, the addition of the Upper Peninsula load, two-thirds of which was represented by proposed sales to Cleveland Cliffs Iron Company, would have more than doubled Michigan Gas and Electric Company's existing purchase obligations and gas plant investment. The loss of the Cleveland Cliffs load by Michigan Gas and Electric Company (which never constructed its Upper Peninsula project, see *supra*, pp. 915, 916) would have been a catastrophic loss for that company, the effects of which would also have been visited upon Michigan Wisconsin and its customers. Accordingly, a ten-year contract between Michigan Gas and Electric Company and Cleveland Cliffs was an entirely reasonable condition within the facts of that case, but has no rational relation to the necessity for Michigan Consolidated to obtain a similar contract with Hanna.

In Michigan Consolidated's case, none of the above referred to considerations are present. Michigan Consolidated is a large, established company with in-depth resources, 900,000 customers and assets of about $400,000,000. The facilities to be installed by Michigan Wisconsin for the service requested are minor, and there can be no question of Michigan Consolidated's ability to continue to pay the demand charges on the additional 10,000 Mcf per day of MDQ sought herein, whether or not the Hanna contract (which will provide only 15 percent of the Upper Peninsula project revenues) is terminated after five years. Pertinent here is the fact that because Michigan Consolidated will treat the Upper Peninsula as a part of its system-wide operations, the economic effect of possible termination of the Hanna contract should be considered, not from the standpoint of an isolated project, but from the standpoint of the entire Michigan Consolidated system. Since the Upper Peninsula sales amount to less than 1 percent of the company's total system sales, the loss of any part of those sales would be *de minimis* with respect to the whole. Moreover, Michigan Wisconsin's small investment in facilities is adequately protected by Michigan Consolidated's 20-year obligation to pay for the additional 10,000 Mcf of MDQ.

Michigan Consolidated proposes to sell 1,500,000 Mcf of natural gas annually to Hanna Mining Company under the terms and conditions of Michigan Consolidated's Rate Schedule No. 7 on file with the Michigan Public Service Commission, subject to the condition that the initial term of the contract under Rate Schedule 7 shall be five years (instead of one year) from the date service is first rendered to Hanna. Service is to be continued from year to year thereafter in accordance with the provisions of the service contract.

The Michigan Commission, which has jurisdiction over Michigan Consolidated retail sales, gave full consideration to Michigan Consolidated's proposal to serve Hanna under Rate Schedule 7 for an initial period of five years, heard the evidence bearing thereon and found nothing requiring that such service be disapproved. In fact, the Hanna sale is comparable to sales being made under the same schedule to Ford, General Motors, Chrysler, McLouth Steel and several hundred other industrial customers in the Detroit area, all of whom buy on a year-to-year basis. In the Examiner's view, reliance on Hanna as a customer is analogous to the situation described in *Kansas Pipeline & Gas Company*, 2 FPC 29, 45, where it was held that contracts are unnecessary if there are reasonable grounds for anticipating the customer will be attached on the basis of experience in similar territory. And it should be remembered that State commissions and the Federal Power Commission regulate "without any confusion of functions" to attain what Congress intended, namely, "a harmonious, dual system of regulation of the natural gas industry—federal and state regulatory bodies operating side by side, each active in its own sphere" (*P.U.C. of Ohio* v. *United Fuel Gas Co.*, 317 U.S. 456, 467).

The Examiner finds nothing in the Hanna contract which is likely to lead either Michigan Wisconsin or Michigan Consolidated into trouble; that Michigan Consolidated's customers are adequately protected by its agreement with Hanna; and that although there appears to be no possibility of a loss of the Hanna sale after the initial five-year term, that load is necessary to the economic feasibility of the project only in the first five years.

System To Be Constructed And Service To Be Rendered By Michigan Consolidated

Before considering Michigan Consolidated's proposed system and service, mention should be made of the fact that at the hearings Michigan Consolidated proposed service to the City of Escanaba on an alternative basis. Escanaba presently operates a municipal propane-air distribution system and the company was interested in buying that system. Accordingly, Michigan Consolidated presented economic studies demonstrating that its project is economically feasible whether it acted as distributor in the City or supplied gas to its municipal system.

During the hearing the City of Escanaba adopted a resolution supporting Michigan Consolidated's project and expressed the desire to purchase gas from Michigan Consolidated on either a retail or wholesale basis. By a telegram dated March 18, 1965, the attorney for the City advised that "On March 16th the Council of the City of Escanaba accepted an offer from Mich-Con to buy the City's gas utility system and the City will sign a sale agreement within a few days." Apparently the purchase of the Escanaba properties by Michigan Consolidated is still subject to the vote of the people.

The estimate of the market witness for the City of Escanaba, predicated upon continued municipal operation of its gas distribution system, was based upon the construction of only 45,700 feet of distribution mains as compared with Michigan Consolidated's proposed construction of 101,415 feet, or over twice the footage proposed by the City as a municipal system. He also used a lower consumption factor for residential space heating use than either Michigan Consolidated or Michigan Gas and Electric Company (.015 Mcf v. .023 Mcf per customer per DDD). He based this estimate on the assumption that customers who heat only part of their houses with gas are classified as space heating customers, which is not the case under Michigan Consolidated's tariff.

Cities, Villages and Townships To Be Served. Michigan Consolidated will provide natural gas service in 36 cities, villages and townships in Delta, Iron, Dickinson and Menominee Counties. The cities are: Escanaba, Caspian, Crystal Falls, Gaastra, Gladstone, Iron Mountain, Iron River, Kingsford, Norway and Stambaugh. The villages are: Daggett, Mineral Hills, Powers and Stephenson. The townships are: Bark River, Bates, Brampton, Breitung, Crystal Falls, Daggett, Escanaba, Felch, Ford River, Harris, Iron River, Masonville, Mellen, Meyer, Nadeau, Norway, Sagola, Spalding, Stambaugh, Stephenson, Waucedah and Wells.

System To Be Constructed by Michigan Consolidated. In addition to the distribution systems to be constructed by Michigan Consolidated, which are estimated to cost $7,936,380 in the fifth year, it will also construct 38.5 miles of 16-inch pipeline from Menominee north to the vicinity of Powers. From that point an 8-inch line will be constructed 21.1 miles east to Escanaba, with a 6-inch lateral extending 9.8 miles to Gladstone. Michigan Consolidated will also construct a 10-inch and 8-inch pipeline extending west and north from Powers Junction 70.4 miles to the Iron River-Stambaugh area, with a 6-inch lateral into the Hanna Mining Company mine. The transmission lines and check meter stations are estimated to cost $6,190,450, making the total cost of both transmission and distribution facilities $14,126,830 in the first five years.

The estimated cost of the facilities is based upon current material quotations and company experience with similar jobs, adjusted for construction conditions expected to be encountered in the Upper Peninsula area.

The 39,973 Mcf to be delivered by Michigan Wisconsin to Michigan Consolidated is the third year peak day requirements of both firm and Rate 7 customers in the Upper Peninsula. The latter (which include Hanna Mining Company) are large volume industrial customers whose deliveries can be curtailed on 30 days' advance notice. Rate 7 customers are curtailed toward the end of the heating season when necessary to conserve gas in Michigan Consolidated's storage fields rather than to meet peak day conditions. Accordingly, Hanna and other Rate 7 customers in the Upper Peninsula might well be served on a peak day occurring earlier in the storage year, and the facilities are designed accordingly. The Upper Peninsula transmission system was sized to meet prospective market requirements and take account of the necessity to meet such requirements under extremely severe winter weather conditions.

Market Requirements. Michigan Consolidated's market witness testified that the number of domestic and commercial customers to be attached in the first five years of service was determined by (1) making a physical survey of the distribution areas to ascertain the number of residential and commercial buildings that are feasible to connect,[13] and (2) applying percentages of connections of customers in each category of service based upon actual connections that Michigan Consolidated has experienced in other new areas in the State.

The market witness sponsored an exhibit showing the percentages of attachment of residential and commercial customers achieved by Michigan Consolidated on a yearly basis in a number of communities in the Lower Peninsula to which it has extended gas service since 1956. He testified that the customer saturations actually achieved are in most cases higher than the percentages used in his market estimate for the Upper Peninsula and that the company's experience in attaching customers in the Alpena-Gaylord area in 1964 was also higher than has been estimated for the first year in the Upper Peninsula.[14]

---

[13] Michigan Consolidated considers a building "feasible to connect" if the required extension of mains does not exceed an average of 150 feet per customer.

[14] The customer saturation experience utilized by Michigan Consolidated indicates that of total residential buildings considered feasible to connect, 40 percent will be attached by the end of the first year of service, and 60 percent, 70 percent, 78 percent and 85 percent in the second through fifth years, respectively, and that 90 percent of such customers will use gas for space heating. Percentages of connection of commercial customers in each of the first five years are 20 percent, 25 percent, 30 percent, 32 percent and 35 percent, respectively, and commercial space heating customer attachments are 40 percent, 60 percent, 72 percent, 78 percent and 85 percent, respectively.

Consumption of gas per customer was also based upon Michigan Consolidated's actual experience in the northern part of Michigan's Lower Peninsula. Estimates of industrial sales were based upon a physical survey of each industrial plant and information as to the type usage and equivalent cost of the fuel presently being used.

In addition to the physical surveys of the area, studies were also made of the population, employment, types of fuel used, types of heating systems, median family income, median value of homes and percent of owner-occupied homes in the southern portion of the Upper Peninsula area. The studies supported the use of the consumption factors and customer saturation percentages used.

The estimates of requirements of 39,937 Mcf on the maximum day and 5,360,463 Mcf annually in the third year (46,292 Mcf maximum day and 6,213,741 Mcf annually in the fifth year) are reasonable.

Gas Supply Relied Upon By Michigan Consolidated. Michigan Consolidated requests that its present MDQ entitlement from Michigan Wisconsin of 533,627 Mcf be increased by 10,000 Mcf, which will increase its ACQ by 1.9 billion cubic feet to 103.3 billion cubic feet. As has been pointed out (*supra*, p. 914), the decision to seek the additional 10,000 Mcf of MDQ was not dictated by Michigan Consolidated's need for the additional gas for it has more than adequate supplies to provide service in the Upper Peninsula. In the future the increasing requirements of that area will be treated like any other requirement on Michigan Consolidated's system and it will include those requirements in its annual nominations of gas supplies from its suppliers.

To meet the Upper Peninsula third year peak day requirements of approximately 40,000 Mcf, Michigan Consolidated will simply direct Michigan Wisconsin to deliver that volume at Menominee rather than at the storage field area in the Lower Peninsula. The 30,000 Mcf of additional peak day capacity required to meet the requirements of Michigan Consolidated's total markets (40,000 less the 10,000 Mcf of MDQ here sought) is readily available as a result of continuing development of its extensive storage field system. Michigan Consolidated has recently completed a program of new wells in its Six Lakes Field which is expected to increase its peak day deliverability by over 100,000 Mcf per day, and the Belle River Mills Field which will be converted from a producing field to a storage field in the Spring of 1965, will provide over 250,000 Mcf per day of peak day ability in the first year, with a future peak day ability of over 500,000 Mcf.

Insofar as annual gas supplies are concerned, there is likewise no question of Michigan Consolidated's ability to meet the requirements of the Upper Peninsula markets, which will be treated as part of Michigan Consolidated's over-all gas supply requirements and constitute less than 1 percent of such requirements.

The annual supply required for the Upper Peninsula over and above the 1.9 billion cubic feet of new supply from Michigan Wisconsin totals only 1.2 billion cubic feet in the first year—an insignificant amount in relation to Michigan Consolidated's total sales of over 263 billion cubic feet last year. The 1.2 billion cubic feet is available from production from Michigan Consolidated's local gas fields[15] and overrun gas from its pipeline suppliers—Michigan Wisconsin, American Louisiana and Panhandle.

In terms of total system gas supply and requirements for the 12 month period commencing September 1, 1965, the firm requirements of Michigan Consolidated's present markets total 235,357 MMcf. Addition of the Upper Peninsula's requirements of 3,105 MMcf results in a total of 238,462 MMcf. To meet these requirements Michigan Consolidated will have firm pipeline supplies totaling 292,205 MMcf annually, including the 1.9 MMcf sought from Michigan Wisconsin in this proceeding and the 18,250 MMcf to be obtained as a result of American Louisiana's 1965 expansion program. Thus Michigan Consolidated has firm pipeline supplies which are 53,743 MMcf per year in excess of the firm requirements of its present customers plus the full requirements of the Upper Peninsula.[16]

---

[15] The Belle River Mills Field alone contains some 35 billion cubic feet of native gas.

Financing. Construction of the Upper Peninsula facilities, which will be only a part of Michigan Consolidated's total annual construction program, will be financed temporarily with short-term bank borrowings and funds generated internally, to be replaced ultimately with first mortgage bonds.

Michigan Consolidated will be able to adequately finance the construction of its transmission and distribution system.

Rates. Michigan Consolidated will charge consumers in the Upper Peninsula the same rates paid by customers throughout the company's outstate districts in the Lower Peninsula of Michigan (see *supra*, p. 921).[17]

Economic Feasibility. Applying Michigan Consolidated's regular outstate rate schedules to estimated sales produces a rate of return of 6.94 percent on the Upper Peninsula project in the fifth year.

Michigan Consolidated's project is economically feasible and the company is eminently qualified to construct and operate the project successfully.

Michigan Wisconsin's Proposed Facilities, Availability of Gas Supply and Economic Feasibility

Facilities. The facilities to be installed by Michigan Wisconsin to supply Michigan Consolidated's third year requirements for service to the Upper Peninsula consist of 4.8 miles of 12-inch pipeline from a point west of the Marinette, Wisconsin meter station to a point near Menominee, Michigan, plus 5,000 compressor horsepower additions (consisting of two 2,500 units) needed to maintain adequate pressures at delivery points in northern Wisconsin as a result of the growth in the Wisconsin markets.

The cost of the facilities, estimated to be $1,682,000, will be financed out of funds on hand.

Availability of Gas Supply. Michigan Consolidated proposes to increase its MDQ allocation of gas from Michigan Wisconsin by 10,000 Mcf per day from 533,627 Mcf to 543,627 Mcf.

Michigan Wisconsin presently has available on its system unallocated firm supply for the maximum day of 11,912 Mcf and annual volumes of 5,460,709. This is more than the 10,000 Mcf of additional MDQ and 1,900,000 Mcf of ACQ sought by Michigan Consolidated in this proceeding.

The physical source of the gas to be delivered at Menominee is Marshfield, Wisconsin, where Michigan Wisconsin purchases gas from Midwestern.

Economic Feasibility. The sale of 10,000 Mcf of additional MDQ and 1,900,000 Mcf of ACQ produces revenues of $799,850. After deducting all applicable operating expenses associated with the proposed service, Michigan Wisconsin will earn in excess of its allowed rate of return of 6.5 percent on the new facilities in each of the first three years of service ($45,948 excess in the third year).

---

[16] The full requirements of Michigan Consolidated's interruptible customers, assuming no curtailment, total 57,997 MMcf, or only 4,254 MMcf in excess of firm pipeline supplies. This volume is available from a number of sources, including overrun deliveries by its three pipeline suppliers and local Michigan production.

[17] The company's regular outstate rates are applicable throughout the State of Michigan except the City of Detroit. The only difference between the outstate rates and the Detroit rates is that in the domestic portion of the rate schedule there is, as a result of historical developments, a small difference under which a customer in outstate Michigan pays about 60 cents a month more for his domestic service than the Detroit customer. The historical difference is being eliminated with time.

Because the additional revenues to Michigan Wisconsin resulting from its providing a new delivery point at Menominee exceeds all of incremental costs associated with that service, Michigan Wisconsin's over-all system rate of return for that and other reasons shows improvement in each of the years after the commencement of service to Michigan Consolidated at Menominee.

In connection with the additional service, it should be observed that the purchase by Michigan Consolidated of gas for the Upper Peninsula from Michigan Wisconsin is an essential part of the proposal since Michigan Consolidated must be able to take advantage of combined billing under Michigan Wisconsin's tariff to enable it to shift volumes between the Lower Peninsula and the new delivery point at Menominee in the Upper Peninsula. Michigan Consolidated's sale to Hanna Mining Company is also based upon the purchase of gas from Michigan Wisconsin.

The foregoing facts make it abundantly clear that Michigan Wisconsin's proposal to construct the minor facilities required to deliver gas to Michigan Consolidated at Menominee is economically feasible and in the public interest.

The Proposed Project Is Required By Public Convenience And Necessity

The evidence presented by Michigan Consolidated shows that heating consumers in the Upper Peninsula will pay substantially less for equivalent volumes of gas under Michigan Consolidated's rates than is paid by consumers in nearby areas of Wisconsin and Minnesota and in other areas, including parts of the Lower Peninsula of Michigan served by other distributing companies.

Under Michigan Consolidated's rates, gas is by far the least expensive fuel with which to heat a home in the southern part of the Upper Peninsula. An average home would cost $160 per year to heat with gas; $186 per year with stoker coal, or 16 percent higher than gas; $250 per year with hand-fired soft coal, or 56 percent higher than gas; and $253 per year with oil, or 58 percent higher than gas. On the basis of U.S. Census Bureau figures as to present fuel use in the Upper Peninsula, and assuming the conversions to natural gas projected by Michigan Consolidated, Michigan Consolidated estimates that by the fifth year of service the people in the southern portion of the Upper Peninsula who use gas for space heating will be saving approximately $1,700,000 annually as compared with what they would otherwise pay for fuel.

The foregoing advantages do not include the economic benefit to be derived from the construction of over $14,000,000 of new facilities in the area; the property taxes to be paid by Michigan Consolidated, estimated at over $200,000 in the fifth year; the personnel to be employed directly by Michigan Consolidated in the area; or the major influence that the introduction of natural gas can have on how the area grows, redevelops, and helps the industrial climate. Nor do they take account of the fact that Michigan Wisconsin has already constructed facilities to provide service to the Upper Peninsula pursuant to Commission authorization, the costs of which are reflected in Michigan Wisconsin's cost of service to its present customers deriving no benefit therefrom. Putting these facilities to the use for which they were intended will benefit Michigan Wisconsin's customers and the consumers they serve.

The evidence clearly supports the finding that construction and operation of the Michigan Consolidated-Michigan Wisconsin project is required by the public convenience and necessity. Backed by the in-depth resources and strength of Michigan Consolidated, which are of such magnitude as to enable it properly to take care of itself and its customers, the inhabitants of the Upper Peninsula area will now not only be able to enjoy the benefits of natural gas but will be able to tackle some of their problems in new ways and perhaps far more successfully.

FINDINGS

Based on the evidence of record, the briefs and arguments of counsel, as well as the preceding portion of this decision, it is further found and concluded that:

(1) Michigan Wisconsin is a "natural-gas company" within the meaning of the Act and subject to the jurisdiction of the Commission.

(2) By its Section 7(a) application in Docket No. CP65–38, Michigan Consolidated, a present customer of Michigan Wisconsin, requests (a) that Michigan Wisconsin be authorized and directed to extend its existing pipeline facilities a distance of 4.8 miles to provide a supply of gas at a new delivery point near Menominee, Michigan, for resale by Michigan Consolidated in 36 cities, villages and townships in Delta, Iron, Dickinson and Menominee Counties located in the southern part of the Upper Peninsula of Michigan, and (b) that its purchases of gas from Michigan Wisconsin be increased by 10,000 Mcf per day, or to 543,627 Mcf, which would have the effect of increasing its annual contract quantity by 1.9 billion cubic feet, or to 103.3 billion cubic feet.

(3) By its Section 7(c) application in Docket No. CP65–39, as supplemented, Michigan Wisconsin seeks a certificate of public convenience and necessity authorizing the construction and operation of facilities and sale of gas requested by Michigan Consolidated in Docket No. CP65–38 and described in paragraph (2) above.

(4) The facilities of Michigan Wisconsin hereinbefore described, as more fully described in the application in Docket No. CP64–39, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and additional sale of natural gas by Michigan Wisconsin to Michigan Consolidated are subject to the requirements of Subsections (c) and (e) of Section 7 of the Act.

(5) The construction and operation of the proposed facilities and the proposed transportation and additional sale of natural gas by Michigan Wisconsin to Michigan Consolidated are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Michigan Wisconsin is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity does not require that the certificate issued to Michigan Wisconsin be conditioned upon Michigan Consolidated's obtaining a ten-year industrial sales contract with the Hanna Mining Company containing no escape clauses.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Michigan Wisconsin's compliance with all applicable Commission Regulations under the Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Michigan Wisconsin to construct and operate the proposed facilities and to sell, transport and deliver natural gas as hereinbefore described, all as more fully described in its application, as supplemented, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Michigan Wisconsin's compliance with all applicable Commission Regulations under the Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale, transportation and delivery of natural gas authorized in paragraph (A) above shall commence within 8 months from the date on which this order becomes the final act of the Commission.

FRANCIS L. HALL,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP65-50

ORDER DENYING PETITION FOR RECONSIDERATION AND WITHDRAWAL AND/OR TERMINATION OF COMMISSION ORDER OF APRIL 2, 1965, AND GRANTING EXTENSION OF TIME

(Issued April 30, 1965)*

Natural Gas Pipeline Company of America filed on April 14, 1965 a response to our order of April 2, 1965, *supra*, p. 666, which instituted an investigation under Section 5 of the Act and a petition for reconsideration and withdrawal and/or termination of that investigation. An answer thereto was filed by staff on April 27, 1965. Natural raises particular objection to the requirement that the company file on or before April 30, 1965 a Cost and Revenue Report prepared in conformity with Section 154.63(f) of the Commission's Regulations.

Natural attacks our authority to require the preparation and submittal of the Cost and Revenue Report alleging that we lack power under the sections of the Act which we cited in our order (Sections 10, 14, 15 and 16) to require such a report. Specifically, Natural states that, as related to information gathering by the Commission, these sections may only be applied generally, and not to individual companies; that reports under these sections may not be used to elicit judgments, opinions, adjustments and estimates; that the Commission's subpoena power is limited to the production of existing documents; and that the burden of proof and the duty of going forward in a Section 5 proceeding may not be shifted by requiring the submittal of such a report.

We find Natural's position to be without merit. We directed the filing of the report under the provisions of Section 10 of the Act and not as an exercise of our subpoena powers in Section 14. There is ample and specific provision in Section 10 authorizing the Commission to require that the Cost and Revenue Report be prepared and submitted by an individual company, such as Natural. *United States* v. *Morton Salt Co.*, 338 U.S. 632. There is nothing in the plain meaning of the section, the legislative history of the Act or in decisions of this Commission or of the courts which would deny this exercise of our authority.

With regard to the objection that Natural is required to exercise its judgment in preparing this report, it is sufficient to say that this is no bar to requiring such a report. Exercise of judgment is fundamental to a report on each of the items set out in Section 10 which Congress clearly gave us the power to require.

The order issued April 2, 1965 did not shift the duty of going forward or the burden of proof in these proceedings. These duties are unaffected by the order and will be the obligation of the appropriate party as in any Section 5 proceeding.

---

*Order issued June 3, 1965, rejecting petition for reconsideration, 33 FPC 1204.

Natural also alleges that it would be physically impossible to prepare the report within the time specified due to other commitments before this Commission and the time required in preparing the report. In view of these allegations, it appears appropriate to extend the time for filing the report to June 1, 1965.

The Commission finds:

There is good cause for extending the time within which Natural must comply with ordering paragraph (B) of our order of April 2, 1965.

The Commission orders:

(A) The time within which Natural must comply with ordering paragraph (B) of the Commission's order of April 2, 1965 is extended to June 1, 1965.

(B) The Petition for Reconsideration and Withdrawal and/or Termination filed by Natural Gas Pipeline Company of America in all other respects is hereby denied.

(C) The order of April 2, 1965 in all other respects shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHWESTERN POWER ADMINISTRATION, SAM RAYBURN DAM PROJECT, DOCKET NO. E-7201

ORDER CONFIRMING AND APPROVING RATES FOR SALE OF ELECTRIC POWER AND ENERGY

(Issued April 30, 1965)

The Secretary of the Interior, acting on behalf of the Southwestern Power Administration (SWPA), and pursuant to Section 5 of the Flood Control Act of 1944 (58 Stat. 887), on January 5, 1965, filed with the Federal Power Commission, a request for the confirmation and approval of rates and charges for the sale of the entire power output of the Sam Rayburn Dam Project to the Sam Rayburn Dam Electric Cooperative, Inc., contained in a contract between the Cooperative and SWPA. The rates and charges set forth in the contract are as follows:

Sam Rayburn Dam Electric Cooperative, Inc. (Contract 14-02-001-1124)

(1) Beginning on the first day of the month following the date the first generating unit at the Sam Rayburn Dam is ready for commercial operation, and until the amount of compensation provided under (2) below, becomes due and payable .... $40,000 per month.

(2) Beginning on the first day of the month following the date two generating units at the Sam Rayburn Dam are ready for commercial operation, and thereafter during the term of this contract .... $79,167 per month.

The contract provides that the above rate shall remain in force until July 1, 1970, at which time, and at the end of each succeeding five-year period thereafter, both the energy and compensation shall be reviewed and redetermined subject to confirmation and approval by the Commission.

A companion contract between Sam Rayburn Dam Cooperative, Inc. (Sam Dam Co-op) and Gulf States Utilities Company (Gulf States), provides for the Sam Dam Co-op to deliver the total power output of the Sam Rayburn Dam Project to Gulf States, for which the Account of the Sam Dam Co-op will be credited each month by an amount equal to the total compensation owed by the Sam Dam Co-op to SWPA. Gulf States in turn agrees to deliver an equal amount of energy to four municipalities which are members of Sam Dam Co-op. The municipalities are the City of Jasper, Texas, City of Liberty, Texas, City of Livingston, Texas, and Town of Vinton, Louisiana. Gulf States further agrees to deliver the total power requirements of the three Sam-Dam Member Cooperatives: Sam Houston Electric Cooperative, Jasper-Newton Electric Cooperative, and Southwest Louisiana Electric Membership Corporation. Gulf States will provide the necessary transmission facilities to receive and deliver the power produced at the Sam Rayburn Dam Project.[1]

Along with the request for approval of rates, a repayment study was filed which shows that the anticipated annual revenues of $950,004 will be sufficient to pay all production and marketing costs, including interest charges on the investment allocated to power and amortization of the initial power investment, in the year 2015, or 50 years from the estimated beginning of commercial operation of the generating units.

The Commission finds:

The proposed rates and charges for the sale of the entire power output of the Sam Rayburn Dam Project, as set forth in the contract with the Sam Dam Electric Cooperative, Inc., for a period beginning with the date of initial commercial operation of the Sam Rayburn Dam Project and ending June 30, 1970, will not be inconsistent with the provisions of the Flood Control Act of 1944.

The Commission orders:

The proposed rates and charges for the sale of the entire power output of the Sam Rayburn Dam Project as set forth in the contract with the Sam Dam Electric Cooperative, Inc., all as set forth above, is confirmed and approved for a period beginning with the date of initial commercial operation of the Sam Rayburn Dam Project and terminating June 30, 1970.

---

[1] Gulf States filed its contract with Sam Dam Co-op on February 9, 1965, pursuant to the rate filing requirements of Section 205 of the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GEORGIA POWER COMPANY, PROJECT NO. 2413

ORDER ISSUING A PRELIMINARY PERMIT

(Issued May 3, 1965)

Application was filed on September 27, 1963, by the Georgia Power Company (Applicant) of Atlanta, Georgia for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2413, known as the Laurens Shoals Project. The proposed project would be located on the Oconee River at approximately river mile 173 in the Counties of Putnam, Morgan, Oconee, Oglethorpe, Greene and Hancock, in the State of Georgia and would affect lands of the United States within the Oconee National Forest.

On March 10, 1965, in Opinion No. 454 *infra*, p. 934, this Commission issued a tentative decision providing for issuance of a preliminary permit to the Applicant. No party has filed any exceptions within the specified time and, therefore, in accordance with Opinion No. 454, a preliminary permit for Project No. 2413 is issued to Applicant, effective as of this date.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license over other non-Federal entities, while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

The issuance of a preliminary permit for Project No. 2413 as hereinafter provided shall not in any way be construed as precluding the exercise of Commission action contemplated under the provisions of Section 7(b) of the Federal Power Act in the event of an application for license.

The Commission further finds:

(1) The Applicant, Georgia Power Company, is a corporation organized under the laws of the State of Georgia.

(2) The proposed Laurens Shoals Project No. 2413 would be located on the Oconee River in Georgia and would affect lands of the United States within the Oconee National Forest.

(3) The proposed Project No. 2413 would be located in the vicinity of river mile 173 of the Oconee River and would consist of a conventional hydroelectric development, or if feasible would incorporate pumped storage facilities.

(4) The results of studies and investigations by the U.S. Corps of Engineers of the Laurens Shoals site (which have been available to the Applicant) do not include pumped storage facilities.

(5) Contracts for proposed Interstate Highway I-20, which will cross an area which would be inundated by the reservoir of a Laurens Shoals Project, are scheduled to be let in late 1966.

(6) If Interstate Highway I-20 is initially constructed to clear the project maximum pool elevation of 460, instead of elevation 438.5 as now planned, there will be a saving to the project of approximately $450,000.

(7) Public notice of the application has been given as required by the Federal Power Act.

(8) No conflicting application is before the Commission.

(9) The project does not affect any Government dam and no reason is apparent at this time for its development by the United States.

The Commission orders:

(A) This preliminary permit is issued to Georgia Power Company (hereinafter referred to as the Permittee) for a period of 12 months, effective as of May 1, 1965, for the sole purpose of maintaining priority of application for license for Project No. 2413 to be located on the Oconee River in Putnam, Morgan, Oconee, Oglethorpe, Greene and Hancock Counties, Georgia, affecting lands of the United States within the Oconee National Forest, subject to the terms and conditions of the Act, which is incorporated by reference as part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This permit is also subject to the terms and conditions set forth in Form P-1, entitled, "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305), which terms and conditions designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, Atlanta, Georgia, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning coordinate its studies with the District Engineer, Corps of Engineers, U.S. Army Engineer District, Savannah, Georgia, in developing a plan for the comprehensive development of the water resources of the Oconee River, Georgia, to assure maximum public benefits and shall keep the Georgia State Highway Department informed of progress in developing an application for license for the project.

Article 11. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Georgia Game & Fish Commission for the purpose of planning and designing adequate conservation measures: (1) to prevent loss or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of damage to those resources, and (3) to develop and improve those resources where practicable.

Article 12. The Permittee shall negotiate with the Department of Anthropology, University of Georgia, a contract for an archeological reconnaissance to determine the extent of any salvage which would be required in the area of the project, should it be built, such contract not to exceed an amount of $1,000 to be paid by the Permittee.

Article 13. The Permittee shall, during the period of project planning, consult with the Georgia Department of Public Health in order that adequate consideration can be given to water quality and vector control.

Article 14. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester, Forest Service, Department of Agriculture, Atlanta, Georgia, as to reasonable requirements relative to operations, field surveys, and explorations, and shall abide by such requirements; and shall cooperate with the Forest Service during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum utilization of, National Forest resources insofar as they are affected by any proposed project.

Article 15. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission Regulations under the Federal Power Act.

Article 16. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(C) This order shall supersede the tentative decision issued March 10, 1965, and shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 454

GEORGIA POWER COMPANY, PROJECT NO. 2413

TENTATIVE DECISION PROVIDING FOR ISSUANCE OF A PRELIMINARY PERMIT

(Issued March 10, 1965)

Syllabus

1. Under Section 5 of the Federal Power Act Commission may grant preliminary permit to prepare studies, surveys and maps of proposed water power project site. P. 935.
2. *Distinguishing Flint River*, Commission *concludes* issuance of preliminary permit for proposed Laurens Shoals project is in the public interest. PP. 936, 937.
3. Under circumstances of this case no delay of proceedings is warranted. P. 937.
4. Preliminary permit gives right of priority of application for license while permittee undertakes necessary studies required by Section 9 of Power Act—no construction is authorized under permit. P. 937.
5. Project affects no government dams; no reason is apparent at this time for its development by the United States. P. 938.
6. In proceeding under Section 4(f) of the Federal Power Act, Commission *provides* for issuance of preliminary permit for Laurens Shoals project, limiting term thereof to one year.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

Application was filed on September 27, 1963, by the Georgia Power Company (Applicant) of Atlanta, Georgia, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2413, known as the Laurens Shoals Project. The proposed project would be located on the Oconee

River at approximately river mile 173 in the Counties of Putnam, Morgan, Oconee, Oglethorpe, Greene and Hancock, in the State of Georgia and would affect lands of the United States within the Oconee National Forest.

A public hearing was held on November 17, 1964, at Athens, Georgia, in order to give interested persons an opportunity to testify and submit evidence on whether a preliminary permit should be issued to the Applicant and to receive evidence regarding the location and elevation of a proposed highway in the project area and the effect of such location and elevation and the proposed schedule of construction on the economic feasibility of the proposed highway and on the proposed project. In accordance with the Commission's order issued October 20, 1964, the presiding examiner has certified the record to the Commission for the issuance of a tentative decision.

The Office of the Chief of Engineers in its letter of March 6, 1964, stated that a comprehensive plan for developing the water resources of the Altamaha, Oconee and Ocumulgee Rivers, Georgia, was being prepared by the District Engineer, U.S. Army Engineer District, Savannah, Georgia. In this letter, it was further suggested that since this report would soon be available the Commission might wish to defer granting the permit applied for by the Georgia Power Company. Although the report was tentatively scheduled for submission to the Chief of Engineers in December 1964, it has not been submitted as of this date.

The Department of the Interior by its letter of March 4, 1964, requested the Commission to defer action on the application for preliminary permit until the District and Division Engineers' reports of the Corps of Engineers have been completed, and until Congress has had an opportunity to act on the recommendation of the Chief of Engineers.

The Department of Agriculture, in commenting on the application, offered no objection to the granting of a preliminary permit for the project, but suggested certain provisions to be included in any permit issued in order to provide adequate protection and utilization for the National Forest land and resources that would be affected by the project.

Section 5 of the Federal Power Act (16 U.S.C. 798) provides that the Commission may grant a preliminary permit to prepare studies, surveys and maps of a proposed site. Georgia Electric Membership Corporation (Intervenor), an intervenor in this proceeding, states that the applicant has not shown why a study is required and further that our holding in the case of the application of the Georgia Power Company for a preliminary permit for the Flint River Project No. 2303 (27 FPC 663), precludes us from issuing a preliminary permit here. In that case the Corps of Engineers had earlier issued a report by the District and Division Engineers covering the same site for which the application was made recommending that three projects be constructed by the United States as the first phase of a comprehensive plan described in the report. The Commission found that the applicant had not shown that it proposed to make any significant studies not covered in the report of the corps and, in denying the application, concluded that "* * * The studies which the preliminary permit are designed to encourage have thus already been made at public expense and should therefore be available on equal basis to any party who may wish to develop these water resources in the event Federal development is not authorized."

Various studies have been made of the Laurens Shoals site. The earliest study is contained in H.D. No. 68, 74th Congress, First Session which was submitted to Congress in 1934 as the U.S. Corps of Engineers "308 Report". Subsequently, in compliance with the Flood Control Act of 1936, another study of the Oconee River Basin was begun early in 1940 and completed in 1949, but was not submitted to Congress. This study was reactivated in 1959 in compliance with a Senate Resolution adopted in 1954. Although formal reports of these studies and investigations have not been published, they have been completed and the results have been available to the public for some time.

Public Law No. 85-850 of August 28, 1958, established a U.S. Study Commission to study plans for development of land and water resources of the Southeast River Basins. Its report published in 1963 included the Oconee River Basin and a hydroelectric development located at Laurens Shoals which is substantially the same as the one studied by the Corps of Engineers. In making this report, the Study Commission utilized the services, studies, surveys and reports of existing government agencies and did not initiate any original or new basic studies of its own of the Laurens Shoals site.

We believe this case should be distinguished from the *Flint River* case. In the *Flint River* case Applicant did not propose any particular project, but planned to study the same sites for which the Corps studies were then available. In the present case Applicant proposes to study a specific hydroelectric project consisting of either an earth fill or concrete gravity type dam with a semi-outdoor type powerhouse. The installed capacity of the proposed project would be about 150,000 kw as a conventional hydroelectric plant or a total of about 400,000 kw if pumped storage were incorporated. Review of the studies already in existence show that they are substantially different from that proposed by the Applicant in such respects as difference in installed conventional capacity, powerhouse design, type of dam, and the possible incorporation of pumped storage capacity. In regard to incorporation of pumped storage, further geological exploration would be required to determine whether it is more economical to excavate the tailrace area from Applicant's downstream Sinclair Reservoir to the proposed site or move the dam site downstream and thus avoid extensive tailrace facilities. These differences, particularly insofar as the possibility of pumped storage is concerned, tend to support the need for additional study.

There are two other significant factors here that were not presented in the *Flint River* case. First, in that case the Engineers' report already published called for Federal development. Noting our obligations under Section 7(b) of the Act not to approve any application for a project where the Commission considers that Federal development should be undertaken and the fact that in commenting on the Chief of Engineers' report to Congress we might soon be required to consider the question of such development, we did not deem it appropriate to grant the preliminary permit. In the present case the recent report of the U.S. Study Commission recommends non-Federal development. We have no indication of what the Engineers' new recommendation will be, since its report is not yet available. However, we note that the 1934 study and report to Congress recommended that the United States not participate in the problems of irrigation, flood control, or power development in this location. Second, applicants for project licenses are now required to submit extensive recreation plans as a part of a license application. There was no such requirement in 1962 when the Flint River project was considered. These plans require coordinated planing for recreation with local, state and Federal agencies. Applicant contends and we agree that issuance of a preliminary permit will allow more effective cooperation and planning with the interested agencies.

Another factor is the necessity for coordinating plans for the project with the construction of proposed Interstate Highway I-20. This highway will cross the Oconee River and areas of Morgan and Greene Counties and, if constructed at the planned elevation, would be inundated by the proposed project. Testimony in the record indicates that if the project is authorized before contracts are let on the highway close to one-half million dollars could be saved by elevating the highway during construction. Rebuilding it later would cost about $1 million. Since it is anticipated that contracts will be let about the end of 1966, it is clear that time is an important element and that an early resolution of whether the proposed project will be built could result in a substantial saving in cost.

On the basis of the foregoing we conclude that issuance of a preliminary permit to the Applicant for the proposed Laurens Shoals project is in the public interest.

We are mindful of the requests that we delay our decision in this case pending publication of the District Engineer's report and until Congress has had an opportunity to act on the recommendations of the Chief of Engineers. The Applicant is aware of the pending report of the District Engineer and also that a preliminary permit does not give it priority over the Corps should Federal development be recommended and acted upon favorably by the Congress. Under these circumstances and considering the benefits which will inure to the ultimate ratepayers through lower costs if the project is coordinated with the building of the highway, we do not believe any delay in this proceeding is warranted.

Applicant originally requested a preliminary permit for a period of 36 months, but later stated that it would accept a permit limited to 18 months. Staff recommends that the term of the permit be limited to one year. Because of the urgency for the early filing of an application for license due to the timing of the highway program in the State of Georgia and in order to allow adequate time for consideration of an application for a license, if one is filed, we agree that the term of the permit should be limited to one year and so order. If it should appear at the end of this period that additional time is necessary to complete the proposed studies we will consider a motion for the extension of the permit at that time.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

The issuance of a preliminary permit for Project No. 2413 as hereinafter provided shall not in any way be construed as precluding the exercise of Commission action contemplated under the provisions of Section 7(b) of the Federal Power Act in the event of an application for license.

The Commission further finds:

(1) The applicant, Georgia Power Company, is a corporation organized under the laws of the State of Georgia.

(2) The proposed Laurens Shoals Project No. 2413 would be located on the Oconee River in Georgia and would affect lands of the United States within the Oconee National Forest.

(3) The proposed Project No. 2413 would be located in the vicinity of river mile 173 of the Oconee River and would consist of a conventional hydroelectric development, or if feasible would incorporate pumped storage facilities.

(4) The results of studies and investigations by the U.S. Corps of Engineers of the Laurens Shoals site (which have been available to the Applicant) do not include pumped storage facilities.

(5) Contracts for proposed Interstate Highway I–20, which will cross an area which would be inundated by the reservoir of a Laurens Shoals Project, are scheduled to be let in late 1966.

(6) If Interstate Highway I–20 is initially constructed to clear the project maximum pool elevation of 460, instead of elevation 438.5 as now planned, there will be a saving to the project of approximately $450,000.

(7) Public notice of the application has been given as required by the Federal Power Act.

(8) No conflicting application is before the Commission.

(9) The project does not affect any Government dam and no reason is apparent at this time for its development by the United States.

The Commission orders:

(A) This preliminary permit is issued to Georgia Power Company (hereinafter referred to as the Permittee) for a period of 12 months, effective as of the date of the final order in this case, for the sole purpose of maintaining priority of application for license for Project No. 2413 to be located on the Oconee River in Putnam, Morgan, Oconee, Oglethorpe, Greene and Hancock Counties, Georgia, affecting lands of the United States within the Oconee National Forest, subject to the terms and conditions of the Act, which is incorporated by reference as part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This permit is also subject to the terms and conditions set forth in Form P–1, entitled, "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305), which terms and conditions designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, Atlanta, Georgia, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning coordinate its studies with the District Engineer, Corps of Engineers, U.S. Army Engineer District, Savannah, Georgia, in developing a plan for the comprehensive development of the water resources of the Oconee River, Georgia, to assure maximum public benefits and shall keep the Georgia State Highway Department informed of progress in developing an application for license for the project.

Article 11. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Georgia Game & Fish Commission for the purpose of planning and designing adequate conservation measures: (1) to prevent loss or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of damage to those resources, and (3) to develop and improve those resources where practicable.

Article 12. The Permittee shall negotiate with the Department of Anthropology, University of Georgia, a contract for an archeological reconnaissance to determine the extent of any salvage which would be required in the area of the project, should it be built, such contract not to exceed an amount of $1,000 to be paid by the Permittee.

Article 13. The Permittee shall, during the period of project planning, consult with the Georgia Department of Public Health in order that adequate consideration can be given to water quality and vector control.

Article 14. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester, Forest Service, Department of Agriculture, Atlanta, Georgia, as to reasonable requirements relative to operations, field surveys, and explorations, and shall abide by such requirements; and shall cooperate with the Forest Service during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum utilization of, National Forest resources insofar as they are affected by any proposed project.

Article 15. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission regulations under the Federal Power Act.

Article 16. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(C) This order is subject to review by the Commission on appeal as provided by the Commission's Rules of Practice and Procedure, particularly Sections 1.30 and 1.31 thereof. Briefs on exception may be filed with the Commission within 30 days from the date of this order and briefs opposing exemption within 20 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INTERSTATE POWER COMPANY, DOCKET NO. E-7213

ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS, PREFERRED STOCK AND COMMON STOCK

(Issued May 3, 1965)

Interstate Power Company (Applicant), incorporated under the laws of the State of Delaware and qualified to do business in the States of Illinois, Iowa, Minnesota and South Dakota, with its principal business office in Dubuque, Iowa, filed an application on March 18, 1965, pursuant to Section 204 of the Federal Power Act, authorizing the issuance and sale at competitive bidding of $14,000,000 principal amount of First Mortgage Bonds, due 1995, 166,000 shares of its authorized but unissued Preferred Stock of the par value of $50 per share, and 200,498 shares of additional Common Stock of the par value of $3.50 per share.

Applicant proposes to issue the Bonds under its Indenture of Mortgage dated as of January 1, 1948, to the Chase Manhattan Bank and Arthur F. Henning (Successor) Trustees, as heretofore supplemented and as to be further supplemented by a proposed Tenth Supplemental Indenture to be dated as of May 1, 1965.

According to the application, Applicant proposes to issue 166,000 shares of its authorized but unissued Preferred Stock of the par value of $50 per share. The dividend rate is proposed to be determined pursuant to competitive bidding on or about May 19, 1965 and to be sold in accordance with the requirements of Section 34.1a(b) of the Commission's Regulations.

Applicant also proposes initially to offer for subscription by its Common Stockholders under a Primary Subscription Right, 178,598 additional shares of Common Stock on the basis of an additional share for each 20 shares held of record; in addition, where holdings are not evenly divisible by 20 or are less than 20, Warrant holders will have the Incidental Right to subscribe for one full share with the number of rights which exceed a multiple of 20 or less than 20. The 21,900 additional shares included in the maximum amount of 200,498 shares will be issued only to the extent, if any, that it is necessary to issue more than 178,598 shares by reason of the exercise of Incidental Rights to satisfy Primary Subscription Rights.

The price at which the Common Stock is to be offered to Common Stockholders will be determined by the Board of Directors of Applicant shortly before the proposed offering date, which price is to be fixed in relation to and at appropriate discount from the then market price on Applicant's presently issued and outstanding Common Stock.

On or about May 7, 1965, Applicant proposes to invite sealed, written bids for the purchase of the Bonds, the additional shares of Preferred Stock and any Unsubscribed Common Stock by newspaper publication and by distribution of public invitations for bids. Copies of the terms and conditions relating to the bids will be made available by the Applicant. All bids, whether from a single bidder or a group of bidders, are to be in writing and on the forms of bid furnished by Applicant and are to be for the purchase of the entire issue of Bonds, Preferred Stock or Unsubscribed shares of Common Stock. Each bid on the Bonds is to specify, among other things, (1) the coupon rate of the Bonds, which is to be a multiple of ⅛ of 1%; (2) the price exclusive of accrued interest, to be paid to the Applicant for the Bonds, which price shall not be less than 99% and not more than 102¾% of the principal amount thereof; and (3) shall provide that accrued interest from May 1, 1965 to the date of payment and delivery will be paid to the Applicant by the purchaser or purchasers. Each bid on the Preferred Stock is to specify, among other things, (1) the dividend rate which shall be a multiple of 1/25 of 1%; (2) and the price to be paid to the Applicant, which price shall not be less than $50 nor more than $51.38 per share. Each bid on the Unsubscribed Common Stock is to specify, among other things, (1) the price per share to be paid to the Applicant for the Unsubscribed Common Stock and (2) the aggregate amount to be paid by the Applicant to the bidder or bidders as compensation for their commitments and obligations in connection with the purchase of the Unsubscribed Common Stock.

Unless postponed, all bids for the purchase of the proposed issuance of Bonds, Preferred Stock and Unsubscribed Common Stock are to be delivered to Applicant at the office of The Chase Manhattan Bank, Room 2414, One Chase Manhattan Plaza, New York, New York, on May 18, 1965 at 3:45 p.m., New York time, for the Common Stock bids, and on May 19, 1965 before 11:00 a.m. for the Bonds and 12:00 Noon for the Preferred Stock, New York time. The terms and conditions relating to the bids provide that the Applicant may return or reject all bids on the Bonds, Preferred Stock or Unsubscribed Common Stock or may exclude individual bids for certain specified reasons. Of those bids not so rejected or excluded, Applicant will accept that bid for the Bonds which provides the lowest cost of money, and that bid for the Preferred Stock which provides for the lowest cost of money and that bid for the Unsubscribed Common Stock which specifies the lowest aggregate amount of compensation to be paid by the Applicant to the bidder or bidders.

Each bid for the Bonds must be accompanied by a certified or official bank check or checks for $420,000, and each bid for the Preferred Stock must be accompanied by a certified or official bank check or checks for $249,000. Each bid for the Unsubscribed Common Stock must be accompanied by a certified or official bank check or checks in the aggregate amount of $50,000.

The Applicant expects to receive net proceeds of about $13,911,200 from the $14,000,000 principal amount of new Bonds; net proceeds of about $8,254,500 from the 166,000 shares of new Preferred Stock; and net proceeds of about $4,843,600 from the additional shares of Common Stock; or total net proceeds of about $27,009,300 from all the new securities. The total net proceeds will be used to discharge $6,800,000 short-term notes, to redeem 80,000 shares of 5½% series Preferred Stock at the cost of about $4,309,000 and the balance of about $15,900,000 will be applied to payment of Applicant's 1965 construction program which has an estimated cost of about $20,990,000, including approximately $10,000,000 for construction of Unit No. 2 at the Applicant's Milton L. Kapp substation at Clinton, Iowa, $4,000,000 for transmission line construction, including $756,000 for 55 miles of Applicant's portion of the Twin Cities-St. Louis 345 kv line, and some $6.9 million for construction of other miscellaneous items, most of which is for electric and gas distribution facilities.

Written notice of the application has been given to the Commerce Commission of Illinois, the Minnesota Railroad and Warehouse Commission, the South Dakota Public Utilities Commission, and the State Commerce Commission of Iowa. Notice has also been given by publication in the Federal Register on April 1, 1965 (30 F.R. 4266), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before April 15, 1965, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued May 12, 1959, *In the Matter of Interstate Power Company*, Docket No. E-6877 (21 FPC 678).

(2) The proposed issuance and sale of Bonds, Preferred Stock and Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issues here involved are regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities are, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, Preferred Stock, and Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, Preferred Stock and Common Stock, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds and Preferred Stock at competitive bidding, and the proposed issuance and sale of Common Stock in the manner set forth in the application shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section

34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof, the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon, the price per share to be received by Applicant for the Common Stock and the amount of any compensation for underwriters to be paid by Applicant in connection with the Common Stock.

(C) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NEVADA IRRIGATION DISTRICT, PROJECT NO. 338

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued May 3, 1965)

Application was filed on February 17, 1965, by Nevada Irrigation District (Applicant) for surrender of its minor-part license for Project No. 338 located on Yuba and Bear Rivers, California.

The application was filed pursuant to paragraph (D) of the Commission's order of June 24, 1963 issuing a license to Applicant for Project No. 2266, effective as of May 1, 1963, and which placed under the license for the latter project all of the project works comprising Project No. 338 (29 FPC 1256).

Notice of the application to include the project works of Project No. 338 as part of the project works for Project No. 2266 was published November 24, 1960 (25 F.R. 11192).

The Commission orders:

Surrender of the minor-part license for Project No. 338 is hereby accepted, effective as of April 30, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN STATES POWER COMPANY (MINNESOTA), DOCKET NO. E-7202

ORDER AUTHORIZING ACQUISITION, MERGER OR CONSOLIDATION OF FACILITIES

(Issued May 3, 1965)

Northern States Power Company (Applicant) filed an application on January 18, 1965, with the Federal Power Commission pursuant to Section 203 of the

Federal Power Act, seeking an order authorizing it to acquire certain electric distribution facilities of Nodak Rural Electric Cooperative, Inc. (NODAK), a North Dakota electric cooperative association with its principal business office at Grand Forks, North Dakota, and to consolidate and merge such distribution facilities with those of Applicant.

Applicant, a corporation organized under the laws of the State of Minnesota with its principal business office at Minneapolis, Minnesota, owns and operates utility properties and furnishes electric service at retail in 426 communities and adjacent territories and electric energy at wholesale for resale in 31 additional communities and at wholesale to rural electric cooperative associations and other utility companies. Of the 457 communities so served, 404 are located in Minnesota, 18 in North Dakota and 35 in South Dakota. The main interconnected electric production, transmission and distribution system of Applicant in central and southern Minnesota and southeastern South Dakota is interconnected with the interconnected electric system of its only utility subsidiary, Northern States Power Company, a Wisconsin corporation.

NODAK owns and operates a cooperative distribution system serving rural areas in the northeastern part of North Dakota. It maintains two small mobile generating units (430 kw) for standby purposes only and purchases energy to meet its requirements from Minnkota Power Cooperative, a "Generation and Transmission" cooperative which supplies energy to 12 member distribution cooperatives. At the end of 1963 NODAK was serving 9,034 ultimate consumers to which it supplied 100,847,011 kwh during the year.

Applicant requests authority to acquire by purchase from NODAK the portion of electric distribution facilities now owned by NODAK that are located in the area which was annexed to the north city limits of the City of Grand Forks, North Dakota on March 2, 1964. According to the application, the portion of NODAK's electric distribution facilities that Applicant is acquiring consists of approximately 5,300 feet of 7.3 kv electric distribution lines and includes 42 poles, 23 transformers, 21 meters and other related equipment and appurtenances.

Applicant represents that pursuant to an Agreement dated December 19, 1964, between Applicant and NODAK, it has agreed to pay $79,412 as consideration for the transfer of these facilities. According to the application, the facilities to be acquired by the Applicant from NODAK have a total original cost of $30,411, an applicable accumulated provision for depreciation of $8,688, and an original cost depreciation of $21,723. This will result in an acquisition adjustment of $57,689 which adjustment will be charged to unappropriated earned surplus.

Applicant represents that the amount of consideration was arrived at through negotiations of representatives of Applicant and NODAK as being fair value of the properties involved, giving weight, among other things, to the fact that Applicant is now furnishing electric energy in the City of Grand Forks and to the present and potential earning power of the properties being acquired. According to the application, there will be no change in the use of these facilities after their acquisition by Applicant which will undertake all duties and legal obligations with respect to such facilities and their operation.

Applicant states that upon the consummation of the transaction described above, the electric distribution facilities to be acquired by Applicant from NODAK will be integrated into Applicant's system, and the services of Applicant's organization will be available to the acquired customers. Applicant further states that no change in rates is contemplated for a year or two as NODAK's commercial and industrial rates are generally lower than Applicant's in this area. However, where a lower bill would obtain by applying any applicable rate of Applicant now in effect, Applicant proposes to permit customers to elect to have such rate applied.

According to the application, Applicant desires to acquire the afore-described distribution facilities which are located within the new corporate limits of the City of Grand Forks because it believes that its sales and engineering services are more closely geared to the needs of the commercial and industrial customers than would be the services of NODAK which are geared primarily to rural needs.

Applicant represents that it is equipped to advance the urban development of the area through its industrial personnel and to give the area promotional assistance. According to the Applicant the acquisition will eliminate future uneconomic duplication of facilities, duplicate crossovers, and maintenance conflicts.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on February 3, 1965 (30 F.R. 1135), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before February 24, 1965, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued February 27, 1964, *Northern States Power Company*, Docket No. E-7145 (31 FPC 464).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of NODAK, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by this Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-178

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1965)

On December 18, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-178 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate (1) approximately 10.3 miles of 6⅝-inch O.D. pipeline, and necessary appurtenances, extending from a point of connection with Applicant's 20-inch O.D. Northwest Division Spokane lateral pipeline in an easterly direction to a point of termination in the immediate vicinity of the Phillips Pacific Chemical Company (Phillips Pacific) ammonia plant, all in Benton County, Washington, such proposed pipeline looping the present sales lateral providing service to Phillips Pacific; and (2) piping and pressure regulator modification to the existing Phillips Pacific Meter Station located at the terminus of the pipeline described above.

The proposed facilities are for the purpose of delivering additional volumes of natural gas to Phillips Pacific so as to increase the deliveries on a firm basis from 100,000 therms per day to 160,000 therms per day at 3.6 cents per therm. This is the same rate that is applicable to the volume presently being delivered. The agreement dated October 29, 1964, between the parties retains the provision as to the sale and delivery of up to 40,000 therms per day on an interruptible basis at 3.4 cents per therm. However, Phillips Pacific may by six (6) months advance written notice convert this interruptible service to firm service in increments of 10,000 therms or multiples thereof and accordingly increase the Maximum Daily Quantity to reflect any such conversion.

Estimated third year additional requirements for the expanded Phillips Pacific plant are 59,996 therms and 15,355,001 therms equating to 5,660 Mcf and 1,448,585 Mcf, respectively, of 1,060 Btu gas peak day and annual firm sales, respectively.

The total estimated cost of Applicant's proposed construction is $273,000, and will be financed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record, concludes that authorization of this proposal is in the public interest.

In keeping with our recent policy when certificating interruptible or direct industrial sales we are including conditions in ordering paragraphs (D) and (E) which make clear that interruptible volumes may be curtailed to meet the present or future requirements of firm customers and that certification of firm volumes does not necessarily give the customer priority over resale customers in obtaining additional increments of firm service in the future. While these conditions have been included in a number of authorizations, we have not previously explained the reasons for imposing the conditions. To prevent any misinterpretation of these conditions we believe that it is desirable to explain them in some detail in this proceeding.

The need for imposing these conditions arose from the reversal by the Court of Appeals of our Opinion No. 355, 27 FPC 697, reversed, *Granite City Steel Co. v. F.P.C.*, 320 F. 2d 711 (CADC-1963), wherein we attempted to reallocate interruptible industrial sales of gas to firm resale customers. The Court held that where interruptible industrial customers had come to expect to receive gas without substantial interruption they were entitled to continue to receive gas on the same basis regardless of their contract provisions or the pipeline's rate structure. In addition the Court spoke not only of meeting such industrial customers' present requirements in preference to persons desiring gas for the first time or more gas, it also spoke of a preference for such industrial customers in having "reasonably foreseeable" requirements met.

These holdings indicate that any condition with respect to rights or priorities to present or future service should be made clear at the time of certification to prevent pipelines and their customers from assuming that a proposed service will be under conditions not contemplated by the Commission at the time of certification.

The dissent to the inclusion of these conditions in this proceeding argues that the conditions place an unfair limitation on industrial use of gas. We do not agree with this interpretation.

The condition in ordering paragraph (D) applies to all interruptible customers, whether industrial or resale.[1] Its only effect is to make clear that a customer paying for interruptible service at substantially lower rates cannot later claim a right to capacity in the line for which he has not paid. Often new facilities are constructed in excess of firm requirements during the first few years of service in contemplation of increasing firm service as the market grows. It is only logical that such excess capacity be used to provide interruptible service until it is required by firm customers willing to pay for it. The use of such excess capacity during its early years by an interruptible customer should not be on the basis of a claim by the interruptible customer that his service is being impaired when the capacity is finally dedicated to a firm customer.

Thus it should be understood that ordering paragraph (D) goes only to the rights of firm customers, industrial or resale, as opposed to interruptible customers of any type. The condition in no way discriminates between industrial and resale customers nor does it limit the sale of gas to industrial customers. It simply insures that "interruptible" will in fact have its purported meaning in a pipeline rate structure.

The Court's language in the *Granite City* case, *supra*, could be interpreted to mean that an existing industrial customer seeking additional firm gas to meet his "reasonably foreseeable" needs should be given a priority to additional gas over the needs of a resale customer seeking additional firm service to enable him to attach new homes or other types of customers. The inclusion of ordering paragraph (E) is for the purpose of assuring that when several customers are seeking new or additional firm service the criterion for allocating the additional gas will be the overall public interest. The condition does not affect firm industrial service already authorized. It does not give a priority to resale customers. It may well be that economic conditions in an area or load factor conditions would dictate that an industrial sale should have priority over resale sales. That will be decided on the basis of the facts controlling at the time additional firm service is sought.

---

[1] El Paso Natural Gas Co., Docket No. CP65-82, 32 FPC 1468, issued December 17, 1964.

We conclude that these conditions are reasonable and desirable and should be included in all authorizations involving interruptible or direct industrial sales.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefore should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provision of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities, and to deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(E) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Commissioner O'Connor *dissenting in part.*

O'CONNOR, *Commissioner, dissenting in part:*

The statutory authority under which this Commission functions is specific in prohibiting the disruption of a transmission company's "ability to render adequate service to its customers." Section 7(a), Natural Gas Act. The condition imposed in ordering paragraph (D) attempts to circumvent this prohibition by converting interruptible sales into contingent sales. Such broad use of certificate authority is totally unwarranted. Not only are controls imposed where no authority lies; but also it is an unjustified attempt to prohibit direct industrial sales.

This condition represents the final step in a series of attempts to reverse certain implications of *Granite City Steel Co.* v. *F.P.C.*, 320 F. 2d 711 (CADC-1963), where the Court stated, at 713, with respect to Section 7(a):

> The theory and purpose of the statutory restriction appear to be that persons desiring gas for the first time, or desiring more gas, should not get it by taking it away from existing lawful customers.

It is clear that direct industrial purchasers are lawful customers of an interstate pipeline despite their being exempted from the Commission's jurisdiction. Thus, when natural gas service is allocated to their purposes, it cannot be disturbed. This much must be conceded; nevertheless, the attempt of the condition is to subject all interruptible sales to the contingency of complete and permanent curtailment upon the wishes of a firm customer.

In order to preserve all pipeline capacity for firm customers, the premise upon which my colleagues act is apparently that of the certificating authority under Section 7(e). That authority has been broadly defined to require the Commission to evaluate all factors bearing on the public interest. However, the multifarious and competing policy considerations that compose the public interest must always be subordinated to the clear command of a legislative mandate. Effect must be given to a statute in its entirety, and to every clause and word thereof, rather than to emasculate an entire section. Therefore, despite the broad standard of Section 7(e), it cannot be exercised in contravention to the clear command of Section 7(a). The latter section not only protects past service; it also necessarily includes the right to obtain future service. It is my opinion, therefore, that should a direct industrial sale be severed pursuant to the proposed condition, it would not be legally supportable. On the other hand, it is clear that all the legal authority needed by this Commission is contained in its power to interpret and enforce the contractual conditions defining the sales proposed herein. Clearly, the interruptible sales are subject to curtailment for emergency needs of utility customers. Otherwise, an industrial customer's rights in the pipeline's capacity should be left to allotments by the company as the economic needs of its service area may dictate.

The circumstances of the natural gas industry do not, in the least, require that interruptible sales be contingent in the manner contemplated by paragraph (D).

Natural gas is utilized primarily for space heating in residences across the country. As such, deliveries are required primarily in the colder months. Unless there are customers for substantial amounts during the summer months, and during periods of unseasonably warm weather, the costs of gas to consumers would be prohibitive simply because no pipeline could be so planned as to operate only during the coldest days of a year, lying idle for the remainder. Industrial customers, utilizing gas for a multitude of worthwhile purposes, serve as a base capacity for the transmission company, enabling it to operate year-round and supplying it with needed revenues that redound to the benefit of all consumers. However, the rationale supporting paragraph (D) is in direct contravention to these circumstances under which the natural gas industry must necessarily operate. Paragraph (D) may have relevance to restrict certain end uses, but it is totally inapposite as a condition for insertion in all certificates for direct industrial sales. Furthermore, a fundamental policy consideration is completely overturned by the ordering paragraph. It is axiomatic that controls by government are not to be imposed in the absence of a compelling public interest. Fiat is not condoned. The national economy bears a traditional relation to the federal government that the former will not be disturbed unless there is a clear showing of a substantial adverse impact upon the public interest. There has been no such showing. Every circumstance surrounding the industrial use of natural gas calls, not for more regulation, but for more encouragement. The fact that interruptible service may operate as firm service through most of the year does not in the least detract from the year-round benefits accorded by such sales. The fact that such service may be at lower rates merely reflects, not only the benefits to the pipeline of continuity of operation, but also the free bargaining that is accorded such sales. This is particularly relevant in view of the increasingly effective competition that confronts natural gas from other energy sources.

The determination to unsettle and render asunder all present and future interruptible service is made clear by the circumstances of this particular order. The proposed departures reach back in time and disturb the vested rights of an existing lawful customer. The applicant has come before the Commission for an amendment to a previous certificate which did not subject the sale to the proposed contingency. Disturbing the prior rights acquired by the parties is entirely unsupportable. The least that should be done would be to condition only the requested increases; however, this is impossible. Applicant has requested no increases of previously authorized sales. A limited assertion of authority does not suffice; it is required that a retroactive condition be ordered in the hope that, should the contingency occur, an attempt could be made to eliminate the interruptible service of a non-jurisdictional customer. The extreme condition thus proposed is totally unwarranted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-252

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1965)

On February 23, 1965, El Paso Natural Gas Company (Applicant), filed in Docket No. CP65-252 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of a measuring station at a point adjacent to its California mainline system in Maricopa County, Arizona, (2) the acquisition and operation of a 4.85-mile segment of 23.0 miles of 6⅝-inch pipeline to be constructed by Arizona Public Service Company (Public Service), the segment extending from Applicant's proposed measuring station in a southerly direction, and (3) the sale and delivery of natural gas to Public Service for initial resale and distribution in the Palomas Plains area, Maricopa and Yuma Counties, Arizona, all as more fully set forth in the application.

Applicant and Public Service propose to initiate the sale and delivery of natural gas in the Palomas Plains area of Maricopa and Yuma Counties, Arizona, for the development of a new irrigation project to reclaim desert land through the use of gas operated irrigation wells. The estimated third-year peak-day and annual sales are 4,942 Mcf [1] and 823,600 Mcf [1], respectively.

The estimated cost of Applicant's proposed facilities, constructed and acquired, will be $100,000 to be financed out of current working funds.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The proposed acquisition of facilities from Public Service, the construction and operation of facilities, and sale of natural gas in interstate commerce, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed acquisition of facilities, construction and operation of facilities, and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the construction and operation of facilities, the acquisition and operation of facilities and sale and delivery of natural gas to Arizona Public Service Company, all as more fully described in the application and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

---

[1] Peak day will occur during summer months; and third year annual firm and interruptible volumes are 124,957 Mcf and 698,643 Mcf, respectively.

(C) The facilities hereby authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-281

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued May 4, 1965)

On March 11, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-281, an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon its Brickland Meter Station in Dona Ana County, New Mexico, and its Prewitt Meter Station in McKinley County, New Mexico, all as more fully set forth in the application.

The facilities proposed to be abandoned have heretofore been used in connection with the transportation and delivery of natural gas on a direct basis to the El Paso Natural Gas Products Company (Products Company) for use in Products Company's Brickland and Prewitt Refineries. The Products Company has discontinued operations at its Brickland and Prewitt Refineries, and therefore, the Brickland and Prewitt Meter Stations are no longer required. Applicant will salvage and return usable materials to stock.

The book cost of the facilities to be abandoned is $7,771 and the book cost of that portion of the facilities that are nonsalvable is $2,160, resulting in a net value for salvable material of $5,611. The estimated cost of removing and reconditioning such facilities is $1,700.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket No. G-242 (3 FPC 85).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GAS TRANSPORT, INC., DOCKET NO. CP65-273

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1965)

On March 8, 1965, Gas Transport, Inc. (Applicant), filed in Docket No. CP65-273 an application as supplemented on March 19, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation of natural gas in interstate commerce, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate approximately 18,000 feet of 3-inch pipeline extending from Grant District, Jackson County, West Virginia, to an existing 6-inch pipeline in the same district, together with a measuring station.

The proposed construction of facilities is required in order to enable Applicant to obtain and transport an additional quantity of approximately 350 Mcf of natural gas per day from existing wells drilled in said Grant District and from wells to be drilled in the future to Applicant's existing pipeline for transportation and delivery to The Ohio Fuel Gas Company for redelivery to the plants of Anchor Hocking Glass Corporation (Anchor Hocking) located at Lancaster, Ohio.

Total estimated cost of Applicant's proposed construction is stated to be $25,454, and will be financed with current funds.

A temporary certificate for the installation and operation of the facilities requested has been granted by Commission letter-order issued April 9, 1965.

After due notice, no petition to intervene, motion of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Gas Transport, Inc., a Delaware corporation having its principal place of business in Lancaster, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 28, 1941, in Docket No. G-213, (2 FPC 1079).

(2) The facilities as hereinbefore described, as more fully described in the application and exhibits in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission and the construction and operation thereof and the transportation of

natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding authorizing the construction and operation of facilities and the transportation of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraphs (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ILLINOIS POWER COMPANY, DOCKET NO. CP65-279

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND DELIVERY OF NATURAL GAS

(Issued May 4, 1965)

On March 9, 1965, Illinois Power Company (Applicant) filed in Docket No. CP65-279 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its natural gas transmission facilities with the proposed facilities of and to deliver natural gas to Applicant for resale and distribution in the Villages of Dawson, Buffalo and Mechanicsburg, and environs, Sangamon County, Illinois, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate a lateral pipeline from Panhandle's Peoria lateral to the communities to be served as well as the necessary distribution facilities for said communities. The total estimated third year peak day and annual natural gas requirements for the three communities are 905 Mcf and 63,269 Mcf, respectively. Applicant is not requesting herein any additional volumes of gas from Panhandle for service to the three villages but merely a new delivery point necessary for such service.

The total estimated cost of Applicant's proposed facilities is $340,780, which cost will be financed with funds on hand available for construction.

Applicant states that it has obtained the necessary authorizations from the Illinois Commerce Commission and from each of the three villages.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 20, 1965 (30 F.R. 3729). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, Illinois Power Company, is a corporation duly organized and existing under the laws of the State of Illinois and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to deliver at said connection up to 905 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(5) The requirement that Panhandle serve Applicant, as proposed, will not place any undue burden upon Panhandle nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to deliver at said connection up to 905 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(C) Panhandle shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

(D) Panhandle shall file, pursuant to Part 154 of the Commission's Regulations, a service agreement with Applicant reflecting the additional delivery point.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MICHIGAN GAS AND ELECTRIC COMPANY, DOCKET NO. E–7222

ORDER INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued May 4, 1965)

Michigan Gas and Electric Company (MGE), a Michigan Corporation, with its principal place of business at 100 South Main, Three Rivers, Michigan by rate schedule filings completed on July 1, 1964, filed with this Commission an agreement and a supplement thereto[1] with the City of Dowagiac, Michigan, Board of Public Works, (Dowagiac) as an initial rate schedule and a supplement to a filed rate schedule[2] providing for service to the Village of Paw Paw, Michigan (Paw Paw).

Available data indicate that MGE's average annual charges to Paw Paw for the 12 months ending April 30, 1964, were 15 mills per kwh. MGE's average annual charges to Dowagiac for the same 12 months period were 9.4 mills per kwh. MGE serves Paw Paw at a flat rate of 1.5¢ per kwh with a yearly minimum of $2,700. The Company's deliveries to the Village for the 12 month period were 10,745,900 kwh, and its total charge was $161,188.50. MGE's sales to Dowagiac are made at a two part rate which may be expressed as a demand charge of $2.35 per kw and an accompanying energy charge of 3½ mills per kwh. The latter rate is subject to changes in taxes and a commodity adjustment to reflect wholesale price changes.

Numerous conferences between representatives of MGE and staff have failed to disclose a sufficient cost justification for MGE rates and charges and their possible discriminatory or preferential effect. However, the Commission is not satisfied that either of MGE's rate schedules are consistent with statutory standards and it appears that there is a need for formal investigation and hearing of MGE's rates, charges and services to Dowagiac and Paw Paw pursuant to the provisions of Sections 205, 206, 301, 304, 307 and 309 of the Federal Power Act.

The Commission finds:

Review and analysis of available data indicate that MGE's Rate Schedules FPC Nos. 2 and 4 as supplemented may result in excessive rates or charges or may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act. Accordingly, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 301, 304, 307 and 309 thereof, that an investigation and hearing be held as hereinafter provided.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of MGE's Rate Schedules FPC Nos. 2 and 4 as supplemented, at the time and place and in the manner all to be fixed by notice of the Secretary.

(B) MGE shall within 45 days from the date hereof, submit a special report setting out cost and revenue data using 1964 as the test year, showing MGE's costs of rendering service to Dowagiac and Paw Paw, calculated in accordance with applicable Commission precedents and submitted in the form as prescribed in Statements A through O, Section 35.13(b)(4)(IV) of the Commission's Regulations under the Federal Power Act. An original and nine conformed copies of the report shall be submitted.

(C) The foregoing submission shall not preclude or limit any additional showing by MGE and shall be without prejudice to future action taken by the Commission or its staff, or to any future position MGE or others may wish to take as to the significance of, or conclusion to be drawn from the above factual report.

(D) Notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before May 28, 1965, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

---

[1] The filing consisted of an agreement dated August 4, 1952, and a supplement thereto dated July 16, 1962, which have been respectively designated in the Commission's files as Michigan Gas and Electric Company, Rate Schedule FPC No. 4 and Supplement No. 1 thereto.

[2] The supplement is designated in the Commission's files as Michigan Gas and Electric Company, Supplement No. 1 to Rate Schedule FPC No. 2.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP65-227

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1965)

On January 27, 1965, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP65-227 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to install during calendar year 1965 and operate up to 900 additional horsepower of compression in the Woodlawn Field, Harrison County, Texas.

The application states that the proposed compressor facilities are required in order to enable Applicant to maintain deliverability from dedicated reserves in the face of continued pressure declines in the field and individual wells.

The estimated cost of Applicant's proposed construction is $158,290, and will be financed with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) The proposed construction and operation of facilities, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, authorizing the construction and operation of facilities as

hereinbefore described and as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, during the calendar year 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MORENCI NATIONAL GAS COMPANY, DOCKET NO. CP65–161

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 4, 1965)

On December 4, 1964, Morenci National Gas Company (Applicant) filed in Docket No. CP65–161 an application, as supplemented on January 12, 1965, February 15, 1965, and March 5, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing American Louisiana Pipe Line Company (American Louisiana) to make a physical connection of its transmission facilities with Applicant's proposed distribution facilities and to sell and deliver natural gas to Applicant for distribution and resale to residential and commercial customers located in Morenci and Weston, Michigan, all as more fully described in the application.

The estimated volumes of natural gas required to supply Applicant's annual and peak day requirements for the initial three years of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	258, 054	276, 742	295, 819
Peak day (Mcf)	1, 898	2, 080	2, 281

The natural gas to be purchased by Applicant from American Louisiana may be supplemented by deliveries of gas from a local producer of gas in intrastate commerce, Morenci Gathering System, Inc. Such deliveries will be made at the same price at which gas service is available from American Louisiana and will require the construction of no new facilities.

The total third year cost of Applicant's facilities to be constructed pursuant to the instant program is estimated to be $610,265, of which $330,000 is to be financed through 20 year First Mortgage Bonds and the remainder through common stock. These facilities consist of 14 miles of transmission line extending from a point on the main transmission line of American Louisiana near Morenci, Michigan, the distribution systems in Morenci and Weston, Michigan.

The Michigan Public Service Commission has authorized Applicant to serve the proposed area and to construct the proposed facilities, conditioned upon the approval sought by the instant filing.

On January 6, 1965, American Louisiana filed its answer with the Commission and stated that it has no objections to providing the requested service and that it can provide such service from existing sources of gas supply and without construction of additional transmission facilities.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on December 18, 1964 (29 F.R. 18023). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) American Louisiana Pipe Line Company, a Delaware corporation with its principal place of business in Detroit, Michigan is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 276 in Docket No. G-2306, et al., issued October 1, 1954 (13 FPC 380).

(2) Applicant is a public utility company in the State of Michigan and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its proposed distribution system.

(3) It is necessary and desirable in the public interest that American Louisiana be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 2,281 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that American Louisiana serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) American Louisiana Pipe Line Company be and is hereby directed to establish physical connection of its natural gas transmission system with the facilities of the Applicant and to sell and deliver up to 2,281 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) American Louisiana Pipe Line Company shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

(C) Applicant shall be prepared to receive natural gas from American Louisiana within one year from the date of this order.

(D) American Louisiana shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

APPLICATIONS OF INDEPENDENT PRODUCERS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND FOR ABANDONMENT—NUMBER OF COPIES, DOCKET NO. R-274

ORDER NO. 297

AMENDING §§ 157.23 AND 157.30 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued May 4, 1965)*

This order amends § 157.23 of the Regulations Under the Natural Gas Act by reducing the number of copies of an application for a certificate of public convenience and necessity now required by paragraphs (a) and (b) of that section and the form set out in Appendix A thereto. It also specifies the number of copies of applications for abandonment to be filed pursuant to § 157.30.

---

*Published in the Federal Register on May 12, 1965 (30 F.R. 6518).

We have recently appraised our needs in this regard and have determined that four copies of applications by both Class A and Class B producers will be adequate.

The Commission finds:

(1) Since the amendments herein adopted either reduce or clarify present procedural requirements, compliance with the notice and effective date provisions of section 4 of the Administrative Procedure Act is unnecessary.

(2) The amendments adopted herein are necessary and appropriate for the purposes of administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7 and 16 thereof (52 Stat. 825, 830; 15 U.S.C. 717f(c), 717o), *orders:*

(A) Effective upon the issuance of this order, §§ 157.23 and 157.30, Part 157, Subchapter E of Chapter I, Title 18 of the Code of Federal Regulations are amended as follows:

1. In § 157.23 and Appendix A thereto, delete the words "original and 7 copies" and "original and five copies" wherever they appear therein, and in lieu thereof insert in each case the words "original and 3 copies".

2. Amend paragraph (a) of § 157.30 to read as follows:

"§ 157.30 Abandonment of service.

(a) No independent producer as herein defined shall abandon all or any portion of its facilities subject to the jurisdiction of the Commission, or any service rendered by means of such facilities, without the permission and approval of the Commission first had and obtained upon application (original and 3 copies), after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity permit such abandonment. *Provided, however*, That nothing herein shall be construed as interfering or as intended to interfere with or to prevent compliance by a natural-gas company with valid conservation orders of a State agency relating to the production or gathering of natural gas."

(B) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE SUPERIOR OIL COMPANY, v. TRUNKLINE GAS COMPANY, UNION OIL COMPANY OF CALIFORNIA, AND PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI65-300

ORDER GRANTING MOTION TO DISMISS COMPLAINT

(Issued May 4, 1965)

On April 20, 1965, the Superior Oil Company (Superior) filed a motion to dismiss its complaint under Section 5(c) of the Outer Continental Shelf Lands Act and Section 16 of the Natural Gas Act, previously filed on September 24, 1964, against Trunkline Gas Company (Trunkline), Union Oil Company of California (Union Oil), and Pan American Petroleum Corporation (Pan American).

It appears from the motion that Superior has assigned and transferred to Union Oil and Pan American, effective as of April 20, 1965, all interests in those leases which were the subject of this complaint. The transfer of the natural gas properties which were the source of the complaint leaves no subject matter for hearing by the Commission.

All parties, including the Commission staff, have indicated that they have no objection to the grant of the motion for dismissal.[1] Consequently, it appears that the granting of the motion by Superior herein would be in the public interest.

The Commission orders:

The motion filed herein by Superior to dismiss its complaint of September 24, 1964 under the Outer Continental Shelf Lands Act and Section 16 of the Natural Gas Act, is hereby granted.

---

[1] The parties indicated their position as follows: (1) Trunkline by letter dated April 20, 1965; (2) Union Oil and Pan American by an answer to the motion, filed April 21, 1965; (3) Staff Counsel and the Public Service Commission of the State of New York by statements on the record on April 22, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WHEELER GAS COMPANY, DOCKET NO. CP64-191

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1965)

On February 28, 1964, Wheeler Gas Company (Applicant) filed in Docket No. CP64-191 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a meter and regulator station on its 4-inch gas supply line in Wheeler County, Texas, for the receipt of up to 1,500 Mcf of natural gas per day from Natural Gas Pipeline Company of America (Natural), all as more fully set forth in the application.[1]

Total estimated cost of Applicant's proposed construction is $3,607.30, and will be financed with cash on hand.

Temporary authorization for the proposed facilities was granted by Commission letter dated March 10, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Wheeler Gas Company, a partnership existing under the laws of the State of Texas and having its principal place of business in Wheeler, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of February 24, 1959, in Docket No. G-16788 (21 FPC 270).

---

[1] Natural was directed to provide the proposed service to Applicant by order issued November 20, 1964, in Docket No. CP65-42, 32 FPC 1350.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c) (4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Wheeler Gas Company, authorizing the construction and operation of facilities as hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER APPROVING PROJECT EXHIBIT L DRAWINGS

(Issued May 5, 1965)

On January 27, 1965, Alabama Power Company, licensee for the Coosa River Project No. 2146, filed application for Commission approval of Exhibit L drawings showing the proposed construction of underwater skimming weirs just upstream from the power intake of the licensee's Lock 3 and Logan Martin developments of the project as parts of the project works.

In its development of the Coosa River under its present program of construction, the licensee will develop about 443 feet of head from about river mile 18 to about river mile 278. Starting with the uppermost development and proceeding downstream therefrom, the developments are known as Weiss, Lock 3, Logan Martin, Lay, Mitchell, Jordan No. 1 and Jordan No. 2. All of these developments have been constructed except Lock 3 which is under construction, Lay which is being modified by increasing its reservoir elevation by 14 feet, Mitchell which was proposed to be modified by increasing its reservoir elevation from 312 feet to 317 feet, and Jordan Nos. 1 and 2 which are being modified by increasing the elevation of the joint reservoir and in other respects.

Near Childersburg, Alabama, about 9 miles downstream from Logan Martin dam and just upstream from the existing Lay reservoir are located industrial plants, particularly the Coosa River Newsprint Division of Kimberly Clark Corp., and Beaunit Fibers, which two industries require process water. Prior to 1964, the river above Childersburg was an open stream and the amount of dissolved oxygen in the water at this location was no lower than about 6 parts per million in the summer months. By letter of February 2, 1965, the Alabama Water Improvement Commission has advised us that the initial operation of the powerplant at the Logan Martin dam resulted in the release of water having a low dissolved oxygen concentration, thereby causing deterioration of water quality in the Coosa River downstream from the dam. The death of fish attributed to that deterioration and its effects on waste assimilative capacity made it necessary for the licensee to revise its operating schedule to permit discharge of water over Logan Martin spillway in order to increase dissolved oxygen concentration in downstream waters. For instance, during the months of July through October 1964, the licensee spilled an average of 2,013 cfs daily for 103 days (about 415,000 acre-feet) which is an equivalent of 21,227,000 kwh of energy.

When Lock 3 development is completed in 1966 and Lay, Jordan, and Mitchell reservoirs are raised, there will be no natural stream remaining between mile 18 and mile 278 and the problem of water quality will be further aggravated. This matter is currently under consideration. Construction of the underwater weirs just upstream from the Lock 3 and Logan Martin power intakes, as shown on the Exhibit L drawings, will permit skimming the upper layers of these reservoirs which usually contain the best quality of water (dissolved oxygen) instead of drawing water deficient in dissolved oxygen from the bottom of the reservoirs. The weir at Lock 3 is designed to skim water from the upper 28 feet and at the Logan Martin development from the upper 20 feet of the respective reservoirs at normal power pool levels.

Inasmuch as Lock 3 is under construction, the weir can be constructed concurrently with the dam structure, but at the existing Logan Martin, construction must proceed underwater, and the completion of construction of both weirs should be expedited to take advantage of the construction at Lock 3 and to improve water quality by the earliest practicable date.

By letter dated February 2, 1965, the Alabama Water Improvement Commission recommended favorable consideration of the application for amendment, stating that it is of the opinion that the underwater weirs will alleviate problems of water quality by permitting turbine releases of surface waters relatively high in dissolved oxygen and that the benefits from the weirs will be for downstream recreational purposes, fishing, and reasonable utilization of the water involved for waste assimilation.

The Department of Health, Education, and Welfare has advised that it concurs in the views of the Alabama Water Improvement Commission.

The Department of the Interior has advised that its Bureau of Sports Fisheries and Wildlife believes that the construction of the underwater skimming weirs as proposed by the licensee for Project No. 2146 would improve water quality.

The U.S. Corps of Engineers has advised that the plans of the project structures affecting navigation are satisfactory and tracings have been approved pursuant to Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The following designated and described Exhibit L drawings conform to the Commission's Rules and Regulations and should be approved as part of the license for the project.

Sheet No.	FPC No.	Showing
7G	2146-220	Lock 3 development—submerged weir around turbine intakes.
10E	2146-219	Logan Martin development—submerged weir around turbine intakes.

The Commission orders:

(A) The Exhibit L drawings designated and described in finding (2) above are hereby approved as parts of the license for Project No. 2146.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NO. 2481

ORDER MODIFYING LICENSE (MINOR) ON REHEARING

(Issued May 5, 1965)

On March 22, 1965, Public Service Company of New Hampshire (Applicant) filed an application for rehearing of the Commission's order issued February 24, 1965, 33 FPC 319, with respect to Applicant's Swans Falls Hydroelectric Plant located on the Saco River in the Town of Fryeburg, Maine, Project No. 2481. The Applicant requests that the termination date of the license be changed from December 31, 1988 to March 1, 1966, and that Article 13 be deleted.

Applicant represents that because of the continued deterioration of the plant, it should be retired from service on or before March 1, 1966 and that Article 13, which requires the filing of a recreational use plan within one year from the date of the license, should be eliminated from the license because it would impose additional financial burdens on a plant already uneconomical to operate.

The Commission finds:

(1) It is appropriate and in the public interest to modify the license as requested by the Applicant by substituting "March 1, 1966" for "December 31, 1988" in the second paragraph on *supra*, page 319 and in ordering paragraph (A) on *supra*, page 320, and by deleting Article 13 of the order issued February 24, 1965.

(2) Under the circumstances recited by the Applicant it is appropriate to further modify the order issuing license by deleting finding number 5 therefrom and by waiving Section 10(a) of the Federal Power Act pursuant to Section 10(i) of the Act.

The Commission orders:

(A) The Commission's order of February 24, 1965 issuing license to the Public Service Company of New Hampshire for Project No. 2481 is hereby modified and amended on rehearing as described above in finding numbers (1) and (2) herein.

(B) The aforementioned Commission order issued February 24, 1965, as amended by this order, shall be accepted by the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER DENYING MOTIONS

(Issued May 6, 1965)*

On April 26, 1965, Scenic Hudson Preservation Conference, Town of Cortlandt, Town of Putnam Valley, and Town of Yorktown, Interveners in this proceeding, filed joint motions (1) to transfer the scheduled hearing of May 4, 1965 from Washington, D.C. to New York City; (2) to provide for an adjourned hearing at which interested parties may have an opportunity to present evidence and to cross-examine Consolidated Edison; and (3) to expand the scope of the hearing (a) to include consideration of underground transmission, (b) to include consideration of certain legal rights relating to ordinances concerning regulation of underground transmission lines, and (c) to permit certain testimony with respect to fish life.

As we stated in our order issued April 30, 1965 on the petition of the Secretary of the Interior to intervene and his motion for prehearing conference and continuance of the hearing, we think the examiner will be in a better position in the light of the circumstances prevailing at the time of hearing to determine such matters as which of the issues should be heard first, the nature, timing and place of presentation, and whether to grant a reasonable postponement for cross-examination and preparation of rebuttal testimony. We think that order disposes of the first and second motions of Interveners.

The motion to expand the scope of the hearing is in effect an application for rehearing of our order issuing license in which we specifically defined the scope of the hearing scheduled for May 4. In our order issued today denying the application filed by these interveners for rehearing we set forth the reasons why the scope of the hearing should not be expanded. Those reasons are incorporated herein by reference and are the reasons for our denial of this motion.

The Commission finds:

The joint motions filed by Interveners should be denied.

The Commission orders:

The joint motions filed by Scenic Hudson Preservation Conference, Town of Cortlandt, Town of Putnam Valley, and Town of Yorktown are hereby denied.

---

*See order issued July 1, 1965 denying rehearing, etc., 34 FPC 1. Set aside, 354 F. 2d 608 (CA2-1965). See order on remand, issued January 25, 1966, 35 FPC 151.

OPINION NO. 452–A

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.,
PROJECT NO. 2338

OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING AND PETITION TO REOPEN PROCEEDINGS AND DENYING MOTION FOR STAY

(Issued May 6, 1965)*

Syllabus

1. Since conclusion that transmission lines be overhead was based on evidence that costs of underground transmission could not be justified, Commission *affirms* determination limiting further consideration of primary lines to overhead transmission. P. 966.

2. Serious weight must be given to State's judgment in setting aside certain lands as parks; nevertheless, ultimate test for transmission line route will be overall public interest, considering all factors. P. 966.

3. Evidence concerning alternatives establishes that Cornwall project is far superior to any possible alternative. P. 968.

4. Contention that Commission erred in issuing license while deferring final decision on transmission line route and design of fish facilities rejected—such action was clearly consistent with Commission's obligations under Section 10(a). P. 968.

5. Congress entrusted licensing of hydroelectric power developments along navigable waterways to Commission—although views of State and local authorities carry great weight, it remains Commission's statutory responsibility to determine whether license should issue and conditions be imposed. P. 968.

6. Commission is not required to hold up issuance of license which clearly meets statutory standard on basis of expectation or hope by some parties that law may eventually be changed. P. 969.

7. Contention that Commission has not met its obligations under Section 10(a) rejected—Commission necessarily must consider licensing proposals individually and appraise their impact on comprehensive river development. P. 969.

8. Cornwall involves no reservoir in or barrier across river itself, thus does not present complex problems of integration with upstream or downstream projects frequently created by conventional hydroelectric projects. P. 969.

9. Under Section 313(c) of the Act a stay does not result automatically from filing of application for rehearing or commencement of judicial review. P. 969.

10. Applicant for stay must satisfy each of tests prescribed by *Virginia Petroleum Jobbers* to justify extraordinary relief represented by stay of administrative order—interveners here have not done so. P. 969.

11. Commission *denies* applications for rehearing, petitions to reopen proceedings and motion for stay.
Commissioner Ross *dissenting*.

---

*Set aside, 354 F. 2d 608 (CA2–1965). See order on remand, issued January 25, 1966, 35 FPC 151.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

On March 9, 1965, 33 FPC 428, the Commission issued its Opinion No. 452 and Order, "Opinion and Order Issuing License and Reopening and Remanding Proceeding for Additional Evidence on the Location of the Primary Lines and Design of Fish Protective Facilities." Applications for rehearing and for further reopening thereof were filed on April 8, 1965, individually by Philipstown Citizens Association and jointly by a number of other interveners headed in the application by Scenic Hudson Preservation Conference.[1] In addition Scenic Hudson, acting alone, has filed a motion for stay of the Opinion and order pending action on the application for rehearing and, if that is decided adversely to it, until final disposition of judicial review proceedings. An answer opposing the motion for stay was filed by Consolidated Edison on April 19, 1965.

Philipstown Citizens Association addresses its application for rehearing solely to the issue of the primary transmission lines of the project. Specifically, it urges that the Commission committed error in excluding further consideration of underground transmission at the remanded hearing which started on May 4, 1965. It also contends that we should not have directed that the proposed routes for the overhead transmission lines to be considered at such hearing "be planned so as to avoid crossing State park lands."

The subject of underground transmission, and the possibility of imposing such a requirement on Consolidated Edison as a condition to the issuance of the license, was extensively considered in our opinion. Our conclusion that the transmission lines, whatever their final location, be overhead and not underground was based on evidence establishing that the costs involved in underground transmission for this project, beyond the extent already required, could not be justified in the public interest. Philipstown has submitted nothing which would warrant a different conclusion. Consequently, the determination to limit the further consideration of the primary lines to overhead transmission must be affirmed.

Philipstown's objection that we should not have directed that the proposed transmission lines be planned so as to avoid crossing State park lands is not well founded. The direction to avoid the park lands was not absolute. The notice issued March 26, 1965, in this proceeding, "Notice of Alternative Overhead Transmission Line Routes of the Cornwall Pumped Storage Project," lists four potential transmission line routes of which route No. 4 would cross a segment of the park. We believe that serious weight must be given the considered judgment of the State in setting aside certain lands as parks. Nevertheless, the ultimate test for the transmission line route will be the overall public interest, considering all factors.

The petition for rehearing filed jointly by Scenic Hudson and the other interveners opposing the project is grounded on a number of propositions. First, they contend that there are serious dangers inherent in the project which we did not adequately explore and to which we gave insufficient weight. They list these dangers as the danger to fish life, the danger to water supplies and plant life, the danger to people and property below the dikes, and the danger to scenic beauty. Contrary to the allegation, each of these factors was fully considered by us in our decision.

Our requirement that applicant install a fish screen in front of the project intake facilities was in accordance with a recommendation by the United States

---

[1] In addition to Scenic Hudson the application includes the Town of Cortlandt, the Town of Putnam Valley and the Town of Yorktown.

Department of the Interior contained in a letter from its Assistant Secretary to the Commission dated July 18, 1963, expressing the Department's comments on Con Edison's application. Moreover, we have required further hearings on the design of the protective devices to insure their adequacy, as well as providing for cooperation between Con Edison, the Fish and Wildlife Service of the Department of the Interior and the Fish and Game Division of the New York State Conservation Department in the design of the fish screen, and we have retained continuing jurisdiction to require any needed modification of the screening facility which operating experience may prove desirable. We believe these provisions are adequate to assure suitable protection of this natural resource.

The apprehension of danger to water supplies and plant life is groundless, in our opinion. The testing procedure established, as well as our reservation of the right to require Con Edison to take appropriate measures to assure against water seepage from the reservoir and to compensate for any damages, are adequate to remedy any conceivable adverse effect from this aspect of the project.

Petitioners contend that the standards used to determine the safety of the project are Corps of Engineers' standards applicable to flood control projects. On the contrary, the evidence shows that the Corps' standards were adapted to take into account the operating characteristics of pumped storage projects and allowances were made for the different stresses which would actually occur. The tests of operating conditions showed in each instance that the design characteristics substantially exceed the minimum standards necessary for approval by the Corps.

The danger of the dams giving way was considered at length in the hearings held in this case. There was expert testimony that the dams were "over-designed" and "over-safe." The Commission's engineering witness agreed that there was no question as to the stability of the dike design as presently planned. Our review of this evidence gives us no cause to doubt the complete stability of any of the project structures. In addition, Article 31 of the license requires that three independent consultants be employed to make further recommendations with regard to the safety and stability of the entire upper reservoir, including the dikes, and that revised design exhibits, reflecting their conclusions, are to be filed for our approval. Under Article 33 Con Edison is prohibited from beginning construction of the project structures until the Commission approves such exhibits showing the final design of the project works. These are standard requirements in all licenses issued by the Commission.

In their application for rehearing the interveners contend that the matter of possible collapse of the dams is of particular concern in this case since a geologic fault passes directly through the area of the proposed reservoir. The interveners are aware of course that the existence of this fault was recognized in the testimony given during the hearing by Mr. Thomas W. Fluhr, a professional engineer and a geologist of outstanding reputation. As stated by Mr. Fluhr, the fault, which extends in a direction north 35 degrees east and crosses near the Village of Cornwall, "lies to the northwest of the [project] site, entirely outside of the site, and does not cross the site at any point." Mr. Fluhr concluded that the fault "is entirely outside and away from the site and can have no effect on the project." The geologic report submitted by Con Edison[3] likewise refers to the fault, pinpointing its location as lying at the toe of the northwest slope of Storm King Mountain on the west side of the Hudson River and extending along the toe of the northwest slope of Breakneck ridge on the east side. The report notes that the fault "is several thousand feet north of the nearest project feature" and that the closest project structure is not the reservoir but the pumping-generating station. The report further notes that cores taken from the plant area showed no disruption or structural disturbance of the rock which could be attributed to the fault and that the fault is entirely inactive.

---

[3] Amendments to application filed September 13, 1963, Exhibit L, Supplement B, pp. 2, 6–8.

The impact on the scenic beauty of the area which will result from the project has been found to be minimal. The petition for rehearing presents no evidence of which we were not aware when we issued our decision nor does it give us any cause to doubt our conclusion.

Scenic Hudson, *et al.*, contend that additional evidence should be received regarding the availability of alternatives to the construction of the Cornwall project. During the hearing both sides introduced a substantial amount of evidence concerning various alternatives and these were carefully evaluated by us. The evidence regarding the alternatives establishes that the Cornwall project is far superior to any possible alternative. At best, the evidence now offered would appear to consist on a disagreement between experts. At this stage of the proceeding in particular, the attempted introduction of additional evidence of this character provides no basis for a reopening of the record.

Interveners contend that we erred in issuing a license to Con Edison while, at the same time, deferring our final decision on the transmission line route and the design of the fish protective facilities. They argue that we have thereby fragmentized the project and have proceeded without weighing all the factors required by Section 10(a) of the Federal Power Act. We do not agree. Our decision to issue the license was made on consideration of all necessary elements. In fact, our opinion specifically provides for transmission lines and fish protective facilities to be included in the project and discusses in detail both the impact of the transmission line on the scenic values of the area and the effect of the project on the Hudson River fish resources. Our determination to accept more evidence of the best transmission line route was motivated by our incomplete knowledge of the Applicant's future transmission plans for this area. A more careful study of the alternative routes as they may relate to these plans was necessary. Our determination to accept additional evidence on the design of the fish protective facilities was in furtherance of our continuing authority under the license to require the Applicant to take all necessary measures to protect fish. Thus, our action in remanding these portions of the proceeding was clearly consistent with our obligations under Section 10(a) and did not represent a deferral of our consideration of any phase of the project. Such a procedure is a common practice of the Commission.

Interveners further allege that the proceeding "should be reopened in order that consideration may be given to the grave policy questions involving the relation of the Federal authority to that of the State and of local municipalities." The answer to this is, of course, that Congress long ago entrusted the licensing of hydroelectric power developments along navigable waterways to this Commission. Although the views of State and local authorities carry great weight, and those of the State were earnestly solicited by us, it remains the statutory responsibility of the Federal Power Commission to determine whether a license should or should not be granted and, if so, the conditions to be imposed thereon. The Commission is cognizant of the proposals now being made for separate legislation on the development of the Hudson River, and the related requests that we withhold issuance of the license to Con Edison in order to allow consideration of the various bills in Congress and in the New York State Legislature. However, our obligation under existing law to determine the merits of the application is clear. Postponement here would force Con Edison to make other less suitable arrangements and would be contrary to our statutory obligation. The Commission is not required to hold up the issuance of a license which clearly meets the statutory standards on the basis of an expectation or hope by some of the parties that the law may eventually be changed.

The joint interveners contend that the record should be reopened to allow the introduction of further evidence for the reason, among others, that litigation is pending which involves the water supply situation of the Village of Cornwall. The effect of the project on that water supply and the plans for redevelopment of the Village water system were passed on and approved by the Village Board and by the New York State Water Resources Commission. The fact that litigation may be initiated or that certain conditions contained in the order of the Water Resources Commission remain to be met before the transfer of the upper reservoir can be effected is not material to our determination of this proceeding. In the event any changes are proposed in the present plans of the project, it will be necessary, of course, to submit revised exhibits to the Commission for our approval.

Scenic Hudson's contention that the Commission has not met its obligations under Section 10(a) in that it has not evaluated the project in the light of a "comprehensive plan" for the development of the entire Hudson River, is without merit. The Commission necessarily must consider licensing proposals individually, and appraise their impact on comprehensive river development. The evidence submitted to the Commission in this proceeding bears out the unique adaptability of the Cornwall site to the development of the planned pumped storage project. Our careful evaluation of the many issues raised at the hearings, including scenic considerations, fish protection, the transmission facilities, safety, recreation, navigation and the inadequacies of the various alternatives, as well as the conditions imposed in the public interest in issuing the license all attest to the appropriateness of the Cornwall project for the development of the Hudson River for the improvement and utilization of water power development and for all other beneficial public uses, as required by Section 10(a).

We point out, additionally, that inasmuch as Cornwall involves no reservoir in or barrier across the river itself, it does not present the complex problems of integration with upstream or downstream projects such as are frequently created by conventional hydroelectric projects.

In its motion for stay, Scenic Hudson contends that the failure to grant a stay will result in irreparable harm to it since, if Con Edison is allowed to proceed with the clearing and construction of the reservoir, powerhouse and switching station, it will make moot the issues upon which Scenic Hudson has based its objections to the license.

Under Section 313(c) of the Act a stay does not result automatically from the filing of an application for rehearing or the commencement of judicial review proceedings. Four tests have been prescribed by the Court of Appeals, each of which an applicant for stay must satisfy in order to justify the extraordinary relief represented by a stay of an administrative order.[3] These tests require the applicant to (1) Make a strong showing that it is likely to prevail on the merits of its appeal; (2) Show that in the absence of a stay it will be irreparably injured; (3) Show that the issuance of a stay will not have a serious adverse effect on other interested persons; and (4) Show that the public interest would not be adversely affected by the stay.[4]

---

[3] *Virginia Petroleum Jobbers* v. *F.P.C.*, 259 F. 2d 921 (CADC–1958); *Pacific Northwest Power Co.*, Opinion No. 418–A, 31 FPC 1051, 1059; *Shell Oil Co., et al.*, Opinion No. 382–A, 29 FPC 851, 852–853.

Interveners have alleged no facts or principles of law in their applications for rehearing not fully considered by the Commission and determined on the basis of a full and complete record and have not demonstrated any likelihood that their contentions might prevail on judicial review. All matters raised by Scenic Hudson and alleged to have been inadequately explored or given insufficient weight by the Commission are, in fact, supported by substantial evidence in the record. That Scenic Hudson and the others opposing the project may disagree with our judgment as to where the public interest lies is no basis for granting a stay.

The record does not support the claim of irreparable injury. Even if Con Edison proceeds with the construction during the pendency of judicial review proceedings, the total impact thereof on the scenic resources, particularly those lying on the west side of the Hudson, have been fully weighed and found to be "minimal." In addition, as previously noted, Con Edison will not be able to begin actual construction until the completion of additional studies. These activities will not be completed before an order can be appealed and stay sought from a court.

A consideration of whatever damage might be done in the period necessary for complete judicial review must be weighed against the adverse effect that further delay would have on the applicant and the public interest. The Cornwall project has been planned to supply the peak power requirements of New York City. Con Edison must be prepared to supply those needs in the near future. If the completion date is delayed, as it would be if a stay were granted until final disposition of judicial review proceedings, applicant could be placed in a position where it would be required to take extraordinary and expensive measures to meet the demands for electricity during peak periods and may very well be forced to build one of the alternative sources of power supply which we have found would cost at least $12,000,000 a year more than Cornwall. The additional burden entailed by such measures would be cast directly on Con Edison's consumers. Moreover, if an inferior project were built the loss would indeed be irreparable. In addition, the public would be deprived of other project benefits, such as improved service reliability, for the duration of the stay. Thus, there is an urgent need for the project and a stay would not serve the public interest.

For the reasons herein discussed, we find that the applications for rehearing and the motion for stay filed by Scenic Hudson should be denied.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing and petition to reopen filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission Opinion No. 452 and accompanying order.

(2) There is no justification for, and the public interest would not be served by, granting a stay of Opinion No. 452 and order.

The Commission orders:

(A) The applications for rehearing and reopening filed herein by Philipstown Citizens Association and jointly by the Scenic Hudson Preservation Conference, the Town of Cortlandt, the Town of Putnam Valley and the Town of Yorktown are hereby denied.

CITY OF DUNLAP, TENNESSEE, DOCKET NO. CP65–212

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 6, 1965)

On January 12, 1965, the City of Dunlap, Tennessee (Applicant) filed in Docket No. CP65–212 an application, as supplemented on January 22, March 10, and March 29, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing East Tennessee Natural Gas Company (East Tennessee) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Whitwell, Daus, Powell's Crossroads, and Dunlap, Tennessee, and environs, all as more fully set forth in the application.

Estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations will be purchased under East Tennessee's Rate Schedule SG–1 and are stated to be:

	First year	Second year	Third year
Annual (Mcf)	52,358	78,612	106,072
Peak day (Mcf)	873	1,296	1,718

Applicant will construct and operate approximately 21.05 miles of 4½-inch and 2.75 miles of 1½-inch transmission pipelines from a proposed interconnection in Marion County, Tennessee, to its proposed distribution facilities in the cities of Dunlap and Whitwell and the rural communities of Daus and Powell's Crossroads in Sequatchie and Marion Counties, Tennessee. The estimated cost of Applicant's proposed lateral line and distribution system is $598,000 and will be financed by the sale of natural gas revenue bonds to the Southern Bond Company of Jackson, Mississippi.

East Tennessee, on February 15, 1965, advised the Commission it had no objection to providing the requested service.

Due notice of the filing of the subject application and opportunity for hearings thereon have been given publication in the Federal Register on January 26, 1965 (30 F.R. 811). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knoxville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 3, 1949 in Docket No. G–1065 (8 FPC 836).

(2) Applicant, City of Dunlap, Tennessee, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section

7(a) of the Natural Gas Act, and has received the necessary local franchises required to render the services proposed.

(3) It is necessary and desirable in the public interest to direct East Tennessee to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant and to sell and deliver to Applicant under a service agreement to be executed by Applicant with East Tennessee in accordance with the Commission's Regulations, up to 1,718 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from East Tennessee for distribution in the named communities and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) East Tennessee Natural Gas Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, City of Dunlap, Tennessee, as herein described, and to sell and deliver up to 1,718 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with East Tennessee in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application as supplemented in this proceeding.

(B) East Tennessee shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-291

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 6, 1965)

On March 17, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-291 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Intermountain Gas Company (Intermountain), all as more fully set forth in the application.

Applicant requests authorization for the sale and delivery of natural gas to Intermountain for resale and distribution in Eagle, Star and Middleton, Idaho, and their environs. The proposed sale will be made by means of existing facilities of Applicant. Estimated annual and peak day requirements of Intermountain in the third full year of service are 59,592 Mcf and 500 Mcf of gas respectively.

Applicant states that Intermountain has received the necessary franchises and authorization for its proposed operations from all regulatory bodies having jurisdiction.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The sale and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, is to be in interstate commerce subject to the jurisdiction of the Commission, and said sale and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale and delivery of natural gas by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, El Paso Natural Gas Company, authorizing the sale and delivery of up to 500 Mcf of natural gas per day to Intermountain Gas Company as hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery of natural gas hereby authorized shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO ELECTRIC COMPANY, DOCKET NOS. E–7216 AND E–6933

ORDER AUTHORIZING ISSUANCE OF COMMON STOCK

(Issued May 6, 1965)

El Paso Electric Company (Applicant), incorporated under the laws of the State of Texas and doing business in the States of Texas and New Mexico, with its principal business office at El Paso, Texas, filed an application on April 1, 1965, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of 2,127,808 additional shares of Common Stock, no par value, for a split up of presently outstanding shares of Common Stock, and an increase in the number of shares of Common Stock under its Amended Employee Stock Purchase Plan from 93,907 shares presently reserved for that purpose to 140,861 shares. Applicant requests that the 140,861 shares be exempted from the Commission's competitive bidding requirements.

Applicant proposes to amend its Charter through appropriate actions by its Common Stockholders by changing its 4,255,615 presently issued and outstanding shares of Common Stock, without nominal or par value, into 6,383,423 shares of Common Stock, without nominal or par value, an increase of 2,127,808 shares, and at the same time to increase the authorized Common Stock from 5,000,000 shares to 7,500,000 shares, without nominal or par value.

The proposed change and stock split-up is to be effective without requiring the surrender of existing certificates and without any change in the amount of Applicant's stated capital, by the issuance to the holders of Common Stock of record as of the close of business on the date the proposed amendment to the Charter becomes effective, which is expected to be May 11, 1965, of certificates for 2,127,808 additional shares of Common Stock, without nominal or par value. Applicant is actually proposing to split its outstanding Common Stock on a 3-for-2 basis.

Applicant represents that the purpose of the proposed change and split-up of its Common Stock is primarily to establish a price per share at a market level that will more readily attract new investors and broaden the interest in the Stock.

The Commission, in previous actions (Docket Nos. E-6886, E-6933 and E-6994), one of which was taken in an order issued on May 11, 1961, 25 FPC 946, authorized the Applicant to issue 101,860 shares of Common Stock under its Employee Stock Purchase Plan. The Commission, in an order issued on June 24, 1964, 32 FPC 1584, extended the expiration date of the Plan from June 30, 1964, to June 30, 1969. The Applicant has 93,907 shares of stock presently reserved for issuance under the Plan. In order for the number of shares reserved for issuance under the Plan to reflect the proposed 3-for-2 split of outstanding stock, the Applicant has requested authorization from the Commission to increase the number of shares so reserved from 93,907 to 140,861. Monies received from stock purchased by the employees will be added to the Applicant's working capital and then used for additions to plant.

Applicant requests that the proposed issuance and sale of up to 140,861 shares of Common Stock, without par value, under the Amended Employee Stock Purchase Plan, be exempted from the Commission's competitive bidding requirements pursuant to Section 34.2(f)(2) of the Commission's Regulations under the Federal Power Act.

Written notice of the application has been given to the Railroad Commission of Texas and the New Mexico Public Service Commission, and to the Governor of each of those States. Notice of the application was also given by publication in the Federal Register on April 14, 1965 (30 F.R. 4774), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest with the Federal Power Commission, Washington, D.C., 20426, on or before April 29, 1965. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as

heretofore described and set forth in the Commission's order issued January 25, 1962. *El Paso Electric Company*, Docket No. E-7017 (27 FPC 174).

(2) The proposed issuance of 2,127,808 additional shares of Common Stock, no par value, to accomplish a 3-for-2 split of presently outstanding Common Stock, and in addition the proposed issuance and sale of up to 140,861 shares of Common Stock, no par value, pursuant to the provisions of the Amended Employee Stock Purchase Plan, all as described above, will constitute issuances of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issues here involved are regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuances of Common Stock, as described above, are, therefore, not exempt by virtue of that subsection from the requirements of Section 204 of the Act.

(4) Good cause has been shown and it is necessary and appropriate for the purposes of the Federal Power Act that the Commission's order issued May 11, 1960, 23 FPC 684, in Docket No. E-6933, be amended as hereinafter provided.

(5) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(1) thereof.

(6) Under the circumstances of this case, sufficient cause has been shown for exempting the proposed issuance and sale of Common Stock under the Amended Employee Stock Purchase Plan from the competitive bidding requirements of Section 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(7) The proposed issuance and sale of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of 2,127,808 additional shares of Common Stock, no par value, to accomplish a 3-for-2 split of presently outstanding Common Stock and the proposed issuance and sale of up to 140,861 shares of Common Stock, no par value pursuant to the provisions of the Amended Employee Stock Purchase Plan, as described above, are hereby authorized, subject to the provisions of this order.

(B) The terms of the Commission's order issued May 11, 1960, in Docket No. E-6933, are hereby amended to authorize the issuance and sale of up to 140,861 shares of Common Stock, no par value, under Applicant's Amended Employee Stock Purchase Plan, in lieu of the 93,901 shares of Common Stock, no par value, heretofore authorized to be issued and sold under the Amended Employee Stock Purchase Plan pursuant to that order.

(C) The proposed issuance and sale of up to 140,861 shares of Common Stock, no par value, under the Amended Employee Stock Purchase Plan is hereby exempted from the competitive bidding requirements of Section 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER ON REHEARING MODIFYING AND CLARIFYING LICENSE ORDER

(Issued May 6, 1965)

This order upon rehearing modifies our order of September 15, 1964, 32 FPC 759, to make clear that the Idaho Power Company, licensee for Project No. 1971 on the Snake River in Idaho and Oregon, may be required under Article 39 of its license to coordinate its entire electric system with other systems. The order of September 15, 1964, amended the article to clarify our intent that the licensee may share in the benefits of coordination other than headwater benefits to downstream projects of the United States.

The licensee filed an application to clarify or amend Article 39 on October 4, 1963. By order of September 15, 1964, we amended the article as set forth therein and discussed some of the objections to such action which had been made by the Secretary in his comments filed on March 13, 1964. The Secretary's comments had alleged that the "purpose of the present petition [of the licensee] is to obtain payment for headwater benefits that it provides to United States Federal projects downstream." In our order of September 15, 1964, we attempted to make clear that Article 39 may not be used by the licensee to obtain payment for such headwater benefits.

On October 14, 1964, the Secretary filed application for rehearing of the order of September 15, 1964. This application requested that the Commission modify the order to: (1) require the licensee to coordinate its whole electric system, rather than merely its project, and (2) make clear that "headwater benefits" to projects of the United States include those from licensee's assured water releases as well as its incidental releases. The petition was subsequently granted for purposes of further consideration. The Secretary was permitted to intervene, and oral argument was held on February 16, 1965.

Article 39 of the license as originally issued required the licensee to coordinate "the project and its system." In amending the article to clarify our meaning with respect to the sharing of coordination benefits, the phrase "and its system" was unintentionally deleted. The licensee had not requested the deletion of this language, and in fact, since the project provides the majority of the licensee's total energy resource requirements, coordination of its project as a practical matter must entail coordination of its entire system. Therefore, we are modifying the article to restore the deleted phrase.

The issue with respect to the nature of the benefits of coordination in which the Commission indicated it will permit the licensee to share revolves around what the Commission meant when it said such sharing will not include headwater benefits. Specifically in question is whether we construe such benefits to include those hydraulic benefits received by downstream Federal projects from the assured water releases which the licensee may be required to make under Article 39 as well as those releases merely incidentally resulting from the presence of the upstream licensed developments. The Commission has held that it may require non-Federal owners of downstream projects to make payments to licensees or the United States for benefits received from assured as well as incidental water releases from headwater improvements. See: *Columbia River Basin Headwater Benefit Investigation*, 29 FPC 238 (1963); Subparagraph 11.27 (a) of the Commission's Regulations under the Federal Power Act. It is accordingly our intent to exclude from any benefit sharing we might order all hydraulic benefits to the downstream Federal projects resulting either from the existence of the upstream project or the coordination required by Article 39.

This will mean that we will order the licensee to share in: (1) all electrical benefits resulting from coordination required pursuant to Article 39, and (2) any hydraulic benefits resulting from coordination required pursuant to Article 39 to projects or developments which are not downstream from the licensed projects. Of course, our order and the license article will have no bearing on any arrangements that might be made between the licensee and any other parties for any coordination over and beyond that we might find necessary under Article 39.

Beyond this we cannot go at this time since the exact benefits of coordination and the category into which they fit with respect to sharing of the benefits cannot be determined until the actual coordination agreement is fixed.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823), especially sections 10(a) and 313 thereof (16 U.S.C. 803(a) and 825(1)), that the order, issued on September 15, 1964, amending the license for Idaho Power Company's Project No. 1971 be modified as hereinafter provided.

The Commission orders:

(A) The order, issued on September 15, 1964, amending the license for Idaho Power Company's Project No. 1971, is modified to provide that Article 39 of the license read:

Article 39. The licensee shall, after notice and opportunity for hearing, coordinate the operation of the project and its system, electrically and hydraulically, with such other power systems and in such manner including the construction of additional transmission facilities as the Commission may direct in the interest of maximizing power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the licensee as the Commission may order.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

JERSEY CENTRAL POWER & LIGHT COMPANY AND PUBLIC SERVICE ELECTRIC AND GAS COMPANY, PROJECT NO. 2309

ORDER APPROVING TRANSFER OF INTEREST AND AMENDING LICENSE (MAJOR)

(Issued May 6, 1965)

Joint application was filed on February 5, 1965, pursuant to Sections 6 and 8 of the Federal Power Act by Jersey Central Power & Light Company (Jersey

Central), a New Jersey corporation, and Public Service Electric and Gas Company (Public Service), also a New Jersey corporation, for Commission approval of the transfer of 50% of the former's interest in the license for the above-designated project to the latter, and amendment of the license for Project No. 2309 so as to include Public Service as a co-licensee of the project with Jersey Central. The license for Project No. 2309 was issued to the Jersey Central Power & Light Company on March 14, 1963. The project is known as the Yards Creek project and is located on Yards Creek, a tributary of the Paulins Kill, which is a tributary of the Delaware River, a navigable water of the United States.

The application is the result of an agreement which the Applicants entered into on December 30, 1964, in which Jersey Central agreed to sell and Public Service agreed to purchase an undivided 50% interest in the Yards Creek Pumped Storage project which is now under construction by Jersey Central, and in all other Kittatinny Mountain project properties which are owned by Jersey Central on the date of the consummation of the sale of the Yards Creek facilities.

Public notice of the application has been given. No protests or petitions to intervene have been received.

The Commission finds:

(1) The proposed transferee is a corporation organized under the laws of the State of New Jersey, is domesticated in the State of New Jersey, and has submitted satisfactory evidence of compliance with the requirements of all applicable state laws as necessary for the operation of Project No. 2309.

(2) Approval of the transfer, upon compliance with the conditions set forth herein, of 50% of the interest in the license for Project No. 2309 to the proposed transferee will not be inconsistent with the public interest.

(3) The license for Project No. 2309 further amended as hereinafter provided is in the public interest.

The Commission orders:

(A) The transfer of 50% of the interest in the license for the project designated in finding (1) above from Jersey Central Power & Light Company to Public Service Electric and Gas Company is hereby approved, effective as of the effective date of the transfer referred to above; subject to Section 9.3 of the Commission's Regulations under the Federal Power Act and subject to the further condition that the net investment in the project shall not be increased on account of the transfer; provided that the transferee shall be subject to the conditions and obligations of the license and to all of the provisions of the Act to the same extent as though it were the original licensee for the project.

(B) The Commission's order of March 14, 1963 (29 FPC 474) issuing a license for Project No. 2309 is hereby further amended by inserting in the ordering paragraph (B) immediately after "Jersey Central Power & Light Company" the words "and Public Service Electric and Gas Company".

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the license for the project designated in finding (1) above by Jersey Central and Public Service. In acknowledgement of the acceptance of such license, this instrument shall be signed for Jersey Central and Public Service, and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP63-174

ORDER DENYING APPLICATION FOR REHEARING AND PETITIONS FOR RECONSIDERATION

(Issued May 6, 1965)

On March 15, 1965, 33 FPC 545, the Commission issued its Opinion No. 455 and order granting permanent certification to Natural for certain facilities previously constructed under temporary certification, resulting in an increase in the net allocation of gas delivered to various customers in the greater Chicago market area.

The Commission imposed a condition in the order that Natural obtain, and file with the Commission reports from its distributor customers of the "Monthly Volumes of Gas delivered to their respective customers for boiler fuel purposes." In its application for rehearing, and in substantially identical petitions for reconsideration, filed by the intervening customers, Natural, North Shore Gas Company, Peoples Gas Light and Coke Company, Northern Indiana Public Service Company and Iowa Electric Light and Power Company, request reconsideration of the above-referenced condition.

Natural and its customers contend that the condition is unnecessary, and is, in fact directed to local utilities and municipalities served by Natural, none of which are subject to the jurisdiction of the Commission; that the ability of Natural and its customers to comply with the terms of the condition is uncertain; and that the condition is inappropriate in that the customers are subject to regulation by the State Commissions and by those Commissions alone.

The condition in question was adapted from an earlier order of the Commission in the matter of *Transcontinental Gas Pipe Line Corporation*, Docket No. G-1783, issued December 15, 1955, 14 FPC 436. Transco there was required to submit reports to the Commission concerning the volumes of gas delivered to the Duke Power Company for boiler fuel purposes. In that case, the sales to Duke were unquestionably nonjurisdictional.

There can be no dispute as to our responsibility or authority to consider such end uses in a Section 7 proceeding. Indeed the parties here do not contend that the Commission is without authority to impose the condition here at issue. Rather they contend that the condition is unnecessary and that their ability to comply therewith is uncertain.

We do not concur that the condition is unnecessary. Its purpose is to permit us to keep apprised of the nature and extent of boiler fuel usages of gas in the Chicago market area and its effects on Natural's interstate system. The fact of local regulation is not germane to the interstate aspects of such matters.

Nor do we concur that the ability of Natural and its customers to comply with the terms of the condition is uncertain. It is apparent from the matters at issue in the original proceeding that our interest in the boiler fuel consumption is limited to those usages where fuel is burned in boilers for the generation of steam for electric power generation.

For the reasons herein discussed, we find that the application for rehearing and the petitions for reconsideration should be denied.

The Commission finds:

The grounds for rehearing set forth in the application for rehearing and petitions for reconsideration filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission Opinion No. 455 and accompanying order.

The Commission orders:

The applications for rehearing and petitions for reconsideration filed herein by Natural Gas Pipeline Company of America, as joined in by Iowa Electric Light and Power Company, and Northern Indiana Public Service Company, and the petitions for reconsideration filed herein by Peoples Gas Light and Coke Company, and North Shore Gas Company, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-238

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 6, 1965)

On February 11, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65-238, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate authorizing (1) the construction and operation of two new delivery points on its main transmission line in Keokuk and Washington Counties, Iowa, and (2) the sale and delivery of natural gas to an existing customer, Iowa Electric Light and Power Company, all as more fully set forth in the application.

Applicant proposes to construct and operate (a) two, 2-inch side taps, approximately 200 feet of 2-inch lateral and a meter station to sell natural gas to Iowa Electric Light and Power Company (Iowa Electric) for resale in the City of Marengo and the towns of North English and Williamsburg, Warren County, Iowa and South English, Keokuk County, Iowa, to be known as the English (Marengo) side tap and meter, and (b) one, 2-inch side tap approximately 200 feet of 2-inch lateral, and a meter station to sell natural gas to Iowa Electric for resale in the town of Kalona, Washington County, Iowa, to be known as the Kalona side tap and meter. The volumes of natural gas will be delivered to Lateral Gas Pipeline Company (Lateral), a wholly owned subsidiary of Iowa Electric for transportation[1] to points of distribution of Iowa Electric in or near Williamsburg, South English, North English, Marengo, and Kalona, Iowa, and are estimated on an annual and peak day basis for the initial three years to be:

	First year	Second year	Third year
Williamsburg	52,048 219	60,526 380	68,735 453
South English	17,097 103	17,448 153	17,825 156
North English	48,548 139	53,465 239	58,089 282
Marengo	87,120 325	99,279 548	110,649 652
Kalona	49,830 164	56,442 293	63,279 349

---

[1] Transportation facilities of Lateral were authorized by the Commission in Docket No. CP65-204 on March 29, 1965, 33 FPC 645.

The total estimated cost of the proposed facilities is $27,100, and will be defrayed from Applicant's current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed construction and operation of facilities and the sale and delivery of natural gas by Applicant to Iowa Light and Power Company as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Natural Gas Pipeline Company of America, authorizing the construction and operation of facilities and the sale and delivery of natural gas to Iowa Electric Light and Power Company, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Applicant and Iowa Electric Light and Power Company shall execute a service agreement in accordance with the Commission Regulations reflecting the new delivery points and the terms and conditions of the deliveries of natural gas thereto, and file the same with the Commission within 30 days after the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-225

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 6, 1965)

On January 25, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-225 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application.

Applicant requests authorization to construct and operate 7.9 miles of branch line and measuring facilities for the sale of a total of 570 Mcf of natural gas per day in the third year to two distributors for resale in four communities located in the vicinity of Minneapolis, Minnesota. Minneapolis Gas Company (Minneapolis) will serve Albertville, Rogers and St. Michael, Minnesota; and North Central Public Service Company (North Central) will serve Dayton, Minnesota.

Minneapolis and North Central have received appropriate franchises for their operations in the communities involved.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed sales of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and sales of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Northern Natural Gas Company, authorizing the construction and operation of facilities and sales of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ORDER ESTABLISHING NATIONAL POWER SURVEY INDUSTRY ADVISORY COMMITTEE ON UNDERGROUND TRANSMISSION

(Issued May 10, 1965)*

The Federal Power Commission is directed by Section 202(a) of the Federal Power Act (16 U.S.C. 792–825r) to promote and encourage voluntary interconnection and coordination of the nation's electric power facilities in the interest of economy and conservation, and is authorized by Section 311 of the Act to conduct broad investigations covering all aspects of the entire power industry. In order to accomplish the objectives of the National Power Survey issued by the Commission on December 12, 1964, more effectively and in accordance with the Executive Order No. 11007 of February 26, 1962 (27 F.R. 1875) relating to the Formation and Use of Advisory Committees, we have concluded that it is in the public interest that a National Power Survey Industry Advisory Committee on Underground Transmission be, and hereby is, established.

1. *Purpose.* The Committee shall investigate the state of the art of underground transmission both by alternating and direct current and shall prepare a report thereon. The report will include an outline of the technical and economic problems involved in such transmission, the progress being achieved in overcoming such problems, and such recommendations as the Committee may deem advisable with respect to acceleration of progress in research and development of underground transmission. Such report shall be prepared and submitted as soon as practicable and if possible no later than September 1, 1965.

2. *Selection of Committee Members.* All Committee members and alternates shall be selected by the Chairman of the Commission with the approval of the Commission.

3. *Conduct of Meetings.* The Chairman of the Commission, or in his absence, the Acting Chairman, or any full-time employee of the Commission designated by the Chairman or Acting Chairman of the Commission, shall act as chairman of Committee meetings and shall be responsible for opening and conducting meet-

---

*Published in the Federal Register on May 14, 1965 (30 F.R. 6667).

ings and for adjourning meetings when, in his judgment, adjournment is in the public interest.

4. *Minutes.* The Chairman of the Commission having made a finding that maintenance of a verbatim transcript would be impracticable and not in the public interest, there shall be kept by the Secretary of the Committee, in lieu thereof, a record of persons present, a description of matters discussed and conclusions reached, and copies of all reports received, issued, or approved by the Committee.

5. *Secretary of the Committee.* The Chairman of the Commission shall appoint a Secretary of the Committee from the Commission staff who shall be responsible for preparing summary minutes of all Committee meetings, preparing agenda, notifying members of the meetings, and maintaining all records related to organization, membership and operations of the Committee. The Secretary or his alternate shall be present during all meetings and shall certify the accuracy of all minutes.

6. *Location and Time of Meetings.* Meetings will convene at the call of the Chairman or Acting Chairman of the Commission at the Office of the Federal Power Commission, located at 441 G Street, N.W., Washington, D.C. 20426, unless otherwise directed. Ordinarily, meetings will be held during the regular working hours of the Federal Power Commission.

7. *Report of the Committee.* The report of the Committee will be presented to the Commission in written form. The content shall be limited to matters relating to those set forth in Item 1, *Purpose.*

8. *Duration of the Committee.* The Committee shall terminate upon submission of its report and in any event not later than two years subsequent to its date of establishment, unless the Commission determines in writing, not more than 60 days prior to the expiration of such two-year period, that continued existence of the Committee is in the public interest.

OPINION NO. 459

SOUTH CAROLINA ELECTRIC & GAS COMPANY, DOCKET NO. E-7146

MEMORANDUM OPINION AND ORDER DENYING APPLICATION FOR REHEARING

(Issued May 11, 1965)*

Syllabus

1. The Savannah River is a navigable water of the United States. P. 985.
2. Section 1 of General Dam Act of 1910, incorporated by reference in special legislation, prohibited construction or commencement of construction of a dam prior to issuance of a War Department permit. P. 986.
3. Respondent could not rely on permit for its right to operate project and at same time contest permit. P. 986.
4. Contention that term expenditures "upon which dam" as used in Section 4 of General Dam Act, means something different from actual construction expenditures rejected as not in accord with plain language of provision and overall context of such Act which relates to actual construction. P. 987.
5. It has long been settled that even where language of statute is clear on the surface recourse may be had to its legislative history. P. 987.
6. Respondent's predecessors did not qualify under exception to 50-year term because plans for dam had not been approved and permit issued by War

* Petition for Review pending in USCA for the Fourth Circuit, No. 10149.

Department before passage of 1910 amendment; therefore no expenditures could have been legally made on dam. PP. 987–988.

7. Nothing urged on rehearing would justify modification of Commission holding that plain language and legislative history of exception indicate subject expenditures do not exempt permittee from 50-year limitation. P. 988.
8. Permit is not only contemporaneous record of events which it recounts but Respondent, in accepting its benefits and obligations, waived right to dispute its terms. P. 988.
9. Commission *denies* rehearing of order requiring Respondent to secure a license for its Stevens Creek hydroelectric project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

On December 30, 1963, the Commission issued an order (30 FPC 1630) requiring the South Carolina Electric & Gas Company (Respondent) to show cause why it should not apply for and secure a license for its Stevens Creek hydroelectric project in Georgia and South Carolina. The project is on the Savannah River, about 8.7 miles upstream from Augusta, Georgia. The Savannah River is a navigable water of the United States. See *United States* v. *Twin City Power Co.*, 350 U.S. 222.

The order to show cause stated that a War Department permit has been issued to Respondent's predecessors on July 20, 1910, authority to issue it stemming from: (1) a special act, approved August 5, 1909 (36 Stat. 180), and extended March 5, 1912 (37 Stat. 72); the General Dam Act of 1906 (34 Stat. 386), as amended June 23, 1910 (36 Stat. 593). The order further recited that it appeared that the fifty-year term prescribed by the General Dam Act of 1910 had expired and that the Company was operating and maintaining the Stevens Creek project works without a valid federal permit issued prior to June 10, 1920 or a license under the Federal Power Act, in violation of Section 23(b) of that Act (16 U.S.C. 817).

On February 20, 1964, we granted the Respondent a continuance until April 29, 1964 on its representation that it needed the time to reply adequately. Under the pertinent section of our Rules of Practice and Procedure (18 CFR 1.9(c)) such answers are required to be drawn so as specifically to admit or deny the allegations, "set forth the facts upon which respondent relies," and state concisely matters of law relied upon.

In its answer, the Respondent stated that it qualified under the exception to the fifty-year limitation on War Department permits enacted in 1910. The fifty-year limitation, and the exception to it on which the Respondent relied, are as follows:

> * * * the authority granted under or in pursuance of the provisions of this Act shall terminate at the end of a period not to exceed fifty years from the date of the original approval of the project under this Act, unless sooner revoked as herein provided or Congress shall otherwise direct: *Provided, however*, That this limitation shall not apply to any corporation or individual heretofore authorized by the United States, or by any State, to construct a dam in or across a navigable waterway, upon which dam expenditures of money have heretofore been made in reliance upon such grant or grants. § 4, 36 Stat. 593, 595 (1910).

The factual portion of Respondent's answer was simply that prior to cut-off date, June 23, 1910, it had expended "substantial sums." The answer also alleged that "its War Department Permit for the Stevens Creek project is perpetual." We noted in our order of March 18, 1965, 33 FPC 584, requiring Respondent to apply for and secure a license, that the Respondent did not claim that the expenditures were "upon which dam" as the exception requires. Section 1 of the General Dam Act of 1910, incorporated by reference in the special legislation,[1] prohibited construction or the commencement of construction of a dam prior to the issuance of a War Department permit. Respondent's War Department permit was not issued to its predecessors until after the enactment in 1910 of the time limit on War Department permits. Commencement of construction before this time would have been illegal.

In this connection we took official notice of Respondent's permit, and its amendments, which came before us in the headwater benefits case of *South Carolina Electric & Gas Co.*, 29 FPC 624, Op. No. 384, Docket No. E-6468, March 28, 1963, *aff'd sub nom. South Carolina Electric & Gas Company* v. *F.P.C.*, 338 F. 2d 898 (CA4). The permit as amended and supplemented reveals that there was no construction work on the dam until well after the 1910 amendment of the General Dam Act. The supplemental approval by the War Department, issued November 16, 1912, provided:

> That whenever said company shall commence the actual construction of said dam, lock or appurtenances, as provided under this permit, such commencement shall be construed as an acceptance of this permit by said company and of all the conditions therein imposed.

The permit shows that construction did not start until after 1912. The Respondent does not contest this nor could it, because the Company relies on the permit for authority to maintain and operate the project. The Respondent could not rely on the permit for its right to operate the project and at the same time contest the permit. See *Central Nebraska Public P. & I. Dist.* v. *F.P.C.*, 160 F. 2d 782, 784 (CA8), cert. denied, 332 U.S. 765.

We pointed out in our order of March 18, 1965 requiring application for a license that it was clear that no actual construction expense, in the sense of the exemption, had been incurred before June 23, 1910 and that this conclusion was compelled by legislative history and plain language. Purchase of land or flowage rights would not exempt a permittee. A primary policy of the General Dam Act was, in the language of President Theodore Roosevelt, "that natural resources should not be held in undeveloped condition either for speculation or other reasons." We quoted this language from the Rainy River veto message in our order of March 18, 1965 because it was a specific and important part of the legislative history of the amendment of 1910, being referred to by the member in charge of the bill.

While in its application for rehearing of our March 18, 1965 order, the Company does not contest our finding that the project was not actually constructed until after 1912, Respondent does state that it made expenditures of money *upon the dam* prior to June 23, 1910. By August 1909 the Respondent's predecessors had, it seems, purchased options on lands bordering the Savannah River[2] The Respondent also states that it is prepared to show:

---

[1] The special act of 1909, consenting to the construction of a dam at Stevens Creek, incorporated by reference the General Dam Act of 1906 (34 Stat. 386). By the specific terms of Section 6 of the General Dam Act of 1906, Congress made such consents to dam construction subject to later amendments. In *South Carolina Electric & Gas Co.* v. *F.P.C.*, 338 F. 2d 898, 902 (CA4-1964), the Court, holding the 1910 General Dam Act amendment specifically applicable to South Carolina's project, stated "* * * [The special act of 1909] * * * authorized construction 'in accordance with the provisions of' the General Dam Act. Because of the reservation in that Act, the permit was amenable to the Act's amendment on June 23, 1910, 36 Stat. 593."

> * * * that after the Stevens Creek Dam Project was authorized, preparation of engineering plans for the dam was undertaken; and that expenditures prior to June 23, 1910 on the dam were necessary for such preparation in order to submit the plans, as was done on June 30, 1910, to the War Department for approval

Respondent contends that the term expenditures "upon which dam," as used in Section 4 of the General Dam Act, means something different from actual construction expenditures. The Company refers us to Instruction 3(13) of our Uniform System of Accounts, which includes as part of the construction cost of a hydroelectric project "engineering services." The argument runs that by definition this would include engineering advice in preparing an application for a War Department permit. This contention does not accord with the plain language of the provision and the over-all context of the General Dam Act which relates to actual construction. Thus Section 4 provides that a Congressional authorization would cease and be null and void unless the "actual construction of the dam" was commenced within one year and completed within three years from the enactment of a special act. A prohibition in terms of "actual construction of the dam" certainly sheds light on the meaning of an exemption increasing a grant already liberal. Section 1, which forbids a dam to be "built or commenced" in navigable waters without a War Department permit, also supports this conclusion.

Even if the term expenditures "upon which dam" in Section 4 was uncertain, the "uncertainty of the Act in this regard justifies, indeed requires, application of the rule that 'all federal grants are construed in favor of the Government lest they be enlarged to include more than was expressly included.'" *Northwest Paper Co.* v. *F.P.C.*, 344 F. 2d 47 (CA8 No. 17,679), April 7, 1965, citing *United States* v. *Grand River Dam Authority*, 363 U.S. 229, 235.

Despite the foregoing, the Respondent urges that we cannot resort to the legislative history of the General Dam Act. It has long been settled that even where the language of a statute is clear on the surface recourse may be had to its legislative history.[3] The meaning of the exception derived from its terms and context is also clarified by the general aims of the statute. Two of the most important were the requirement that permits be for a term only and that the exercise of the privilege of using the water resources of navigable streams be utilized promptly. Appellant states that it was not as dilatory as the permittee in the Rainy River case. It may be observed, however, that in the instant case a War Department permit could have been issued prior to the 1910 amendment of the General Dam Act had respondent's predecessors been prepared to proceed. But both the permit and the statute extending the time for completion shows an inability to construct the project within the time originally contemplated in the 1909 special act. The permit was not actually issued until July 20, 1910 and any construction prior to that time would have been in violation of the River and Harbor Act of 1899 (33 Stat. 401 and 403) and the aforesaid statutes of 1906 and 1909. Thus Respondent's predecessors did not qualify under the exception to the fifty-year term because plans for the dam had not been approved and a permit had not been issued by the War Department before the passage of the 1910 amendment, and therefore no expenditures could have been legally made upon the dam.

---

[2] For "indications of expenditures which had been made on the Project" prior to June 23, 1910, Respondent refers us to the statements of Congressman Bartlett, of Georgia on August 2, 1909. It appears from this reference that Congressmen Bartlett and Mann, explaining the special act on the floor before its passage, stated that the individuals who were the Respondent's predecessors had invested about seventy-five to ninety thousand dollars in land options. 44 Cong. Rec. 4821–23 (1909).

[3] See *United States* v. *American Trucking Ass'n*, 310 U.S. 534, 543–4.

It has been seen that, in addition to the purchase of land options by its predecessors, the Respondent is prepared to prove that it spent money for engineering advice in preparing its application for a War Department permit and maintains these expenditures should be considered as made upon the dam prior to June 23, 1910. As we indicated in our previous order, whether such promotional and preparatory expenditures prior to the issuance of a War Department permit would exempt anyone from the fifty-year limitation on such permits is purely a question of law. Nothing that Respondent urges on rehearing would justify a modification of our holding that the plain language of the exception and its legislative history clearly indicate that such expenditures do not exempt a permittee from the fifty-year limitation.

The first order in this proceeding required the Respondent to show cause, under oath, why, in view of the expiration of the fifty-year term of its War Department permit, it should not apply for and secure a license under Section 4(e) of the Federal Power Act. Under Section 1.9(c) of our Rules of Practice and Procedure a respondent must set forth, among other things, the specific facts upon which he relies. These facts, considered with the contents of the Respondent's War Department permits, show that the permit has expired.

Respondent claims it was erroneous for us so to find in the absence of a hearing, citing *Ohio Bell Telephone Co.* v. *Public Utilities Commission of Ohio*, 301 U.S. 292. The case is inapposite because there the Court found that the commission not only improperly expanded the doctrine of official notice but relied for decision on evidential facts which it refused to disclose. In contrast the facts that we officially notice are contained in Respondent's War Department permit and its amendments. These materials were involved in a headwater benefits case in which the respondent participated. See *South Carolina Electric & Gas Co.* v. *F.P.C.*, 338 F. 2d 898 (CA4).

The permit is not only a contemporaneous record of the events which it recounts but Respondent, in accepting its benefits and obligations waived the right to dispute its terms. Further the permit and its supplements constitute official entries of a department which are "admissible to prove the act, transaction or occurrence as a memorandum of which the same were made or kept." 28 U.S.C. 1733(a).

In addition to the *Ohio Bell Telephone* case the Respondent relies on *Rochester Gas and Electric Corp.*, v. *F.P.C.*, 344 F. 2d 594 (CA2 No. 29180), April 6, 1965. That case dealt with Section 5(d) of the Administrative Procedure Act which makes available to us, in our discretion, the use of a declaratory order to terminate a controversy or remove uncertainty. It was held that we may decide a case on statements contained in a petition for a declaratory order if they are sufficient. The Court affirmed our order requiring the respondent to apply for a license covering three of four hydroelectric developments on the Genesee River but vacated our order as to the development farthest upstream. The Court did not hold that we may not amplify such admissions by official notice in an appropriate case. It stated that, under the circumstances, the Court itself would not take judicial notice of factual matters which had not been brought to our attention.

In short, Respondent's admissions and its own permit show that the latter has expired. In such a situation the Second Circuit decision in *Fay* v. *Douds*, 172 F. 2d 720 (CA2) is more applicable than its *Rochester* case. In *Fay* v. *Douds* the Court, speaking through Chief Judge Learned Hand, stated:

> Upon such a record the defendant's denial of any hearing was right. Neither the statute, nor the Constitution, gives a hearing where there is no issue to decide * * * The Constitution protects procedural regularity, not as an end in itself, but as a means of defending substantive interests. Every summary judgment denies a trial upon issues formally valid. Where, as here, the evidence on one side is unanswerable, and the other side offers nothing to match or qualify it, the denial of a trial invades no constitutional privilege. *Id.* at 725.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed in this proceeding present no facts or legal principles which would warrant any change in the Commission's order issued March 18, 1965, requiring South Carolina Electric & Gas Company to apply for and secure a license.

The Commission orders:

(A) The application for rehearing filed by South Carolina Electric & Gas Company on April 16, 1965, is hereby denied.

(B) Our order of March 18, 1965, requiring South Carolina Electric & Gas Company to apply for and secure a license, is hereby stayed until ninety days after the entry of a final order after judicial review, if such review is taken.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALGONQUIN GAS TRANSMISSION COMPANY AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-217

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 12, 1965)

On January 15, 1965, Algonquin Gas Transmission Company (Algonquin) and Tennessee Gas Transmission Company (Tennessee) filed in Docket No. CP65-217 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the exchange of natural gas, all as more fully set forth in the application.

Tennessee proposes to construct and operate a side valve and meter station adjacent to its transmission line in Milford, Connecticut, and to deliver for the account of Algonquin up to 200 Mcf of natural gas per hour to New Haven Gas Company (New Haven), an existing customer of Algonquin, pursuant to an agreement between Tennessee and Algonquin dated November 1, 1964. Algonquin will return equivalent volumes to Tennessee at any of five existing points of interconnection between their systems.

No increase in Algonquin's authorized contract demand with New Haven is requested. The gas to be received by New Haven through the proposed delivery point is presently being taken through existing delivery points for service by Algonquin to New Haven.

The estimated cost of the side valve to Tennessee is $2,360, and will be financed with general funds. New Haven will own the meter station by reimbursing

Tennessee for the cost of constructing it. Tennessee will rent the station for one dollar per year, and Algonquin will pay Tennessee $167 per month for its operation and maintenance.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Algonquin Gas Transmission Company, a Delaware corporation having its principal place of business in Boston, Massachusetts, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 206 issued March 14, 1951, in Docket No. G-1319 (10 FPC 35).

(2) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G-910 (6 FPC 777).

(3) The proposed construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and exchange of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Algonquin and Tennessee are able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Algonquin's and Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Algonquin Gas Transmission Company and Tennessee Gas Transmission Company, authorizing the construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Algonquin's and Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the exchange of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GULF STATES UTILITIES COMPANY, DOCKET NO. E-7217

ORDER AUTHORIZING ISSUANCE OF COMMON STOCK

(Issued May 12, 1965)

Gulf States Utilities Company (Applicant), incorporated under the laws of the State of Texas and doing business in the States of Texas and Louisiana with its principal business office at Beaumont, Texas, filed an application on April 2, 1965, for an order pursuant to Section 204 of the Federal Power Act, authorizing the issuance of 10,373,664 additional shares of Common Stock without par value, to effect a two-for-one split of the outstanding Common Stock of Applicant.

Applicant proposes to amend its Articles of Incorporation to change each of the presently authorized 20,000,000 shares of Common Stock without par value, issued and unissued, into 2 shares of Common Stock, without par value, thereby increasing to 40,000,000, the total authorized shares of Common Stock. The 10,373,664 shares for which authorization is sought will be the number of shares required for pro-rata issuance to the holders of record of a like number of shares of Common Stock, without par value, at the time the aforesaid amendment becomes effective which is expected to be at the close of business on May 27, 1965.

According to the Applicant, the purposes of the issuance of the additional shares of Common Stock, without par value, resulting from the proposed split up of such stock are to broaden the market and increase the salability of Applicant's Common Stock by establishing a market price per share at a lower level. Applicant expects that the proposed action will cause its Common Stock to be more attractive to new investors and will benefit Applicant whenever it becomes necessary to issue additional Common Stock to finance corporate investments.

Written notice of the application has been given to the Louisiana Public Service Commission, the Texas Railroad Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on April 14, 1965 (29 F.R. 4775), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before April 30, 1965, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued December 20, 1962, *Gulf States Utilities Company*, Docket No. E-7074 (28 FPC 1077).

(2) The proposed issuance of 10,373,664 shares of Common Stock to holders of Applicant's outstanding Common Stock will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a (a) (1) thereof.

(4) The proposed issuance of Common Stock as hereinafter authorized will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, upon the terms and conditions and for the purposes specified in the application, as described above, are hereby authorized, subject to the provisions of this order.

(B) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever which may come before this Commission.

(C) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-228

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 12, 1965)

On January 29, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-228 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in order to sell and deliver natural gas, on a firm and interruptible basis, to Iowa Public Service Company (Public Service), all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate measuring and regulating facilities to establish a new delivery point in Dakota County, Nebraska, for the delivery of natural gas to Public Service. Public Service will resell approximately 176,300 Mcf of said gas per year on a firm and interruptible basis to Iowa Beef Packers, Inc. (Iowa Beef) for use in the latter's proposed meat processing plant near Dakota City, Nebraska. Public Service will sell and deliver 32 Mcf per day on a firm basis from its existing contract demand with Applicant. Interruptible volumes will be utilized by Iowa Beef for steam heating the plant's main building; firm volumes will be used for water heating and limited space heating.

The total estimated cost of the proposed facilities is $19,850, which cost will be financed with cash on hand. Public Service will reimburse Applicant the actual cost of facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural

gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver 32 Mcf of natural gas per day, on a firm basis, and to sell and deliver natural gas, on an interruptible basis, to Public Service, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP65–247

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 12, 1965)

On February 19, 1965, The Ohio Fuel Gas Company (Applicant), filed in Docket No. CP65–247 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 11.5 miles of 24-inch O.D. pipeline extending Applicant's Line L-3100 northward from its present terminus in Knox County, Ohio, looping an additional section of Line L-2450 between its Treat and Weaver Compressor Stations, all as more fully set forth in the application.

The proposed facilities will enable Applicant to maintain adequate storage input in its Weaver Storage Area during the summer of 1965 and thereafter, and to provide adequate service to its northern markets during the winter of 1965–66, and thereafter.

The estimated cost of Applicant's proposed construction is $975,000, and will be financed through the issuance and sale of promissory notes or common stock to The Columbia Gas System, Inc., parent company of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G-371 (4 FPC 1033).

(2) The facilities hereinbefore described and as more fully described in the application and exhibits in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, The Ohio Fuel Gas Company, authorizing the construction and operation of facilities as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-292

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 19, 1965, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP65-292 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of certain natural gas facilities for the sale of natural gas to existing distributors for resale, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct during calendar year 1965 a maximum of 5 new meter stations at new delivery points and a maximum of 15 mainline or lateral taps in order to transport and sell natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with the Commission.

Applicant states that natural gas deliveries to any one customer through the proposed facilities will not exceed 100,000 Mcf annually, and that such gas will not be used for boiler fuel purposes.

The total estimated cost of the proposed facilities under this application will not exceed $115,000, which cost will be financed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $115,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter is granted on the express condition that any interruptible service authorized herein should be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $115,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued hereby is granted on the express condition that any interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED GAS SUPPLY CORPORATION AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP65-268

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 5, 1965, Consolidated Gas Supply Corporation (Consolidated)[1] and Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP65-268 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the exchange of natural gas, all as more fully set forth in the application.

Consolidated proposes to construct and operate approximately 3.01 miles of 6⅝-inch pipeline extending from two wells in Somerset County, Pennsylvania to a point of connection with Texas Eastern's 20-inch and 24-inch pipeline in Somerset County, Pennsylvania, and to construct and operate a measuring station at such point, and a measuring station at each of the two wells involved.

By means of these facilities, and pursuant to an agreement between the parties dated February 25, 1965, Consolidated will deliver up to 10,000 Mcf of natural gas per day to Texas Eastern in return for substantially equal daily volumes to be returned by Texas Eastern to Consolidated at an existing point of interconnection between the two systems in Greene County, Pennsylvania, or, with prior consent of the parties, at any other point of interconnection between the systems.

Total estimated cost of Consolidated's proposed construction is $69,752, and will be financed with general funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Consolidated Gas Supply Corporation, a West Virginia corporation having its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued April 27, 1943, in Docket No. G-290 (3 FPC 994).

---

[1] The application herein was filed jointly by Texas Eastern and New York State Natural Gas Corporation (New York Natural). However, by Commission order accompanying Opinion No. 448, *Hope Natural Gas Company,* 33 FPC 150, issued February 2, 1965, in Docket No. CP63-272, Hope Natural Gas Company was authorized to acquire and operate all of the jurisdictional natural gas facilities of New York Natural, and the name of the surviving corporation was changed to Consolidated Gas Supply Corporation, effective April 1, 1965, the date of consummation of the merger. Therefore, the certificate hereinafter granted will be issued to Texas Eastern and Consolidated rather than to Texas Eastern and New York Natural.

(2) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G–859, *et al.*, (8 FPC 190).

(3) The proposed construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and exchange of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Consolidated and Texas Eastern are able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Consolidated's and Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Consolidated Gas Supply Corporation and Texas Eastern Transmission Corporation, authorizing the construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Consolidated's and Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the exchange of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CRYSTAL GAS COMPANY, DOCKET NO. CP65–194

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 13, 1965)

On December 24, 1964, Crystal Gas Company (Applicant) filed in Docket No. CP65–194 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Hill 'n Dale and Keystone West, Pawnee County, Oklahoma, and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Hill 'n Dale, and approximately 2.5 miles of 2-inch lateral pipeline extending to a point of interconnection with Cities Service's 16-inch main transmission line in Pawnee County, Oklahoma. Applicant has already installed a distribution system in the Keystone West Lake Estates development.

Applicant's estimated third year annual and peak day requirements are 9,440 Mcf and 110 Mcf of natural gas respectively.

Total estimated cost of the proposed project is $63,693.14, of which $40,214.14 represents expenditures previously made for installation of the Keystone West Lake Estates distribution system. Remaining costs will be financed with general funds.

On January 15, 1965, Cities Service filed an answer to the application herein, stating that it has no objection to the issuance by the Commission of an order as requested by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, Crystal Gas Company, a corporation organized and existing under the laws of the State of Oklahoma, is authorized to construct and operate facilities and distribute and sell natural gas as proposed.

(3) It is necessary and desirable in the public interest that Cities Service be directed to establish physical connection of its natural gas transportation facilities with the proposed facilities of Applicant and to sell and deliver natural gas to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive natural gas from Cities Service, as proposed, within one year from the date on which this order issues.

(5) The requirement that Cities Service serve Applicant, as proposed, will not place any undue burden upon Cities Service nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation facilities with the proposed facilities of Applicant and to sell and deliver natural gas to Applicant, all as hereinbefore described and as set forth in the application.

(B) Cities Service shall report to the Commission in writing the date of commencement of service to Applicant, within ten days thereof.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Cities Service, as proposed, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MARTHA FEATHERSTONE, ET AL., DOCKET NO. CI64-591, ET AL.; THE ATLANTIC REFINING COMPANY, DOCKET NO. CI63-576

ORDER DENYING APPLICATION FOR REHEARING

(Issued May 13, 1965)

On April 23, 1965, The Atlantic Refining Company filed an application for rehearing of our order issued March 25, 1965, 33 FPC 621, in the above-entitled proceeding. Applicant maintains that we erred in adopting the initial decision of the Presiding Examiner as our own, including the condition requiring an initial price not in excess of 15.384 cents per Mcf, and in denying its exceptions to that decision.

We have considered the assignments of error and grounds for rehearing set forth in the application and have reconsidered our order. The arguments advanced here are the same as those advanced in the exceptions and rejected by us in the order. Our conclusions as to these matters remain unchanged. No new facts or arguments are called to our attention which would be cause for granting rehearing or disturbing the original order.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's order.

The Commission orders:

The application for rehearing filed by The Atlantic Refining Company on April 23, 1965, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MANUFACTURERS LIGHT AND HEAT COMPANY, DOCKET NO. CP65-243

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On February 17, 1965, The Manufacturers Light and Heat Company (Applicant), filed in Docket No. CP65-243 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate 8.86 miles of 20-inch pipeline looping its existing 14-inch Line No. 1278 from a connection with its Eagle Compressor Station in West Vincent Township, Chester County, Pennsylvania, to a point in East Vincent Township, Chester County, Pennsylvania.

The application states that the proposed construction is necessary in order to serve the 1965–66 winter requirements of Applicant's market areas. Total estimated cost of Applicant's proposed construction is $1,020,000, and will be financed with proceeds of the sale of Applicant's notes and common stock to The Columbia Gas System, Inc., parent company of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and the exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 20, 1944, in Docket No. G–593, *et al.*, (4 FPC 821).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Manufacturers Light and Heat Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application in Docket No. CP65–243, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MILWAUKEE GAS LIGHT COMPANY, DOCKET NO. CP65-239

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 13, 1965)

On February 12, 1965, Milwaukee Gas Light Company (Applicant), filed in Docket No. CP65-239 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant up to 2,535 Mcf of gas in the third year for resale and distribution in the villages of Adell, Belgium, Cascade, Cedar Grove, Fredonia, Oostberg, Random Lake and Waldo, Wisconsin, all as more fully set forth in the application.

Applicant proposes to construct and operate (1) main transmission line facilities consisting of 13.9 miles of 3-inch, 6.4 miles of 8-inch and 5.5 miles of 6-inch, and regulator station facilities at an estimated cost of $665,418, and (2) distribution facilities in each of the eight villages at an estimated total cost of $639,075. Municipal franchises have been obtained from each of the eight villages. Approval of the Public Service Commission of Wisconsin was granted to Applicant on December 15, 1964.

Applicant proposes to purchase additional volumes of natural gas from Michigan Wisconsin under Michigan Wisconsin's Rate Schedule ACQ-1 to meet the requirements of the named eight villages. The volumes of natural gas necessary to meet maximum day and annual requirements for the first three years of operation are as follows:

	(Mcf at 14.73 psia)		
	First year	Second year	Third year
Maximum day	1, 542	2, 155	2, 535
Annual (includes interruptible)	397, 853	452, 486	494, 420

Michigan Wisconsin filed an answer in this proceeding on March 1, 1965, stating it had no objection to the granting of (1) the requested order for service, and (2) the construction of approximately 9.7 miles of 6-inch lateral under its so-called 10-cent formula at an estimated cost of $227,600. Three meter stations will also be constructed at a total estimated cost of $60,000.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 3, 1965 (30 F.R. 2738). No protest, petition to intervene, notice of intervention, or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946 in Docket No. G-669 (5 FPC 953).

(2) Applicant, Milwaukee Gas Light Company, a Wisconsin corporation having its principal place of business in Milwaukee, Wisconsin, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 2,535 Mcf of natural gas on a maximum day for distribution and resale as hereinbefore described.

(4) The requirement that Michigan Wisconsin serve Applicant, as hereinafter ordered, will not place an undue burden upon Michigan Wisconsin, require it to enlarge its transportation facilities or impair its ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the villages of Adell, Cascade, Cedar Grove, Oostburg, Random Lake, Waldo, Belgium and Fredonia, Wisconsin within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilites proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 2,535 Mcf of natural gas on a maximum day to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

(D) Michigan Wisconsin shall file pursuant to Part 154 of the Commission's Regulations a superseding service agreement reflecting the increased services ordered herein and the new delivery points.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65–307

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 29, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65–307 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the sale and delivery of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate one 2-inch side tap, approximately 200 feet of 3-inch lateral and a meter station, all in Bureau County, Illinois, for the sale of natural gas at a new delivery point to Illinois Power Company (Illinois) for resale and distribution to new customers in Dover and Malden, Bureau County, Illinois.

The application states that Illinois proposes to initiate natural gas service to the above communities from the quantities of natural gas which Applicant has heretofore been authorized to sell and deliver to it.

Total estimated cost of Applicant's proposed construction is $9,530, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The facilities hereinbefore described, as more fully set forth in the application and exhibits in this proceeding, are proposed to be used for the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities, hereinbefore described, as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within six months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-304

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 24, 1965, Northern Natural Gas Company (Applicant), filed in Docket No. CP65-304 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate a new delivery point in Dodge County, Nebraska consisting of measuring and regulating facilities and appurtenances, for the delivery through its Peoples' Division (Peoples) of up to 52,800 Mcf of natural gas per year on an interruptible basis to Rawhide Products, Inc. (Rawhide) for use in the latter's new alfalfa dehydration plant.

Total estimated cost of Applicant's proposed construction is $3,400. The application states that Peoples will reimburse Applicant the actual cost of constructing the facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application and exhibits in this proceeding will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the delivery of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation and delivery of natural gas to Rawhide, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within six months of the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Northern Natural Gas Company for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LELAN F. SILLIN, JR., DOCKET NO. ID-1473

ORDER DENYING AUTHORIZATION PURSUANT TO SECTION 305(b) OF THE FEDERAL POWER ACT

(Issued May 13, 1965)

Lelan F. Sillin, Jr. (Applicant), c/o Central Hudson Gas & Electric Corporation, South Road, Poughkeepsie, New York, filed an application on December 24, 1964, for authorization, pursuant to Section 305(b) of the Federal Power Act to hold the following positions:

President and Chief Executive Officer, Director	Central Hudson Gas & Electric Corporation
Director	Fargo Manufacturing Company, Inc.

Central Hudson Gas & Electric Corporation (Central Hudson), incorporated under the laws of the State of New York, with its principal place of business in Poughkeepsie, New York, is a public utility within the meaning of that term as used in the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued September 13, 1961 in Docket No. E-7006 (26 FPC 482).

Fargo Manufacturing Company, Inc. (Fargo), incorporated under the laws of the State of New York, with its principal place of business in Poughkeepsie, New York, is engaged in the manufacture of electrical equipment, and in the past and presently supplies Central Hudson with electrical connectors. The dollar amounts of such equipment purchased from Fargo during the past five years are as follows: 1960, $51,400; 1961, $67,400; 1962, $72,650; 1963, $87,300, and 1964, $82,000. While Central Hudson does purchase electrical connectors from other suppliers, the bulk of its purchases of this type of equipment is from Fargo, 70 percent in 1964. Mr. Sillin has no stock interest in Fargo and would receive no compensation therefrom except for nominal fees for his activities as a director.

When Congress passed the Federal Power Act in 1935, it had before it a long record of the abusive use of interlocking positions in the electric utility industry, including particularly interlocking arrangements between public utilities and underwriting firms and as between public utilities and firms supplying them with electrical equipment. As a result, Congress in Section 305(b), expressly made it unlawful for any person to hold interlocking positions of officer and director in companies falling within these categories, unless a showing could be made to the Commission upon which it could find that the future holding of such interlocking positions would not adversely affect either the public or private interests. The Section is directed to the possible future effect upon public or private interests and is not dependent upon the establishment that a person involved actually has operated in a manner inimical to the public interest. On the contrary, the Section presupposes that with the exception of companies within a holding company system under the control of the Securities and Exchange Commission, there would be very few authorizations granted.

Over the years, since the Act was passed, applications under this Section have accordingly been confined primarily to interlocking positions between electric utilities within a holding company system approved by the Securities and Exchange Commission. Most of these applications have been granted. There have been only a very few applications filed to hold positions between public utilities and supply companies, the majority of which have either been withdrawn or denied. As a general principle, we feel that such interlocking positions should not be permitted where the supplier is in a position to furnish any appreciable amount of the electrical equipment in any category purchased by the utility. In such instances, any possible benefit to the two companies from having an individual serve both of them in a responsible capacity is outweighed by the potential disadvantages to the public utility, its customers and others in the markets in which the utility and the supplier operate.

In the present case, we believe it clear that the record of purchases in the past by Central Hudson from Fargo indicates that the holding of interlocking positions in the two companies would involve a potential conflict of interest which could have an adverse effect on public or private interests.

Accordingly, the Commission, having considered the above application as supplemented, and upon the information therein contained, *finds:*

Applicant has failed to show by his application that neither public nor private interests will be adversely affected by his holding the positions referred to above. Accordingly, it is necessary and appropriate for the purposes of the Federal Power Act that Applicant's request for authorization to hold these positions be denied as hereinafter ordered.

The Commission orders:

The application heretofore filed by the Applicant pursuant to Section 305(b) of the Federal Power Act, seeking to hold the positions referred to above, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP65-295

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 23, 1965, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP65-295 an application pursuant to Section 7(c) of the Natural Gas

Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing May 30, 1965, and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing transmission system, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order, issued March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing May 30, 1965, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct during the 12-month period commencing May 30, 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing May 30, 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65-306

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 29, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP65-306 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the twelve-month period commencing on May 25, 1965, and the operation of minor lateral and field facilities to enable Applicant to take into its certificated pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The total cost of the proposed facilities will not exceed a maximum of $2,000,000, and no single project will exceed a cost of $500,000, which costs are to be financed by cash on hand or by short term bank loans.

The purpose of this "budget-type" application is to enable Applicant to establish additional connections in fields from which Applicant is already authorized to receive gas where it is not possible to construct facilities under the exemption provided by Section 2.55(d) of the Commission's Rules, to provide necessary booster compressor facilities in such fields or to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G-1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate, therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the twelve-month period commencing on May 25, 1965, and the total expenditures for facilities to be constructed hereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct during the twelve-month period commencing on May 25, 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the twelve-month period commencing on May 25, 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65–285

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1965)

On March 15, 1965, Transwestern Pipeline Company (Applicant) filed in Docket No. CP65–285 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and operation of certain minor gas sales and transportation facilities, including taps, valves, meters and service lines, for the purpose of enabling Applicant to make various minor sales to customers along its system, all as more fully set forth in the application in this proceeding.

Applicant states that the proposed facilities will be used for the purposes specifically set forth in Section 157.7(c)(1) of the Commission's Regulations, except that Applicant will not make any direct industrial sales or any miscellaneous rearrangements under the authorization herein sought.

Applicant proposes to construct a maximum of: (1) 35 new delivery points for distributors, (2) 10 miles of no larger than 4-inch pipeline, (3) 35 taps and (4) 5 meters. Further, Applicant states that delivery to any one purchaser will not exceed 100,000 Mcf annually and no gas will be used for boiler fuel purposes as defined in Section 157.7(c)(9) of the Commission's Regulations. The total estimated cost of the proposed facilities will not exceed $150,000, which cost will be financed with funds on hand. These costs are exclusive of the costs of taps and valves for which Applicant will be reimbursed under the terms and conditions of its FPC Gas Tariff for right-of-way service under Rate Schedule RW–1, which covers sales to distributors for resale to consumers who granted easements for Applicant's pipeline and have a right to have a tap installed on the right-of-way.

Section 157.7(c)(1) of the Commission's Regulations provides that no budget type application for service to a distributor who is required to make a contribution for the cost of construction of facilities may be filed pursuant to said section. In view of the reimbursement provisions for Applicant's Rate Schedule RW–1 customers, the aforesaid provision of Section 157.7(c)(1) should be waived insofar as it would apply to said customers.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $150,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c) (8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter is granted on the express condition that any interruptible service authorized herein should be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(9) That part of Section 157.7(c) (1) of the Commission's Regulations providing that no budget-type application may be filed pursuant to said section for service to a distributor who is required to make a contribution for the cost of construction of facilities should be waived insofar as it would apply to Applicant's Rate Schedule RW–1 customers.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas as hereinbefore set forth, and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $150,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued hereby is granted on the express condition that any interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) That part of Section 157.7(c)(1) of the Commission's Regulations providing that no budget-type application may be filed pursuant to said section for service to a distributor who is required to make a contribution for the cost of construction of facilities is hereby waived insofar as it would apply to Applicant's Rate Schedule RW-1 customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60-14

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1965)

On March 31, 1965, United Gas Pipe Line Company (Petitioner) filed in Docket No. CP60-14 a petition to amend the order issued by the Commission in said docket on August 11, 1960, 24 FPC 216, which order authorized, among other things, the construction and operation of facilities and the delivery of up to 4,250 Mcf of natural gas per day to American Cyanamid Company (American) for use in the latter's acrylic fiber manufacturing plant located in Santa Rosa County, Florida.

Petitioner herein requests that the order of August 11, 1960 be amended to authorize it to increase deliveries to American by 9,250 Mcf per day, to 13,500 Mcf per day, pursuant to an agreement between the parties dated March 24, 1965. Petitioner further requests authorization to enlarge the meter station used to serve this customer by replacing the present 4-inch meter tubes with 6-inch tubes, at an estimated net cost of $1,337.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the petition has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued in Docket No. CP60-14 on August 11, 1960 be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued in Docket No. CP60-14 on August 11, 1960 be and the same is hereby amended by authorizing Petitioner to enlarge the meter station utilized for natural gas service to American Cyanamid Company and to operate said facility for delivery to this customer of up to a total of

13,500 Mcf of natural gas per day, as hereinbefore described and as set forth in the petition.

(B) The authorization granted hereby shall not entitle American Cyanamid Company to any priorities or rights to additional gas for meeting any future increase in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(C) In all other respects the order hereby amended shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER PERMITTING INTERVENTION

(Issued May 14, 1965)

In our Opinion No. 452, which contained our order issuing a license to Consolidated Edison on March 9, 1965, 33 FPC 428, we calendared a hearing for May 4, 1965, the hearing order providing for reception of evidence as to the best route for the overhead transmission line between Nelsonville, N.Y. and the Company's transmission line grid. The order also provided for the receipt of additional evidence concerning the design of fish protective facilities. On March 26, 1965, in a notice of overhead transmission lines to be considered at the hearing (30 F.R. 4265), we extended the time for transmission line interventions, as well as those relating to fishery, to May 3, 1965.

The following have filed timely petitions to intervene on the transmission line issue: (1) Town of Carmel, Putnam County, N.Y.; (2) Taconic State Park Commission; (3) William A. Perry and Mari F. Perry; (4) Rock Industries, Inc.

The Town of Carmel is interested in the transmission line issue because three potential routes would come within its boundary. However, the petition indicates that the Town desires to establish the undesirability of overhead transmission, an issue outside the scope of the hearing. Therefore, for reasons similar to those given in our order of April 26, 1965, permitting the Cortlandt Citizens for the Hudson River to intervene, we are limiting the participation of the Town of Carmel to the issue of the best route for the overhead transmission lines between Nelsonville, N.Y. and the Company's transmission line grid.

The following have filed timely petitions to intervene in the fishery aspect of the proceeding: (1) Hempstead Town Lands Resources Council; (2) Nassau County Fish and Game Association, Inc.

The Commission finds:

The participation of the above-named petitioners in this proceeding may be in the public interest.

The Commission orders:

The above-named petitioners are hereby permitted to intervene in the above-entitled proceeding subject to the rules and regulations of the Commission: *Provided*, That the participation of interveners on the transmission line issue shall be limited to the question of the best route for the overhead transmission lines to be included in the license issued for the Cornwall Pumped Storage Project; *Provided further*, That the admission of the Petitioners shall not be construed as recognition by the Commission that the interveners might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Commissioner Ross *dissents* to the limitation of the above-named petitioners to the issue of overhead transmission lines. For the reasons stated in his dissent to Opinion No. 452, he would have permitted evidence respecting underground transmission lines.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP64–18

ORDER FURTHER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 14, 1965)

On February 18, 1965, Panhandle Eastern Pipe Line Company (Panhandle) filed in Docket No. CP64–18 a petition to further amend the order of the Commission issued in said docket July 24, 1964, as amended October 21, 1964 and December 29, 1964, 32 FPC 349, 1157, 1546. The order issued July 24, 1964, authorized Panhandle to construct and operate natural gas facilities and to increase sales to fifty existing customers. The aforementioned amending orders provided for increased contract quantities to six of Panhandle's resale customers.

By the instant filing, Panhandle seeks further amendment of the order issued July 24, 1964, in Docket No. CP64–18 by requesting revision of authorized summer contract quantities to two customers, as follows:

Citizens Gas Fuel Company

(Volumes in Mcf)

	Apr.	May	June	July	Aug.	Sept.	Oct.
Present	8,200	6,200	4,300	3,800	3,800	6,000	8,000
Proposed	10,200	8,000	5,900	5,200	5,400	7,600	9,800
Increase	2,000	1,800	1,600	1,400	1,600	1,600	1,800

Missouri Utilities Company

(Volumes in Mcf)

	Apr.	May	June	July	Aug.	Sept.	Oct.
Present	13,800	9,300	4,300	3,000	3,000	6,500	13,000
Proposed	13,800	9,300	4,300	3,500	3,500	6,500	13,000
Increase	0	0	0	500	500	0	0

Panhandle will have adequate capacity to provide these revised contract quantities.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on March 11, 1965 (30 F.R. 33). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued July 24, 1964, as amended, in Docket No. CP64–18 be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Panhandle Eastern Pipe Line Company in the Commission order of July 24, 1964, as amended October 21, 1964 and December 29, 1964, in Docket No. CP64–18 be and the same is hereby amended by authorizing the sale and delivery of additional quantities of natural gas as hereinbefore described and as more fully described in the aforementioned petition.

(B) In all other respects the order in Docket No. CP64–18 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

RUMFORD FALLS POWER COMPANY, PROJECT NO. 2333

ORDER ISSUING LICENSE (MAJOR)

(Issued May 14, 1965)*

Application was filed on December 27, 1962 by Rumford Falls Power Company (Applicant) of Rumford, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for its constructed Project No. 2333, known as the Rumford Falls Project and comprising the Upper and Lower Stations, located on the Androscoggin River, in the Town of Rumford Falls, Maine. The project does not affect land of the United States.

According to the application, the project was constructed in 1892, 1910 and 1918. Reinforcing of Middle Dam was done in 1926, and the Middle Dam Headworks were strengthened in 1955. The No. 4 unit at the Upper Station was converted in 1950 from 40 to 60 cycle generation. In 1954, the lower site was redeveloped by including the total head included in the old Island Station and the Old Lower Station into what is now known as the Lower Station. From the application, it is impossible to determine the increase in the capacity as the previous capacity is not known. The reconstruction was completed and the plant was placed in operation in October 1954.

The Upper Station develops a total of 21,970 kw and the Lower Station is capable of developing 12,800 kw. The energy is delivered to Applicant's parent company, Oxford Paper Company.

In its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis of this finding was that the Androscoggin River is presently, and for more than a century has been used for the transportation of logs and other forest products by water.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation have been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interest of fish and wildlife resources.

---

*Memorandum Opinion No. 465 and order issued July 12, 1965, denying application for rehearing, 34 FPC 27. Remanded for clarification, *Rumford Falls Power Co.* v. *F.P.C.*, 355 F. 2d 683 (CA1–1966).

[1] *New Hampshire Water Resources Board*, Docket No. E–6807, 20 FPC 99–101.

For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1954 and a termination date of December 31, 1993.

Since the subject application was filed prior to our rule set out in Section 4.41 of the Commission's Regulations under the Federal Power Act (18 CFR 4.41), as clarified by our Order No. 292, issued January 8, 1965, 33 FPC 32, requiring the filing of recreational use plan with the application, we are by Article 25 herein requiring the licensee to file a plan within one year, such plan to be in conformance with the requirements of Section 4.41 Exhibit R of Regulations under the Federal Power Act.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Maine and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The issuance of a license for the project as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 46,400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project for the costs of administration of Part I of the Act is reasonable.

(6) The substations, generator leads, transmission lines and appurtenant facilities mentioned in paragraph (B) below are parts of the project and should be included in the license for the project.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Rumford Falls Power Company (Licensee) of Rumford, Maine, under Section 4(e) of the Federal Power Act (Act) for a period effective as of January 1, 1954, and terminating on December 31, 1993, for the continued operation and maintenance of the Rumford Falls Project No. 2333, located on the Androscoggin River, a navigable water of the United States, in the Town of Rumford, Maine, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2333 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the applicant or by the

United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2333-1) entitled, "General Map."

Exhibit K: Sheet 1 (FPC No. 2333-2) entitled, "Detail Map—Middle Dam, Canal and Lower Station."

Exhibit K: Sheet 2 (FPC No. 2333-3) entitled, "Detail Map—Upper Dam, Upper Station and Reservoir."

Exhibit K: Sheet 3 (FPC No. 2333-4) entitled, "Detail Map—Reservoir."

Exhibit K: Sheet 4 (FPC No. 2333-5) entitled, "Detail Map—Reservoir."

Exhibit K: Sheet 5 (FPC No. 2333-6) entitled, "Supplementary Sheet—Map of Original Purchases."

(ii) Constructed Project No. 2333 consist of:

Upper Station: Located in the town of Rumford, Maine, on the Androscoggin River, consisting of a concrete gravity dam with pin type flashboards, a gatehouse with power-operated headgate hoists and gates, two for each of four active penstocks, a reservoir of approximately 400 acres area, a powerhouse in two sections, the Old Station 120 feet long and 30 feet wide containing one hydroelectric unit of 4,050 kw, the New Station, 140 feet long and 60 feet wide contains two 9,000 hp and one 10,000 hp units developing a total of 17,920 kw, two transformer substations, a 40 cycle, 2 circuit, 11 kv, and one 60 cycle 11 kv transmission lines each on steel towers about one mile long between the Upper Station and the Oxford Paper Company, and underground 11 kv tie line about 800 feet long from the powerhouse to the substation of the Central Maine Power Company;

Lower Station: Located just below the Upper Station with crest elevation being same as tailwater elevation of Upper Station, consisting of a rockfilled, timber crib, gravity-type dam with 12 inch pin-type flashboards, a 2,400 foot canal with a set of 10 headgates and a gatehouse containing two motorized gate hoists, two 12 foot steel penstocks, surge tanks, a powerhouse containing two hydroelectric units capable of developing 6,400 kw each;

Transmission Lines: The two transformer substations are required to combine into one system the generating and conversion equipment of various voltages as given in detail in Exhibit M. There is one 40 cycle, 2 circuit, 11 kv, and one 60 cycle, single circuit, 11 kv power line, each on steel towers and approximately one mile in length, which transmits power between the Upper Station and Oxford Paper Company. The tie line to Central Maine Power Company consists of two 3 conductor direct burial cables at 11.5 kv from the Upper Station powerhouse to switchgear located in the Central Maine Power Company substation approximately 800 feet from the powerhouse;

and appurtenant mechanical and electrical facilities, the location, nature and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 of 9 (FPC No. 2333-7) entitled, "Detail Map Upper Dam & Upper Station;" sheet 2 of 9 (FPC No. 2333-8) entitled "Sections Thru Upper Dam, Power Station & Gatehouse;" sheet 3 of 9 (FPC No. 2333-9) entitled, "Elevations of Upper Station and Gatehouse;" sheet 4 of 9 (FPC No. 2333-10) entitled, "Detail Map Lower Station Grounds & Headworks;"

Exhibit L: Sheet 5 of 9 (FPC No. 2333-11) entitled, "Sections and Profile Lower Station Development;" sheet 6 of 9 (FPC No. 2333-12) entitled, "Elevations of Lower Station and Gatehouse;" sheet 7 of 9 (FPC No. 2333-13) entitled, "Detail Map Middle Dam & Middle Canal Headworks;" sheet 8 of 9 (FPC No.

2333–14) entitled, "Sections of Middle Dam, Middle Canal & Headworks;" sheet 9 of 9 (FPC No. 2333–15) entitled, "Single Line Diagram Power System;" and

Exhibit M: Consisting of 24 typewritten pages and filed December 27, 1962, entitled "General Description and Specifications of Equipment and Appurtenances."

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised August 1, 1964) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of January 1, 1954:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 46,400 horsepower.

Article 31. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the application possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXAS GAS UTILITIES COMPANY, DOCKET NOS. CP62–288, CP65–269, AND CP65–270

FINDINGS AND ORDER AUTHORIZING THE EXPORTATION OF NATURAL GAS AND CANCELLING DOCKET NUMBER

(Issued May 14, 1965)

On March 5, 1965, Texas Gas Utilities Company (Applicant) filed in Docket No. CP65–270 an application pursuant to Section 3 of the Natural Gas Act for authorization to continue, as successor to Associated Oil and Gas Company (Associated), the exportation of natural gas from the United States to the Republic of Mexico, all as more fully set forth in the application.

The exportation of natural gas involved herein was originally undertaken in 1935, and has subsequently been carried out by various parties. Original authorization was issued to Texas Gas Utilities Company (TGU Co.) (no relation to Applicant) by Commission order issued September 10, 1940, in Docket No. G–117. By order issued November 28, 1961, 26 FPC 770, in Docket No. CP61–280, Texas Gas Utilities Corporation (TGU Corp.) (no relation to Applicant) was authorized to continue the exportation in lieu of TGU Co.; and by order issued December 20, 1962, 28 FPC 1075, in Docket No. CP62–287, Associated was authorized to continue the exportation in lieu of TGU Corp.

The subject exportation of natural gas involves sales of approximately 3,500 Mcf per day to Compania National de Gas, S. A. (Compania) for resale and distribution in Piedras Megras, Coahuila, Mexico, and to La Consolidada, S. A. (Consolidada) for use in a steel plant located near the aforementioned town. Said exportation will be continued by Applicant pursuant to contracts originally executed by TGU Corp. as seller and Compania and Consolidada as buyers. The TGU Corp.-Compania contract was executed June 20, 1956, effective December 21, 1956, and extends for a ten year period ending December 21, 1966. The TGC Corp.-Consolidada contract is dated June 19, 1956, was amended December 10, 1956, was further amended by letter dated September 16, 1960, and extends for a ten year period ending June 19, 1966. The aforementioned contracts have been assigned to Applicant by Associated by conveyance dated January 12, 1965.

On March 5, 1965, Applicant also filed, in Docket No. CP65–269, an application pursuant to Executive Order No. 10485 for a permit authorizing the continued maintenance and operation of facilities located at the international boundary between the United States and Mexico near Eagle Pass, Texas for the subject exportation. Said facilities were the subject of a permit issued to Associated in Docket No. CP62–288 on December 20, 1962. It appears there is no need to issue a new permit, and accordingly the present permit will be amended by substituting Applicant in lieu of Associated as holder thereof.[1]

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Applicant, Texas Gas Utilities Company, a Delaware corporation having its principal place of business in Corpus Christi, Texas, is a "person" within the meaning of Sections 2(1) and 3 of the Natural Gas Act, and the exportation of natural gas proposed to be continued by it is subject to the jurisdiction of the Commission under the provisions of Section 3 of the Act.

---

[1] The amended permit is to be issued concurrently with this order.

(2) The continued exportation of natural gas by Applicant, as proposed, is appropriate and consistent with the public interest, provided such exportation be upon the terms and conditions hereinafter specified, and authorization therefor should be granted as hereinafter ordered.

(3) The permit heretofore issued to Associated Oil and Gas Company on December 20, 1962, in Docket No. CP62–288 should be amended by substituting Applicant in lieu of Associated as holder thereof.

The Commission orders:

(A) Applicant, Texas Gas Utilities Company, be and the same is hereby authorized to continue, as successor to Associated Oil and Gas Company, the exportation of natural gas from the United States to Mexico in accordance with the terms of the contracts hereinbefore described, upon the terms and conditions of this order.

(B) The authorization granted by paragraph (A) above shall not be transferable or assignable and shall remain in effect only so long as Applicant continues the acts and operations thereby authorized in accordance with the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder, and in accordance with the terms and conditions of this order.

(C) The authorization granted herein shall automatically terminate upon the termination or expiration of the contracts hereinbefore described, and upon the termination or discharge of each such contract, Applicant shall forthwith notify the Commission in writing of the fact and date of such termination.

(D) Applicant shall not, during the terms of the authorization granted by this order, materially change or alter its export operations as now represented to the Commission without first obtaining the permission and approval of the Commission.

(E) In the event that Applicant should abandon or permanently cease for any reason whatsoever all or any part of its export operations prior to the termination dates of the contracts involved, Applicant shall forthwith notify the Commission of said fact and the reason therefor.

(F) Applicant shall file reports with the Commission from time to time under oath and in such detail as the Commission may require with respect to the whole or any part of its natural gas export operations and shall continue making the annual filing required of its predecessors.

(G) The permit heretofore issued to Associated Oil and Gas Company on December 20, 1962, in Docket No. CP62–288 shall be amended by substituting Applicant in lieu of Associated as holder thereof.

(H) Docket No. CP65–269 be and the same is hereby cancelled.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GILMAN PAPER COMPANY, PROJECT NO. 2392

ORDER ISSUING LICENSE (MAJOR)

(Issued May 17, 1965)

Application was filed on August 7, 1963, by Gilman Paper Company (Applicant) of New York, New York, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2392, known as the Gilman Project, situated on the Connecticut River, a navigable water of the United States, in the Towns of Lunenburg and Guildhall, Essex County, in the vicinity of the

Village of Gilman, Vermont, and the Towns of Dalton and Lancaster, Coos County, New Hampshire. The project does not affect lands of the United States.

According to the application, the first dam at the site was completed about 1900 for use in the operation of a pulp and paper mill. In 1928 the dam was reconstructed after having been washed out. Applicant installed one generator in 1932, one generator in 1935, and two generators in 1941.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1941 and a termination date of December 31, 1990.[1]

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structure insofar as the interests of navigation are concerned pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project conditions in the interests of fish and wildlife and recreation as set forth in Form L-3, and added that should pollution in the Connecticut River be abated sometime in the future and conditions may again be favorable for anadromous fish and resident sport fish species, it may be desirable that adequate fish passage facilities and other fish protective devices be provided at the Gilman Project, including adequate releases of water. By letter dated February 27, 1964, Applicant objected to the inclusion of the fish and wildlife conditions set forth in Form L-3 as being unwarranted in view of the sluggish and shallow conditions in the Connecticut River above the Gilman Project. Applicant requested that any license for the project include an additional condition limiting the application of Article 15 of Form L-3 until the need for fishways has been shown to exist as evidenced by the successful operation of similar facilities at all dams on the Connecticut River downstream from Applicant's. The State of New Hampshire Fish and Game Department recommended for inclusion in any license for the project conditions in the interests of fish and wildlife essentially the same as those recommended by the Department of the Interior, and in addition thereto a condition providing for minimum water releases for the conservation and development of fish resources. By letter dated December 30, 1963, Applicant expressed the same opposition it had expressed to the Department of the Interior's recommendations and for the same reasons. We believe that Articles 15 and 16 of Form L-3 adequately provide the conditions relative to fish and wildlife sought by the Department of the Interior and the State of New Hampshire and that it is in the public interest to include in this license such conditions which provide for notice and opportunity for hearing.

Applicant indicates that present recreational use in and around the project area is minimal. Appropriate state and local agencies in New Hampshire and Vermont are not prepared at this time to make recommendations for these facilities. The future potential for recreational development and for establishment of a cold water fishery in the Connecticut River would, however, increase the recreational value of the project. Under these circumstances, we have concluded that no recreational use facilities are required at the project at the present time, but we are providing by Article 32 that the Licensee shall continue to cooperate with Federal, State and Local agencies in the development of facilities necessary for full recreational utilization by the public of project lands and waters and that it shall report the results of such cooperation and development to the Commission periodically beginning at the end of three years from date of issuance of this license and every fifth year thereafter. Moreover, pursuant to the provisions of Article 17 of the License, the Commission is reserving the authority to require the Licensee to construct, maintain, and operate such additional recreational facilities as the Commission, after notice and opportunity for hearing, may determine are necessary and desirable and reasonably consistent with the primary purpose of the project.

---

[1] On August 14, 1951, 10 FPC 1255, in Docket No. E-6346, *Connecticut River Power Company*, the Commission found the Connecticut River from its mouth to points above the mouth of the Nulhegan River, a tributary of the Connecticut River, is a navigable water of the United States. Project No. 2392 is within that reach of the Connecticut River.

The Department of Health, Education, and Welfare has advised, among other things, that at this time the project does not constitute a source of pollution and removal of the dam is not warranted. The Department does not envision that the granting of the license will create or intensify vector problems.

Two informal protests against the "construction" of "proposed" Project No. 2392 have been received. The protestants have been advised that the application involved an existing dam and hydroelectric plant at the site of Applicant's paper mill in the Village of Gilman, Vermont, and no new construction is involved.

The Commission finds:

(1) The Gilman Project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of New Hampshire, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. Except for the above-mentioned informal protests, no other protests and no petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 4,500 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as a part of this license, except that Exhibit K, sheet 2 of 2 (FPC No. 2392-3) should be approved only insofar as it shows the location of the dam and power plant.

The Commission orders:

(A) This license is hereby issued to Gilman Paper Company (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period effective January 1, 1941 and terminating December 31, 1990, for the continued operation and maintenance of Gilman Project No. 2392, located on the Connecticut River, a navigable water of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Gilman Project No. 2392 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2392-1) entitled "Plan View of Entire Project Area Hydroelectric Station."

Exhibit K: Sheet 1 of 2 (FPC No. 2392-2) entitled "Map Showing Elevations in Immediate Vicinity of Hydroelectric Station and Dam;" sheet 2 of 2 (FPC No. 2392-3) entitled "Detail Plan View of Project Area covering Hydroelectric Station and Adjacent Mill." Approval only insofar as it shows the location of the dam and power plant.

(ii) Project works consisting of: a dam (crest elevation about 828 feet USGS, topped with 5-foot flashboards) extending from the left bank, including a concrete gravity section (with two sluice gates) about 108 feet long, a rock filled timber crib section about 211 feet long (including a 27-foot long sluiceway—crest elevation about 827 feet USGS, and a 15-foot long bulkhead—crest elevation about 839 feet (USGS); a powerhouse, extending to the right bank, with one 1250 hp turbine and three 1000 hp turbines direct connected to one 990 kva (1.0 PF) and three 1000 kva (0.8 PF) generating units; and appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 of 4 (FPC No. 2392-4) entitled "Plan View and Cross Sections of Hydroelectric Station;" sheet 2 of 4 (FPC No. 2392-5) entitled "Construction Details, Plans and Cross Sections of Dam;" sheet 3 of 4 (FPC No. 2392-6) entitled "Construction Details, Plans and Cross Sections of Dam—Concrete Part;" sheet 4 of 4 (FPC No. 2392-7) entitled "Construction Details, Plans and Cross Sections of Dam—Timber and Rock Part;" and

Exhibit M: Consisting of five typewritten pages entitled "General Description of Equipment," filed in the Commission August 7, 1963.

(iii) All of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, except Article 25 and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of January 1, 1941:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 4,500 horsepower.

Article 31. The Licensee shall, within six months from the date of issuance of this license, submit for Commission approval an additional Exhibit "K" drawing, showing the project boundary and any other pertinent details in the vicinity of the dam and powerhouse, prepared in accordance with the Commission's Rules and Regulations.

Article 32. Licensee shall cooperate with State and local agencies and individuals in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of three (3) years from the date of issuance of this license and every fifth year, thereafter, Licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation development at the project.

Article 33. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the application possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as a part of this license to the extent indicated in finding (7) above.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NOS. 2318, 2320, AND 2330

ORDER WAIVING PENALTY FOR NON-PAYMENT OF ANNUAL CHARGES

(Issued May 17, 1965) *

On April 22, 1965, the Presiding Examiner certified to the Commission the motion by counsel of Niagara Mohawk Power Corporation (Licensee) for a waiver, pursuant to subparagraph 11.31(e) of the Regulations under the Federal Power Act, of penalties for non-payment of annual charges until the Commission has made a final determination on Licensee's application for rehearing as to whether the charges were properly assessed.

---

*See Opinion No. 481, issued November 15, 1965, 34 FPC 1298.

The Commission in 1963 and 1964 issued licenses for the Licensee's Project Nos. 2318, 2320, and 2330. Project No. 2318 is located on the Sacandaga River. Project Nos. 2320 and 2330 are located on the Raquette River. These licenses were made effective from the date on which these rivers were determined to be navigable waters of the United States.[1] The licenses for these projects have been accepted by Licensee.

On July 17, 1964, the Commission issued a statement of annual charges for Project No. 2318 in the amount of $27,883.07 and on October 16, 1964, it issued statements of annual charges for Project Nos. 2320 and 2330 in the amounts of $115,437.13 and $30,938.85, respectively. These charges cover the period from 1949 through 1963.

In these consolidated proceedings the Licensee challenges the Commission's authority to assess annual charges from the effective date of the license. A hearing was held April 20, 1965 respecting the issues presented. The Presiding Examiner has not filed his initial decision. In the circumstances, we believe that it is appropriate that penalties for non-payment of the annual charges assessed as described above should be waived, as hereinafter provided, until we have made a final determination on whether these charges were properly assessed.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823) that penalties for the Niagara Mohawk Power Corporation's non-payment of annual charges for its Project Nos. 2318, 2320, and 2330 be waived under subparagraph 11.31(e) of the Regulations under the Federal Power Act on the conditions hereinafter provided.

The Commission orders:

(A) Penalties for the Niagara Mohawk Power Corporation's non-payment of the annual charges described above for its Project Nos. 2318, 2320, and 2330 hereby are waived under subparagraph 11.31(e) of the Commission's Regulations under the Federal Power Act until the Commission has made a final determination on the record as to whether these charges were properly assessed: *Provided, however*, that interest at the rate of 6 percent per annum shall be paid from the dates of the statements of annual charges until the date of payment of whatever amount ultimately may be required to be paid.

(B) This order is subject to acknowledgement of its acceptance by Licensee within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF PASADENA, CALIFORNIA, PROJECT NO. 1250

ORDER GRANTING EXEMPTION FROM PAYMENT OF ANNUAL CHARGES

(Issued May 17, 1965)

Application was filed on March 22, 1965 by the City of Pasadena, California, licensee for Project No. 1250, for exemption from payment of the net amount of annual charges under the license for the project for the calendar year 1964, pursuant to the provisions of Section 10(e) of the Federal Power Act (Act) and Regulations of the Commission thereunder, on the ground that the balance of the power not used by the licensee for municipal purposes was sold to the public without profit.

---

[1] 8 FPC 231 (1949); and 8 FPC 390 (1949).

The statement of annual charges rendered by the Commission for the year involved amounted to $87.92. The application sets forth that the project operations for the year 1964 resulted in a net loss, and that the power was sold by the licensee to ultimate consumers without profit.

The Commission finds:

(1) The licensee is a municipality within the meaning of Section 3 (7) of the Act, and is entitled to claim exemption from payment of annual charges under Section 10(e) of the Act.

(2) The licensee is entitled to exemption from payment of all charges for which it was billed for the year 1964.

The Commission orders:

The licensee for Project No. 1250 is hereby exempted from payment of annual charges for which it was billed for the calendar year 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE OHIO FUEL GAS COMPANY, DOCKET NO. RP65-51

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING REFUNDS

(Issued May 18, 1965)

The Ohio Fuel Gas Company (Ohio), on April 1, 1965, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Third Revised Volume No. 1.[1] The proposed change in rates[2] would make effective as of January 1, 1965, a reduction in Ohio's jurisdictional rates of approximately $821,931, based upon sales for the twelve-months' period ended February 28, 1965.

The proposed rate filing, which we have docketed as shown above, reflects a reduction in the Federal income tax rate for corporations from 50 to 48 percent and also the flow-through of the rate reduction by Ohio's suppliers, United Fuel Gas Company (United) and Texas Gas Transmission Corporation, to give effect to reductions in the Federal corporate income tax rate on the same date. Ohio states that it will flow-through to its jurisdictional customers the refunds received from United to give effect to the same income tax reduction on United's cost of service as of March 1, 1964, through December 31, 1964. Ohio will credit current billings to reflect the proposed reduction in bills previously rendered for service during the monthly periods commencing January 1, 1965.

The proposed filing is not intended to change or otherwise affect the existing obligations of Ohio under the settlement agreement in Docket No. G-16818, *et al.*, or the Commission's orders therein. The rate levels of the Partial Requirements (CDS-PR) rate schedules contained in Ohio's existing tariff, heretofore, have been filed at the same levels as those in the CDS rate schedules. However, the proposed filing does not contain revised tariff sheets which reflect the proposed rate reduction in the CDS–PR rate schedules. We, therefore, will provide that such revised tariff sheets be filed.

---

[1] Eighth Revised Sheets Nos. 12, 24 and 30. Nineteenth Revised Sheets Nos. 7, 22 and 27.

[2] Appendix A hereto contains the proposed rate levels.

Ohio requests the wavier of the notice requirements of the Commission's regulations as may be necessary to permit the tendered tariff sheets to become effective as of January 1, 1965, as proposed. No protests or objections to Ohio's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the notice requirements of Section 154 of the Commission's Regulations under the Natural Gas Act and for permitting the revised tariff sheets specified above to become effective as of January 1, 1965.

(2) The proposed revised tariff sheets and the rate reductions as proposed by Ohio are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and such tariff sheets should be accepted for filing to be effective subject to the requirements of this order.

The Commission orders:

(A) The notice requirement of Section 154 of the Commission's Regulations under the Natural Gas Act is hereby waived and the revised tariff sheets specifically described hereinabove are accepted for filing to be effective as of January 1, 1965.

(B) Within twenty days hereof, Ohio shall tender for filing appropriate revised tariff sheets which reflect the same rate level in the Partial Requirements (CDS–PR) rate schedules as in the CDS rate schedules herein being accepted, such CDS–PR rate schedules to be subject to the provisions of any orders of the Commission which have been issued and which hereafter may be issued in the proceedings in Docket No. RP65–45.

(C) This order shall not be construed to change or otherwise affect the existing obligations of Ohio relating to refunds and rate reductions under orders heretofore issued by the Commission in proceedings involving Ohio; and further, this order is without prejudice to any findings or orders which have been made or which may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, Ohio, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Ohio or any other persons or parties affected by this order.

APPENDIX A

Ohio Fuel Gas Company

Comparison of Proposed Rates With Presently Effective Rates

Rate Schedule	Present	Proposed
CDS-1:		
Demand	$1.87	$1.87
Commodity	32.27¢	32.05¢
AOS-1: Commodity	38.42¢	38.20¢
SGS-1: Commodity	50.90¢	50.68¢
CDS-1A:		
Demand	$1.87	$1.87
Commodity	32.71¢	32.49¢
AOS-1A: Commodity	38.86¢	38.64¢
SGS-1A: Commodity	51.34¢	51.12¢

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INTERSTATE POWER COMPANY, DOCKET NO. E-7213

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS, PREFERRED STOCK AND COMMON STOCK

(Issued May 19, 1965)

By order issued May 3, 1965, *supra*, p. 939, in the above-entitled matter, the Commission authorized Interstate Power Company (Applicant) to issue and sell at competitive bidding $14,000,000 principal amount of First Mortgage Bonds, due 1995, 166,000 shares of its authorized but unissued Preferred Stock of the par value of $50 per share, and 200,498 shares of additional Common Stock of the par value of $3.50 per share, subject to the provisions, among others, set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Bonds and Preferred Stock at competitive bidding, and the proposed issuance and sale of Common Stock in the manner set forth in the application shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof, the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon, the price per share to be received by Applicant for the Common Stock and the amount of any compensation for underwriters to be paid by Applicant in connection with the Common Stock.

Applicant on May 19, 1965, filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states among other things, (1) that it proposes to accept, as representing the lowest annual cost of money to it, the bid of Halsey, Stuart & Co. Inc. to purchase the proposed issuance of $14,000,000, principal amount of Bonds, at the price of 99.784 percent of principal amount, with an interest rate of 4⅝ per annum; (2) that it proposes to accept as representing the lowest annual cost of money to it, the bid of White, Weld & Co.–Eastman Dillon, Union Securities & Co.–Equitable Securities Corporation–Stone & Webster Securities Corporation to purchase the proposed issuance of 166,000 shares of Preferred Stock, at the price of $50.459 with a dividend rate of 4.68 percent per annum; and (3) that it proposes to offer the Common Stock to the stockholders at a price of $27.25 per share and that it proposes to accept as representing the lowest commitment fee, the bid of Kidder, Peabody & Co. Incorporated to receive $10,999.99 aggregate amount of compensation for commitment to purchase the Common Stock unsubscribed for by stockholders.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in paragraph (B) of the Commission's order issued May 3, 1965 in the above-entitled docket; and under the respective bids it proposes to accept for the

issuance of Bonds, Preferred Stock and Common Stock, (a) the price to be received by Applicant for the Bonds and the interest rate thereof are reasonable; (b) the price per share to be received by Applicant for the Preferred Stock and its dividend rate are reasonable, and (c) the price per share to be received by Applicant for the Common Stock is reasonable, and the compensation to be paid to the underwriter under the bid Applicant proposes to accept for underwriting the proposed issuance of Common Stock is reasonable.

(2) The proposed issuance and sale of Bonds, Preferred Stock, and Common Stock as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof, and the price per share to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereof, are approved as reasonable, and the price per share to be received by the Applicant for the proposed issuance of Common Stock and the compensation to be paid to the underwriter for underwriting the issuance of that Common Stock, under the respective bids referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds, Preferred Stock and Common Stock referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of paragraphs (C), (D) and (E) of the Commission's order issued May 3, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED GAS SUPPLY CORPORATION,
DOCKET NO. CP65–277

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 20, 1965)

On March 8, 1965, Consolidated Gas Supply Corporation (Applicant) [1] filed in Docket No. CP65–277 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate a new compressor station, to be called the Oxford Compressor Station, at a point in Doddridge County, West Virginia approximately 28 miles north of Applicant's existing Jones Compressor

---

[1] The application herein was filed by Hope Natural Gas Company (Hope). However, by Commission order accompanying Opinion No. 448, *Hope Natural Gas Company*, 33 FPC 150, Hope was authorized to acquire and operate all of the jurisdictional natural gas facilities of New York State Natural Gas Corporation, and the name of the surviving corporation was changed to Consolidated Gas Supply Corporation, effective April 1, 1965. Therefore, the certificate hereinafter granted will be issued to Consolidated Gas Supply Corporation rather than to Hope Natural Gas Company.

Station in Gilmer County, West Virginia. The proposed station will contain a total of 3,200 horsepower of compression. Applicant also proposes to construct and operate two field compressor units, each having two 660 horsepower engines for a total of 2,640 horsepower, to be located near the present Jones station.

Replacement of the Jones station is required because the engines which comprise it are old, obsolete and of differing makes and models, and its maintenance is consequently both difficult and costly. The facilities proposed herein will provide greater flexibility in Applicant's operations, and will permit estimated reductions in operating and maintenance costs of $191,367 annually.

The estimated cost of the proposed Oxford station is $1,589,000, and that of the field compressor facilities is $877,000. These costs will be financed by Applicant with cash on hand or with proceeds from the issuance of notes or stock or both to Consolidated Natural Gas Company, parent company of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Consolidated Gas Supply Corporation, a West Virginia corporation having its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 27, 1943, in Docket No. G-290 (3 FPC 994).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Consolidated Gas Supply Corporation, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon the Applicant's compliance wth all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLUEBONNET GAS CORPORATION, DOCKET NO. CP65-326

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 21, 1965)

On April 12, 1965, Bluebonnet Gas Corporation (Applicant) filed in Docket No. CP65-326 an application, as supplemented April 30, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application.

Applicant proposes to construct and operate one meter station in Jefferson Davis Parish, Louisiana; one meter station in Pointe Coupee Parish, Louisiana, and one meter station and approximately 4.5 miles of 4-inch pipeline in Acadia Parish, Louisiana, all for the transportation and sale of natural gas to Florida Gas Transmission Company (Florida), pursuant to an agreement between the parties dated March 15, 1965. Sales are estimated to total 4,500 Mcf per day.

Total estimated cost of Applicant's proposed facilities is $110,000, and will be financed with proceeds of $30,000 from the issuance and sale of common stock to Lumar Gas Corporation, parent company of Applicant, and by means of loans totaling $82,000.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Bluebonnet Gas Corporation, a Texas corporation having its principal place of business in Houston, Texas, upon completion of construction and commencement of operation of the proposed facilities will be engaged in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed construction and operation of facilities and sale of natural gas by Applicant to Florida hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Bluebonnet Gas Corporation, authorizing the construction and operation of facilities and the transportation and sale of natural gas to Florida Gas Transmission Company hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the proposed sale of natural gas undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP65-300

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 21, 1965)

On March 25, 1965, Central Illinois Public Service Company (Applicant) filed in Docket No. CP65-300 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Trunkline Gas Company (Respondent) to establish physical connection of its facilities with those which Applicant proposes to construct and to sell and deliver natural gas to Applicant for resale and distribution in the Village of Thompsonville, Franklin County, Illinois, and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately one and one-half miles of lateral pipeline extending from Respondent's transmission line east of the Village of Thompsonville to the village and the necessary distribution facilities in the area to be served. Applicant has received a certificate of public convenience and necessity from the Illinois Commerce Commission and a franchise from the Village of Thompsonville for its project.

Applicant's estimated peak day and annual natural gas requirements in Mcf to serve the Village of Thompsonville and environs for the first three years of operation are as follows:

	First year	Second year	Third year
Peak day	78	124	158
Annual	7,500	11,985	15,200

Respondent has not filed any objection to the application. Applicant states that Respondent will be required to install a metering and regulating station at a cost of $17,000.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

The Commission finds:

(1) Applicant, Central Illinois Public Service Company, is a corporation organized and existing under the laws of the State of Illinois and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the Village of Thompsonville, Franklin County, Illinois, and environs.

(2) Respondent, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant and to sell and deliver to Applicant up to 158 Mcf of natural gas per day for resale and distribution in the Village of Thompsonville, Franklin County, Illinois, and environs, as hereinafter ordered.

(4) The requirement that Trunkline serve Applicant, as proposed, will not place undue burden upon Trunkline nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Trunkline Gas Company be and it is hereby directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described and as more fully described in the application in this proceeding, together with such metering, regulating and appurtenant facilities as may be required therefor and to sell and deliver up to 158 Mcf of natural gas per day to Applicant pursuant to Respondent's appropriate rate schedule on file with the Commission.

(B) Applicant shall commence the purchase of gas within one year from the date of this order.

(C) Respondent shall advise the Commission of the date of commencement of service within ten days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with Part 154 of the Commission's Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65–315

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 21, 1965)

On April 6, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65–315 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of four measuring and regulating stations and the sale and delivery of natural gas through one station to Intermountain Gas Company (Intermountain) and through three stations to Northwest Natural Gas Company (Northwest Natural), all for resale and distribution, as more fully set forth in the application.

Applicant proposes to sell and deliver natural gas to Intermountain for resale to Flying H Farms, Inc., located in Elmore County, Idaho, for irrigation use, and to Northwest Natural for resale and distribution in the communities of Carson, Washington, and Molalla, Jefferson and Scio, Oregon, and their respective environs, to residential, commercial and industrial consumers.

The four measuring and regulating stations which Applicant proposes to construct have a total estimated cost of $34,700, which is to be financed out of current working funds. Applicant will make deliveries at the outlet of these facilities.

The facilities proposed to be constructed by Intermountain and Northwest Natural will consist of transportation and distribution facilities which will cost approximately $168,530 and $507,100, respectively.

Applicant states that Intermountain and Northwest Natural have received all necessary franchises and authorizations, from all regulatory bodies having jurisdiction, which are necessary for their proposed operations.

The estimated peak day and annual natural gas requirements of Intermountain and Northwest Natural are as follows:

	Requirements in Mcf			
	Intermountain		Northwest Natural	
	Summer peak day	Annual	Winter peak day	Annual
First year	2,448	255,000	1,206	201,506
Second year	3,456	360,000	1,255	222,166
Third year	4,512	420,000	1,302	227,830

Due notice of the filing of the application was published in the Federal Register on April 20, 1965, and amended on April 22, 1965 (30 F.R. 5610 and 5717). No protest or petition to intervene has been filed in this proceeding.

On April 26, 1965, the Public Utility Commissioner of Oregon filed a notice of intervention and waiver of hearing in support of the application as filed. No other notices of intervention have been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are sub-

ject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, El Paso Natural Gas Company, authorizing the construction and operation of facilities and the transportation and sale of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ILLINOIS POWER COMPANY, DOCKET NO. CP65-286

FINDINGS AND ORDER DIRECTING SALE OF NATURAL GAS

(Issued May 21, 1965)

On March 15, 1965, Illinois Power Company (Applicant), filed in Docket No. CP65-286 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to sell and deliver to Applicant, through existing facilities, up to 1,563 Mcf on a peak day and 166,400 Mcf annually, the stated third year natural gas requirements of Applicant for resale and distribution in the villages of Altona, Wataga, Rio and Oneida, Knox County, Illinois; the village of North Henderson, Mercer County, Illinois; and the village of Alexis, Mercer

and Warren Counties, Illinois, and their environs, all as more fully set forth in the application.

Applicant proposes to construct a total of 32.6 miles of 2-inch, 3-inch, and 4-inch pipe, extending to the above communities from an existing point of delivery from Michigan Wisconsin near New Windsor, Illinois.

Estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	67,789	142,138	166,400
Peak day (Mcf)	963	1,250	1,563

Total estimated cost of Applicant's proposed construction, including transmission facilities and distribution systems, is $816,930, and will be financed with funds available for construction purposes.

Applicant has obtained necessary franchises to supply natural gas in said communities and on March 2, 1965, the Illinois Commerce Commission granted Applicant a certificate to construct and operate the necessary facilities and to sell gas therein.

On April 16, 1965, Michigan Wisconsin filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to provide the requested service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 25, 1965 (30 F.R. 3891). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946 in Docket No. G-699 (5 FPC 553).

(2) Applicant, Illinois Power Company, an Illinois corporation having its principal place of business in Monticello, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to sell and deliver to Applicant, under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 1,563 Mcf of natural gas on a maximum day and 166,400 Mcf annually for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the villages of Altona, Wataga, Rio and Oneida, Knox County, Illinois; the village of North Henderson, Mercer County, Illinois; and the village of Alexis, in Mercer and Warren Counties, Illinois, and their environs, within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to sell and deliver up to 1,563 Mcf of natural gas on a maximum day and 166,400 Mcf annually to Applicant under a service agreement to be executed by Applicant with

Michigan Wisconsin in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MILWAUKEE GAS LIGHT COMPANY, DOCKET NO. CP65-260

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 21, 1965)

On March 1, 1965, Milwaukee Gas Light Company (Applicant) filed in Docket No. CP65-260 an application as supplemented on April 14, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its natural gas transmission facilities with the facilites proposed to be constructed by Applicant, and to sell and deliver up to 125 Mcf of natural gas to Applicant in the third year for resale and distribution in the village of Cecil, Shawano County, Wisconsin, as more fully set forth in the application.

Applicant seeks physical connection of its proposed facilities with a 0.46 mile section of 4-inch transmission line to be constructed by Michigan Wisconsin,[1] and the sale and delivery of the third year maximum day requirements of Applicant for Cecil, Wisconsin of 125 Mcf of gas at such connection. A municipal franchise has been obtained from the village. Approval of the Public Service Commission of Wisconsin was granted to Applicant on April 6, 1965.

Applicant proposes to purchase volumes of natural gas from Michigan Wisconsin under Michigan Wisconsin's Rate Schedule ACQ-1 to meet the requirements of Cecil. The volumes of natural gas necessary to meet maximum day and annual requirements for the first three years of operation are as follows:

	(Mcf at 14.73 psia)		
	First year	Second year	Third year
Maximum day	46	97	125
Annual	9,578	14,371	17,202

Total estimated cost of Applicant's proposed distribution system is $59,632, and will be defrayed from its own funds.

Michigan Wisconsin filed an answer in this proceeding on March 27, 1965, stating it had no objection to the granting of the requested order for service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 18, 1965 (30 F.R.

---

[1] Segment to be constructed by Michigan Wisconsin pursuant to its "10-cent formula".

3617). No protest, petition to intervene, or request for hearing has been filed in this proceeding. The Public Service Commission of Wisconsin filed a notice of intervention on April 7, 1965, stating a hearing was not requested. No other notices of intervention have been received.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946 in Docket No. G–669 (5 FPC 953).

(2) Applicant, Milwaukee Gas Light Company, a Wisconsin corporation having its principal place of business in Milwaukee, Wisconsin, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver up to 125 Mcf of natural gas on a maximum day to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the village of Cecil, Shawano County, Wisconsin within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 125 Mcf of natural gas on a maximum day to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

(D) Michigan Wisconsin shall file pursuant to Part 154 of the Commission's Regulations a superseding service agreement reflecting the increased services ordered herein and the new delivery point.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

MINNESOTA POWER & LIGHT COMPANY, DOCKET NO. E–7219

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued May 21, 1965)

Minnesota Power & Light Company (Applicant), incorporated under the laws of the State of Minnesota with its principal business office at Duluth, Minnesota, filed an application on April 15, 1965, with the Federal Power Commission, seeking an order pursuant to Section 204 of the Federal Power Act authorizing the issuance of 1,716,094 additional shares of Common Stock without par value.

Applicant is principally engaged in the generation, purchase transmission, distribution and sale of electricity in central and northeastern Minnesota. Applicant interchanges energy with its subsidiary, Superior Water, Light and Power Company located in Superior, Wisconsin, at the Minnesota-Wisconsin border.

Applicant proposes to amend its Articles of Incorporation so as to (1) split and change the number of shares of its Common Stock, no par, outstanding at the close of business on May 26, 1965, into twice such number, and (2) increase from 3,000,000 to 8,000,000 the number of shares of Common Stock, no par, which it is authorized to issue. According to the application, the amendment to the Articles of Incorporation will be submitted to the Applicant's stockholders for their approval at the annual meeting to be held on May 11, 1965. Applicant proposes that on or about June 16, 1965, all holders of Common Stock of record at the close of business on May 26, 1965, will be sent certificates for the additional shares of Common Stock, no par, to which they will become entitled as a result of the two-for-one split. According to the application, the Applicant will not receive any proceeds from the issuance of the Common Stock.

The Applicant believes that the proposed split of its Common Stock with the resulting lower market price per share, should result in a broadening of public interest in the Stock, an increase in the number of stockholders and a greater availability of shares for purchase and sale and hence should prove beneficial to the stockholders and the Company. It also believes that the resultant improved and expanded market should also serve to facilitate future Common Stock financing by the Company.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission and to the Governor of that State. Notice has also been given by publication in the Federal Register on April 28, 1965 (30 F.R. 5913), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before May 6, 1965, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy generated in the State of Minnesota and consumed outside thereof, and for the transmission and sale at wholesale of electric energy generated in the State of Wisconsin and consumed in the State of Minnesota, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter, and Applicant is, therefore, a public utility within the meaning of that term as used in Section 204 of the Federal Power Act.

(2) The proposed issuance of 1,716,094 additional shares of Common Stock, no par, to accomplish a two-for-one split of presently outstanding Common Stock, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Common Stock, as described above, is, therefore, not exempt by virtue of that subsection from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(1) thereof.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(6) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of 1,716,094 additional shares of Common Stock, no par value, to accomplish a two-for-one split of presently outstanding Common Stock, as described above, is hereby authorized, subject to the provisions of this order.

(B) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body.

(C) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioner: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PENNSYLVANIA POWER & LIGHT COMPANY, DOCKET NO. E-7214

ORDER AUTHORIZING ACQUISITION, MERGER OR CONSOLIDATION OF FACILITIES

(Issued May 21, 1965)

Pennsylvania Power & Light Company (Applicant), filed an application on March 22, 1965, with the Federal Power Commission, pursuant to Section 203 of the Federal Power Act, seeking an order authorizing it to acquire certain electric facilities of the Woolrich Woolen Mills (Woolrich), and to consolidate and merge such facilities with those of Applicant.

Applicant is incorporated under the laws of the Commonwealth of Pennsylvania with its principal business office at Allentown, Pennsylvania, and is engaged principally in the generation, transmission, distribution and sale of electric energy serving a 10,000 square mile territory which embraces 29 counties, including Clinton County, in central eastern Pennsylvania, which has a population of approximately 2,265,000.

Woolrich is a corporation organized under the laws of the Commonwealth of Pennsylvania and is engaged in the manufacture of woolen products in Clinton County, Pennsylvania. Initially, Woolrich supplied its own electric energy requirements for its manufacturing operations and by extending its lines, supplied the residences of the adjacent village of Woolrich which at that time were occupied chiefly by "mill" people. Woolrich has continued to supply the village even though it has been purchasing for many years its entire requirements from Applicant. At present, many of the residences of the village are occupied by people who have no relationship by way of ownership or employment with the mill. Woolrich has never filed any of its rates or charges for its electric service in the village with any regulatory commission.

The electric facilities to be acquired are located in the Village of Woolrich, Pine Creek Township, Clinton County, Pennsylvania, and consist of a series street lighting system made up of both overhead and underground facilities and grounded neutral overhead electric distribution system, of both single and three phase construction, providing service to 189 residential and 13 small commercial consumers. The facilities to be acquired comprise all of the electric facilities of Woolrich not directly associated with mill operation.

Applicant represents that pursuant to an agreement dated January 26, 1965 between Applicant and Woolrich, it has agreed to acquire these facilities for a cash consideration of $140,000, which amount according to the Applicant was arrived at by arm's-length negotiations. The consideration will be $78,104 in excess of the estimated original cost of the subject facilities of $61,896 and, therefore, an acquisition adjustment of $78,104 will be created by the transaction. The Applicant proposes to eliminate the acquisition adjustment by a debit to Account 425, Miscellaneous Amortization.

Upon acquisition, Applicant proposes to tie this system directly to its own power sources and supply all consumers as Applicant's customers. Applicant states that this will result in decreases in bills for residential electric service. Applicant also states that it will supply a street lighting service pursuant to its filed tariffs and agreement with the local political subdivision. According to the application, consummation of the proposed transaction will not require any formal change in any contract for the purchase, sale or interchange of electric energy, except that Applicant, as successor, will assume Woolrich's rights and obligations to supply street lighting in the village.

Applicant submits that the proposed acquisition will be in the public interest because it will mean that the electric service to the residents of the village of Woolrich will be provided by a public utility company and Applicant believes that supply of essential electric service by a public utility of its size and competence, fully aware of its legal obligations to provide present and future service on an adequate, continuous, safe and economic basis, is in the interest of customers and the public generally.

Written notice of the application has been given to the Public Utilities Commission of Pennsylvania and to the Governor of that State. Notice has also been published in the Federal Register on April 8, 1965 (30 F.R. 4566), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before April 23, 1965, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 3, 1964, *Pennsylvania Power & Light Company*, Docket No. E-7173 (32 FPC 1263).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Woolrich, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the

provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by this Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, DOCKET NO. CP65-272

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued May 21, 1965)

On March 8, 1965, Wisconsin Power & Light Company (Applicant), filed in Docket No. CP65-272 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Co. (Michigan Wisconsin) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Amherst and Amherst Junction, Wisconsin, all as more fully set forth in the application.

Applicant proposes to construct (1) a regulator station, (2) 3.7 miles of distribution mains, (3) 1.44 miles of 2" lateral pipe leading from the Michigan Wisconsin gate station to Amherst Junction, and (4) .6 mile of 4" lateral leading from the gate station to Amherst for a total third-year construction cost of $124,488 (including the distribution systems). This expenditure will be financed from cash on hand or funds borrowed from the sales of securities as may be necessary as part of Applicant's over-all construction program.

Applicant seeks physical connection of its proposed facilities with a 4-inch, .44 mile lateral to be constructed by Michigan Wisconsin in Portage County, Wisconsin, and the sale and delivery of Applicant's third-year requirements.

Estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations will be purchased under Michigan Wisconsin's Rate Schedule ACQ–1 and are stated to be:

	First year	Second year	Third year
Annual (Mcf)	17,827	37,478	42,960
Peak day (Mcf)	149	309	355

On March 24, 1964, the villages of Amherst and Amherst Junction granted Applicant franchises to supply natural gas in said villages and on December 30, 1964, the Public Service Commission of Wisconsin, in Docket No. CA–4430, granted Applicant a certificate to construct and operate the necessary facilities and to sell gas to the public in the above-mentioned villages.

On March 28, 1965, Michigan Wisconsin filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to provide the requested service and to construct .44 mile of 4-inch lateral pipeline connecting its system to the proposed facilities of the Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 20, 1965 (30 F.R. 3731). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946 in Docket No. G–669 (5 FPC 953).

(2) Applicant, Wisconsin Power & Light Company, a Wisconsin corporation having its principal place of business in Madison, Wisconsin, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 355 Mcf of natural gas on a maximum day and 42,960 Mcf annually for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in Amherst and Amherst Junction, Wisconsin, within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 355 Mcf of natural gas on a maximum day and 42,960 Mcf annually to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61-2, ET AL.

ORDER REJECTING APPEAL FROM PRESIDING EXAMINER'S RULING

(Issued May 24, 1965)

On May 6, 1965, Sun Oil Company (Sun) filed with the Commission a document entitled "Appeal from Ruling of Presiding Examiner Denying Right of Cross-Examination." The appeal seeks Commission review of rulings made by the presiding examiner during the cross-examination of staff witness Dr. Felix I. Shaffner, the staff's rate of return witness, under which rulings counsel were denied the right to pursue certain lines of cross-examination. The appeal also seeks in the alternative an order directing the examiner to strike the testimony of staff witness Shaffner and the exhibits he sponsored. On May 17, 1965, Hunt Oil Company, *et al.*, (Hunt) filed an adoption of and joinder in the Sun appeal.

Section 1.28(a) of the Commission's Rules of Practice and Procedure provides: "Rulings of presiding officers may not be appealed from during the course of hearings except in extraordinary circumstances where prompt decision by the Commission is necessary to prevent detriment to the public interest." Sun assets that it requested the presiding examiner to certify his rulings to the Commission but that he refused to do so.

Questions as to the admissibility or exclusion of evidence or the propriety of cross-examination must be determined initially by the presiding examiner and his rulings are subject to our review at the time of consideration of the examiner's decision. In the absence of extraordinary circumstances, we shall not examine on appeal interlocutory rulings with respect to matters of the type hereinbefore mentioned. The appeal sets forth no facts which would warrant our consideration of the matter at this time and the appeal should therefore be rejected.

The Commission orders:

The appeals filed herein by Sun Oil Company on May 6, 1965, and by Hunt on May 17, 1965, are rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP65-206

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF SERVICE AND ACCEPTING TARIFF SHEETS AND NOTICES OF CANCELLATION FOR FILING

(Issued May 24, 1965)

On January 7, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP65-206 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain sales and transportation of natural gas in interstate commerce, all as more fully set forth in the application.

Applicant proposes to abandon field sales and transportation of natural gas made pursuant to the following rate schedules:

Purchaser	Applicant's Rate Schedule	Tariff
Interstate Natural Gas Company	X–1	Original Volume No. 1
United Gas Pipe Line Company	T–1	Original Volume No. 1
Texas Eastern Transmission Corporation	X–2	Original Volume No. 2
United Gas Pipe Line Company	XFS–4	Original Volume No. 2
United Gas Pipe Line Company	XFS–7	Original Volume No. 2
United Gas Pipe Line Company	XFS–8	Original Volume No. 2

The service agreement for each sale has been terminated by agreement between Applicant and the purchaser. Applicant has filed notices of cancellation of the related rate schedules.

In addition, Applicant seeks permission and approval to abandon the transportation service previously rendered by Consolidated Gas Utilities Corporation (Consolidated) for United Gas Pipe Line Company pursuant to Rate Schedule X–6 of Consolidated's FPC Gas Tariff Original Volume No. 2.[1]

On January 7, 1965, Applicant filed with the Commission Notices of Cancellation of Rate Schedules X–1, T–1, X–2, XFS–4, XFS–7, XFS–8, and X–6 reflecting the termination of these sales and service.

Applicant, in order to eliminate inactive and unnecessary schedules and to achieve a more systematic and meaningful grouping of presently active rate schedules filed three superseding Tariff Volumes which it requests be accepted for filing.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 5, 1943 in Docket No. G–252 (3 FPC 910).

(2) The sales and service proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, were performed in interstate commerce, subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid sales and service is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the new FPC Gas Tariff, First Revised Volume Nos. 1 and 2 and Original Volume No. 3 of Arkansas Louisiana Gas Company and Notices of Cancellation of Rate Schedules X–1, T–1, X–2, XFS–4, XFS–7, XFS–8 and X–6 be accepted for filing.

---

[1] Consolidated was merged into Applicant as of August 31, 1960, at which time Applicant succeeded to Consolidated's contractual rights and obligations.

The Commission orders:

(A) Permission for and approval of the abandonment of the service hereinbefore described, as more fully described in the application in this proceeding, are hereby granted.

(B) Applicant's new FPC Gas Tariff, First Revised Volume Nos. 1 and 2 and Original Volume No. 3 and the Notices of Cancellation of its Rate Schedules X-1, T-1, X-2, XFS-4, XFS-7, XFS-8, and X-6 are hereby accepted for filing effective as of the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED GAS SUPPLY CORPORATION,[1] DOCKET NO. CP65-262

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On March 1, 1965, New York State Natural Gas Corporation (Applicant) filed in Docket No. CP65-262 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of (1) approximately 5.7 miles of 30-inch pipeline extending from the present terminus of Applicant's Line No. 550 in the Town of Cuyler, Cortland County, New York, in a northeasterly direction and parallel to Line No. 30 to the DeRuyter Connection in Madison County, New York; (2) an additional new 1,100 Hp engine at the E. M. Borger Compressor Station in the Town of Dryden, Tompkins County, New York; (3) approximately 6.7 miles of 20-inch pipeline (to be known as Line No. 554) parallel to Line Nos. 14 and 24, extending from the Genessee Falls Gate to the Randall Gate, Wyoming County, New York; and (4) approximately 1.32 miles of 26-inch pipeline extending east from the Sabinsville Compressor Station, Tioga County, Pennsylvania, to replace 20-inch pipeline in Line No. 34, all as more fully set forth in the application on file with the Commission.

The proposed facilities will be utilized in meeting the peak day requirements of Applicant's customers beginning with the 1965-66 winter season.

The estimated cost of the proposed facilities is $1,483,000; less an estimated $41,295 net salvage to be realized from the removal of the segment of 20-inch pipeline from Line No. 34, and will be defrayed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation and a "natural-gas company" within the meaning of the Natural Gas Act, was merged into Hope Natural Gas Company and the name of Consolidated Gas Supply Corporation substituted for that of Hope Natural Gas Company by Commission order issued February 2, 1965 (33 FPC 150).

---

[1] On April 1, 1965, pursuant to Commission authorization in Docket No. CP63-272, New York State Natural Gas Corporation merged with its affiliate, Hope Natural Gas Company, and the name of the surviving company was changed to Consolidated Gas Supply Corporation.

(2) Consolidated Gas Supply Corporation, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 2, 1965 (33 FPC 150).

(3) The facilities herein described and as more fully described in the application and exhibits in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Consolidated Gas Supply Corporation, authorizing the construction and operation of facilities as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NATIONAL FUELS CORPORATION AND WARREN PETROLEUM CORPORATION, DOCKET NO. G-20426

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, PROVIDING FOR REFUNDS, AND TERMINATING PROCEEDING

(Issued May 24, 1965)

On April 12, 1965, National Fuels Corporation (National) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure involving a proposed increased rate for sales of natural gas made to Lone Star Gas Company from the Madill Plant, Cumberland Field, Marshall and Bryan Counties, Oklahoma. The proposed increased rate of 16.8¢ per Mcf of natural gas was suspended by order of the Commission for the statutory period, and made effective subject to refund by proper motion on May 26, 1960.

Under the terms of the offer, National proposes a settlement rate of 14.0¢ per Mcf of gas at 14.65 psia; a moratorium on future increased rate filings until March 1, 1968; to refund all monies collected subject to refund above the settlement rate from August 1, 1961, to the date of issuance of this order;[1] and to amend its contract with Lone Star to delete the favored-nation provision therefrom and to change the periodic pricing provisions to provide for a 1.0¢ increase on January 1, 1968, and a similar increase at two five-year intervals thereafter.

The proposed settlement rate exceeds the applicable area increased rate ceiling as set forth in the Commission's Statement of General Policy No. 61–1, 24 FPC 818. However, National submitted data with its offer showing that it has added substantial supplies of natural gas in order to meet its contract commitment to Lone Star. In fact, National states, 77.6% of the volumes of natural gas delivered to Lone Star in 1964, came from wells connected to National's plant since 1954. In company-wide settlements, we have often approved proposed settlement rates which exceeded the applicable area increased rate ceiling where substantial productive acreage was added under the contract since 1954, or where the volumes of gas sold under the contracts were increased substantially.[2] Here we believe that the additional wells from which National purchases gas for plant use and delivery to Lone Star to be sufficiently analogous to permit an exception to the applicable area ceiling. Therefore, we shall approve the proposed settlement rate of 14.0¢ per Mcf of natural gas.

National acquired the Madill Plant on December 31, 1962, from Warren Petroleum Corporation (Warren) but did not assume Warren's obligation to refund monies collected subject to refund prior to that time. However, Warren filed its concurrence in National's proposal on April 26, 1965. Consequently, we shall order Warren to refund its proportionate share of the refund monies set forth above.

We desire to make it clear that acceptance of National's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases or periodic increases as provided in its offer of settlement, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving National's rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by National on April 12, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by National April 12, 1965, and concurred in by Warren on April 26, 1965, is hereby approved in accordance with the provisions of this order.

(B) National shall file, within 30 days from the date of issuance of this order, an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating the favored-nation, and the present periodic escalation provisions therefrom and substituting therefor periodic escalations as specified in its offer of settlement. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

---

[1] The refunds will be approximately $856,482, plus interest to May 1, 1965.

[2] *E.g., Sohio Petroleum Company,* Docket No. G–8488, *et al.,* 30 FPC 1623.

(C) National and Warren shall each compute for the respective periods in which it has refund obligations the difference between the rate collected subject to refund and the settlement rate for the period from August 1, 1961, to the date of this order for sales of natural gas to Lone Star from the Madill Plant, and within 30 days from the date of this order each shall submit a report to the Commission, and serve a copy on Lone Star, setting out the amount of refunds each has computed it is obligated to make (showing separately the principal and interest) the bases used for such determination and the period covered.

(D) National and Warren shall each, within 30 days from the date of issuance of this order, refund with applicable interest to May 1, 1965, to Lone Star the monies each has computed in accordance with paragraph (C) above, and each shall within 10 days thereafter file with the Commission a release from Lone Star showing receipt of the refunds in conformity with the settlement proposal as approved herein.

(E) Upon notification by the Secretary of the Commission that National and Warren have complied with the terms and conditions of the order, the rate and charge of 14.0¢ per Mcf at 14.65 psia, specified in National's offer of settlement, shall be effective as of the date of issuance of this order, and the above designated proceeding shall be deemed terminated.

(F) The acceptance by the Commission of National's offer of settlement, with which Warren concurred, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against National or Warren, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-322

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On April 8, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65-322 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate one 2-inch side tap, approximately 200 feet of 3-inch lateral and a meter station in Clinton County, Illinois, for the sale of natural gas to Illinois Power Company (Illinois), an existing customer, for resale and distribution in Shattuc, Illinois.

In addition Applicant proposes to construct and operate one 2-inch side tap, approximately 200 feet of 3-inch lateral and a meter station in Perry County, Illinois, for the sale of natural gas to Illinois for resale and distribution in Tamaroa, St. Johns, Sunfield and Holden, Illinois.

The estimated third year annual and peak day requirements of Illinois for the proposed service are 51,523 Mcf and 638.5 Mcf respectively, and will be provided from quantities of natural gas which Applicant has heretofore been authorized to sell and deliver to Illinois.

Illinois has received all necessary State and local authorizations for the service proposed herein.

Total estimated cost of Applicant's proposed construction is $19,160, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore, found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirement of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-290

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued May 24, 1965)

On March 17, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP65-290 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to abandon, by sale to Atlanta Gas Light Company (Atlanta), its Dry Branch lateral line and the Georgia Kaolin No. 1 Meter Station, located at Dry Branch, Georgia.

Atlanta presently utilizes gas delivered by Applicant from the Dry Branch lateral for service to Georgia Kaolin Company. After the proposed abandonment, such service will be rendered by Atlanta with natural gas received through Applicant's existing East Macon Meter Station.

Atlanta proposes to utilize the subject facility for future sales of natural gas in the vicinity of Dry Branch, Georgia.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-319

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On April 6, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP65-319 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12 month period from August 7, 1965 through August 6, 1966, and operation of routine field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of its existing system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting new and existing supplies of natural gas in various producing areas generally co-extensive with its system.

The total cost of the facilities covered by this application will not exceed $3,000,000, with no single project to exceed a cost of $500,000, and will be financed with general funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12 month period from August 7, 1965 through August 6, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct during the 12 month period from August 7, 1965 through August 6, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization hereby granted a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12 month period from August 7, 1965 through August 6, 1966, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61-328

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On March 5, 1965, Transcontinental Gas Pipe Line Corporation (Petitioner) filed in Docket No. CP61-328 a petition to amend the order of the Commission issued in said docket May 17, 1962, 27 FPC 992, which order authorized Petitioner, among other things, to construct and operate 8.5 miles of 8-inch pipeline extending from its existing facilities in the Block 23 Field to the Block 48 Field, South Marsh Island Area, offshore Louisiana.

By the instant filing, Petitioner seeks amendment of the above order by requesting authorization to construct and operate 10.06 miles of 16-inch line in lieu of the above described 8.5 miles of 8-inch line. Petitioner also seeks authorization to construct and operate 2.35 miles of 10-inch line from Block 48 to Block 49 and a meter station in the Block 48 Field, at Block 49.

The proposed amendment will enable Petitioner to attach new reserves in Block 49 as well as the reserves in Block 48. In addition the proposed line will enable petitioner to transport, from Block 35 to Block 23, gas which was previously transported through a 2.28 mile 6-inch line destroyed by Hurricane Hilda in October, 1964.

Total estimated cost of the proposed facilities is $1,638,399, compared to a cost of $698,085 estimated for the originally authorized facilities, and will be financed with general funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission issued May 17, 1962, in Docket No. CP61-328, be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued May 17, 1962, in Docket No. CP61-328 be and the same is hereby amended by authorizing Petitioner to construct and operate the facilities hereinbefore described, both in lieu of and in addition to facilities originally authorized in said order, all as more fully set forth in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65-310

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On April 2, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP65-310 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale to Piedmont Natural Gas Company, Inc. (Piedmont), an existing customer, of an additional volume of natural gas, and authorizing a reduction in Piedmont's present storage gas allocation, all as more fully set forth in the application.

Applicant requests authorization to increase firm sales to Piedmont by 10,000 Mcf per day, from 79,000 Mcf per day to 89,000 Mcf per day, and authorization for a reduction of 10,000 Mcf per day in Piedmont's existing allocation of storage gas, from 34,000 Mcf per day to 24,000 Mcf per day.

The proposed additional firm service has been requested by Piedmont due to the unexpected increase in its requirements resulting from the recent introduction in its market area of new rates for firm service.

No new facilities will be required, since the additional sales will be made through existing delivery points to Piedmont.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G–1277 (9 FPC 32).

(2) The modifications in Applicant's service to Piedmont hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid modifications in Applicant's service to Piedmont are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity requires that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the modifications in natural gas service to Piedmont hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The modifications in service herein authorized shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one month from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP65–258

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On February 26, 1965, Trunkline Gas Company (Applicant) filed in Docket No. CP65–258 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 15.5 miles of 16-inch pipeline and a purchase measuring station, all located in Brooks County, Texas, for the purchase of natural gas in the Kelsey Fields, Texas area, and the transportation of such gas to Applicant's existing 20-inch Texas supply lateral.

The gas is to be purchased by Applicant from Humble Oil & Refining Company (Humble), pursuant to an agreement between the parties dated January 29, 1965.[1]

Total estimated cost of Applicant's proposed facilities is $750,000, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) The proposed construction and operation of facilities by Applicant are issued authorizing Applicant, Trunkline Gas Company, to construct and operate the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within six months from the date on which this order issues.

---

[1] A temporary certificate authorizing the sale was issued to Humble in Docket No. CI65–842 by Commission letter dated April 30, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65–187

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On December 23, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65–187 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 3.2 miles of 10-inch line, an orifice meter station, and a regulator station and appurtenant facilities, all in Ouachita Parish, Louisiana. These facilities will connect Applicant's existing facilities at West Monroe Junction with its 10-inch Olin Mathieson Chemical Corporation line. Applicant states that the proposed facilities are required in order to provide more efficient operation of its facilities in the West Monroe, Louisiana area, and in order to provide increased deliveries to its customers in this area, primarily to Olin Mathieson and United Gas Corporation.

Total estimated cost of Applicant's proposed facilities is $213,260, and will be financed with general funds.

On March 4, 1965, Applicant filed a supplement to the application herein, and on April 21, 1965, it filed a letter clarifying certain language contained in the supplement. The burden of such filings is that Applicant agrees that its jurisdictional customers will not be adversely affected should it fail to receive an adequate return or fail to recover the out-of-pocket costs incurred in providing natural gas service to the direct sale customers involved.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, United Gas Pipe Line Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) Should Applicant fail to receive an adequate return or to recover out-of-pocket costs incurred in providing the direct sales of natural gas authorized herein, it shall not attempt to recover any part of the deficiency from jurisdictional sales customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-302

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued May 24, 1965)

On March 24, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-302 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove certain natural gas delivery stations serving Commercial Solvents Corporation (Commercial) in Ouachita Parish, Louisiana, all as more fully set forth in the application.

The facilities to be abandoned consist of two delivery stations, with the following facilities: (1) An orifice meter and 2,851 feet of 12-inch pipeline and (2) an orifice meter station and 275 feet of 2-inch pipeline.

The reason for the proposed abandonment is that the contract for the sale of natural gas by Applicant to Commercial expired by its own terms on January 1, 1965, and Commercial has advised Applicant that it would not renew the agreement. The delivery stations are therefore no longer required.

Applicant has been advised that Commercial will purchase its gas supply from other sources.

Due notice of the filing of the application was published in the Federal Register on April 7, 1965 (30 F.R. 4510). No protest, petition to intervene or notice of intervention has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65–308

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On April 1, 1965, United Gas Pipe Line Company (United) and Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP65–308 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the exchange of natural gas, all as more fully set forth in the application.

The facilities proposed herein consist of two separate interconnections between the systems of United and Transco, located approximately 9.5 miles apart on Transco's 30-inch main line in Pike County, Mississippi. One connection (connection A) requires the construction of approximately 1.5 miles of 6⅝-inch pipe, together with an orifice meter and related facilities, extending from Transco's 30-inch line to United's 6⅝-inch Jackson-Magnolia line, at Magnolia, Mississippi. The other connection (connection B) will consist of 220 feet of 6⅝-inch pipe, together with an orifice meter and related facilities, connecting United's East 30-inch main line with Transco's 30-inch line.

The proposed exchange is for the benefit of United. It experiences low pressure at the extremity of its Jackson-Magnolia line, near Magnolia, which can be alleviated by the receipt of gas from Transco at connection A. United will return equivalent volumes of gas to Transco at connection B.

United is liable for the entire total estimated cost of the proposed facilities of $88,302, and will pay such costs out of funds on hand. This figure includes the cost of taps to be constructed by Transco on its 30-inch line, and for which it will be reimbursed by United.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(3) The proposed construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and exchange of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) United and Transco are able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon United's and Transco's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to United Gas Pipe Line Company and Transcontinental Gas Pipe Line Corporation, authorizing the construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon United's and Transco's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the exchange of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

VALLEY GAS TRANSMISSION, INC., DOCKET NO. CP65-283

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1965)

On March 11, 1965, Valley Gas Transmission, Inc. (Applicant) filed in Docket No. CP65-283 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, during the 12-month period commencing with the date on which this order issues, and operation of routine field facilities to enable it to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augument Applicant's ability to act with reasonable dispatch in contracting for and connecting new and existing supplies of natural gas in various producing areas generally coextensive with its system.

The total cost of the proposed facilities will not exceed a maximum of $500,000, and no single project will exceed a cost of $50,000. The proposed facilities will be financed with funds from internal sources and by means of financing already arranged.

Applicant requests that the Commission waive Sections 157.7(b)(1)(i) and 157.7(b)(1)(ii) of the Regulations under the Natural Gas Act. These sections impose limitations on the total and single project expenditures for "budget-type" gas purchase facilities to be constructed pursuant to Section 157.7(b) of the Regulations. Applicant requests such waiver in order that it may be afforded greater flexibility in attaching reserves without delays resulting from the processing of individual certificate applications. In view of the size and nature of Applicant's operations, it appears appropriate to waive the aforementioned sections of the Regulations in this proceeding.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 29, 1960, in Docket No. G-19618 (25 FPC 233).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the requirements of Sections 157.7(b)(1)(i) and 157.7(b)(1)(ii) of the Regulations under the Natural Gas Act should be waived, and that the authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date on which this order issues, and that total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000 with no single project to exceed a cost of $50,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Valley Gas Transmission, Inc., to construct during the 12-month period commencing on the date on which this order issues, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization herein granted, a statement in compliance with Section 157.7(b)(3) of the Regulations under the Natural Gas Act.

(D) The requirements of Sections 157.7(b)(1)(i) and 157.7(b)(1)(ii) of the Regulations under the Natural Gas Act are hereby waived, and the authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures on facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $50,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-166

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1965)

On March 19, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP65-166 an application to amend its then-pending application for a certificate of public convenience and necessity filed in said docket by requesting the Commission to waive the limitations set forth in Section 157.7(c)(1)(ii) of the Regulations under the Natural Gas Act and to permit Applicant to construct and operate facilities for the sale of natural gas for purposes enumerated in the subject amendment, all as more fully set forth in the application to amend.

The Commission issued a "budget-type" certificate in Docket No. CP65-166 on March 22, 1965, 33 FPC 588, authorizing Applicant to construct during the calendar year 1965 and to operate facilities for the sale of natural gas for purposes set forth in Section 157.7(c)(1)(ii) of the Regulations under the Natural Gas Act. In its application to amend Applicant requests additional authorization to construct and operate facilities for sales for uses other than those specified in Section 157.7(c)(1)(ii) of the Regulations.

Construction and operation of facilities and deliveries of natural gas for such purposes will be within the cost, time, and other limitations specified in Section 157.7(c) of the Regulations under the Natural Gas Act. Sales of natural gas for the purposes specified will not replace or supplement gas purchased from a distributor or other natural gas company.

Rather than delineate the specific purposes for which natural gas may be used under "budget-type" certificates we are of the opinion that the regulations covering the types of services which may be rendered under "budget-type" certificates should be broadened and we are so doing under an amendment of Section 157.7(c)(1)(ii) so as to permit

> Direct sales of natural gas to consumers located in areas outside the franchise area of any local distributor.

The "budget-type" certificate issued to Applicant will be amended to conform to the terms of the amended regulation.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the application to amend has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity to Applicant in Docket No. CP65-166 should be amended as hereinafter ordered.

The Commission orders:

The order issuing a certificate of public convenience and necessity to Applicant in Docket No. CP65-166 be and the same is hereby amended by waiving the limitations set forth in Section 157.7(c)(1)(ii) of the Regulations under the Natural Gas Act and authorizing Applicant to construct and operate facilities and to deliver natural gas to consumers located in areas outside the franchise area of any local distributor.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, CP61-143; NATURAL GAS PIPELINE COMPANY OF AMERICA, CP61-149; ARKANSAS LOUISIANA GAS COMPANY, CP61-163

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued May 25, 1965)

Colorado Interstate Gas Company (Colorado Interstate) on March 29, 1965, Natural Gas Pipeline Company of America (Natural) on April 1, 1965, and Arkansas Louisiana Gas Company (Arkansas Louisiana) on March 15, 1965, filed in the above-designated dockets their respective applications to further amend an order of the Commission issued on January 3, 1963, 29 FPC 8, in Docket No. CP61-143, *et al.*, and amended December 30, 1963, 30 FPC 1615 and June 2, 1964, 31 FPC 1332, which order and amendments authorized (1) the construction and operation of certain facilities and the exchange of natural gas between Natural, Colorado Interstate and Arkansas Louisiana limited in duration to May 1, 1965; and (2) a transaction by which gas sold by Colorado Interstate to Arkansas Louisiana is delivered by Colorado Interstate to Natural in exchange for gas delivered by Natural to Arkansas Louisiana limited in duration to May 1, 1965, all as more fully set forth in their respective applications.

Colorado Interstate, Natural, and Arkansas Louisiana seek to amend the order issuing certificates of public convenience and necessity in the above dockets so as to extend the short-term interruptible field sale and exchange of natural gas authorized therein to May 1, 1966, from the present expiration date of May 1, 1965. In addition to the requested extension of duration of the exchange period and short-term interruptible field sale, Colorado Interstate and Natural seek authorization to increase the maximum daily quantity of natural gas exchanged from 25,000 Mcf daily to 35,000 Mcf daily.

The order of the Commission issued January 3, 1963, as amended December 30, 1963, and June 2, 1964, in the subject dockets authorized Colorado Interstate to sell up to 25,000 Mcf of natural gas daily to Arkansas Louisiana from the Mocane Laverne area in the Oklahoma Panhandle area on a short-term interruptible basis and the exchange of equivalent volumes of natural gas between Colorado Interstate and Natural in order to effect said sale. Deliveries are made to Arkansas Louisiana by Natural at a point in Grady County, Oklahoma for the account of Colorado Interstate, and equivalent volumes are delivered by Colorado Interstate to Natural at an interconnection between their two systems in the Mocane Field in Oklahoma.

Colorado Interstate states it continues to have a supply of gas in excess of its market requirements, and that the proposed extension of duration of the sale to Arkansas Louisiana will provide Colorado Interstate with an additional market for the years 1965 and 1966.

Colorado Interstate[1] and Natural[2] have filed revised tariff sheets reflecting an extension of term to May 1, 1966, under Colorado Interstate's sale and exchange schedules X-12 and X-14, respectively, and under Natural's exchange rate schedule X-8, which are requested to become effective as of May 1, 1965.

---

[1] *Rate Schedule X-12.* Fourth Revised Sheet Nos. 37 and 39, Superseding Third Revised Sheet Nos. 37 and 39; Sixth Revised Sheet No. 38, Superseding Fifth Revised Sheet No. 38; Third Revised Sheet No. 39A, Superseding Second Revised Sheet No. 39A; and First Revised Sheet No. 39B, Superseding Original Sheet No. 39B; all of CIG's FPC Gas Tariff, 2nd Revised Volume No. 2.

Rate Schedule X-14. Second Revised Sheet No. 47, Superseding First Revised Sheet No. 47, and Fifth Revised Sheet No. 49, Superseding Fourth Revised Sheet No. 49 of CIG's FPC Gas Tariff, 2nd Revised Volume No. 2.

[2] *Rate Schedule X-8.* Third Revised Sheet No. 32. Fifth Revised Sheet Nos. 33 and 34 to Natural's FPC Gas Rate Tariff, Second Revised Volume No. 2.

Due notice of the subject applications to amend and opportunity for hearing has been given by publication in the Federal Register on April 13, 1965 (30 F.R. 4729) in Docket No. CP61-143; April 10, 1965 (30 F.R. 4702) in Docket No. CP61-149; and March 25, 1965 (30 F.R. 3890) in Docket No. CP61-163. No protest, petition to intervene, notice of intervention or request for hearing has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require (1) that the Commission's order issued January 3, 1963 in Docket No. CP61-143, *et al.*, and amended December 30, 1963, and June 2, 1964, be further amended so as to (a) extend the short-term interruptible field sale and exchange of natural gas authorized therein to May 1, 1966, from the present expiration date of May 1, 1965, and (b) authorize an increase in the maximum daily quantity of natural gas exchanged from 25,000 Mcf daily to 35,000 Mcf daily, and (2) the filed revised tariff sheets reflecting an extension of term to May 1, 1966 under Colorado Interstate's sale and exchange schedules X-12 and X-14, respectively, and under Natural's exchange rate schedule X-8 be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) The Commission's order issued January 3, 1963 in Docket No. CP61-143, *et al.*, and amended December 30, 1963, and June 2, 1964, be and the same is hereby further amended so as to extend the short-term interruptible field sale and exchange of natural gas authorized thereby to May 1, 1966, from the present expiration date of May 1, 1965, and to authorize an increase in the maximum daily quantity of natural gas exchanged from 25,000 Mcf daily to 35,000 Mcf daily, as requested in the applications to amend filed herein.

(B) Colorado Interstate's Fourth Revised Sheet Nos. 37 and 39, Superseding Third Revised Sheet Nos. 37 and 39; Sixth Revised Sheet No. 38, Superseding Fifth Revised Sheet No. 38; Third Revised Sheet No. 39A, Superseding Second Revised Sheet No. 39A; and First Revised Sheet No. 39B, Superseding Original Sheet No. 39B; all of Colorado Interstate's FPC Gas Tariff, 2nd Revised Volume No. 2; Second Revised Sheet No. 47, Superseding First Revised Sheet No. 47, and Fifth Revised Sheet No. 49, Superseding Fourth Revised Sheet No. 49 of Colorado Interstate's FPC Gas Tariff, 2nd Revised Volume No. 2; and Natural's Third Revised Sheet No. 32, Fifth Revised Sheet Nos. 33 and 34 to Natural's FPC Gas Tariff, Second Revised Volume No. 2 be accepted for filing to become effective on the date this order issues.

(C) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EASTERN MAINE ELECTRIC COOPERATIVE, INC., DOCKET NO. E-6475

ORDER SUBSTITUTING HOLDER OF PRESIDENTIAL PERMIT

(Issued May 25, 1965)

The Eastern Maine Electric Cooperative, Inc. (Eastern Maine), incorporated under the laws of the State of Maine and doing business in the State of Maine with its principal place of business in Calais, Maine, filed an application on April 12, 1965 for the substitution of the holder of the Presidential Permit issued to the Kingman Electric Cooperative of Kingman, Maine on May 27, 1953. Eastern Maine states that it recently acquired the assets and liabilities of the Kingman Electric Cooperative (Kingman) which includes facilities for the transmission of electric energy from New Brunswick, Canada to Forest City, Maine which were originally owned and operated by Kingman and authorized pursuant to a Presidential Permit issued May 27, 1953, under Docket No. E-6475.

Eastern Maine further states that no change in the physical connection at the boundary or in the contracts involved with the transfer of power has been made as a result of this consolidation and change of ownership. It appears that Eastern Maine does not intend to export electric energy from the United States to Canada over the facilities in question. Eastern Maine in effect only seeks a substitution of the holder of the Presidential Permit.

The Commission finds:

Amendment of the Presidential Permit issued in Docket No. E-6475 to reflect the change of name of the Permittee, Kingman Electric Cooperative by reason of its acquisition by Eastern Maine Electric Cooperative, Inc. will not be inconsistent with the terms of the permit.

The Commission orders:

(1) The Presidential Permit signed by the President of the United States on May 27, 1953 in Docket No. E-6475 be amended to change the name of the Permittee from Kingman Electric Cooperative to Eastern Maine Electric Cooperative, Inc.

(2) The Presidential Permit, described above be further amended to incorporate the following Article:

Article 11. The Permittee shall report annually to the Commission on or before February 15, in triplicate, the amount of energy imported during each month of the preceding calendar year, the maximum rate of importation and the consideration therefor.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LAKE SUPERIOR DISTRICT POWER COMPANY, PROJECT NO. 2390

ORDER ISSUING LICENSE (MAJOR)

(Issued May 25, 1965)

Application was filed on August 1, 1963 by Lake Superior District Power Company (Applicant) of Ashland, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2390, known as Big Falls Hydro Plant, located on the Flambeau River in Rusk County, Wisconsin, in the vicinity of the City of Ladysmith and the Village of Tony. No lands of the United States are affected by the project.

Construction of the project was completed in 1923 and there has been no substantial construction at the project since that date.

Applicant does not believe a license is required for its project. However, Applicant requests that if a license is issued, it should have a current effective date. In a proceeding on an application for license filed by Dairyland Power Cooperative for Project No. 1960 on the Flambeau River, the Commission, on November 17, 1949, found in its Findings and Order issuing a license for Project No. 1960, among other things, that the Flambeau and Chippewa Rivers, together with the Mississippi River were used for a number of years as a highway for the floating and rafting of quantities of logs and lumber in interstate commerce, and that the Flambeau River at least from a point above Project No. 1960, and the Chippewa River at least from its point of confluence with the Flambeau River, constitute navigable waters of the United States (8 FPC 1276, 1278). Project No. 1960 is located on the Flambeau River at river mile 25.5 and Project No. 2390 is located about 4½ miles upstream therefrom. After the log supply had been depleted on the lower tributaries of the Chippewa, logs were floated down the Flambeau and during the logging season from 4,000 to 5,000 men were employed on the North and South Forks of the Flambeau and on its tributaries, the Jump and Elk Rivers and their tributaries, in connection with running logs on those streams. The North and South Forks join to form the main Flambeau River at a point about 17 miles above Project No. 1960, some 13 miles upstream from Project No. 2390.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962, and a termination date of December 31, 1993, since there has been no substantial construction of the project subsequent to its completion in 1923, and the reach of the Flambeau River in which Project No. 2390 is located has not heretofore been determined to be a navigable water of the United States.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, advised that the project, as currently operated, does not affect adversely the fish and wildlife resources, and that the provisions contained in Form L-3, which is attached hereto, are adequate.

The Department of Health, Education, and Welfare has advised that there are no apparent pollution or vector control problems created or intensified by the operation of the project, and no special conditions were recommended for inclusion in any license for the project.

The Public Service Commission of Wisconsin reported on the application but made no recommendation with respect thereto.

The Exhibit R, being one typewritten page, submitted as part of the application, shows existing outdoor recreation facilities but contains no plans for future recreational development for which there is a potential need. Applicant indicated willingness to continue to cooperate with Federal, State and local officials to provide for the maximum recreational use of the project site. By Article 32 herein we are requiring Applicant to continue cooperation in the interest of outdoor recreation and to file a revised Exhibit R for Commission approval within two years, showing a proposed plan for development to meet future recreational needs.

The Commission finds:

(1) The Flambeau River from its confluence with the Chippewa River to at least the North and South Forks of the Flambeau is a navigable water of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 10,400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's Rules and Regulations and should be approved as part of the license for the project.

(8) Exhibit R filed as part of the application conforms substantially to the Commission's Rules and Regulations and should be approved as part of the license for the project insofar as it indicates present recreational use.

The Commission orders:

(A) This license is hereby issued to Lake Superior District Power Company (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of major Project No. 2390, located on the Flambeau River in Rusk County, Wisconsin, and affecting navigable waters of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Big Falls Hydro Plant Project No. 2390 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

***Exhibit J:* (FPC No. 2390-1) entitled "Big Falls Development—Flambeau River, Wisconsin-Lake Superior District Power Company, Ashland, Wis." signed for Lake Superior District Power Company by M. E. Juhl on July 30, 1963.**

***Exhibit J-1:* (FPC No. 2390-2) entitled "Big Falls Development—Flambeau River, Wisconsin-Lake Superior District Power Company, Ashland, Wis." signed for Lake Superior District Power Company by M. E. Juhl on July 30, 1963.**

***Exhibit K:* (FPC No. 2390-3) entitled "Big Falls Development—Flambeau River, Wisconsin-Lake Superior District Power Company, Ashland, Wis." signed by M. E. Juhl for Lake Superior District Power Company on July 30, 1963.**

(ii) project works consisting of: A dam 2,196 feet long consisting of earth embankments with reinforced concrete core walls resting on bed rock, and a reinforced concrete gravity spillway section having 8 floodgates, 14 feet high and 35 feet long; a reservior of about 380 acres extending 4.5 miles upstream from the dam; a powerhouse of brick construction 105 feet by 68 feet, containing 3 generating units totaling 7,780 kilowatts; and other appurtenant mechanical and electrical facilities; the location, nature and character of which are more

specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed a part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawing of Big Falls Development (FPC Nos. 2390-4 through -11), signed by M. E. Juhl, President of Lake Superior District Power Company on July 30, 1963.

Exhibit M: Two typewritten pages describing the mechanical, electrical and transmission equipment of the project, filed in the Commission August 1, 1963.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Article 1 through 29, are attached hereto and made a part hereof, except Article 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge effective as of April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 10,400 horsepower.

Article 31. The Commission reserves the right to determine at a later date what transmission facilities, if any, should be included in the license as part of the project works.

Article 32. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of such additional facilities as may be necessary for full recreational utilization by the public of project lands and waters consistent with the terms of the license and the operation of the project and shall within two years of the date of issuance of this license file for Commission approval a revised Exhibit R in conformance with the requirements of Section 4.41 R of Regulations under the Federal Power Act.

Article 33. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) The Exhibit R referred to in finding (8) above is hereby approved as part of this license to the extent indicated in the finding.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-210

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1965)

On January 11, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-210 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Specifically, Applicant seeks authorization to construct and operate three farm taps and two measuring and regulating stations and appurtenances for the establishment of five new delivery points for the delivery of gas to two distributors, American Gas Company of Wisconsin (American) and Applicant's Peoples Natural Gas Division (Peoples) for resale. The delivery point locations will be as follows:

Distributor	*Location of Delivery Point*
American	Rusk County, Wisconsin
Peoples	Colfax County, Nebraska
Peoples	Black Hawk County, Iowa
Peoples	Gray County, Kansas
Peoples	Jasper County, Iowa

American and Peoples will reimburse Applicant for the entire cost of construction of the new facilities, which is estimated to be $5,003. Total estimated maximum firm and interruptible sales of natural gas are 59 Mcf and 158 Mcf per day, respectively.

Applicant's policy of requiring distribution customers to make a contribution toward the costs of measuring and regulating facilities and appurtenances where no additional contract demand gas is purchased is now incorporated in Applicant's tariff on file with the Commission.

Due notice of the filing of the application was published in the Federal Register on January 29, 1965 (30 F.R. 968). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation, having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Northern Natural Gas Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65–221

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1965)

On January 21, 1965, Northern Natural Gas Company (Applicant), Omaha, Nebraska, filed in Docket No. CP65–221 a "budget-type" application, as supplemented on February 11, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during calendar year 1965 and the operation of natural gas facilities, all as more fully set forth in the application.

Applicant specifically seeks authorization to construct and operate gas sales facilities for the establishment of new and additional unspecified delivery points. Applicant estimates that 64 new delivery points will be constructed in 1965, of which 24, costing an estimated $60,000, will enable its Peoples Division to make direct sales in the field to irrigation and farm customers. Forty new delivery points, costing an estimated $240,000, will be installed for delivery of gas for resale to existing distributors in existing market areas. Financing of the total cost of $300,000 will be from cash on hand and from funds generated through operations.

Applicant also requests waiver of the provisions of Section 157.7(c)(1)(i) prohibiting the filing of an abbreviated application when a distributor is required to make a contribution to the Applicant for cost of construction of facilities. Applicant's policy of requiring distribution customers to make a contribution toward the costs of measuring and regulating facilities and appurtenances where no additional contract demand gas is purchased by the distributor is now incorporated in Applicant's tariff on file with the Commission.

Due notice appeared in the Federal Register on February 5, 1965 (30 F.R. 1269). No petition to intervene, notice of intervention or protest to the granting of the application was filed.

At a hearing held on May 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) Good cause has been shown for waiver of that portion of Section 157.7(c)(1)(i) of the Commission's Regulations under the Natural Gas Act which

prohibits the filing of an abbreviated application where contribution toward the cost of the facilities is to be required of distributors.

(8) The authorization hereinafter granted should be limited to construction during the calendar year 1965, the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(9) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of subparagraph (7) of Section 157.7(c) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application, as supplemented.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of subparagraph (7) of Section 157.7(c) of the aforesaid Regulations and, further, the certificate is granted upon the express condition that any interruptible service resulting herefrom shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) This certificate shall not entitle any industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(G) Applicant's request for waiver of that portion of Section 157.7(c)(1)(i) of the aforesaid Regulations which prohibits the filing of an application where contribution to the cost of facilities is to be required from distributors, is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANIES—BUDGET APPLICATIONS—DIRECT SALES, DOCKET NO. R-275

ORDER NO. 298

AMENDING REGULATIONS UNDER THE NATURAL GAS ACT

(Issued May 25, 1965)*

Section 157.7(c)(1)(ii) of the Regulations allows a pipeline company to request budget-type certificate authority to make direct sales of natural gas to consumers, located outside of local distributors' franchise areas, who will use the gas solely for certain specifically designated purposes. Recent applications under this section indicate that there are other purposes for which such relatively minor direct sales are made. There is no apparent reason why they, too, should not be permitted in a budget-type certificate, provided such sales are within the cost, time, volume, end-use and other limitations set out in the other portions of paragraph (c) of the section. We are, therefore, amending the rule to effect this change.

The Commission finds:

(1) The amendment adopted herein is necessary and appropriate for the purposes of the administration of the Natural Gas Act.

(2) Since this amendment imposes no new requirement on the persons affected thereby but, rather, relaxes existing requirements; and in view of the fact that the comments on the provision being amended herein (submitted by distributing companies during the proceeding in Docket No. R-254 which culminated in the rule now being amended) were not concerned with the purposes for which direct sales were made so long as their existing franchise was protected, it is unnecessary to comply with the notice, hearing and effective date requirements of section 4 of the Administrative Procedure Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7 and 16 thereof (52 Stat. 825, 830; 56 Stat. 83; 15 U.S.C. 717f, 717o) *orders:*

(A) Effective upon the issuance of this order, subdivision (ii) of § 157.7(c)(1) of Regulations Under the Natural Gas Act, Subchapter E. Chapter I of Title 18 of the Code of Federal Regulations, is amended to read as follows:

"§ 157.7 Abbreviated applications.

* * * * * * *

(c) *Gas-sales or transportation facilities—budget-type application.* * * *

(1) * * *

(ii) Direct sales of natural gas to consumers located in areas outside the franchise area of any local distributor."

[Secs. 7, 16, 52 Stat. 825, 830, 56 Stat. 83; 15 U.S.C. 717f, 717o.]

(B) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

---

*Published in the Federal Register on June 2, 1965 (30 F.R. 7280).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 1447

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued May 25, 1965)

Application was filed on December 22, 1964 and suplemented on March 11, 1965 by Pacific Power & Light Company (Applicant) under Section 6 of the Federal Power Act for surrender of its license for major Project No. 1447, known as the Cove Hydroelectric Project, located on Crooked River in Jefferson County, Oregon, and affecting lands of the United States.

The Cove project consisted of a low rock-fill diversion dam across Crooked River, an open conduit about 1,700 feet long extending from the dam to a reinforced concrete powerhouse containing two water wheels, one connected to a 700 kilowatt generator, the other connected to a 400 kilowatt generator, with appurtenant facilities, and a 22 kva transmission line 1.9 miles long. The energy was used by Applicant for public utility purposes.

The application for surrender was required to be filed by the provisions of Article 46 of the Commission's order issued September 12, 1960,[1] in connection with Portland General Electric Company's then proposed Round Butte Project No. 2030, which contemplated the flooding out by Project No. 2030 of Project No. 1447. Article 46 states that PGE, prior to starting construction of the Round Butte project, should enter into agreement with the Bureau of Reclamation, relating, among other things, to the settlement of rights and interests involved in the inundation of the Cove plant Project No. 1447 by the Round Butte Project. A copy of such an agreement was filed as Exhibit C of the application for surrender.

We are advised by Applicant in the aforementioned March 11, 1965 filing that the reservoir of the Round Butte Project had inundated the Cove Project reservoir and that the water level of the Round Butte reservoir was at such a height on January 31, 1964 that the Cove plant could not have been operated even if the equipment had not already been removed.

The Commission finds:

(1) Annual charges under the license for Project No. 1447 have been paid through December 31, 1963, and Applicant's copy of the license instrument was returned with the application for surrender.

(2) Public notice of the application has been given. No protests or petitions to intervene have been received.

(3) Acceptance of surrender of the license for Project No. 1447 is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 1447 is hereby accepted effective as of January 31, 1964, subject to the payment of annual charges through said date in the amount of $7.67.

---

OPINION NO. 460

SOUTHERN NATURAL GAS COMPANY v. UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63-7

OPINION AND ORDER ON COMPLAINT REQUESTING A REDUCTION IN MAXIMUM DAILY QUANTITY OF GAS TO BE TRANSPORTED

(Issued May 25, 1965)*

Syllabus

1. United's Rate Schedule No. T-3 does in fact provide for fixed billing demand of 55,460 Mcf per day for transportation service and charges therefor properly have been computed at that amount since January 3, 1953. PP. 1080-1081.
2. Commission *concludes* Southern has presented sufficient basis for reduction in billing demand to daily amount of 35,294 Mcf, commencing on date of issuance of this opinion and extending prospectively therefrom. P. 1081.
3. Under instant circumstances Commission *holds* Southern has clearly waived any contractual right it might have had to declare original conversion tariff voidable under *Mobile*. P. 1081.
4. At time Southern filed its complaint in February, 1963 conversion tariff constituted United's filed and lawful rate within meaning of *Montana-Dakota* and thus lawful rate for the service—under Section 5(a) of the Gas Act such rate is alterable prospectively only. P. 1081.
5. As long as Southern has had unconditional right to utilization of subject capacity in United's line, it should be required to pay therefor whether used to maximum during all billing periods or not. P. 1082.
6. Considering special circumstances here, continuation of charge based on fixed demand of 55,460 Mcf is not just and reasonable; such billing demand should be reduced to 35,294 Mcf per day. P. 1083.
7. In a proceeding arising under Section 5 of the Natural Gas Act, Commission *grants* complainant's request for reduction in maximum daily quantity of gas to be transported.

Commissioner Ross *dissenting*.

William S. Tarver, *Peter G. Smith* and *H. D. McHenry* for Southern Natural Gas Company

Thomas Fletcher for United Gas Pipe Line Company

Francis J. McShalley for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

O'CONNOR, *Commissioner:*

This proceeding arose on a formal complaint filed with the Commission in February 1963 by Southern Natural Gas Company (Southern) against United Gas Pipe Line Company (United). The question for decision is whether, under a transportation service provided by United for Southern, the billing demand is flexible, depending on the maximum volume of gas tendered for transportation, or is a definite amount fixed by United's tariff. Southern contends that it has the contractual right to reduce the billing demand below the 55,460 Mcf[1] per day provided in the tariff and that United unlawfully denies it that right. Southern requests, *inter alia*, (1) that the Commission recognize such contract right to reduce the billing demand for gas transported by United; (2) that if the Commission finds that United's tariff worked an abrogation of the billing demand provision of the contract, it reduce the billing demand to a henceforth required amount of 35,294 Mcf per day, the maximum quantity Southern expects to tender in the future; and (3) that United be required to submit to Southern a service agreement providing for Southern's right to reduce the billing demand in the future as provided in the contract.

---

* Initial decision appears on P. 1085. See order issued July 20, 1965 denying rehearing, instituting new proceedings, etc., 34 FPC 88. Affirmed *Southern Natural Gas Co. v. F.P.C.*, 361 F. 2d 70 (CADC-1966).

[1] Unless otherwise noted all volumes are at 14.9 psia.

United, in its answer to the complaint, relies upon its currently effective Rate Schedule T–3 as contained in its FPC Gas Tariff, First Revised Volume No. 1, under which the service is performed, and filed pursuant to a settlement agreement to which Southern subscribed. This schedule provides for a fixed billing demand of 55,460 Mcf per day. United contends that the billing demand is fixed at the tariff amount, irrespective of the volumes of gas actually tendered by Southern for transportation; that, in executing the transportation contract, it intended to reserve, and has to the present reserved, 55,460 Mcf per day capacity in its Carthage-Sterlington line for use in the transportation of gas of Southern; and that, in any event, Southern, by its acquiescence to such a fixed bill over a period of years, is now estopped from complaining of its terms. The staff of the Commission supports the position of Southern.

The matter is now before us on exceptions filed by United to an initial decision issued November 30, 1964, by Presiding Examiner Ewing G. Simpson in which he held that United must revise its tariff, effective May 1, 1963, to provide a flexible billing demand in accordance with the terms of the transportation contract between the parties. As an alternative thereto, the Examiner would permit United to file a new service agreement giving Southern the right to reduce the maximum daily quantity for which charges are computed to the maximum quantity tendered for transportation on any day in the preceding twelve-month period ending with the last day of the billing month, accompanied by such other filing as required to effect a reduction in United obligation to receive gas for transportation to a maximum of 35,294 Mcf per day. Briefs in opposition to United's exceptions have been filed by Southern and the Staff.

The record shows that prior to 1945 United had an obligation to sell to Southern approximately 30 percent of the latter's line requirements, limited, however, to gas produced by United in the Monroe Field in northern Louisiana. This field was declining at that time to the point where United could not continue to meet the demands of its customers. To remedy this situation United, early in 1945, applied for a certificate in Docket No. G–622 to construct a 24-inch pipeline from the Carthage Field, Panola County, Texas to the Monroe Field for the purpose, among others, of transporting gas for Tennessee Gas and Transmission Company (now Tennessee Gas Transmission Company) and enabling United to transport its own purchased gas into the Monroe Field area for sale to its customers served therefrom, including Southern. The requested certificate was issued in July 1945. See *United Gas Pipe Line Co.*, Docket No. G–622, Opinion No. 124, 4 FPC 307.

At the same time that United's application was pending, Southern, having control through a subsidiary, Southern Production Company (Production), of reserves in the Carthage Field, applied to the War Production Board for an allocation and preference rating for the necessary pipe and material to construct its own transportation line, subject to the alternate utilization of a portion of the capacity of United's proposed line. At the suggestion of the Board, which had issued United an allocation, and having knowledge that United's line would have excess capacity, at least in its initial years of operation,[2] Southern withdrew its own application for a line to Carthage.

---

[2] 4 FPC at pp. 315–316.

On September 7, 1945, United entered into a contract with Southern (Rate Schedule No. 87) to supply 26 percent of Southern's requirements out of the Carthage Field in lieu of its former commitment from the Monroe Field. On the same day Production contracted to sell to United the gas produced by it in the Carthage Field with the intent, but without firm assurance, that the volumes thereof would be transported and sold to Southern at Monroe. The contract was subject to cancellation by Production on an option held by Southern to purchase Production's gas. By 1949 United's obligatory deliveries to Southern had grown to more than 115,000 Mcf, and Southern's need for additional gas was continually increasing. During 1950 United advised Southern that it had begun to experience shortages at Carthage and might not be able to continue the delivery of the present quantities, much less meet Southern's requests for increases. Seeking to assure a continued supply of Carthage Field gas to the greatest extent possible, Southern exercised its option to purchase Production's gas, thereby forcing the cancellation of the Production-United contract, and reducing United's ability to sell Carthage gas to Southern from 115,000 Mcf to 60,000 Mcf per day. Thereupon, on May 7, 1951, four interrelated and interdependent contracts were executed: (1) Southern entered into a contract for the purchase of Carthage gas from Production; (2) United and Production entered into a contract whereby United would gather and process the gas; (3) United and Southern entered into the transportation contract involved in this proceeding, providing for United's transportation from Carthage to Monroe of the residue gas purchased by Southern from Production; and (4) United and Southern contracted for a reduction in United's sales obligation to Southern (exclusive of the transportation gas) from 115,000 Mcf to 60,000 Mcf per day, thereby maintaining the necessary capacity in United's Carthage-Sterlington line for the continued transportation of the Production gas.

In the May 1951 transportation contract United agreed to receive from Southern at the Carthage delivery point for transportation "such quantities of natural gas as Southern may elect, from time to time, up to but not exceeding fifty-five thousand Mcf in any one day." The 55,000 Mcf was at the contract pressure base of 15.025 psia and was equivalent to the earlier figure of 55,460 Mcf at 14.9 psia. The contract provided (Article VIII) for a demand charge based on a billing demand defined as:

> * * * the maximum volume of gas which Southern has elected to deliver to United for transportation hereunder in any one day, up to and including fifty-five thousand (55,000) Mcf * * * during the twelve (12) month period ending with the last day of the billing month. * * *

Since the gas was now Southern's, the commodity charge previously applicable was eliminated. The originally proposed demand charge of 45 cents per Mcf was reduced by Commission order to 38 cents per Mcf.

On July 2, 1952, United filed the transportation contract as its Rate Schedule No. 126-B. The schedule became effective July 23, 1952, at which time the transportation of gas commenced thereunder. Southern's initial nomination was for 44,500 Mcf per day and billings were rendered at this figure for the next few months.

On July 3, 1952, one day after the filing of its transportation rate schedule, United filed at Docket No. G-2019 its conversion tariff pursuant to Order No. 144 restating its rates in tariff form and proposing a general rate increase. The tariff was suspended until January 3, 1953, at which time it went into effect subject to refund. In accordance with the then recent amendments to Section 154.85 of the Regulations Under the Natural Gas Act, United included with its filing a statement identifying those portions of the transportation contract stated to be continued in effect as an executed service agreement and not superseded by the gas tariff. The above-quoted portion of the contract, defining and specifying the billing demand, was not listed as being retained. Southern raised no issue at that time, nor did it do so until the present case, with respect to the changes in the rate schedule, nor did Southern assert that the provisions thereof were improper as contrary to the transportation contract. Commencing with the effectiveness of the tariff on January 3, 1953, United began to bill and Southern began to pay without protest a demand charge based on an amount of 55,460 Mcf per day, although it was not until January 25, 1956, 3 years later, that Southern first requested the transportation of the maximum figure. United's conversion tariff became part of a complex of consolidations under lead docket No. G–1142, eventually resulting in a settlement effective August 1, 1954, approved by the Commission in Opinion No. 277, 13 FPC 398, issued November 2, 1954.

Southern was a party by intervention to United's rate cases consolidated at Docket No. G–1142 which culminated in the acceptance of the revised conversion tariff. The tariff, and the underlying exhibits, listed Southern's maximum daily quantity for the transportation service at 55,460 Mcf. Except for a variation in the transportation rate, the rate schedule and the maximum daily quantity listed therein have remained unchanged to the present. In the settlement the parties expressly refrained from agreement on the rate-making principles underlying the rates reflected therein, and they specified that the settlement was to be without prejudice to the rights or contentions of any party in any future proceeding. The Commission's Opinion so provides.[3] Since that time United has filed nine rate increases to which Southern has been a party in the proceedings. Seven of the increases were settled out in March 1962, 27 FPC 504. The eighth and ninth increases were Docket Nos. RP63–1 and RP65–1, leading in the first instance to Opinion No. 428, 31 FPC 1180, and eventually to the settlement order issued December 23, 1964, 32 FPC 1515. On each occasion the settlement agreement provided that it constituted only a dollar settlement and that no methods underlying the determination of the dollar amounts were approved.

From January 25, 1956, and continuing through the winter of 1961–1962 Southern frequently requested and received the transportation of the maximum 55,460 Mcf per day. However, the Production[4] reserves have now been depleted to the point where they are physically unable to produce this amount of gas. Since April 18, 1962, Southern has requested the transportation of no more than 35,294 Mcf in any day and has asked that, under the terms of the billing demand provision in the transportation contract, the maximum daily quantity utilized in computing the charges be reduced to this figure. United has refused to comply on the ground that Southern must continue to pay a bill based on the 55,460 Mcf amount even though at no time can this quantity ever again be transported.

The issues in this proceeding, as enumerated in our February 27, 1964 order,[5] are stated in the initial decision. On our consideration of the record made, the briefs of the parties, and the exceptions to the Examiner's decision and the replies thereto, we conclude that United's Rate Schedule No. T–3, contained in the conversion tariff filed pursuant to our Order No. 144, as initially effective January 3, 1953, and as finally approved in the settlement effective August 1, 1954, thereafter included as a part of United's FPC Gas Tariff, First Revised Volume No. 1, does in fact provide for a fixed billing demand of 55,460 Mcf per day for the transportation service provided Southern and that the charges properly have been computed at that amount since January 3, 1953, to the present date. We further conclude that, based on the evidence adduced in this case and for the reasons hereinafter stated, Southern has presented a sufficient basis for a reduction in the billing demand to a daily amount of 35,294 Mcf, such reduction to commence on the date of issuance of this opinion and to extend prospectively therefrom. More particularly, we disagree with the Examiner in his determinations that no effect should be given to Southern's failure to lodge a timely complaint to the change from the contract billing demand in the conversion tariff submitted for filing and that Southern should be accorded retroactive relief.

---

[3] 13 FPC at pp. 419–420.

[4] The present seller is Sinclair Oil & Gas Company which has succeeded to the interests of Production under the contract and in the oil and gas leases subject thereto.

[5] 31 FPC 468.

It is possible that, had Southern made timely objection to the conversion tariff, the Rate Schedule T-3 would have been voidable under the rule enunciated by the Supreme Court in *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332 (1956), or, if not so voidable, the Commission would have ordered the tariff modified to provide for a flexible billing demand. Southern, however, not only did not protest the change the tariff made in its contract rights but operated without objection thereunder for a three-year period from January 3, 1953, to January 25, 1956, despite the fact that during this entire period it *never* requested transportation of the maximum quantity and instead, in a series of eleven separate transportation requests, specified amounts ranging from 45,377 Mcf to 9,832 Mcf per day. Under these circumstances we hold that Southern has clearly waived any contractual right it might have had to declare the original conversion tariff voidable under the *Mobile* case. It necessarily follows that, at the time of its complaint in February 1963, the provisions of the conversion tariff constituted United's filed rate within the meaning of *Montana-Dakota Utilities Co.* v. *Northwestern Public Service Co.*, 341 U.S. 246 (1951), and thus was the lawful rate for the service. Pursuant to our authority under Section 5(a) of the Natural Gas Act, this rate is alterable prospectively only.

The dissent suggests that the Supreme Court in the *Mobile* case, *supra*, and the District of Columbia Circuit in *Tyler Gas Service Co.* v. *Federal Power Commission*, 247 F. 2d 590, cert. den. 355 U.S. 895, have indicated that the underlying contract provisions cannot be waived by the acquiescence of one party to an inconsistent filing by the other. We think this misreads the two cases. As the Circuit Court made clear in the *Tyler* case, *supra*, at 593, the issue both there and in *Mobile* (see *Mobile Gas Service Corp.* v. *F.P.C.*, 215 F. 2d 883, 884) was whether, where a party to a gas sales contract had acquiesced in a conversion tariff which to a minor extent varied from the original contract, such acquiescence could be claimed to be a "basis for saying that it has agreed to be bound by later unilateral rate increases". Putting it in terms of this case, *Mobile* and *Tyler* stand for the proposition that Southern's acquiescence in United's action in filing the conversion tariff without the variable demand provisions could not constitute an implied agreement by Southern to waive its rights, should United initiate subsequent modifications of the underlying contract. The cases do not suggest that the purchaser cannot waive modifications of the underlying contract.

The dissent also states that to make out a case of implied waiver there must be a "clear, unequivocal and decisive act" showing such purpose. We do not disagree. But surely the fact that Southern, having been billed at its 44,500 Mcf nomination figure from July 23, 1952, when the original contract rate schedule became effective until January 3, 1953, when the conversion tariff became effective, then proceeded to pay without objection, protest, or reservation a demand charge based on an amount of 55,460 Mcf per day, though it did not request this maximum until more than three years later, constitutes such a showing. This is particularly true when it is recognized that the conversion tariff remained the subject of a formal Commission proceeding until November 2, 1954, and throughout this period Southern, though an intervener in the proceeding, never raised any question about the elimination of the variable billing provision, even though its elimination was then adversely affecting Southern.

Moreover, even if we had discretion to make a tariff change retroactive to the date of the complaint,[6] we would not do so in the light of the circumstances involved herein. There are at least two reasons for this conclusion. First, when United executed the transportation contract and received a certificate therefor, it dedicated 55,460 Mcf of the transmission capacity of the line to the performance of its obligation to Southern, regardless of amounts under the billing demand.[7] This capacity has been available at all times to Southern; no instances are recorded and none are alleged wherein United was unable to transport the quantities of gas requested by Southern up to 55,460 Mcf per day. As long as Southern has had an unconditional right to the utilization of this much capacity in United's line, it is our opinion that Southern should be required to pay therefor, whether used to the maximum during all billing periods or not.

Secondly, an examination of the exhibits leading to the settlement in United's recent rate cases Docket Nos. RP63–1 and RP65–1 reveals that, in each instance, the revenues contemplated under the transportation service were calculated at the fixed amount of 55,460 Mcf per day.[8] Thus, the costs-of-service developed and the rates fixed for the periods there involved were determined in part on this fixed amount. It is significant that although the present case was pending before us at the time of the successful negotiation of the settlement agreement,[9] Southern made no attempt to reserve the issue of a reduced billing demand in its agreement to the settlement terms. Instead, Southern agreed to the settlement as a complete dollar satisfaction of United's pending rate cases. There is no provision under the settlement whereby the Commission could now make adjustments to reflect the rendition of this transportation service at the lesser amount, with reduced revenues to United, and to adjust the rates of its other customers to compensate therefor. Southern's failure to lodge a more timely protest has thus resulted, over the years, in the perpetuation and formalization of a charge for the service at the maximum quantity which cannot now be adjusted for past periods without imposing an unwarranted hardship on United in the way of a reduction in revenues.

However, we do agree with the Examiner that Southern has demonstrated a reason for prospectively reducing the billing demand. Section 5(a) of the Act requires that when the Commission, after hearing, finds any charge to be unjust or unreasonable, it shall determine the just and reasonable charge "to be thereafter observed and in force, and shall fix the same by order." As earlier stated, the evidence shows that since April 1962 Southern has requested the transportation of no more than 35,294 Mcf per day. The evidence also establishes that the Carthage acreage reserves have been fully developed, that the production of gas will continue to decline steadily and that no daily quantity of gas larger than 35,294 Mcf can possibly be available to Southern for future transportation. Thus, as found by the Examiner, continued use of a fixed billing demand of 55,460 Mcf per day would require that Southern pay for a service which it does not now and cannot in the foreseeable future receive. Considering these special circumstances, we find that the continuation of a charge based on the fixed demand of 55,460 Mcf is not just and reasonable and that, as requested by Southern, the billing demand should be reduced to a henceforth specified amount of 35,294 Mcf per day, the maximum quantity Southern will be able to tender in the future.

---

[6] In its reply brief Southern disclaimed any desire to seek recovery of possible overpayments for the 1953–1956 period.

[7] Article I of the transportation contract, which was expressly listed by United in the statement required by Order No. 144 as one of the provisions remaining in effect and not superseded by the conversion tariff (unlike Article VIII which was not so listed), stated in pertinent part:

> Subject to the terms and conditions hereof, United agrees to accept and receive from Southern * * * for transportation as hereinafter provided, such quantities of natural gas as Southern may elect, from time to time up to but not exceeding fifty-five thousand (55,000) Mcf [15.025 psia] in any one day.

[8] Docket No. RP63–1, Exhibit No. 1–89; Docket No. RP65–1, Exhibit No. 7–3; Stipulation and Agreement dated December 16, 1964, approved December 23, 1964, FPC Gas Tariff, First Revised Volume No. 1, Fifth Revised Sheet No. 99. Although certain of these exhibits had not been formalized at the time the record was closed in this proceeding, they are matters of which we may take administrative notice herein.

[9] The Examiner's decision was issued November 30, 1964. The settlement agreement was concluded December 16, 1964, and approved by the Commission on December 23, 1964, the same date on which United's exceptions to the initial decision were filed. Under Section 1.30 of our Rules of Practice and Procedure the parties had until December 30, 1964, within which to file their exceptions and the Commission had an additional 10 days during which it could have initiated review on its own motion. Thus, at the time of the settlement the Examiner's decision had not become final.

The practical effect of our order is that Southern will be held liable to pay for the capacity held available to it in the past while United will be free for the future to employ for its own use the excess 20,166 Mcf per day of transmission capacity. This resolution is particularly appropriate, we believe, since United's decision to construct a line of the existing size has not been shown to have been significantly influenced by any overt act of Southern to secure an absolute reservation of a specific transmission capacity. While present events may indicate that the line is overbuilt to handle the quantities of gas currently moving through it, the fault, if any, does not lie with Southern. Rather, its present excessive size seems to have been due primarily to the wartime shortages of a variety of pipe sizes and materials which precluded the installation of pipe of a smaller diameter. In this respect we note that, had United's original investment in these facilities been shown to have been predicated, even in part, on an intent of a continuous, cooperative use thereof by Southern or the granting to it of an unconditional reservation of transmission capacity, our decision herein might be different. However, a review of the record underlying Docket No. G–622, particularly the allocation and preference rating granted United by the War Production Board, establishes that no conditions to this effect were attached either to the Commission's certificate or to the authorization as granted by the Board. Consequently, this circumstance is not before us for decision.

For the reasons herein given no change in the billing practice or charge for past periods will be ordered. For future periods the maximum daily quantity, and the concomitant payment obligation of Southern, will be reduced to 35,294 Mcf at 14.9 psia. If Southern, at a time or times subsequent hereto, desires to have this amount still further reduced, thereby releasing additional transmission capacity to United, it may make a further application to the Commission. United will be required to amend its Gas Tariff in accordance with this decision.

The Commission further finds:

(1) Southern and United are natural-gas companies under the Natural Gas Act, and the transportation in interstate commerce of natural gas involved in this proceeding is subject to the jurisdiction of the Commission.

(2) The continued billing by United, from and after the date of this decision, of a transportation charge under its Rate Schedule T–3 for the service provided Southern which is the subject of this proceeding based on a maximum daily quantity and a billing demand of 55,460 Mcf at 14.9 psia is not just and reasonable; a charge based on a maximum daily quantity and a billing demand of 35,294 Mcf at 14.9 psia would be just and reasonable.

(3) United should be required to file substitute tariff sheets subject to the approval of the Commission, containing the billing demand and maximum daily

quantity herein found to be proper as set forth in Paragraph (2) above, said substitute sheets to be effective on the date of our order herein and until further order of the Commission. The filing or filings herein required should be made within 30 days of the date of issuance of this decision.

(4) Except to the extent granted herein all exceptions filed to the Examiner's decision are without substantial support in fact or in law and should be denied.

The Commission orders:

(A) Within 30 days from the date of issuance of this order, and in manner and form satisfactory to the Commission, United shall file appropriate revisions to its FPC Gas Tariff, First Revised Volume No. 1, to provide with respect to its Rate Schedule No. T-3, Transportation Service for Southern Natural Gas Company, a billing demand based on a maximum daily quantity of 35,294 Mcf per day at 14.9 psia (35,000 Mcf at 15.025 psia), to be observed from and after the date of this order and until changed by further order of the Commission.

(B) The Examiner's decision, to the extent not inconsistent herewith and as modified herein, is hereby adopted as part of this decision and order.

(C) Except as herein granted, the exceptions to the Examiner's decision are hereby denied.

Commissioner Ross *dissenting.*

Ross, Commissioner, *dissenting:*

I dissent to that portion of the Commission opinion which holds that the filing of United's conversion tariff is voidable and that Southern waived its contract rights by not protesting the change which the tariff allegedly made in its contract.

The essential facts are as follows. In May 1951 Southern and United executed a transportation agreement which was filed with the Commission as Rate Schedule No. 126-B. This contract provided for variable billing demand and United billed Southern in accordance with this provision. Thereafter, United filed a conversion tariff pursuant to Order 144 which tariff however, eliminated the variable billing demand provision of the contract. The majority accepts this much as fact. However, the legal significance it attaches thereto is erroneous.

The *Mobile* Case[1] constitutes the leading case on this issue and involved another unilateral rate filing by United. The Supreme Court declared in that case:

> From our conclusion that the Natural Gas Act gives a natural gas company no power to change its contracts unilaterally, it follows that the new schedule filed by United was a *nullity* insofar as it purported to change the rate set by its contract with Mobile and that the contract rate remained the only lawful rate * * *. Any amounts paid by Mobile in excess of the contract rates on the basis of the erroneous order of the Commission were therefore unlawfully collected, and United is obligated to make restitution of the excess payments. (p. 347) [emphasis added]

This language makes it clear that unilateral rate filings unsupported by contract are void. There is absolutely nothing in the Court's opinion which as much as suggests that such filings are merely voidable contingent upon the prompt protest of the purchaser, as the majority holds. In this connection, the majority also finds that Southern has clearly waived any contractual right it might have had by its failure to protest promptly.

To make out a case of implied waiver there must be a clear, unequivocal and decisive act of the parties showing such purpose. Mere silence is no waiver unless there is an obligation to speak.[2] The facts here hardly satisfy these requirements. As a matter of fact the Tyler Case[3] emphasizes that a purchaser's acquiescence in a unilateral rate filing does not preclude subsequent and successful challenge.

---

[1] *United Gas Pipe Line Company* v. *Mobile Gas Service Corp.*, 350 U.S. 332.

[2] 56 Am Jur, Waiver, Section 17.

> The fact that the conversion tariff acquiesced in by Tyler Gas slightly changed the cost to it, as compared to the original contract percentage rate, cannot distinguish this case from Mobile * * *. (p. 593).

Finally the majority indicates that it would refuse to honor Southern's contract rights in any event because: (1) Southern should be required to pay for capacity dedicated to its use; and (2) Southern agreed to the settlement of recent rate cases involving United in which some exhibits had been prepared which computed revenues based on a fixed billing demand respecting the transportation involved in this case.

With respect to the first point, I simply remind my colleagues of the time honored maxim, "Equity follows the law". And the law is clear. While the Commission has the undoubted power to prescribe a change in contract rates whenever it determines such sales to be unlawful, this power is limited to making such changes on a prospective basis only.[4] Moreover, this power to alter contract rates does not permit the Commission to relieve a party of an improvident bargain. Rather, the sole concern of the Commission is whether the rate is so low as to adversely affect the public interest.[5] Here, the majority does not suggest that the public interest has been adversely affected by the variably billing demand provision of the instant contract.

Concerning the second point, the majority is using a party's assent to a dollar amount settlement of rate cases to foreclose its legal rights—this despite the express language of the settlement agreement whereunder the parties reserved all their rights in any and all future rate proceedings of United. In effect, the majority is holding that the standard reservation clauses in settlement agreements are meaningless and is forcing parties to pipeline rate cases[6] to immediately and fully litigate any and all claims they may have, or be deemed to have forever waived such rights. In so holding, the majority has unnecessarily undermined the prospects of settling future rate cases.

In summary, I agree with the position and supporting reasons advanced by the Commission Staff, Southern Natural and Presiding Examiner Ewing Simpson, and disagree with the majority's opinion.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON PROCEEDINGS INITIATED BY FORMAL COMPLAINT AS TO CHARGES SUBJECT TO SECTIONS 4 AND 5 OF THE NATURAL GAS ACT

(Issued November 30, 1964)

SIMPSON, *Presiding Examiner:* The proceeding arises under Section 4 and Section 5 of the Natural Gas Act (Act) and involves as the principal question, whether charges made by United Gas Pipe Line Company (United) to Southern Natural Gas Company (Southern) for a transportation service rendered under Rate Schedule T–3 of the former's tariff are lawful, just and reasonable.

Section 4(a) of the Act provides, in brief, that all charges made by a natural-gas company for the transportation of natural gas subject to the jurisdiction of the Commission, and all rules and regulations pertaining thereto, shall be just and reasonable; Section 4(b) provides, to the effect, that with respect to such transportation no natural-gas company shall make any undue preference or advantage or maintain any unreasonable difference in charges, service or facilities as between classes of service; Sections 4(c) and (d) provide, in substance, that every natural-gas company shall file schedules showing its rates and charges for transportation subject to the jurisdiction of the Commission, along with the classifications, practices, and regulations affecting the same, and the contracts relating thereto; and, Section 5(a) provides, similarly, that whenever after hearing the Commission finds a charge, rule, regulation, contract, or classification to be unjust, unreasonable, or unduly discriminatory, it shall determine and order the just and reasonable charge, rule, regulation, or contract to be thereafter in force.

---

[3] *Tyler Gas Service Company* v. *F.P.C.*, 247 F. 2d 590, cert. den. 355 U.S. 895.

[4] *F.P.C.* v. *Sierra Pacific Power Co.*, 350 U.S. 348.

[5] *Ibid.*

[6] Presumably the same could be said for producer and electric utility rate settlements.

On February 21, 1963, Southern filed its formal complaint asserting that with respect to United's jurisdictional transportation of natural gas from the Carthage field, Panola County, Texas, to Perryville, Louisiana, it is subjected to undue prejudice and disadvantage in that United's applicable rules, regulations, and charges are unjust and unreasonable, and in violation of Southern's contractual rights and the Act.

Southern requests, in effect, that with respect to its transportation contract with United, dated May 7, 1951, the Commission conclude that Art. VIII relating to a flexible billing imposes a continuing obligation in the premises, and was not abrogated by United's filing of a conversion tariff, or, if Commission's conclusion in these matters be adverse, that a reduction be directed in the maximum daily quantity required to discharge Southern under the contract; and that, in either event, United be required to submit a service agreement providing an automatic reduction in such maximum daily quantity to the maximum quantity tendered for transportation during the twelve-month period ended with the last day of the billing month.

On March 19, 1963, United filed answer asserting to the effect that: under the terms of the transportation contract United had in fact reserved in its Carthage-Sterlington line 55,460 Mcf of capacity for the sole use and benefit of Southern for a term of 20 years; setting of a fixed billing demand of 55,460 Mcf in United's conversion tariff was in accordance with the transportation contract; Southern by silence agreed to United's statement, filed pursuant to Section 154.85 of the Commission's Regulations, which specified or implied a reservation of 55,460 Mcf capacity for Southern's use; Southern, by participation in various past Commission proceedings concerned with United's tariffs and rates, accepted the terms of various approved settlements which recognized the reservation, and for a period of 10 years also acquiesced in United's method of application of its tariff to the transportation service; and, finally, Southern's avoidance of payment for reserved space would discriminate against United's other customers by increasing their allocated cost of service.

United therefore requests, in effect, that the Commission reject Southern's interpretation of the tariff or find that Southern has, expressly and by conduct, acquiesced and agreed to the terms thereof, and is estopped to assert any meaning contrary thereto; or else determine the responsibility of United's customers for the cost of service related to the facilities involved and, for the purpose thereof, join as parties hereto all of United's customers so concerned.

Except as appears in the preceding paragraph, no hearing has been requested upon the complaint and answer.

On February 27, 1964, the Commission issued its order entitled "Order Instituting Proceedings, Designating Presiding Examiner, and Fixing Date for Prehearing Conference," wherein it was concluded that Southern's complaint raised issues other than those specifically stated which could not be decided upon the pleadings,[1] and that the issues involved related primarily to matters of law or regulatory policy with few, if any, disputed questions of fact. Accordingly, the order provided for a prehearing conference to be held at a time, date and place therein fixed, to afford the parties an opportunity to stipulate relevant facts and to permit the fixing of dates for the submission of briefs on the issues presented, or, at the Presiding Examiner's discretion, the setting of a date of hearing upon such relevant and material matters as remained in dispute. Notice having been duly issued and published, and the parties having filed and served, as later directed, their several proposals to stipulate, the prehearing conference provided by the Commission's order, aforesaid, was held of record commencing on March 24, 1964, and concluding on April 23, 1964, after a recess from March 25, 1964 to April 22, 1964, granted on request of counsel to enable revision of the several stipulations proposed and consideration of the necessity of tenders of supplementary offers of evidence.[2]

Proposed stipulations were severally presented in the final session of the conference, on behalf of Southern, United, and Commission's Staff. Upon due agreement thereto these were accepted and formerly received by the Presiding Examiner as part of the prehearing conference record as Exhibits 1, 2 and 3, respectively.

With respect to certain matters upon which the parties were unable to agree, and requested a ruling, the Presiding Examiner, orally of record: excluded as foreign to the issues, Southern's offer in evidence by reference of the transportation agreement between Tennessee Gas Transmission Company and United, dated March 15, 1945;[3] and received in evidence by reference: (a) over the objection of United,[4] Southern's offer of the contract between Southern Production Company (Production) and Southern, dated May 7, 1951, providing for Southern's purchase of Carthage field gas (Item A); (b) over the objection of Southern,[5] United's offer of documents described in subparagraphs (h), (i) and (j) of paragraph 4 of its proposed stipulation, relating to the 1945 testimony of United's witness Hargrove in Docket No. G-622 (Item B); and, (c) over the objection of United,[6] Southern's offer of matter contained in Exhibits N, O, P and Q, of its proposed stipulation relating to the 1951 testimony of Southern's witness Van den Berg in Docket Nos. G-1308 and G-1676 (Item C).

Prior to conclusion of the conference each counsel stated, formally of record, a waiver of further hearing and rested upon the respective stipulations and the aforesaid rulings upon the respective offers of evidence.

---

[1] Particularly the issue whether the fixed billing demand claimed by United is just and reasonable.

[2] The order made provision for intervention but as no petitions or notices in this respect were filed, only complainant, the respondent, and Staff participated.

[3] Exhibit 28 in Docket No. G-622. Contrary to the provision in Southern's contract the billing demand provision of this, approximately contemporaneous, contract provided for a fixed payment regardless of the amount of gas transported, a fact which Southern unsuccessfully contended evidenced the intent of United as to the billing demand provision of the contract between it and United.

[4] That United was a stranger to the contract. However, the existence of the Southern-Production contract is specifically recognized in the recital clauses of United's transportation contract with Southern.

[5] That Southern was not a party to the proceeding. However, at the request of the Commission, Southern's President voluntarily testified therein, with counsel present, as to sufficiently related matters including Southern's plans for Carthage gas and its system requirements.

[6] That United was not a party to the original proceeding. However, the prior testimony here involved, descriptive of the arrangement between United and Southern for the transportation of gas by United from the Carthage field to Perryville, had been received in evidence by reference as a part of Item M in United's Docket No. G-1750, *et al.* United later emphasized an objection only that the matter was self-serving.

Thereafter, and as duly provided therefore during the conference, seriatim briefs were filed by Southern, United, and Staff Counsel, respectively, including Southern's reply.[7]

THE ISSUES

The Commission's order instituted the proceeding upon the following statement of issues:

1. Whether the transportation contract between United and Southern provided a billing demand which was subject to change, depending upon the amounts of gas Southern elected to deliver to United up to 55,460 Mcf per day or provided a fixed billing demand of 55,460 Mcf;

2. If it is determined that the contract provided a billing demand subject to change:

a. Whether United, in its conversion tariff, made a substantive change in the contract by providing a fixed billing demand and whether such a substantive change is within the intent and purpose of Section 154.85 of the Commission's Regulations under the Act, and

b. Whether the tariff filed pursuant to the settlement in G-1142 (13 FPC 398) changed the contract provision as to billing demand.

3. Whether under the *Mobile*[8] doctrine United is free to seek a unilateral change in the transportation contract.

4. Whether Southern, by its past acquiescence and conduct with regard to the billing demand provision contained in United's Rate Schedule T-3 is now estopped from complaining of that provision.

5. If United's presently effective Rate Schedule T-3 specifies a fixed billing demand, whether that tariff provision is just and reasonable under the Act.

THE CONTENTIONS

Complainant

Southern submits that: The transportation contract provided a billing demand subject to change depending upon the amounts of gas Southern elected to deliver for transportation (up to a maximum quantity of 55,460 Mcf) on any day during the preceding twelve months; neither United's conversion tariff, nor the revised tariff filed pursuant to the settlement in Docket No. G-1142, *et al.*, lawfully effected a substantive change as to billing demand, and Section 154.85 of the Commission's Regulations did not operate in conjunction with either so to do; United was not free under the doctrine of the *Mobile* case[9] to effect a unilateral change in the transportation contract; Southern is not estopped from complaining of the billing demand provision contained in United's Rate Schedule T-3; and, assuming *arguendo*, that none of the foregoing be true, a provision in the rate schedule specifying a fixed billing demand, regardless of the volumes available for transportation, is unjust and unreasonable under the Act and should be set aside.

Respondent

United asserts, in substance, that Southern contracted on the basis of a fixed billing demand as evidenced by testimony in proceedings in Docket No. G-622 relating to the control of space in United's pipeline and an attempt to prove in United's Docket No. G–1860, *et al.*, a life of Carthage field reserves of 22-plus years; concedes the mere filing of the conversion tariff under Section 154.85 of the Regulations did not make a substantive change in the contract, but asserts that such filing put Southern on notice of United's omission of Art. VIII of the transportation contract from the tariff and of an intent that the tariff would control and Southern be obligated to pay for capacity, whether used or not; Southern was required to object or agree and, failing to do so, thereafter evidenced its agreement thereto by performing obligations as fixed in the tariff even though during the period ended January 25, 1956, it neither requested nor received as much as 55,460 Mcf of gas per day; Southern further consented by a "consensual" participation in the rate settlement in Docket No. G–1142, *et al.*,[10] which, being predicated upon advantages to Southern and detriment to United, estops Southern to deny the binding conclusiveness of the agreement; such reservations as claimed by Southern in connection with this settlement (G–1142) relate only to methods and principles used in arriving at the settlement and not to the agreement as one which relates to billing provisions; the *Mobile* case is not applicable as the case does not prohibit a consent; and, as the record will not support a finding that the aforesaid tariff provision is contrary to the public interest, the Section 5(a) investigation should be dismissed.

---

[7] While United's Counsel excepted to the briefing schedule as providing him insufficient time, as well as the Presiding Examiner's denial of a motion for modification thereof, it is to be noted that United's brief was not required for some 7½ weeks after the conclusion of the conference. Counsel also excepted to the fact that his motion to change the schedule to provide him opportunity to reply to Staff's brief, as an initial brief, under the Section 5 part of this proceeding, was also denied. The denial was based upon various matters stated in Southern's objections thereto.

[8] *United Gas Pipe Line Company* v. *Mobile Gas Service Corporation*, 350 U.S. 332 (1956).

[9] *United Gas Pipe Line Company* v. *Mobile Gas Service Corporation*, 350 U.S. 332 (1956).

Commission's Staff

Staff contends that the language of Art. VIII of United's transportation contract with Southern, whether given its plain meaning or a construction based upon United's initial billing practices and consideration of Southern's related Carthage gas purchase contract, establishes the billing demand as one subject to change, depending upon the amount Southern tenders for transportation up to and including 55,460 Mcf (14.9 psia); the change proposed by United, consisting of the omission of Art. VIII of the transportation contract from its conversion tariff and the statement filed under Section 154.85 of the Regulations, provide a substantive change as to billing demand, contrary to the purpose and intent of Section 154.85; and, accordingly, the tariff filed pursuant to the settlement agreement in Docket No. G–1142 could not and did not lawfully affect such a change; United is not free under the *Mobile* doctrine to seek a unilateral change in the transportation contract[11] as the doctrine holds to the effect that United does not have the right, with or without the Act, to unilaterally change its contract by providing for a fixed billing demand in its conversion tariff; Southern never agreed to any change in the billing demand provision, reserved its rights in the rate settlement agreements in which it participated, had no reason to protest an initial billing based on 55,460 Mcf of demand[12] or to believe, until United denied its request for a reduction, that United had intended to establish a fixed billing demand by the filing of its conversion tariff, and, accordingly, is not now estopped to complain of the billing demand provision of United's Rate Schedule T-3.

THE EVIDENCE

Jurisdiction

Jurisdiction over the transportation service, having been asserted by the Commission in prior proceedings, is not contested as an issue in this proceeding.

---

[10] The *Mobile* case, *supra*, arose when Mobile Gas Service Corporation refused to accept a rate increase United attempted to impose by a similar unilateral action.

[11] *United Gas Pipe Line Company* v. *Mobile Gas Service Corporation*, 350 U.S. 332 (1956).

[12] Staff asserts that Southern had no reason to challenge United's filing in this regard since it was then (1952–1956) able to, and subsequently (1956–1960) did, receive 55,460 Mcf, the maximum provided in the contract.

The 1951 Contract Billing Demand Provision

The transportation contract of May 7, 1951 (Rate Schedule No. 126–B),[13] provided that United would accept from Southern at Carthage (Texas) such quantities of natural gas as Southern should elect for transportation to Monroe (Louisiana), up to but not exceeding 55,000 Mcf in any one day (Paras. I and III),[14] at a charge of 38 cents per Mcf of billing demand per month consisting of the maximum volume of gas which Southern elected to deliver to United in any one day during the 12 months period ending with the last day of the billing month, within the above limit provided (Art. VIII).[15]

Previously, the predecessor contract of September 7, 1945, (United's Rate Schedule No. 87) provided that each year (ending October 31) Southern would purchase United's contract percentage (26%) of the former's aggregate line requirements, for which it would pay a demand charge of 38 cents per Mcf of maximum daily delivery during the 12 months period, and a commodity charge of 5 cents per Mcf.[16]

The record does not disclose the billing practiced under Rate Schedule No. 87, but it does disclose that with respect to Rate Schedule No. 126–B, and effective with the date of initial operation (July 23, 1952) Southern requested the transportation of 44,500 Mcf per day until further notice and that until January 3, 1953, when United's FPC Gas Tariff, Original Volume No. 1 became effective, billing was rendered on the basis of a demand equal to Southern's continuing request, and that only after the latter date was it billed on the basis of 55,460 Mcf, without regard to the billing terms of the contract.

Except for United's contentions related to incidents and events attending the execution of the predecessor (1945) and later (1951) contracts, *supra*, and an alleged course of conduct between the parties as to an implied reservation of space, it is obvious from the very language of the 1951 contract that Southern was to be billed based upon a demand which was subject to change, depending upon the amounts of gas Southern would elect to deliver, and not upon a fixed billing demand of 55,460 Mcf per day.

United's Claim of Reservation of Space

United would seek to vary the direct language of the contracts and lay a preliminary foundation for an ultimate claim of estoppel by contending to the effect that from the very beginning of negotiations preceding the contract of September 7, 1945, Southern had the ultimate intent to obtain possession of Production's gas for transportation by United under an exclusive and preemptive reservation of space in the latter's Carthage line. Matters claimed by United to evidence such an intent include Southern's acquisition in 1947 and exercise in 1952 of the option to take Production's gas with the concomitant loss to United of the use of an equivalent amount of capacity in its Carthage line; testimony of Southern's witnesses in Docket Nos. G–622 and G–1750, *et al.*, stating an estimated life of Production's reserve on an assumption of production of 55,460 Mcf for every day of such life; and repeated consideration by Southern of constructing and operating a similar line for such transportation.

The consideration of the evidence which follows leads to conclusions which compel a denial of this contention.

---

[13] Having a term of 20 years from its effective date to July 23, 1972.

[14] Measured at 15.025 psia.

[15] Converted for billing to a pressure base of 14.9 psia; *i.e.*, 55,460 Mcf.

[16] Measurement at 14.9 psia; provision also being made for subsequent tax reimbursement, and a term ending October 31, 1965.

The 1945 and 1951 Contracts

The immediate controversy between the parties developed, in part, out of circumstances dating back to 1945 when Southern contracted with United to obtain a supply of gas to replace the latter's declining production from the Monroe (Louisiana) field, and, at the same time, to gain access to production from acreage owned and controlled by its subsidiary, Southern Production Company, Inc., (Production), in the Carthage gas field.

United, a substantial supplier of gas from the Monroe field area, had, previous to 1945, contracted to sell and deliver to Southern, from the field, sufficient gas to supply 30.375 percent of the latter's line requirements. However, the decline in production made it apparent that it could not continue to meet demands upon its Monroe supplies, and United, accordingly, filed an application in Docket No. G–622 [17] for a certificate authorizing it to transport into the Monroe area gas available from the Carthage (Texas) field sufficient to provide for the immediate sale and delivery of 61,000 Mcf per day of such gas to Monroe area customers, including three pipelines.[18]

At the same time, Southern, having control, through its subsidiary, Production, of approximately 500,000,000 Mcf of reserves in the Carthage field,[19] considered extending its Logansport line to Carthage and, in March 1945, filed with the War Production Board for an allocation and necessity rating with respect to the requisite pipe and material,[20] subject, however, to the results of negotiations then pending with United for alternate utilization of a portion of the capacity of the latter's then proposed Carthage-Monroe pipeline (G–622).

On March 16, 1945, at some suggestion of the War Production Board, and prior to successful conclusion of its negotiations with United, but with reasonable knowledge that United's line would be built with surplus capacity, Southern, again subject to the same previous condition, withdrew that part of its application which related to its proposed Carthage extension.

United, however, with a previously issued War Production Board preference rating and allocation, had its pipe on firm order by April 1945, and, on July 5, 1945, obtained the certificate applied for in Docket No. G–622, *supra*.[21]

As a consequence of discussions conducted during this general period, United thereafter formally agreed by contract dated September 7, 1945, to substitute for the commitment to supply Southern 30.375 percent of line requirements from Monroe field sources, a commitment to supply 26 percent of such requirements from Carthage sources (United's FPC Gas Rate Schedule No. 87).[22]

United, however, had already fixed the design of its Carthage line, largely on the basis of availability of pipe size [23] along with a consideration of shortages anticipated in Monroe area supplies, to present and expected future demands of its local Monroe area and pipeline customers, and the requirements of a transportation obligation to Tennessee.[24] It confined its consideration as to Southern's requirements to the trend of the latter's prior load development as limited by the capacity of its then existing lines.

---

[17] Sometime prior to April 1945.

[18] Southern Natural Gas Company, Mississippi River Fuel Corporation, and Memphis Natural Gas Company.

[19] Production had four completed and shut-in wells in the field, and one drilling.

[20] Involving 25 miles of 14-inch line to connect the Carthage and Logansport fields, 62 miles of 14-inch loop line paralleling its existing Logansport line, and various field gathering lines, estimated to cost, in total, $1,700,000.

[21] *United Gas Pipe Line Company,* 4 FPC 307, 320.

[22] Effective November 1, 1945. In 1945, Southern had obtained 75 percent of its 1944 peak day requirements of 240,000 Mcf from Monroe field producers and 25 percent from production and purchases in the Logansport field. United's commitment with respect to supplies from the Monroe field then amounted to some 72,900 Mcf per day (peak) or 21,000 000 Mcf per year. Under the new contract sale of gas was effected at Carthage at a price of 5 cents per Mcf, and delivery at Monroe at an added charge of 1.8 cents per Mcf.

[23] *I.e.,* diameter of 24 inches.

On the same date as the Southern contract (September 7, 1945), Southern's subsidiary, Production, contracted to sell to United the gas to be produced from 16 drilling units in the Carthage field,[25] in effect for transportation and sale by the latter to Southern at Monroe. However, in order that the parent, Southern, might obtain this same gas in the future, a provision was included in the contract for Production's optional cancellation thereof before the expiration of the 10-year primary term, but after January 1, 1950; and, on June 16, 1947, prior to a distribution of its subsidiary's stock, Southern obtained the option to take Production's gas at any time on or after January 1, 1950, and prior to December 31, 1952.[26]

Increases in Southern's loads and system capacity culminated December 15, 1948, in a line requirement of approximately 445,000 Mcf per day, and the concurrent obligation on the part of United to deliver, under its 26 percent commitment, up to 115,700 Mcf per day.

However, in anticipation of Carthage field shortages, in relation to which it now desired to gain direct access to Production's gas, Southern filed an application as amended in Docket No. G–1308 (1949–1950) for a certificate to authorize the construction and operation of pipeline facilities to loop, extend, and connect its existing Logansport-Monroe line with the Carthage field.[27] During the course of these proceedings, United advised Southern of certain limited intentions as to its meeting the latter's future requirements and, in August 1950, further advised of its inability to supply the additional gas required to meet the 26 percent of an increase to 550,000 Mcf in such requirements, of which Southern had given timely notice.

Thus concerned that its contract with United (Rate Schedule No. 87) did not provide either a right to a specific quantity of gas or adequate relative rights, in the premises,[28] and that the continuance of deliveries of 115,700 Mcf per day could not be assured,[29] Southern sought to have determined the volume of Carthage gas to which it was entitled, and United agreed that based upon the ratio of Southern's existing entitlement to the total of United's field commitments,[30] Southern would be entitled for the future to 28 percent of United's

---

[24] The line would begin at a field gasoline plant near Carthage, Texas, extend 132 miles eastwardly to a point of connection with Tennessee's existing main line at Monroe, Louisiana, and, thence, 10 miles northeastwardly to United's Sterlington, Louisiana, compressor station in the Monroe field. The estimated cost, including various appurtenant facilities, but not gathering facilities and processing plant, amounted to approximately $6,964,000.

[25] At a price of 4 cents per Mcf, plus payment for extracted liquids.

[26] At a price of 5 cents per Mcf for gas purchased to December 31, 1952, and thereafter each 5 years at a price determined by arbitration.

[27] *Southern Natural Gas Company*, 9 FPC 756. Including 5.8 miles of 8-inch and 29 miles of 12-inch line from Carthage to Logansport, 78 miles of 14-inch loop pipeline, and certain compressor station facilities, estimated to cost nearly $4,000,000. The certificate was issued May 19, 1950. See, *Southern Natural Gas Company*, 11 FPC 1262, 1263–64 for further details as to facilities costing $3,767,220 and directly related to the proposed purchase of Production's gas.

[28] Southern may have had equal rights with Mississippi River Fuel and prior rights as to others.

[29] United indicated during the 1950–1951 negotiations as to this and related matters that it had shortages at Carthage and would not be able to continue the delivery of 115,700 Mcf per day.

[30] Including commitments of 160,000 Mcf per day to Mississippi River Fuel, 120,000 Mcf per day to Texas Eastern, and 25,000 Mcf per day to local markets, which, with the 115,700 Mcf per day to Southern, totaled to 420,700 Mcf per day.

Carthage purchases, or 22,000,000 Mcf per year.[31] As this agreement assumed a continuation of United's 4-cent per Mcf Carthage field contracts, then due to expire on various dates commencing May 17, 1956,[32] to enable United to offer adequate inducement for the extension of such contracts for terms sufficient to cover the remaining term of Southern's contract,[33] the latter agreed to an increase in United's commodity price of gas to the approximate going field price of 8.5 cents per Mcf.[34]

Southern's method of assuring its supply of Carthage gas thus involved abandonment of construction of certain facilities proposed in Docket No. G–1308,[35] exercise of its option to purchase Production's Carthage gas,[36] and, contemporaneously: cancellation of Production's gas sale contract with United; execution of a gathering and processing contract by and between Production and United; a superseding of United's sales contract of September 7, 1945, to provide a reduction in United's sales obligation to Southern; and, agreement by United to transport to Monroe, for Southern, gas to be purchased from Production, up to 55,000 Mcf of gas per day.

Thereafter, on July 18, 1951, United filed its application in G–1750 for Commission certification of the proposed transportation service,[37] and on November 26, 1951, tendered for filing the sales contract of May 7, 1951 (Rate Schedule No. 112–A) to supersede Rate Schedule No. 87 and reduce sales for the terms remaining, to October 31, 1965, from 115,000 Mcf to 60,000 Mcf per day, or by the amount of the volume lost to it by Production's cancellation;[38] and, again, on February 1,

---

[31] Of an anticipated total annual Carthage production of 78,000,000 Mcf, which did not include Production's supply. Southern had been receiving from United approximately 42,000,000 Mcf per year and expected to receive from Production approximately 20,000,000 Mcf, or, from both United and Production, quantities equal to that previously received from United alone.

[32] Skelly Oil Company contract, the second largest in terms of volume available.

[33] *I.e.*, to October 31, 1965. The suppliers involved were Arkansas Louisiana Gas Company, British-American Oil Producing Company, Magnolia Petroleum Company, McAlester Fuel Company, Phillips Petroleum Company, Skelly Oil Company, and Union Producing Company an affiliate, to each of which United had been paying 4 cents per Mcf under contracts which would have expired as indicated in the text, except that one was terminable in part at any time. United subsequently extended its Carthage purchase contracts to 1972 at a price of 8.5 cents effective January 1, 1952.

[34] United's price to Southern under its Rate Schedule No. 87 was at a 4-cent per Mcf commodity rate, a 1-cent per Mcf gathering charge, and a demand charge of 38 cents per month per Mcf of the maximum quantity delivered during the previous 12 months which averaged an additional 1.8 cents per Mcf. The agreement to accept an increase in United's commodity rate was not formally expressed in the new sales contract of May 7, 1951, but Southern admits by testimony of its witness in the proceeding in Docket No. G–1750, *et al.*, that such was implied therein (Art. I, Sec. 2).

[35] *Southern Natural Gas Company*, 11 FPC at 1263. The construction here eliminated had been estimated to cost $3,767,320.

[36] Under its new purchase agreement of May 7, 1951, with Production, which was no longer a subsidiary, the wellhead price became 7 cents per Mcf for all gas taken prior to January 1, 1952, and 8½ cents per Mcf for the next 5 years, with increases of approximately 1-cent per Mcf for each following 5-year period of the life of the field; plus a gathering charge to 1-cent per Mcf.

[37] *United Gas Pipe Line Company*, 11 FPC 1016.

[38] The new sales contract, providing an increase in rate, was suspended by the Commission in Docket No. G–1860 (11 FPC at 1017). It was refiled, as required by Commission's order issued June 13, 1952 (11 FPC 1016), to reduce the demand charge from 45 cents to 38 cents per Mcf (Rate Schedule No. 126–A). The excise of Southern's option to purchase Production's gas and Production's notice of cancellation of its contract to sell to United were also to become effective contemporaneously with the effective date of the new transportation contract.

1962, refiled the transportation contract dated May 7, 1951 (Rate Schedule No. 112-B).[39]

Conclusions as to an Implied Reservation of Space

As early as 1945, Southern expressed an interest in the so-called utilization of a part of the capacity of United's proposed Carthage pipeline. Its president so stated, in effect, in testimony in the proceedings in Docket No. G-622;[40] its chief engineer, by letter dated March 3, 1945, wrote in similar vein to the War Production (Board);[41] and it is stated in such terms in Southern's application to the Board of approximately even date.[42] However, it also appears that, in fact, all of the foregoing negotiations between these parties were directed in each instance toward arrival at an agreement which would provide for the simple transportation of an adequate volume of Carthage produced gas at a mutually satisfactory price.[43] Further, in the proceedings in G-622 (1945) neither party nor witness, nor participating counsel, mentioned a subject which so much as suggests "control", "mortgage", "rent", or "reservation" of line space or capacity beyond the evident assumption that United would be able to perform according to the intent of its negotiations. Indeed, in that part of the then current negotiations between Southern and United which bore on the subject of passing of title, the method proposed by Southern appear to have evoked no discussion which supports United's claim,[44] and original arrangements concerning the sale of Production's gas to United for delivery at Monroe, which apparently placed the transportation responsibility wholly upon United, gave no indication, either direct or otherwise, that Southern desired any assurance of performance in the nature of a specified right to space. Indeed, the fact that, even allowing for the volume of option gas, United's line would have a surplus of capacity,[45] serves to negate the necessity of any assumption looking toward such a reservation.[46]

Further, while the exercise of Southern's option on Production's reserves was induced, in part, by anticipation of a reduction in United's Carthage deliveries,[47] it initiated its application in Docket No. G-1308 (1950) for the purpose of attaching these reserves on an assumption that United, having progressively over a period of years met its share of Southern's increasing line requirements,[48] would continue to deliver 115,000 Mcf per day, if necessary by means of an election to do so from other sources. However, Southern was informed for the first time during the course of the proceedings in Docket No. G–1308 that United's deliverability from Carthage had declined by as much as 34 percent of the volume assumed and that United would not meet the deficiency from other sources. Accordingly, in the light of these circumstances, it must be held that testimony of Southern's witness in G–1750, *et al.*, that it was desirable that Southern provide capacity in United's lines", and "advantageous to leave a hole in the pipe line of 55 million feet" had no relation to any plan which had its inception in prior events but related only to the fact that Southern realized, during negotiations with United in 1950–1951, it had available the possibility of an economical alternative to its own construction.[49]

---

[39] The transportation contract was suspended by the Commission's order of February 28, 1952, in Docket No. G-1873. It was refiled, as required by Commission's order of June 3, 1952 (11 FPC 1016), to reduce the rate from 45 cents to 38 cents per Mcf (Rate Schedule No. 126-B).

[40] Such as: "looking towards the utilization of capacity in the pipeline which they propose to build", and "we would require substantial capacity in this line" (United's Stipulation's, Exh. 1); again: "if we get—the capacity we need in the United Gas Pipe Line Company's line" (United's Stipulation's Exh. 6).

[41] As to "negotiations with United Gas Pipe Line Company with regard to utilization of facilities proposed to be installed by that company" (United's Stipulation's Exh. 3(a)).

[42] So, "Negotiations are under way with United Gas Pipe Line Company, looking to utilization by Applicant of some of the capacity in the 24'' pipe line proposed to be built." So, in its letter to the Board of March 16, 1945, eliminating facilities from the application.

[43] Testimony of Southern's and United's witnesses in Docket No. G-622 (United's Stipulation's Exhs. 1, 6, 7, 8, 10 and 11).

[44] Testimony of United's witness (United's Stipulation's Exh. 10).

[45] See, *United Gas Pipe Line Company*, 4 FPC, at 315, 318.

[46] Incidental references by Southern's witness to a somewhat similar arrangement proposed by United for the transportation of 114,000 Mcf of gas for Tennessee are far from conclusive in this matter (United's Stipulation's Exhs. 1, 8, and 10).

[47] A further, but not solely determining, factor was the ultimate approach of the date of expiration of its option on Production's reserves, December 31, 1952, when Production would be free to sell its reserves at will.

[48] The first instance to the contrary occurred when United responded to Southern's notice of July 31, 1950 to the effect it would have insufficient Carthage gas to furnish Southern's increased line requirements of 550,000 Mcf per day.

Finally the mere selection of a term of 20 years, ending in 1971, for the transportation contract, based upon an estimate by Southern of a life of Production's reserves of 21 plus years at an assumed contract rate of production of 55,000 Mcf per day, would not, and does not, properly serve to imply that Southern thus undertook to obligate itself as responsible for a fixed portion of United's Carthage line capacity without regard to its use thereof, particularly where, as stated previously, the line's original size was determined (G–622) prior to any mutual consideration concerning Southern's eventual resort to Production's gas.[50]

Billing Under the Conversion Tariff

Subsequent to the date of filing of United's Rate Schedule No. 87 on October 1, 1945, and prior to the date of filing of the new transportation contract as Rate Schedule No. 112–B on February 2, 1952,[51] the Commission issued its Order No. 144, effective December 1, 1948, which amended Part 154 of its general rules and regulations governing the form, composition, and filing of gas rate schedules and tariffs, and required the restatement of all filed effective schedules, but pending the restatement, permitted schedules to be filed in accordance with Part 154 as previously in effect (Sec. 154.82). This Order also provided that except as superseded by, or in conflict with, other applicable provisions of the tariff, each contract on file as an effective rate schedule would continue as an executed service agreement until expired or replaced by one properly executed (Sec. 154.85).

Following termination of certain proceedings in the Court of Appeals for the District of Columbia Circuit concerning the validity of Order No. 144,[52] the Commission, by order of October 16, 1950, in Docket No. G–1508, directed United to file its tariff in conformity with the amended regulations (9 FPC 1161), with which United complied by filing on July 3, 1952, a conversion tariff designated as its FPC Gas Tariff, Original Volumes Nos. 1 and 2, effective August 3, 1952,[53] and by which it proposed to supersede certain filed rate schedules, including Rate Schedules Nos. 126–A and 126–B,[54] and impose increases, including those applicable to sales to Southern under the corresponding conversion Rate Schedule PL–3 and the transportation for Southern under the corresponding conversion Rate Schedule T–3. Consequently, as required by Order No. 144, United also filed its several statements identifying the portions of the pre-existing contract of September 7, 1945, and the transportation agreement of May 7, 1951 which were to remain in effect as not superseded by, or in conflict with, other applicable provisions of its tariff (Sec. 154.85).[55] The latter, however, failed to include the pricing provision of the contract and thus the charge imposed by Art. VIII of the transportation contract of May 7, 1951 based upon the maximum volume delivered for transportation in any one day during the past 12 months, up to 55,000 Mcf, was omitted.

---

[49] After the conclusion of the proceedings in G–1308 in May 1950, United offered to transport this gas at the charge of 45 cents per month per Mcf of the previous 12 month's maximum daily quantity which at an assumed 100 percent load factor would average 1.48 cents per Mcf. The cost to Southern of constructing its own facilities consisting of 29 miles of 12-inch pipeline, 64 miles of 14-inch loop line, and compressors, totaling some $3,420,000, or more, converted to annual fixed charges and operating expenses of at least $588,050, would have averaged a corresponding 2.93 cents per Mcf.

[50] Southern estimated Production's recoverable reserves as of January 1, 1950, to be 437,470,000 Mcf, which indicated a life of 21 plus years, assuming production at the rate of 55,000 Mcf per day or an average of 20,088,750 Mcf per year. This acreage is reasonably scattered. It appears that in G–1447 (1950) United itself rested upon estimates which indicated a life of field good to 1972.

[51] First tendered for filing on July 18, 1951, but rejected, along with the new sales contract similarly tendered, for failure to file the supporting data required for changes and increases in rates and charges (see, 11 FPC at 857). Both schedules (No. 112–A, sales, filed November 26, 1951, and No. 112–B, transportation, filed February 2, 1952) involved rate changes or increases, and were suspended by Commission's orders of December 21, 1951 to May 26, 1952, and February 28, 1952 to August 3, 1952, respectively (see, 10 FPC 1633, and 11 FPC 856), as was a supplementary agreement dated January 8, 1952 reducing the volume of gas sold under Rate Schedule No. 87 in the event the transportation contract became effective prior to the new sales contract (Rate Schedule No. 87, Supp. No. 2, Docket No. G–1750, *et al., supra*).

[52] *United Gas Pipe Line Company* v. *F.P.C.* (CADC-1950) 181 F. 2d 796.

Instead, the conversion tariff proposed a new monthly demand charge based upon the maximum daily quantity for such month,[56] *i.e.*, the maximum volume which United was obligated to transport for Southern as specified in a service agreement.[57] The former provision had become effective July 23, 1952, upon a filing made pursuant to the terms of the Commission's order of May 27, 1952, in Docket No. G–1750, *et al.*, (11 FPC 1016, 1019), while the latter, suspended to January 3, 1953, by the Commission's order of July 31, 1952, in Docket No. G–2019 (11 FPC 1162, 1164), became effective under bond upon expiration of the suspension period, by Commission's order issued January 14, 1953 (13 FPC at 402).

By letter of July 3, 1952, United had duly advised Southern of the filing of the conversion tariff and the statement required by Section 154.85 of the Regulations.

Thereafter, pursuant to the terms of the transportation contract, and by letter dated September 8, 1952, Southern requested to the effect that commencing July 23, 1952, until further notice, United transport for Southern 44,500 Mcf per day.[58]

---

[53] See, *United Gas Pipe Line Company,* 13 FPC 398 (1954).

[54] Rate Schedule Nos. 126–A and 126–B were filed July 2, 1952, as directed by the Commission in its certificate order of May 27, 1952, in Docket Nos. G–1750, *et al.* The former to effect a proposed reduction in rates proposed in Rate Schedule 112–A, from 45 cents per Mcf per month demand and 9½ cents commodity, to a corresponding 38 cents per Mcf per month and 5 cents per Mcf, and the latter to effect a reduction in the rate proposed in Rate Schedule 112–B from 45 cents to 38 cents per Mcf of billing demand per month, both Rate Schedules Nos. 112–A and 112–B having been dismissed by the order (11 FPC 1016).

[55] Rate Schedule No. 87 was in effect until superseded by Rate Schedules 126–A and 126–B on July 23, 1952, which later were, on January 3, 1953, in turn superseded by the conversion tariff's Rate Schedules Nos. PL–3 and T–3, respectively.

[56] Expressed as "2.6¢ multiplied by the product obtained by multiplying the number of days in the month by the maximum daily quantity for such month" (Rate Schedule T–3, Sec. 3(a)).

[57] FPC Gas Tariff, Original Volume No. 1, Rate Schedule T–3, Sections 3 and 5, Original Sheets Nos. 68A and 68B, issued July 3, 1952. While a new service agreement was finally tendered by United on August 17, 1962, after the filing of Southern's informal complaint in Docket No. IN–953, none has been executed by Southern.

[58] 15.025 psia.

Thereafter, to January 24, 1956, when Southern first requested its full contract quantity of 55,000 Mcf (15.025 psia), requests in the premises were:

From—	To—	Volume requested (Mcf) (15.025 psia)	Contract billing demand (Mcf) (14.9 psia)
July 23, 1952	Aug. 1, 1954	44, 500	44, 873
Aug. 1, 1954	Sept. 7, 1954	31, 000	44, 873
Sept. 7, 1954	Nov. 1, 1954	32, 116	44, 873
Nov. 1, 1954	Aug. 1, 1955	45, 000	45, 378
Aug. 1, 1955	Oct. 1, 1955	23, 596	45, 378
Oct. 1, 1955	Nov. 9, 1955	9, 832	45, 378
Nov. 9, 1955	Nov. 11, 1955	29, 496	45, 378
Nov. 11, 1955	Dec. 2, 1955	44, 244	45, 378
Dec. 2, 1955	Jan. 24, 1956	34, 412	45, 378

United's billing was initially consistent with the terms of the transportation contract and from July 1952 to January 1, 1953, United billed Southern on the basis of a billing demand of 44,500 Mcf, the amount requested for transportation. However, from January 3, 1953, when Rate Schedule T-3 became effective as a part of the tariff,[59] United billed and Southern paid a demand charge which reflected use of a constant quantity of 55,460 Mcf (14.9 psia) per day although the first request for transportation of such an amount was not made until January 24, 1956, as aforesaid.

Thus, on the basis of contract demands set forth in the foregoing table, United's conversion tariff's demand charge of 60 cents per Mcf was applied in a manner to impose upon Southern an increase in demand charge cost of approximately $72,000 per year.[60]

Conclusion as to Change in Billing Demand

It is concluded, therefore, that the provision in United's conversion tariff of a fixed billing demand, in lieu of one which depended upon the amount of gas requested, operated to effect a substantive change in the application of the terms of the transportation contract of May 7, 1951.

Intent of Section 154.85

The preface to Order No. 144 states that Sec. 154.85 was redrafted to avoid the charge that the provisions of the Order would affect substantive rights and to make clear the intent to permit contracts, on file as effective rate schedules, to continue in effect as executed service agreements until expired or superseded. Accordingly, while Sec. 154.85 requires that the natural-gas company, by statement filed concurrently with the tariff, identify the provisions of the contract which are to remain in effect as not superseded by, or in conflict with, other applicable provisions of the rate schedule and general terms and conditions, it further provides that agreements intended to effect a change or amendment in the contract may be made only by the execution of a form of service agreement contained in the tariff, and the preface sufficiently indicates why no method of change, other than that by agreement, is suggested or recognized.

Moreover, the question whether substantive changes are within the intent and purpose of the Section received its full answer in proceedings in the Court of Appeals, District of Columbia Circuit, where the Commission gave the Court its "binding assurance" that Order No. 144 would operate prospectively, and affirmed that it interpreted the same "as not authorizing the making of any change in an effective rate, charge, or contract provision, without compliance with the Natural Gas Act." (*United Gas Pipe Line Company* v. *F.P.C.* (CADC–1950), 181 F. 2d 796, 799).

---

[59] Which included an index stating 55,460 Mcf to be the "maximum daily quantity" applicable to the transportation agreement of May 7, 1951.

[60] Effective January 3, 1953 (see, 13 FPC at 406 (G-1142, *et al.*))

Further, United explicitly states that it does not contend that the filing of a statement accompanying a conversion tariff automatically effects such a change as that in the billing demand, but rather that it rests upon a contention to the effect that the filing of the statement served as notice to Southern that the pricing provision of the transportation contract was not being retained as a part of the service agreement, to which Southern consented in a settlement reached in proceedings in United's Docket No. G–1142 (Br. pp. 81–82, 93).

It is concluded, therefore, that the substantive change attempted by United in its conversion tariff's provision for a fixed billing demand is beyond the intent and purpose of Sec. 154.85 of the Commission's Regulations under the Act.

Billing Under the Settlement Tariff

The tariff filed to effectuate the terms of the settlement in G–1142, *et al.*, and thus supersede Rate Schedule T–3 of the conversion tariff,[61] provided a demand charge based upon the maximum daily quantity, and a definition of the latter, which was, to all practical purposes, in accord with similar provisions of the schedule of the conversion tariff.[62]

United claims that Southern, by agreement to the settlement tariff in G–1142, *et al.*, formally consented to the use of a fixed demand of 55,460 Mcf per day in billing for the transportation of Carthage gas.[63]

The settlement, presented of record in the hearing session of August 17, 1954, was based principally upon several documents (Exh. Nos. 77–79) which reflected the results of Staff's examination and allocation of United's recorded costs as related to a given test year (1952),[64] of which Exh. 79 compared estimated revenues based upon a demand of 44,872 Mcf in regard to rates effective prior to the proposed increases and a demand of 55,460 Mcf in regard to both the increased rates then in effect and Staff's proposed trial (settlement) rates.

However, Staff counsel, in formally reporting the actions of the conference concerning the stipulation, stated of record that the participants had agreed that "neither United or the Commission's Staff nor any other affected party is to be considered as agreeing with the methods used for determining cost of service, or with the principles underlying the results reflected in the proposed settlement," and that it was understood that "this agreement will not prejudice the rights or contentions which any of the parties are asserting or may assert in any proceeding now pending or in the future arising before this Commission."

---

[61] *United Gas Pipe Line Company,* 13 FPC at 407 and 417.

[62] The conversion tariff schedule, effective as of January 3, 1953: in substance, 79 cents per Mcf of the maximum daily quantity for such month; the settlement tariff, effective as of August 1, 1954: 60 cents per Mcf of maximum daily quantity in effect during the billing month (Rate Schedule T–3, para. 3(a)). Conversion and settlement tariffs to the common effect that the maximum daily quantity is the maximum volume specified in the service agreement (Rate Schedule T–3, paras. 6 and 5, respectively), and that a contract in effect on the effective date of the tariff remains in effect as an executed service agreement to the extent not superseded by or in conflict with the tariff (General Terms and Conditions, para. 13.1). The settlement tariff, in apparent recognition of the practice under the conversion tariff from January 3, 1953, added that for such agreements the maximum daily quantity shall be that specified in an Index appearing on Sheet No. 99 of First Revised Volume No. 1 (Rate Schedule T–3, para. 5.1).

[63] The consolidated proceedings (G–1142, *et al.*) involved all of United's jurisdictional rates and charges for the sale and transportation of natural gas (13 FPC at 399), and included an investigation under Section 5(a) of the Act initiated by the Commission's order of October 12, 1948 (G–1142), and rate increases under Section 4(e) thereof as proposed in United's conversion tariff (G–2019). Hearings held in 1953 and early 1954 were followed by conferences which resulted in the settlement, agreed to by all participants but one, Mississippi River Fuel Corporation.

[64] A fourth exhibit (No. 80) comprised a form of gas tariff to be filed to effectuate the terms of settlement.

The Commission, in its opinion approving the settlement, accorded full recognition to each reservation (13 FPC at 408–409), and provided, in part, that its order would be without prejudice "to any claims or contentions which may be made by the Commission, United, or any other affected party hereto, in any proceeding now pending or hereafter instituted by or against United or any other companies or persons" (13 FPC at 419–420).

United's counsel in reply to Staff counsel's foregoing report stated his general agreement thereto and offered in evidence Exh. Nos. 77–80, *supra*, only for the purpose of extending and explaining his own acceptance.

Southern's counsel also limited his formal statement, in part, to one of acceptance of Exh. Nos. 77–80 as affording a basis upon which Southern agreed to recommend the rates proposed, and, in oral argument before the Commission, made specific reference to Exh. 79 only as it demonstrated the over-all savings expected with respect to its purchases at Kosciusko and Monroe, and the transportation of Carthage gas, adding, in effect, that Southern had consented because in the "package" presented to it, United had specifically agreed to enlarge the reserves that could be called upon to support deliveries at Monroe.

Staff's association in Exh. 79 (G–1142, *et al.*) of a contemporaneous billing demand with earlier rates and a probable prospective demand with prospective rates, neither requires nor justifies the inference that Southern's reliance upon Exh. 79 for settlement purposes represented a consent to imposition of the contract maximum quantity as a permanent fixed billing demand. United's contention that Southern's reservations in G–1142, *et al.*, relate only to cost methods and principles fails to accord the recognition required both as to the broader reservation of rights and contentions with respect to future proceedings and the basic and controlling purpose of the settlement to arrive at generally acceptable test year cost of service result in terms of rates.

It is concluded that the formulation, acceptance, and approval of the settlement tariff in G–1142, *et al.*, does not present a question in regard to the transportation contract that is ultimately different from that considered above with respect to the conversion tariff.

Conclusion as to Change in Billing Demand

On the basis of the foregoing considerations it is further concluded that, except for possible application of the doctrine of estoppel, hereinafter considered, the provision of a fixed billing demand in United's settlement tariff in G–1142, *et al.*, in lieu of one depending upon the amount of gas requested, operates to effect an unsupportable substantive change in the application of the terms of the transportation contract of May 7, 1951.

The "Mobile" Doctrine

In *United Gas Pipe Line Company* v. *Mobile Gas Service Corporation*, 350 U.S. 332 (1956), the Supreme Court held that a natural gas company could not unilaterally effect a change in the specified rate of a long term contract simply by filing a new rate schedule with the Commission. The Court stated that the Act recognizes that rates to particular customers may be set by individual contract, does not affect the initial rate-making and rate-changing powers of natural gas companies, and does not confer the right, not otherwise possessed, to change rate contracts by unilateral action. Under this holding a new schedule which purports to effect such a change is a nullity and of no effect upon the status of the contract rate as the lawful rate. It is apparent that the doctrine of this case is as applicable to a unilateral change in the specified billing volume as to the specified charge, and United does not contend to the contrary.

However, United does contend that Southern agreed of record to the rate settlement in G–1142, *et al.*, wherein rates had been tested as to revenue results in part upon the assumption of a constant quantity to be transported for Southern, and the tariff purported to adopt a fixed demand in respect thereto; and, further contends to the effect that Southern's subsequent performance and payment constitutes conclusive evidence of its consent and agreement that the tariff was thus correct and acceptable.

Nevertheless, while Southern in effect may have stipulated a partial waiver of the application of the billing demand provisions of the contract, the fact pointed out in the preceding section hereof, that it has not consented that the contract maximum quantity become the permanent fixed billing demand under the doctrine of the *Mobile* case saves to it the billing demand provisions of the transportation contract.[65]

Conclusion as to United's Freedom Under "Mobile"

It is concluded, therefore, that United is not free under the "Mobile" doctrine to effect an unilateral change in the billing demand provisions of the transportation contract of May 7, 1951.

The Estoppel Issue

United's contention that Southern's conduct and performance estops the latter from denying or claiming to the contrary of tariff terms and conditions relates both to the former's conversion and settlement tariffs.

With respect to the conversion tariff, United's case is that by the filing on July 3, 1952, of the tariff and statement in G–2019 Southern was on notice that the pricing article of the transportation contract of May 7, 1951 (Art. VIII, Rate Schedule 126–B) was not being retained as a part of the tariff or service agreement, that unless Southern objected, the tariff would control and require payment under Rate Schedule T–3 for 55,460 Mcf per day, whether transported or not, and that Southern's subsequent performance of the tariff's obligations in this respect, without objection,[66] imports an agreement thereto.

With respect to the superseding settlement tariff, United's case is that in addition to continuing its payments without objection,[67] Southern, in consideration of United's agreement to increase deliveries at Monroe [68] and apply thereto system supplies in lieu of the previously limited Carthage production,[69] accepted settlement knowing that United proposed to retain in the settlement tariff the fixed billing demand first applied under the conversion tariff (Exh. 80, G–1142, *et al.*) and that Staff had computed comparative revenues under Rate Schedule T–3 in relation to both existing and trial (settlement) rates by use of a like billing demand (Exh. 79, G–1142, *et al.*).

United associates with the foregoing certain economic advantages alleged to have been obtained by Southern in earlier negotiations related to the Carthage field contract of September 5, 1945 (G–622), and the transportation contract of May 7, 1951 (G–1750, *et al.*), asserting that these provided a premise for Southern's acquiescence in United's billing under each tariff.

---

[65] The holding in *Mississippi River Fuel Corp.* v. *F.P.C.* (CADC-1957), 252 F. 2d 619, 625 (cert. den. 355 U.S. 904) which sanctioned United's tariff omission of a clause in its pre-existing contract with Mississippi River Fuel rests on the fact of discrimination and does not support United's contentions in this proceeding.

[66] From January 3, 1953, the effective date of the tariff to August 1, 1954, the effective date of the settlement tariff.

[67] From August 1, 1954, the effective date of the settlement tariff, to January 24, 1956, the effective date of Southern's first request for transportation of the full contract quantity of 55,460 Mcf per day.

[68] From 65,546 Mcf to 76,000 Mcf at Monroe; an increase from 100,839 Mcf to 150,839 Mcf per day at Kosciusko was in fact related to Southern's exercise of an option and not to settlement considerations. United alleges that the increase at Monroe enlarged its liability and created a detriment to it.

[69] As in the sales contract of May 7, 1951, Rate Schedule No. 126–A.

Although Southern agrees that for the period January 3, 1953, to January 24, 1956, it was billed and, without objection, paid on the basis of a fixed billing demand which exceeded the billing demand provided by the contract, that it obtained certain considerations from United as a condition for agreement to the settlement (G–1142, *et al.*),[70] and that it did gain substantial advantages in the negotiations which related to the Carthage field and transportation contracts,[71] it answers to the effect that it is not shown that United suffered any disadvantage because of Southern's failure to insist upon its rights and payment of charges computed otherwise than as provided in the contract, that in the settlement in G–1142, *et al.*, not only was United compensated for concessions,[72] but Southern limited its agreement to rate results, and saved its rights with respect to future proceedings.[73]

The evidence supports these answers. Indeed, both as a matter of fact and, as hereinafter set forth, of law, Southern's payment of excess charges is not of the significance that may first appear, for United not only fails to prove that any disadvantage resulted to it but an approximation based upon Southern's changes in the election of gas to be transported during the period July 23, 1952, through December 31, 1963,[74] indicates that during that portion when excess charges were paid (to January 1956) Southern requested annual average volumes not significantly different in amount or in year to year variation from the other corresponding annual averages.[75] Moreover, Southern's claim, to the effect that having received transportation of the maximum contract quantity (55,460 Mcf) on frequent occasions after the date of its first request therefor (January 24, 1956), it is to be considered, in the absence of evidence to the contrary, that a like quantity would have been transported upon any prior request, is valid on the basis of the terms of the contract and the principle that parties are expected to live up to what they have chosen to write, and, with regard to estoppel, is sufficient to put in question the significance to be attached to the length of period as well as number of the excess payments.[76]

United does not establish, as in this connection it must, that Southern's failure to object to United's omission of the pricing article of the transportation contract (Rate Schedule 126–B) in the latter's conversion tariff (Rate Schedule

---

[70] Including increased deliveries at Monroe and the application of system reserves thereto, without limitation to specific fields or source.

[71] Including a savings in cost of constructing and operating its own facilities for the transportation of Production's Carthage gas.

[72] That is for its agreement that Monroe deliveries would be supported by system supplies Southern agreed to accept a rate which included system costs.

[73] Southern also contends that the doctrine of estoppel has no place in regulatory proceedings, but the issues formulated by the Commission's Order herein and the conclusions here entered with respect thereto require no further conclusions with respect to this contention.

[74] United's Stipulation's Exh. 28.

[75] Using as a convenience a midnight to midnight day in lieu of the contract's 7 : 00 a.m. to 7 : 00 a.m. day, weighting volumes requested for a fraction of a day by that fraction, and deeming an apparent variation in pressure bases as of relatively insignificant effect.

[76] On the basis of a contract billing demand consisting of the maximum volume for any day within the past twelve months, Southern was properly billed and properly paid on 55,460 Mcf from January 1956 to April 1963, even though certain deliveries in the 1961–1962 season included gas loaned by United to make up a difference between the volume requested by Southern and that available from Production's acreage. It is noted that Sinclair Oil & Gas Company succeeded to Production's interests and, as of November 1, 1956, adopted the sales contract of May 7, 1951, with Southern, Production's Rate Schedule No. 2, as its own Rate Schedule No. 96.

T-3) was based upon any intent to mislead or willingness to deceive.[77] Nor does it establish, as it must, that it was thereby induced to pursue a course of action to its detriment, or has been actually injured.[78]

Morever, mere acquiescence would not prevent Southern from asserting what would ordinarily be its legal right,[79] and the mere making of a payment when not legally bound would not create an obligation to continue doing so.[80] Indeed, Southern's payment of charges on the basis of the maximum contract demand during a period when, because of its own circumstances or volition, it was taking less, is susceptible of more than the one construction that it had thereby assented to a change in the billing provisions of the contract, and any construction consistent with its rights does not offer a proper basis for the application of an estoppel against it.[81] Estoppels, not favored in the law and, in general, strictly construed,[82] cannot be based upon mere argument or doubtful inference.[83] To allow it on the grounds claimed here would result not in preventing wrongful injury to United but in relieving it of an existing obligation to Southern.

The result is the same if the stipulated facts be considered from the possible aspect of a waiver, which, in the absence of associated estoppel elements, involves simply an intentional and voluntary relinquishment of a right. It may be manifested, however, only by actions indicating a clear and unequivocable purpose[84] inconsistent with any intention other than that of waiving.[85] In the proceeding in G-1142, *et al.*, Southern was free to determine to what extent and in what respect an agreement to settle would operate to limit its resort to rights provided under the transportation contract.[86] Circumstances attending payments in the period of excess charges and reservations in rates proceeding settlements[87] establish that Southern never intended a permanent waiver of rights provided under the billing provisions of the transportation contract.

The fact, adverted to by United, that Southern, as a participant in more recent proceedings concerning United's rates, failed to raise the issue here involved neither requires nor justifies modification of the conclusions reached herein with respect to estoppel and waiver. The later proceedings initiated in the period 1955-1961[88] were settled by stipulation dated February 16, 1962, approved by the Commission by order issued March 12, 1962, wherein Southern again fully reserved rights for the future. Moreover, as late as the first four months of 1962 Southern requested transportation of the full contract quantity (55,460 Mcf) on as many as

16 different occasions effective for a total of as many as 44 days,[89] and in discussions held as late as early 1962 sought to adjust its differences with United by mutual agreement, only failing which it filed this complaint.[90]

Conclusions as to the Estoppel Issue

Accordingly, on the basis of the foregoing it is concluded that Southern is not by past acquiescence and conduct with regard to the billing demand provision of United's Rate Schedule T-3 now estopped from complaining of that provision.

Status of Rate Schedule T-3 as "Just and Reasonable"

Southern contends that because of a decline in the volume of Carthage gas available to it for transportation, United's billing on the basis of 55,460 Mcf of demand presupposes a service which it no longer receives and results in a charge to it that is neither just nor reasonable as required by the Act. United responds to the effect that the Carthage line no longer operates at capacity and that, if Southern be obligated to pay on the basis of a demand significantly less than the maximum contract quantity, other customers, not notified of these proceedings and not parties thereto, would be required to bear an unjustified proportionately larger share of United's total cost of service.

From the stipulated facts it appears that since April 18, 1962, Southern's requests for transportation have not exceeded 35,000 Mcf (15.025 psia) per day; and that the Production-Sinclair Carthage acreage has been fully developed, the allowable production therefrom has been of a consistently declining order, 15 of the 27 gas wells on the acreage are under compression, and, in all probability, no quantity larger than 35,000 Mcf will be available therefrom for transportation for any substantial period in the future.

Use by United of a fixed billing demand of 55,000 Mcf (15.025 psia) is not only contrary to the flexible billing provisions of the transportation contract but would require that Southern pay for a service which it does not, and probably in the future, will not, receive. Obviously, charges based upon a fixed demand of 55,460 Mcf are not just and reasonable under the Act and have no legal support.

United's contention as to the resulting imposition of additional cost responsibility upon other customers is fully answered by Southern's reply that such a contingency properly relates to issues to be determined in those proceedings in which United proposes future rates which would have such an effect.

It is not alleged and cannot be found that granting Southern the relief to which it is entitled will impose an improper burden upon United.

Conclusion as to "Justness and Reasonableness" of Charge

Upon the basis of the foregoing, it is found and concluded that the provision of United's presently effective Rate Schedule T-3, specifying a fixed billing demand, is not just and reasonable and is unlawful under the Act.

Southern's Requested Relief

In its formal complaint Southern requests that the Commission recognize its right to reduce the maximum daily quantity to the maximum quantity tendered by Southern to United for transportation during the twelve month period ending with the last day of the previous month, and require that United submit to

---

[89] As previously stated during 1961–1962 season, at least, United did, temporarily and to a limited extent, make up transportation shortages in Southern's Carthage supplies against eventual redeliveries from this source.

[90] Southern filed its informal complaint on July 27, 1962, and its formal complaint herein on February 21, 1963.

Southern a service agreement providing that the latter shall have the right at any time and from time to time to reduce the maximum daily quantity to the maximum quantity tendered by Southern to United for transportation under such service agreement during such twelve month period. Staff counsel recommends that the relief sought be granted.

However, in accordance with the foregoing findings and conclusions, it will be sufficient that, United be required to refile effective as of May 1, 1963, the date upon which a billing demand less than 55,460 Mcf would have become effective under the billing provisions of the transportation contract, the billing provisions of its FPC Gas Rate Schedule T-3 so as to provide a flexible billing demand in accordance with the applicable provisions of its transportation contract of May 7, 1951 (Rate Schedule 126-B) and of the Order which follows as a part of this decision.

FURTHER FINDINGS AND CONCLUSIONS

Proposed findings and conclusions, and contentions of counsel, inconsistent with the findings and conclusions of this decision are without merit or not directly pertinent to a proper disposition of the issues herein and are herewith denied.

ORDER

Upon consideration of the record herein, the contentions set forth in the briefs and proposed findings of respective counsel, and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this Order is a part,

It Is By These Presents Ordered, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) United shall, within 15 days from the date this Order becomes effective, and in manner and form satisfactory to the Commission, file revisions of the appropriate portions of its FPC Gas Tariff, First Revised Volume No. 1, to provide with respect to its Rate Schedule T-3, Transportation Service for Southern Natural Gas Company, and effective as of May 1, 1963, a flexible billing demand in accordance with the provisions therefor of Article VIII of its transportation contract of May 7, 1951, herein;

(B) In lieu of the filing required in Paragraph (A) hereof, United may file an executed service agreement providing that Southern shall have the right at any time and from time to time to reduce the maximum daily quantity to the maximum quantity tendered for transportation thereunder during the twelve months period ended with the last day of the billing month, accompanied by such other filing as is required to effectuate an appropriate reduction in such maximum daily quantity to 35,294 Mcf (14.9 psia); all within 15 days from the date this order becomes effective, and in manner and form satisfactory to the Commission.

(C) Upon satisfactory compliance with the provisions of Paragraphs (A) or (B) hereof, the proceedings herein shall be terminated.

Ewing G. Simpson,
Presiding Examiner.

John D. Lane and *George F. Bruder* for Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

Ross, *Commissioner:*

This proceeding arose on the filing by Alabama Power Company, Licensee of constructed Project No. 2146 on the Coosa River in Alabama, of applications for a determination whether certain causeways and other land fills, heretofore unauthorized although presently in varying stages of construction, should be allowed or excluded from the reservoir area of its Logan Martin Development. Location of these causeways is shown in the appended map. The causeways would occupy project lands in the power or flood pools of the reservoir and have been or would be erected by the owners of islands or peninsulas in the reservoir for the purpose of providing access by road to their properties. They will have no effect on the operations of the reservoir insofar as the power purposes of the project are concerned. Licensee has no objections to the causeways provided certain conditions are agreed to by the landowners.[1] It considers, however, and rightfully so, that under the terms of the license[2] it cannot permit the causeways to be constructed or to remain unless and until they have been approved by the Commission.

---

*Initial decision appears on P. 1109.

Our jurisdiction, which is accepted without opposition by all parties to the proceeding, is based on Sections 4(e) and 10(a) of the Federal Power Act and on the license authorizing the project as issued September 4, 1957,[3] and as since amended. The matter is now before us for decision on exceptions to an initial decision issued by Examiner Ewing G. Simpson on February 16, 1965, wherein he determined that the public interest will best be served by allowing the Licensee to permit use of the project lands for the causeways for which application has been made, on the ground that they will contribute to the greatest public use of the project waters and adjacent land for recreational purposes. With regard to two of the causeways, denominated in the record as the Goodgame Causeway No. 4 and the Whitten Causeway No. 6, the Examiner would require the construction of bridges providing a verticle clearance of 11.5 feet above the full power pool and a horizontal clearance of 34 feet as recommended by the St. Clair County Engineer and the Alabama Highway Department. The inclusion of these bridges in the causeway plans is agreed to by the applicants Goodgame and Whitten. The Examiner declined to adopt recommendations by those opposing the authorizations for (1) a requirement of two bridges in each of Causeways No. 4, 6 and 7 to allow for one-way boat traffic, and (2) raising of the bridge clearance to 20.5 feet to permit sailboats to pass through.

The exceptions to the initial decision involve only Causeways No. 4, 6 and 7, and the determinations made in regard thereto. Interveners filing the exceptions[4] contend that approval of these causeways under the conditions applied by the Examiner is not in the public interest and that the causeways either should be completely removed or, alternatively, that the bridges ordered in Causeways No. 4 and 6 should be increased in height and number.[5] They ask also for compensation for consequential damages if the causeways are not ordered removed and request that a date be set for the completion of the causeways and bridges to the proper specifications. They also assign error to the fact that the Examiner, in ordering bridges in Causeways No. 4 and 6, neglected to direct the excavation of the land underlying the bridges to allow for boat passage. Finally, they request that a construction bond be required to insure compliance with the Commission's decision and order in this proceeding.

The record demonstrates that the Goodgame and Whitten causeways will restrict to a degree access by boat to and from Rabbit Branch, a bay of the

---

[1] These conditions include, among others, that the Licensee be indemnified against any liability arising from the causeways, that payments of a specified amount be made for each causeway, such payments to be applied as credits in establishing the actual legitimate original cost of the development, and that all conflicts of interest with other interested property owners be resolved to the satisfaction of the Federal Power Commission.

[2] Article 26.

[3] *Alabama Power Co.*, Opinion No. 305, 18 FPC 257, rehearing denied 18 FPC 565.

[4] Filed by Charles A. J. Beavers, Esq. and Frank M. James, Esq. for and on behalf of Clearwater Point Estates, Inc. and 24 individual persons.

[5] Interveners earlier had requested separate bridges in both Causeway No. 6 and Causeway No. 7. However, the exceptions indicate that they no longer seek to secure a requirement of a bridge in the latter causeway, provided that the bridge in Causeway No. 6 is in accordance with their specifications.

Logan Martin reservoir,[6] and obstruct certain views across the water. The causeways together reduce by somewhat more than half the channels capable of passing small boats at full power pool and by an additional amount at minimum power pool. The interveners claim that while sailboats could navigate the channels remaining at the Whitten causeways, it would be difficult and would interfere with powerboat traffic. The staff's recreation witness expressed the opinion that if ordinary precautions were taken the channels at the causeways could be navigated by all craft.

The bridges in Causeways No. 4 and 6 will serve to facilitate powerboat passage and small sailboats. In addition, use of the bridge passages by these boats will lessen the number of such boats traversing the open channels and will leave more room for larger sailboats to maneuver.

The most important beneficial effect of the Goodgame and Whitten causeways is that they provide access to approximately 30 acres of island land eminently suited for recreational purposes. About half the land will be in private residential development and the other half will be used for the largest proposed commercial recreation development on the reservoir, providing facilities for lodging, dining, boating and swimming for the public. Additional advantages are that the causeways will serve as breakwaters and provide new fish habitat, as well as land access thereto. Both owners have expressed an intent to dedicate to the county the roads on their causeways and islands when they are completed. The county commissioners, some of whom testified at the hearing in favor of the causeways, have stated their willingness to accept these dedications.

On our consideration of the record we conclude that the causeways will contribute to the beneficial public uses of the project and should be approved. The opening of access by road to the islands and the other advantages cited outweigh, in our opinion, the restriction of boat access to Rabbit Branch and the interference with the cross-water view. We further agree with the Examiner that the evidence does not establish a need for more than one bridge each in Causeways No. 4 and 6 and that the public interest does not warrant our specification of bridges higher than those recommended by the appropriate State and local officials. In the absence of any evidence by interveners of the additional cost involved in requiring bridges with greater clearances, we are unable to find that such bridges would be an appropriate requirement in view of the limited convenience which could be expected to result.

We have earlier determined that this Commission has no authority to adjudicate claims for money damages.[7] Accordingly, the exception seeking such recovery is denied. The exceptions relating to the setting of a time limit for the completion of construction and the excavation of areas under the bridges are the subject of modifications made in our order from that recommended in the initial decision. The request for the posting of construction bonds will be denied since, if the Commission's order is not complied with, a complaint proceeding can readily be initiated.

As pointed out by the Licensee, the Examiner's decision includes a reference to Ranch Marina in footnote number 22 on page 1113 which should be omitted The reference will be deleted.

---

[6] Prior to construction of the dam and creation of the reservoir, Rabbit Branch was a small stream which during the winter months was about 6 to 8 feet wide and 6 inches to 2 feet in depth; during summer it would dry up completely. It is now approximately 3 miles long and, at maximum, about ½ mile wide. The interveners are persons who recently have bought land in a development located along Rabbit Branch and for the most part, plan at some time in the future to erect homes and private boating facilities thereon. Estimates for the number of such homes as given in the record range from 250 to 1,000.

[7] *Idaho Power Co.*, Project No. 1971, Order Dismissing Complaint, 29 FPC 572.

In all other respects the Examiner's decision is approved and will be adopted by us.

The Commission orders:

(A) Licensee may grant permission to use project lands and properties, for the causeways, bridges, and fills (collectively causeways) for which formal application has been made herein, *to-wit:* Fraim Causeway No. 2, Goodgame Causeway No. 4, Whitten Causeways Nos. 5, 6 and 7, McCaig Causeway No. 21, and Alabama Property Company Causeways Nos. 23-A and 23-B, *provided* that:

(1) Licensee reserve for itself and its successors and assigns the right to use its project lands and properties as may be required to safely and efficiently operate and maintain the project for beneficial public uses, including recreational purposes;

(2) In the event a causeway is to be a private road, Licensee secure agreements that the causeway owners and their successors and assigns will maintain, repair, alter or remove the causeways as required by the public convenience, health or safety and will release and indemnify the Licensee from all liability respecting the causeways or their effects and will reimburse it for any expenditures made in connection therewith;

(3) In the event all other requirements (except paragraph A(2) above) of this order have been complied with and thereafter the causeway is dedicated as a public road and accepted as such by the appropriate county authority, Licensee is authorized to grant an easement to the county, upon its request, for a public road as to any portion of a causeway lying in the pool area and to join with the appropriate landowner in granting an easement to the county for a public road as to any portion of a causeway lying in the flood easement;

(4) Licensee obtain payment or allowance from the owners, if such has not already been obtained, as just and fair compensation to it for the use of its project lands and properties by the causeways.

(B) Construction of the causeways, bridges, and land fills designated in Paragraph (A) hereof shall be initiated not later than October 1, 1965, and be completed not later than March 31, 1966, and thereafter shall be maintained to the design specifications contained in the Licensee's applications as amended by the Licensee's filing of October 5, 1964 (Item M), and any additional specifications that may be set from time to time by the Commission upon its own motion, or upon recommendation by the Licensee, Corps of Engineers, or State and local authorities, after notice and opportunity for hearing.

(C) In the event any of the persons seeking approval of causeways herein should, for any reason, choose to forego construction and to withdraw their applications, such persons shall cause the removal of existing incomplete causeways and restoration of the terrain to its prior elevation or to a depth of five feet below normal winter elevation (460 feet above mean sea level), such removal to be completed by March 31, 1966.

(D) The areas underlying the bridges to be erected in Causeways Nos. 4 and 6 and their approaches shall be excavated to a minimum depth of five feet below normal winter elevation to allow boat passage.

(E) Within ninety days after the date upon which this order shall become effective, the Licensee shall secure the removal from project lands and properties of causeways pending before it for which no applications have been filed, or for which applications are deemed to have been abandoned, unless the owner thereof enters into the agreements and makes the payment or allowance required under Paragraph (A) of this order.

(F) The reference to Ranch Marina is deleted from footnote number 22, page 1113 of the Examiner's decision.

(G) The Examiner's decision, as modified herein, is hereby adopted as part of this decision and order.

(H) Except as herein granted, the exceptions to the Examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON PROCEEDINGS INITIATED UNDER PROVISIONS OF THE FEDERAL POWER ACT AND A LICENSE BY APPLICATIONS TO DETERMINE THE STATUS OF CAUSEWAYS

(Issued February 16, 1965)

SIMPSON, *Presiding Examiner:* These proceedings were initiated by the filing on February 14 and 17, and June 29, 1964, by Alabama Power Company, Licensee of Project No. 2146 on the Coosa River (River) in Calhoun, St. Clair, and Talladega Counties, Alabama, of its several applications in the premises and Commission's Order Fixing Hearing, issued August 10, 1964, in relation thereto.

The proceedings relate to the authority contained in, and jurisdiction conferred by, Sections 4(e)[1] and 10(a)[2] of the Federal Power Act (Act), and particularly to the provisions of Article 26 of the license issued Alabama Power Company (Licensee), September 4, 1957, (Opinion No. 305, and as amended)[3] as applicable to the use and operation of the Logan Martin dam and reservoir.

On February 14, 1964, Licensee filed its letter to the Commission dated February 12, 1964, with several exhibits attached for consideration in regard to the approval or disapproval of the application to the Licensee of F. O. Whitten, Sr., for permission to construct Causeways Nos. 5, 6 and 7 on project lands in the Logan Martin reservoir; on February 17, 1964, it filed a similar letter dated February 14, 1964, also with several exhibits attached for consideration in regard to approval or disapproval of the application to Licensee of J. W. Goodgame for permission to construct a similar Causeway No. 4; and, on June 29, 1964, filed a further letter to the Commission, dated June 25, 1964,[4] with several exhibits attached for consideration in regard to the approval or disapproval of applications to Licensee of Roy M. McCaig, Charles R. Burgess and J. R. Moody for permission to construct a Causeway No. 21 and land fill.

As indicated by Exh. A, accompanying Licensee's application to the Commission filed February 14, 1964,[5] the Chairman of the St. Clair County Commissioner's Court, Pell City, Alabama, gave notice to Licensee by letter dated January 2, 1964, of a filing with the Commission on behalf of seven listed individuals for permits to construct eleven different causeways in the reservoir, and requested Licensee's consideration and approval to the Commission of each of the same,[6] to which Licensee replied by letter dated January 9, 1964, suggested that certain specified minimum information be supplied.[7] In response to this and subsequent requests Goodgame[8] and Whitten[9] among those listed, and another[10] submitted data of the nature requested, while three neither complied nor appeared at the hearing.[11] Of those remaining, one has since been resolved by Licensee on the basis of an oral understanding in fact reached between itself and a predecessor owner at the time of Licensee's acquisition of a flood easement and fee,[12] while another has endeavored to make a partial belated compliance by letter dated May 16, 1964, refusing to accept a condition as to Licensee's indemnification.[13] Accompanying Licensee's first two applications[14] are copies of a total of some 12 letters from individual owners of reservoir shore sites, which protest alleged effects of some or all of causeways as being generally adverse to property rights, health, and recreational uses, as well as scenic values, and by its Order Fixing Hearing, issued August 10, 1964, herein, the Commission noted that it had received numerous letters and petitions, some supporting and others opposing the causeways. The order, further reciting that the foregoing applications requested a determination whether causeways constructed without approval should be authorized or removed from the reservoir and whether certain causeways proposed for construction should be approved, found a public hearing respecting the matters involved and issues presented to be appropriate and in the public interest, and ordered such a hearing to be held concerning the same commencing September 9, 1964, at 10:00 a.m. at a place in Alabama subsequently designated by the Secretary's Notice of August 13, 1964, to be the Courthouse, Anniston, Alabama. Accordingly, these proceedings came on for hearing and were heard commencing on September 9, 1964, at the place and time provided, concluding on the following day. Appearances were entered on behalf of Licensee, Staff, and tentatively, as provided by the Rules, on behalf of three participants proposing to construct causeways and fills, and thirty-six opposing property owners.[15]

---

[1] Section 4(e) of the Act, in brief, authorizes the Commission to issue licenses for the construction, operation and maintenance of project works, including dams, reservoirs, power houses, transmission lines, and other items necessary or convenient for the development and improvement of navigation in, and for the development and utilization of power from, jurisdictional streams.

[2] Section 10(a) of the Act, in brief, provides that the license issued shall be on the condition that the project adopted, including maps, plans, and specifications shall be such as will be best adapted to a comprehensive plan for improving or developing a waterway for the use or benefit of interstate commerce, the improvement and utilization of water power development, and other beneficial public uses, including recreational purposes.

[3] Article 26 of the license provides, in part, to the effect that Licensee shall retain possession of all property covered by the license including the project area, project works, and all franchises, easements, water rights and rights of occupancy and use, unless voluntary disposition thereof be approved by the Commission (Opinion No. 305, issued September 4, 1957), and Form L–6 of December 15, 1953, at 16 FPC 1121, 1126; 18 FPC at 270.

[4] The recitals of Commission's Order Fixing Hearing refer to applications filed February 14, 17 and 25, 1964, of which the latter, as noted in the hearing (T. 3) is an obvious typographical error in that it relates in fact to the application filed June 29, 1964.

[5] See Exh. B of the application to the Commission filed February 17, 1964.

As required by the granting of record of Staff's oral motion therefor, Alabama Property Company, Fraim, Goodgame, McCaig and Whitten have, since the hearing, submitted detailed causeway plans and bridge designs to Licensee which have been duly filed as supplements to the latter's several applications herein, with the latter's accompanying comment indicating its several approvals with respect thereto, on the assumption of a further approval by the Engineer of St. Clair County, Alabama, of final roadway width and side slope specifications applicable to Goodgame and Whitten causeways (Item M); and as permitted by a related ruling of the Presiding Examiner, opposing interveners have since filed counterproposals to require construction of additional bridges to permit one way passages, and to require certain greater clearances for sailboat traffic through these latter causeways (Exh. 41).

---

[6] Allen, Causeway No. 1; Fraim, Causeway No. 2; Funderburg, Causeway No. 3; Goodgame, Causeway No. 4; Whitten, Causeways Nos. 5, 6 and 7; Powell, Causeways Nos. 8, 9 and 10; and Walker, Causeway No. 11.

[7] This letter was addressed to the Chairman of the St. Clair County Commissioner's Court who had given notice of application on behalf of the seven individuals.

[8] Causeway No. 4.

[9] Causeways Nos. 5, 6 and 7.

[10] McCaig, Causeway No. 21.

[11] Allen, Causeway No. 1; Funderburg, Causeway No. 3; Powell; Causeways Nos. 8, 9 and 10.

[12] Walker, No. 11, successor to N. D. Pless, with respect to which notice was given the Commission by letter dated March 13, 1964, and further consideration abated.

[13] Fraim, Canseway No. 2.

[14] Filed February 14, 1964, and February 17, 1964, respectively.

[15] On appropriate applications subsequently filed formal intervention was granted by Commission's order issued November 4, 1964. One of the individual property owners who entered an informal statement at the hearing in opposition to the causeways did not seek formal intervention, while three others who did not participate obtained intervention.

Thereafter, Staff filed its brief, interveners their several statements in lieu of briefs, and Licensee its reply to Staff's brief.

Fifty exhibits and fifteen items, including the three parts of Item M, were received in evidence.

In all fourteen witnesses testified, including the Chairman and three members of the Court of County Commissioners of St. Clair County, Alabama, and eleven individuals representing local property interests were permitted to make informal statements as to their opposition or approval.[19]

THE ISSUES

The issues presented in regard to the authorization of causeways over lands with respect to which Licensee has acquired fee or easement, involve: (a) whether implementation of the license and the beneficial public use provisions of Section 10(a) of the Act, with particular regard to that for recreation, justifies the granting of these applications and Licensee's yielding possession of certain easements and rights of occupancy in regard to such uses and purposes, and (b) whether, and to what extent, approvals of causeways should be conditioned to require owners to provide bridges and other facilities for public use and recreational purposes.

THE CONTENTIONS

Article 26 of the license requires, in pertinent part, that Licensee retain possession of project property, franchises, easements, water rights, and rights of occupancy and use related to the project, and that none necessary or useful to the project and to the development of power shall be voluntarily sold, transferred, abandoned or otherwise disposed of, without the approval of the Commission. It is the position of Licensee that, while the existence of causeways and fills which embrace any part of the project lands or rights is unauthorized until approved by the Commission, in the interest of attaining full public utilization of project waters for recreation, it does not object to the presence of causeways or similar works having no appreciable effect upon the operation of the dam and reservoir, provided that: a payment be made which can be applied against an appropriate part of project cost; Licensee be protected against any potential liability in regard to such causeways; design and construction thereof shall be acceptable to County authority having jurisdiction and the Commission; and conflicts of interest with adjoining property owners be resolved to the satisfaction of the Commission.

Licensee also proposes that as to causeways to be authorized, which will in fact become dedicated and accepted by the county as public roads, it be permitted to grant an appropriate easement to the county, and relieve the landowner from having to indemnify Licensee for injuries or damages to the causeway or to persons using the same.

Counsel for the causeway proponents, herein, filed their respective statements in lieu of briefs to the effect that no question exists as to the Commission's jurisdiction in the premises and all relevant facts have been already presented of record.

Counsel for opposing interveners, having first filed a similar statement in lieu of brief, in counter proposals (Exh. 41) to plans and bridge designs filed as supplements to Licensee's applications (Items M -Goodgame, -McCaig, and -Whitten), recommend that provision be made for one-way boat traffic by the construction of two bridges in Causeway No. 4 (Goodgame) and two each in Causeways Nos. 6 and 7 (Whitten), with a finished grade elevation sufficient to provide access by small sailboat (485.5 feet).

---

[19] Not including one in opposition who later testified.

Staff contends that it is consistent with the public interest to authorize Licensee to permit use of project lands and easements for the immediately pending causeways and land fills provided Licensee: reserve a right to future use of lands and easements as may be required for the safe and efficient maintenance and operation of the project; secure agreements that causeway owners, successors and assigns, will maintain, repair, alter or remove the causeways as required by the public convenience, health or safety, and will release and indemnify Licensee from any liability therefor, and reimburse Licensee for expenditures made in connection therewith; and receive appropriate compensation for the occupation of such lands and easements.

Staff further contends that the record provides no basis for a requirement that six sailing bridges be installed as proposed by interveners, and that, accordingly, causeways, bridges and land fills should be approved as proposed in Licensee's applications herein, as amended by Item M.

THE EVIDENCE

The Reservoir, Lands, Rights, and General Causeway Construction

Logan Martin dam and reservoir, licensed by the Commission as a part of Project No. 2146, is located on the Coosa River (River) basically in the area of Pell City and Riverside, Alabama. Stretching at full pool from river mile 99.5, at the dam, to river mile 148, upstream, the reservoir embraces some 18,000 acres, and several hundred miles of shoreline. It is one of six built, or under construction, which will provide a series of lakes on the River to extend from the vicinity of Wetumpka, Alabama, upstream to the vicinity of Rome, Georgia, and, being in particular proximity to metropolitan Birmingham, gives early evidence of possessing a major potential with respect to future recreational use.[17]

Filling of the reservoir, which commenced in the spring or summer of 1964 had, as of the date of hearing herein, reached, and was being temporarily held, at an approximate elevation of 461 feet, but it is intended that, subject to power requirements[18] and the incidence of rain and floods, elevation during the principal period of recreation (May to September) will normally vary between 464.5 feet and 465 feet.[19]

In general, for pool requirements, Licensee acquired land in fee to an elevation of 465 feet at the dam and 473 feet in the upper reaches of the reservoir;[20] and, for flood storage above pool level, acquired flood easements to an elevation of 473.4 feet near the dam and 490 feet upstream. While Licensee's form then in general use provided for the acquisition of lands to be surrounded by water, in instances of settlements with Licensee, certain fee owners, nevertheless, formally elected to retain lands to become islands and take severance damages in regard thereto. In consequence, certain causeways were then, or have been since, constructed, or partially constructed, and in connection with applications filed pertaining thereto[21] the Commission has approved a land fill at Pine

---

[17] Licensee is presently making an over-all study of future recreational use of the reservoir.

[18] The power plant consists of three 57,000 hp turbines connected to three 42,750 kw generators.

[19] However, again subject to the incidence of rains and floods, the pool will operate during the winter at a lower level of 460 feet.

[20] Allowing for hydraulic gradient.

[21] Including in this proceeding: Alabama Power Co., Nos. 23A and 23B, causeways: Fraim, No. 2, land fill; Goodgame, No. 4, causeway; McCaig, No. 21, causeway and land fill; and Whitten, Nos. 5, 6 and 7, causeways.

Harbor Marina and breakwater at Willingham's dock. Of the remainder, three are yet pending with Licensee,[22] seven have been effectively withdrawn or abandoned,[23] and eleven others have been permitted because located adjacent to but not on project property, or constructed prior to acquisition, or reserved as a part of the settlement.[24]

Matters Pertaining to Principal Causeways

Causeways Nos. 5, 6 and 7 (Whitten)[25]*—Location*

Causeways Nos. 5, 6 and 7 are located in the lower reaches of the reservoir, in St. Clair County, Alabama, where Licensee acquired land in fee to a normal pool elevation of 465 feet and additional flood easements to elevation 473.5 feet,[26] and are intended to connect and provide access, successively, to three islands. Except for the installation of bridges these causeways would form a continuous arm of land across a major portion of the flooded outlet of Rabbit Branch and confine passage substantially to one deep channel near the far shore, some 475 feet in width,[27] supplemented at times by another shallower channel in the same area some 257 feet wide.[28]

Without these causeways, there would be at the site of No. 6, two channels three feet or more in depth of respective widths of 282 feet and 403 feet; and, on the site of No. 7, two of 150 feet and 300 feet width, respectively. However, neither causeway lies in any part of the original channel of Rabbit Branch which, before flooding, was a stream usually but one-half to two feet deep in wet weather and 6 to 8 feet wide, and in summer dry.

Licensee's Acquisition of Whitten Property and Related Matters

By taking in fee to elevation of 465 feet Licensee acquired some 400 acres of a 450 acre river-front farm which Whitten had previously owned over a period of years. Including portions subject to flood easement, Islands Nos. 5, 6 and 7 embrace some 18 acres[29] of the 50 acres of the farm which remained after Licensee's acquisition.[30]

Originally access to the Whitten tract, and specifically to what are now Islands Nos. 5 and 6, was by either of two county roads known as the Roe and Vincent Roads, respectively, the flooding of which leaves no other feasible means of access to the islands by vehicle than by causeways.

Settlement between Licensee and Whitten with respect to the acquisition occurred by deed dated October 12, 1962. This instrument, representing the only written agreement between Whitten and Licensee, makes no mention of the reservation of a way, but, nevertheless, either at the time of settlement or shortly thereafter, Whitten advised Licensee's local representative of an intent to construct Causeways Nos. 5, 6 and 7, and, apparently without immediate objection thereto, proceeded so to do.[31] There is no proof that Whitten thereby intended to obtain permission to construct the causeways or that any of Licensee's local employees, including its supervisor in charge of the field office acquiring the land, had any authority to grant it.

---

[22] Cline, No. 22, a small partially completed causeway; Ranch Marina, a minor general reshaping of the shore line; and Riddle, No. 19, a small causeway.

[23] Allen, No. 1; Funderburg, No. 3; Powell, Nos. 8, 9 and 10; Stewart, No. 18; and Waite, No. 12; none of whom have completed an application in form appropriate for submission to the Commission or indicated any current interest in doing so.

[24] Borden, No. 27; Davis, No. 13; Lankford, No. 26; Lipsey (no number); Merrill, No. 16; Roberson, No. 20; Roe, No. 25; Treadwell, *et al.*, No. 17; Wadsworth, *et al.*, Nos. 14 and 15; and Walker (Treasure Island), No. 11; with respect to which no opposition had been expressed as to any one.

[25] Licensee's request for approval of these causeways was submitted and filed with the Commission on February 14, 1964, and supplemented by further data submitted by letter of even date.

[26] Elevations are heights above mean sea level.

[27] At normal pool elevation of 465 feet, from five to ten feet deep near shore sloping steeply toward midstream and a depth of 35 feet or more.

[28] This latter channel would be impassable at normal winter pool elevation of 460 feet.

[29] Above normal pool level of 465 feet, Island No. 5 embraces some 5 acres, Island No. 6 some 9 to 10 acres, and Island No. 7, sold in gross in 1964, some 3½ more acres.

[30] Including some 22 acres subject to easement between elevation 465 feet to elevation 473.5 feet.

Thereafter, in February 1963, with causeway construction well under way, a complaint was made to Licensee with respect to such construction and Whitten was given notice to discontinue. On the latter further proceeding, in October 1963, to effect a fill at the intersection ashore of Causeway No. 5 and Vincent Road, Licensee obtained an injunction in the Circuit Court of St. Clair County on November 8, 1963, which stayed all further construction on the causeways.

As of February 1963, with causeways partly level,[32] Whitten had invested approximately $10,000 therein, with another $8,000 or so required for completion to the proposed elevation of 474.5 feet, and with a bridge in Causeway No. 6.[33]

Present Status and Intended Use of Islands and Causeways

Of the six lots originally owned by Whitten on Island No. 5, one was sold in October 1963, two in November of that year, and three in April 1964. The two sold in November were purchased as a recreation area for the use of employees of a local telephone company. The others are intended, apparently, for private residential purposes. The recreation area presently represents an investment of some $20,700 in land, clearing, beach grading, drilling of a well, and installation of an electric pump. In addition, the employees have been engaged in cooperatively installing dock and piers, a float, and picnic facilities.

Other than for the making of a dirt road and the availability of electric service Island No. 6 remains undeveloped, but is capable of subdivision into approximately 18 residential building sites or lots. Island No. 7, which was sold in gross in the fall of 1963, for private residential use, has only a drilled well and electric pump, boat docks, and a launching ramp.

Whitten intends to dedicate the island causeways as public roads and in his discussions with the Chairman of the Court of County Commissioners it has been indicated to him that when as many as two or three permanent island residents are established the dedication will be accepted.

Specifications and Reservoir Occupancy

The causeways originally would have had a top width of 15 feet, rip-rap on 2.5:1 side slopes, 90 percent machine compaction, and a finished elevation of 474.5 feet, or one foot above flood easement, but, by later specifications approved by the County Engineer for St. Clair County, Whitten now undertakes to provide causeways with finished grade of 476.5 feet, rip-rap protection to 475.5 feet, together with a bridge in No. 6 for boat passage and water outlet, of a single 34 foot span built according to State highway department standards, with a reinforced deck girder, steel piling, concrete abutments, rip-rap protection where necessary, and finished grade of 476.5 feet. Licensee reasonably assumes that, as the County Engineer has required 2:1 side slopes and a maximum road width of 20 feet in the instance of other causeways or land fills, the immediate causeways will be approved herein with the same slope and road width.

---

[31] In October or November 1962.

[32] Each was then of full length: No. 5 approximately 475 feet, No. 6 approximately 1910 feet, and No. 7 approximately 825 feet.

[33] Whitten first proposed to locate a bridge in deep water at the center of Causeway No. 6 which would have had a horizontal clearance of 18 feet, width of 15 feet, abutments of reinforced concrete or creosoted pine piling, 6x16-inch pine stringers, and 3x10-inch hardwood flooring, of a type familiar on county back roads and capable of bearing the heaviest equipment to be used in connection with future construction on the islands.

Causeway No. 5, except for a small portion of one side located in very shallow water (6 inches), lies almost entirely in the flood easement, while No. 6 is located on both pool land (1.5 acres) and flood easement (0.6 acres), and No. 7 lies principally on pool land (0.7 acres) and partly on flood easement (0.1 acres).

Licensee's Report of Effects of Causeways Nos. 5, 6 and 7

According to Licensee, Causeway No. 5 will have no effect upon the operation of the reservoir, or upon boating, and will present no particular problem as to mosquito control or driftwood collection. Causeways Nos. 6 and 7, except for a bridge, would confine all outlet from Rabbit Branch to the two channels previously mentioned[34] and have some effect upon both boating in the area and also the view from certain property sites. With a bridge in Causeway No. 6 the effect upon boating would be partially alleviated and there would be no appreciable problem as to mosquito control. Problems concerned with the collection of driftwood would require some time to evaluate.

These causeways would have no significant hydrological effects on flood levels in Rabbit Branch, flows through the channel, or reservoir operations.

Causeway No. 4 (Goodgame)[35]—Location

Causeway No. 4 lies in Rabbit Branch outlet on the lower reaches of the reservoir,[36] approximately three-quarters of a mile upstream from the above considered Whitten's Causeways Nos. 5, 6 and 7, in the same area where Licensee acquired land in fee to normal pool elevation of 465 feet, and above for flood easement to 473.5 feet. It extends some 1275 feet southeastwardly from the mainland to provide access to Island No. 4 (Coosa Island) also located in the outlet of Rabbit Branch. Except for a proposed bridge the causeway and island would form a continuous land arm across the outlet and confine flows and boat traffic to a single channel some 375 feet wide between Island No. 4 and the northeast bank of the Branch. The causeway does not extend into the original channel of Rabbit Branch.

Acquisition of Goodgame Property and Related Matters

Licensee acquired what is now the Goodgame property from one Williamson and wife on March 7, 1961, for a certain consideration, applicable in part to the fee and in part to the easement, which was accepted in full compensation for all consequences attendant upon the construction and operation of the reservoir. Thereafter, on October 30, 1962, before filling of the reservoir had commenced, Goodgame acquired the island from the Williamsons.

Prior to flooding access to the tract had been by county gravel road, principally Roe Road which led from U.S. Highway 231 southerly for about one and a half miles, where it crossed the present causeway location within approximately 400 feet or less of what is now the island, after which it passed off to the west. The Vincent Road also came within approximately the same distance to afford an access to the tract from an easterly direction. It was testified at the hearing, and not disputed, that as in the case of the preceding Whitten property, Licensee allowed the predecessor to Goodgame's title certain unspecified severance damages with respect to that part of the land which is now Coosa Island, without provision for a causeway.[37]

---

[34] *I.e.,* the deep 475 foot wide channel between Island No. 7 and Waite's Island and the shallower 257 foot channel between Waite's Island and the mainland.

[35] Licensee's request for approval was filed with the Commission February 17, 1964, and was supplemented, as to matters concerning a bridge, by a second letter dated July 18, 1964.

[36] St. Clair County, Alabama.

The Court of County Commissioners of St. Clair County, which is charged with the duty of supervising the building and maintenance of County public roads, sought at the time of the initiation of Licensee's land acquisition program, to have Licensee replace roads which would be flooded. However, in the final settlement the County finally agreed to accept a round sum and to undertake the relocation and raising of roads required by public use. In the determination of the round sum the County Engineer, the County Commissioner in the road district affected,[38] and Licensee's senior engineer of hydraulic planning, first viewed each road to determine which should be raised or relocated, and which eliminated because leading only to unoccupied property, following which the County Commissioners as the Court made an official determination in the premises. While the Roe Road in the vicinity of Island No. 4 was eliminated from consideration because of the absence of dwellings in the area which would bear occupancy,[39] it had been understood, in effect, that the County could relocate or build up any road in the reservoir area and obtain the soil necessary therefor from the reservoir.[40]

Goodgame, apparently first sought to raise the Roe Road above pool level, but meeting with an objection from his predecessor in title, and because of matters related to natural drainage and depth of water, the County Commissioners suggested the construction of a causeway at the present site. Accordingly, in the summer of 1963, Goodgame obtained what purported to be a permit from the Commissioners for such construction on condition that the causeway become a public road. However, the former, for some undisclosed reason, entered into correspondence with Licensee concerning the proposed causeway, and in the course thereof was advised that construction could not proceed at that time. Nevertheless, acting upon such authority as had been obtained from the County Commissioners, he proceeded with construction, and thereafter, upon complaint filed November 7, 1963, in the Circuit Court of St. Clair County, Licensee obtained a temporary restraining order and Goodgame desisted.

With this turn of events a continuation of the construction was authorized by the County Commissioners and undertaken as a road district activity which proceeded until restrained by Order of the Circuit Court, issued December 6, 1963, upon Licensee's complaint against the Commissioner in the district. Thereafter, on discovery of further work in progress,[41] Licensee obtained court authorization to barricade the causeway, and, with placement of a barrier of telephone poles for this purpose, the island became accessible only by barge and boat.

Subsequently, a proceeding to condemn the causeway as a public road[42] was authorized by the Court of County Commissioners and duly filed on August 5,

---

[37] While Licensee's witness testified that the appraisal provided some additional amount as severance damages to take care of the loss of value of the cut-off lands, neither the Whitten nor Williamson deed directly or indirectly refers to such a sum or category of damages.

[38] Each Commissioner member of the Court of County Commissioners is assigned individual responsibility for the supervision and maintenance of roads in a designated district.

[39] The house last standing on Coosa Island was removed some 8 to 10 years ago, but access thereto had been had from both the Roe and Vincent Roads.

[40] The Roe Road has been raised at a point about one mile north of Coosa Island, and others have been either relocated around water or raised without objection; but the County has not constructed any roadways in the reservoir area similar to the Whitten or Goodgame causeways.

[41] June 17 and July 13, 1964.

[42] A step taken with Goodgame's agreement.

1964, in the Probate Court of St. Clair County, which, since removal, now pends in the local Federal District Court.

As of the time of the first injunction construction had commenced on at least three houses and continued thereafter with materials transported by water.

Present Status and Intended Use of Island

Goodgame has completed seven houses and cottages on the Island and has seven under construction. He has also installed there a large boat crane, and boat ramps. A marina is two-thirds completed. In addition to a year-round house he plans to have in all some 32 cottages,[43] docks for 36 boats, a motel of 15 units, the marina, a restaurant of rather substantial size, a beach with bath houses, a playground, and sanitary facilities, all available for public use.[44]

Present construction and improvements on the 17 acres included in the island[45] represent an investment of approximately $163,000, with approximately $90,000 more estimated to be required for completion as planned.

Goodgame expresses an intent to dedicate to the county the causeway and island roads and, as required, an interest which he asserts in the use of a 30 foot right-of-way in a road leading into the area, and it appears that with the completion of the causeway the County Commissioners desire and will accept a dedication which includes the causeway.

Specifications and Reservoir Occupancy

The causeway, as originally proposed, would have had a top width of 11 feet, rip-rapped side slopes of 1.5:1 maximum, 90 percent machine compaction, and a top elevation of 475 feet, or one and a half feet above flood elevation, with a bridge of such design as would be approved by the St. Clair County Engineer or be otherwise required. However, by later, superseding specifications approved by the County Engineer for St. Clair County, Goodgame now proposes to construct a causeway with finish grade of 476.5 feet, rip-rap protection to 475.5 feet, together with a bridge for boat passage and water outlet, of a single 34 foot span built according to State Highway Department standards, with a reinforced deck girder, steel piling, concrete abutments, rip-rap protection where necessary, and finish grade of 476.5 feet; and, in this connection as in the instance of the preceding Whitten proposal, Licensee reasonably assumes that, as the County Engineer has required 2:1 side slopes and a minimum road width of 20 feet in the instance of other causeways and land fills, the immediate causeway will be approved herein with the latter slope and road width.

The causeway will lie partly on pool lands (0.8 acres) and partly in the flood easement (1.1 acres).

Licensee's Report of Effects of Causeway No. 4

According to the Licensee, Causeway No. 4 will have not appreciable effect upon reservior operation, will present no particular problem as to mosquito control, and but a minor effect, if any, with respect to driftwood collection; but, substantially confining Rabbit Branch outlet to a channel estimated to be some 375 feet wide at normal pool level of 465 feet, it would, except for a bridge, necessarily have some effect upon boating.

---

[43] With duplexes, a total of forty units, each containing two bedrooms.

[44] Construction is at elevation 475 feet and above. Sanitation facilities have been inspected and approved by the sanitation officer of the County on behalf of both the County and the State.

[45] Above normal pool level, including that embraced in the flood easement.

The causeway would have no significant hydrological effects on flood levels in Rabbit Branch or flows through the channel.[46]

Objections to Causeways

Causeways of the character of the foregoing (Nos. 4 and 5, 6, and 7) have both adverse and beneficial effects with respect to the use of water area and adjoining lands, and, depending upon local conditions, with or without bridges, would: impair the recreational use of the former by limiting the passage of boats, create a problem of mosquito control and, by merely extending the shoreline, create one of debris collection; and, also restrict the across-water view from land sites and water areas. However, this list of negative possibilities is paralleled by one of at least equally extensive possible benefits, for a causeway, as a breakwater may well be useful in preventing bank erosion, affording protection to boats, and in providing a safe resting place for water fowl, new fish habitats and fishing areas, and access to public and private recreation and dwelling areas.

In the immediate matters it is objected that the Whitten causeways (Nos. 5, 6 and 7) constitute a barricade[47] to the main body of the reservoir,[48] create a hazard to boating, and obstruct the view over a broad expanse of water,[49] including a view over the open lake some two miles downstream to the dam. It is also specifically objected that the Goodgame causeway (No. 4) will limit boat traffic to a single channel,[50] and support a relatively comprehensive commercial development of Island No. 4.[51] However, some ten other property owners, once opposed to the Whitten causeways, now withdraw their opposition.

On the other hand five county officials,[52] the president of the local Chamber of Commerce,[53] an owner of an upstream tract in the vicinity,[54] and several owners of individual lots,[55] either tendered statements or testified in favor of the causeways, in some instances upon an assurance that a bridge would be provided for passage by water. Those approving do so on the basis of assertions as to beneficial breakwater effects, the relatively minor nature of inconvenience imposed, and the contribution that access may make possible in the over-all development of the area to its full potential.

---

[46] With a drainage area embracing about ten square miles and a 50-year run-off of some 3,000–4,000 cubic feet per second, the area of restriction would result in a flow velocity at the end of the causeway of but some 0.2 feet per second (12 feet per minute) and an equally negligible loss of head.

[47] By a lot owner across Rabbit Branch and below Causeway No. 4 (Goodgame) who neither sails nor owns a boat; and by an officer and one of 15 members of a group venture and club type 35-acre development as Clearwater Point Estates, Inc., of which but one member owns a sailboat. Development of the latter tract and sale of lots commenced only after the Whitten causeways were up.

[48] By the owner of a lot located on the mainland below Causeway No. 4 and above Whitten's No. 5, speaking for himself and possibly owners of several other lots.

[49] By one of three original joint purchasers of acreage on so-called Doctor's Point across Rabbit Branch from Island No. 4 who is interested in sailing though not presently owning a boat.

[50] By the protestants of the two immediately preceding footnotes.

[51] By the protestants of the three preceding footnotes, one of whom owns under a deed dated about September 1962 which is asserted to carry residential type restrictions. The area is not subject to zoning ordinance restrictions.

[52] Including the Circuit Judge of Calhoun and St. Clair Counties who had earlier tried the injunction proceedings against these causeways, the sanitation officer of St. Clair County (Causeway No. 4), the Chairman of the Court of County Commissioners of St. Clair County, and tacitly or otherwise, two of the Commissioners.

[53] Pell City, St. Clair County, Alabama.

[54] Of some 62 acres on Rabbit Branch above Island No. 4.

[55] Including: an owner of one of a number of lots in a subdivision on the mainland between Causeways Nos. 4 and 5; an owner of a lot one-half mile up Rabbit Branch from Island No. 4, and a boatsman; an owner of a lot across Rabbit Branch from Island No. 4 (Goodgame's only); statement of no objection by an officer and one of 15 members of a group venture and club type 35-acre development known as Clearwater Point Estates, Inc. (Goodgame's only); and an owner representing 9 lots on the mainland in proximity to Causeway No. 4, on condition that bridges be installed. A number of others whose names are signed on a petition headed "Landowners Petition" but who are not all landowners may be taken also as favoring the authorization of the Whitten and Goodgame causeways (Exh. 31).

Staff's witness, serving as a consultant to the Commission in the field of licensing procedures for recreation, fish and wildlife, and experienced in the field of management of fisheries and wildlife from a recreational point of view, testified to a number of factors concerned, of which, and on balance, those favorable are clearly predominant.

Objections and Benefits Compared

Rabbit Branch contains about 575 acres of reservoir area and has approximately eight and a half miles of shoreline upon which there is a substantial amount of property either subdivided or available for subdivision.[56] Presently, there are but some nine houses under construction or completed above the causeways, but the general speculation and opinion of those testifying was that as many as 250 to 1,000 homes, cabins and camp sites would develop in that area with the possibility of traffic by a roughly corresponding number of boats. Even under present conditions of relative underdevelopment many boats and a number of water skiers already use the water above and adjoining the causeways.

Causeway No. 4 and Causeways Nos. 6 and 7 admittedly do impair in certain respects the recreational uses of a substantial water area, the degree of which depends upon the question of bridges.

Opponent interveners, though accepting the bridge plans of the Alabama Highway Department submitted on behalf of Whitten and Goodgame, recommend a provision for one-way boat traffic through each causeway by the construction of two such bridges in each (Nos. 4, 6 and 7); and, to provide for small sailboat access, that the causeway bridge have a finished grade of 485.5 feet, approximately 20 feet above normal pool elevation, as compared with the 476.5 feet proposed (Item M).

The apparent height of the masts of boats which sail upon the reservoir vary, from approximately ten or twelve feet for the smaller size to some 30 or 35 feet for the larger.[57] Thus, while the clearance proposed on behalf of Whitten and Goodgame, of approximately nine to ten feet at normal pool level (465 feet), would be inadequate to pass anything but the lower masts, it would, nevertheless, serve to pass motorboats and so reduce the traffic in the channels by Coosa Island and Island No. 7 and substantially facilitate the navigation of sailboats through those places. The testimony satisfactorily establishes, on balance, that, in exercise of ordinary precaution and observation of rules of the road, qualified operators of both motor and sailboats, could navigate the passages at Coosa Island and Island No. 7 in safety, even though the latter is not a simple point passage and may involve a run and a turn.[58]

The evidence will not support a finding that a so-called "sailing bridge" as proposed by interveners would be a reasonable or appropriate burden to place upon the owners of these islands. Indeed, the opposing interveners, resting entirely upon the matter of convenience, took no occasion in the hearing to address themselves to that specific point.

Interveners rights are not those of persons situated on a wholly natural body of water, and, in the absence of local ordinance or special identification with the beneficial public use thereof, are not inherently superior to like claims of others. In this light, and the absence of other persuasive considerations, Whitten and Goodgame have as much claim to the reasonable and lawful use and development of their property as others, even though the uses are not the same.

---

[56] Above the Whitten causeways; above Causeway No. 4: 335 acres and 7.4 miles of shoreline.

[57] The larger sailboats operate upon the open reservoir, out of the Birmingham Sailing Club located down river from Rabbit Branch.

[58] On these waters, as others, sailboats have the right of way over motorboat traffic.

The record is materially deficient in evidence that would justify and require a finding that use of Rabbit Branch requires bridges in each causeway that would provide for a stream of one way traffic in double passages or a finding that for its probable use the channel between Island No. 7 and the mainland is unreasonably small, as compared with passage available above Causeway No. 4; or a finding that the route by channel in Rabbit Branch from points above Causeway No. 4 to open water would be significantly longer or more inconvenient than access thereto through the waters which would be occupied by the causeways (Exh. 2).

In these circumstances it is found and concluded that single bridges in Causeways Nos. 4 and 6, of span proposed in Item M herein, will be sufficient to provide the public with reasonable passage through the causeways as a supplement to that of the main channel of Rabbit Branch, and that the requirement of additional bridges in Causeways Nos. 4, 6 and 7 would impose an unreasonable and undue burden upon these causeway owners.

It is evident that Causeways Nos. 4, 5, 6 and 7, with the two bridges will create no significant or particular problem with respect to vector control or the collection of driftwood and debris.

Although Staff witness testified that Causeways Nos. 6 and 7 will restrict the view across Rabbit Branch, from Doctor's Point downstream to the vicinity of Clearwater Point Estates, it was also testified that the nearest of these causeways is nearly a half mile distant from the nearest point at the latter location and would present no objectionable obstruction to view from either building site or pier level. Indeed, the only objection consistently entered on behalf of those situated in the vicinity of Clearwater Estates was to the obstruction of access to water.

As to the obstruction of view from Doctor's Point by Goodgame's Causeway No. 4, Staff witness testified from an on-site observation to the effect, and without contradiction, that compared with the obstruction to view effected by the Island that of the causeway was minor and incidental. It is found, therefore, that Causeway No. 4 does not create a substantial additional obstruction to the view from the complaining area.

The evidence is that wind blowing over water on reaches as long as those to the east and south of Rabbit Branch can cause waves as high as two or three feet. Causeways Nos. 6 and 7, and to a somewhat less extent interior Causeway No. 4, could thus provide a breakwater against waves of substantial height and afford material protection to boats, docks and other property. They would provide, in addition, new fish habitats and spawning areas, and, if open to the public by dedication as proposed, access by land to considerable new fishing areas.

Causeway No. 4 would also provide access to what is, as now planned, the largest developed recreational area on the reservoir which will be available to the public.

It is found and concluded that these causeways (Nos. 4, 5, 6 and 7) and required bridges would make a significant contribution to the beneficial public use of the reservoir.

Other Causeways and Fills

McCaig (No. 21)[59]

In this matter permission is sought to place fill and raise a small island of approximately 2.8 acres, located some 22 miles above the dam, in the flood easement, and to construct a causeway some 1,600 feet long to connect the island to the mainland.

Some 75 feet of the causeway would lie in a very shallow portion of the power pool, the remainder in the flood easement.

The causeway would have a top elevation of 478 feet,[60] a top width of 20 feet, 2:1 side slopes, rip-rap to elevation 468 feet with grass above, and would be machine compacted.[61]

Construction on the causeway was started in November or December 1963, approximately at the time Licensee began clearing land for the reservoir, but has been halted due to a restraining order obtained by Licensee May 21, 1964, in the Circuit Court of Talladega County, Alabama. Licensee's condemnation proceeding against the property of which the island is a part is still pending and the valuation thereof has not yet been determined.

Licensee reports that the proposed construction appears to be in keeping with the practices of Talladega County in its road construction and relocation program in the reservoir area, it does not appear that there will be any resulting appreciable effect on boat traffic, reservoir operations, mosquito control, or driftwood accumulation, and there has been no indication of public opposition.

Licensee seeks authorization to grant the permission sought to construct the causeway and fill, subject to certain specified conditions including a waiver by McCraig in the Licensee's pending condemnation proceeding if any claim for severance damages and compensation for land taken insofar as these relate to the island and causeway site, and the execution of a satisfactory release and indemnity agreement as to any future liability of Licensee with respect to the causeway and fill.

Under the foregoing circumstances, the causeway and land fill is considered as contributing to the public utilization of project water and adjacent land for recreational purposes.

The authorization sought is granted Licensee, as provided, and subject to the conditions stated, in the order included as a part of this decision.

The following, although not among the causeways specified in Commission's Order Fixing Hearing, issued herein August 10, 1964, are included by Licensee and Staff as among those to be disposed of in these proceedings, and are deemed to be subject to such disposal by the general language of the order, and of the notice which was duly published in two local area papers on August 6, 1964, which refers generally to the approval or exclusion of unauthorized causeways within the project area.

Alapaco Acres and Seddon Shores Subdivisions (Nos. 23-A and 23-B)[62]

Alabama Property Company (Property), a subsidiary of Licensee, is the owner of land lying in Talladega County, Alabama, on the east shore of the reservoir some four miles above the dam, which is known as Alapaco Acres Subdivision and is composed of subdivided lots sold or to be sold to the public. The subdivision has a road system dedicated or to be dedicated to the County which in one location crosses the upper end of a slough and occupies about 5,000 square feet in the flood easement. Property seeks permission to construct a causeway (No. 23-A) at the location indicated.

---

[59] Includes Charles R. Burgess and J. R. Moody as parties in interest. Licensee's application to the Commission for this construction was by letter filed June 29, 1964.

[60] In this area, Licensee acquired pool rights in fee to elevation 466 feet and flood rights to elevation 475 feet.

[61] Degree not specified.

[62] Licensee's application to the Commission in respect to these matters was by letter filed March 12, 1964.

Property also owns land on both sides of Fishing Creek on the west shore of the reservoir, 19 miles above the dam, near Riverside, Alabama, which is known as Seddon Shores Subdivision and is composed of subdivided lots sold or to be sold the public. This subdivision also has a road system dedicated or to be dedicated to the County, with respect to which three causeways (Nos. 23-B) would be required, to be located in the flood easement except for some 0.005 acres in the power pool.

In the instance of each subdivision causeways would be built on county roadways to usual county road specifications and be provided with proper drainage facilities.

None of the foregoing causeways would have any appreciable effect on reservoir operations or boat traffic at normal pool level, or would cause increased difficulties because of mosquito control or collection of driftwood and debris, and there has been no expression of public opposition.

The subdivisions are intended to promote public enjoyment and use of the reservoir and adjacent lands for recreation purposes and it appears that adjoining property owners and the public would be benefited by the construction proposed.

Licensee seeks authorization to grant the permission sought subject to certain specified conditions including, in brief, a condition that plans and specifications be based upon the usual road specifications utilized by the two counties in their respective road construction and relocation programs in the reservoir area, and roads and fills become dedicated as public roads in the several counties. In the circumstances stated, the authorization sought is granted Licensee, as provided, and subject to the conditions stated, in the order included as a part of this decision.

Fraim (No. 2)[63]

The proposed causeway, substantially completed, extends some 600 feet from the end of the Pine Harbor Marina land fill, previously authorized by the Commission, southwesterly to connect with an island owned by Fraim on which he has a residence. It would be located entirely in the flood easement.

The proposed causeway would have a finished elevation of 476.5 feet, or three feet above the flood easement,[64] a top width of 20 feet, 2:1 side slopes, heavy machine compaction,[65] with heavy rip-rap or grass sod.

Licensee reports to the effect that it does not appear that the causeway would have any appreciable effect on the operation of the reservoir, boat traffic, mosquito control, or driftwood and debris, collection, and there has been no indication of opposition from others.

Licensee seeks authorization to grant permission to construct the causeway, subject to certain specified conditions, including a waiver by Fraim in Licensee's pending condemnation proceeding of any claim for severance damages and easement compensation, insofar as these relate to the island and causeway site, and the execution of a satisfactory release and indemnity agreement as to any future liability of Licensee related to the causeway.

---

[63] Licensee's application to the Commission for this construction was by letter filed September 11, 1964.

[64] Which is consistent with the practices of St. Clair County in its road construction and relocation program in the reservoir area.

[65] Degree not specified.

The causeway contributes to the public utilization of project waters and adjacent land for recreational purposes. The authorization sought is granted Licensee, as provided, and subject to the conditions stated, in the order included as a part of this decision.

Riddle (No. 19) and Cline (No. 22)

The first of these causeways lies on the east side of the reservoir some 1.5 miles above the dam, the second in the upper reaches some 33.5 miles above the dam. The former, described in the evidence simply as a small causeway, and the latter as a small partially completed causeway across a slough, have been pending with the Licensee about a year or more with no indication of an imminent disposition. Staff proposes that, within 90 days of the date upon which the order herein shall become effective, Licensee either obtain the necessary data and agreements from the owners and submit the appropriate application, or secure removal thereof from the reservoir. As Licensee expresses no opposition the order will include a provision such as that proposed.

Public Interest

Upon the evidence of record, it is further found and concluded that the authorization herein granted Licensee to permit use of its project lands and properties for the causeways, bridges, and land fills hereinabove set forth will be consistent with the public interest in carrying out the provisions of the Act, subject to the conditions stated in the order included as a part of this decision.

ORDER

Upon consideration of the record herein, the contentions set forth in the briefs and proposed findings of counsel, and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this Order is a part,

IT IS ORDERED, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) Licensee may grant permission to use project lands and properties, for the causeways, bridges, and fills (collectively causeways) for which formal application has been made herein, *to-wit:* Fraim Causeway No. 2, Goodgame Causeway No. 4, Whitten Causeways Nos 5, 6 and 7, McCaig Causeway No. 21, and Alabama Property Company Causeways Nos. 23-A and 23-B, *provided* that:

(1) Licensee reserve for itself and its successors and assigns the right to use its project lands and properties as may be required to safely and efficiently operate and maintain the project for beneficial public uses, including recreational purposes;

(2) In the event a causeway is to be a private road, Licensee secure agreements that the causeway owners and their successors and assigns will maintain, repair, alter or remove the causeways as required by the public convenience, health or safety and will release and indemnify the Licensee from all liability respecting the causeways or their effects and will reimburse it for any expenditures made in connection therewith;

(3) In the event all other requirements (except paragraph A(2) above) of this order have been complied with and thereafter the causeway is dedicated as a public road and accepted as such by the appropriate county authority, Licensee is authorized to grant an easement to the county, upon its request, for a public road as to any portion of a causeway lying in the pool area and to join with the

appropriate landowner in granting an easement to the county for a public road as to any portion of a causeway lying in the flood easement;

(4) Licensee obtain payment or allowance from the owners, if such has not already been obtained, as just and fair compensation to it for the use of its project lands and properties by the causeways.

(B) The causeways, bridges, and land fills designated in Paragraph (A) hereof shall be built and maintained to the design specifications contained in the Licensee's applications as amended by the Licensee's filing of October 5, 1964 (Item M), and any additional specifications that may be set from time to time by the Commission upon its own motion, or upon recommendation by the Licensee, Corps of Engineers, or state and local authorities.

(C) Within ninety days after the date upon which this order shall become effective, the Licensee shall secure the removal from project lands and properties of causeways pending before it for which no applications have been filed, or for which applications are deemed to have been abandoned, unless the owner thereof enters into the agreements and makes the payment or allowance required under Paragraph (A) of this order.

EWING G. SIMPSON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AMERADA PETROLEUM CORP., ET AL., DOCKET NO. CI62-1544, ET AL.

ORDER DENYING PETITION FOR RECONSIDERATION

(Issued May 26, 1965)

On April 28, 1965, the Public Service Commission of the State of New York filed an application for reconsideration of our order issued on March 29, 1965, 33 FPC 643, in the above proceeding wherein we deferred further consideration of what refunds, if any, should be ordered where a producer is granted a temporary certificate without a refund condition to sell at a price later determined to be out of line in a decision on the permanent certificate. The basis for our deferral was that the validity and measure of our refunding power is in issue in *U.G.I., et al.* v. *Callery Properties*, S. Ct. Nos. 671, *et al.*, October Term 1964.

We adhere to our view that the issue as presented in this case should be deferred until guidance on the scope of our refunding powers is given by the Supreme Court in the *Callery* case. We will, therefore, deny the petition for reconsideration.

The Commission orders:

The Application for Reconsideration filed on April 29, 1965, in the above proceeding is hereby denied.

Commissioner Ross *dissenting.*

Ross, *Commissioner, dissenting:*

Upon reconsideration, I believe this matter should be set for immediate hearing consistent with the Court's remand in *P.S.C. of N.Y.* v. *F.P.C.*, 329 F. 2d 242.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

DUQUESNE LIGHT COMPANY, DOCKET NO. E-6939

ORDER TERMINATING PROCEEDING

(Issued May 26, 1965)

This proceeding was instituted by order to show cause directed to the Duquesne Light Company (Duquesne) issued on May 23, 1960, 21 FPC 717. That order directed Duquesne to show cause why it should not be found to be in violation of certain provisions of the Commission's Uniform System of Accounts relating to accounting and reporting of deferred taxes.

By letter dated March 27, 1965, counsel for Duquesne asserted that the Company is now fully complying with this Commission's accounting and reporting requirements relating to deferred income taxes and requested that the Commission terminate this proceeding. Commission staff examination of Duquesne's books of account and of its FPC Form No. 1 for the year 1964 indicate that Duquesne is now complying with this Commission's deferred tax accounting and reporting requirements.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act and the Commission's Uniform System of Accounts that this proceeding be terminated.

The Commission orders:

The above-captioned proceeding is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

MOOSE CREEK RANCH, INC., PROJECT NO. 2353

ORDER AMENDING LICENSE (MINOR)

(Issued May 26, 1965)

Application was filed on December 7, 1964 under Section 6 of the Federal Power Act (Act) by Moose Creek Ranch, Inc. (Applicant) for amendment of its license for minor Project No. 2353 located on North Fork of Moose Creek, Idaho County, Idaho.

The application seeks to replace Article 15 of the license with a new Article 15 recommended for inclusion in the license by the Department of the Interior in a letter to the Commission dated November 13, 1964. The substitute Article 15 provides for the alteration of the period of fishway operation, for modification of the project structure in the interest of fish passage, and for inclusion of the Idaho Department of Fish and Game and the Fish and Wildlife Service of the Department of the Interior as parties to regulation of fishway operation.

The license for the project waives Section 6 of the Act insofar as it relates to public notice.

The Commission finds:

The license for Project No. 2353, as amended herein, is in the public interest.

The Commission orders:

(A) Article 15 of the license for Project No. 2353 is hereby amended to read as follows:

Article 15. To ensure free fish migrations the Licensee shall maintain such flows at such times of the year through the Deniltype fishway constructed as part of the project as may be determined necessary by the Idaho Fish and Game Department, the United States Forest Service and the Fish and Wildlife Service, and shall make such reasonable modifications in project structure and operation in the interest of anadromous fish conservation as may be directed by the Commission upon the recommendation of the above named agencies, and after notice and opportunity for hearing.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

CITY OF NORWICH DEPARTMENT OF PUBLIC UTILITIES, PROJECT NO. 2441

ORDER CORRECTING LICENSE ORDER

(Issued May 26, 1965)

Through inadvertence, a line was omitted in paragraph (A) of the Commission's initial license order for Project No. 2441 issued April 15, 1965, 33 FPC 801 at 803. The omitted line reads as follows: "for a period effective April 1, 1962, and terminating December 31, 1993,"

The Commission orders:

(A) Paragraph (A) of the Commission's April 15, 1965 license order for Project No. 2441 is hereby corrected to read as follows:

(A) This license is hereby issued to City of Norwich Department of Public Utilities (Licensee), of Norwich, Connecticut, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of the Greenville Hydro Plant Project No. 2441, located on the Shetucket River, a navigable water of the United States, in New London County, Connecticut, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

VIRGINIA ELECTRIC & POWER COMPANY, PROJECT NO. 2463

ORDER ISSUING LICENSE (MAJOR)

(Issued May 26, 1965)*

Application was filed on April 20, 1964, by Virginia Electric & Power Company (Applicant) of Richmond, Virginia, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2463, known as the Park Hydroelectric Project, located on the lower end of the Chesapeake and Ohio Canal paralleling the James River, a navigable water of the United States[1] within the City of Richmond, Virginia. The project utilizes water from the canal, which diverts water from the James River at a point upstream from the subject project and then returns the water to the James River just downstream from the project. The project does not affect lands of the United States.

According to the application, construction of the project was commenced by Applicant in May 1939, was completed in August 1940, and started operating in February of the same year. No changes have been made in the project since the initial construction.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned and that the project plans have been approved pursuant to Section 4(e) of the Act. The Corps of Engineers pointed out that the Belle Isle site (located 0.1 mile upstream from Project No. 2463) had been proposed for redevelopment in the Corps' comprehensive plan for development of the James River Basin[2] which proposed the construction, sometime in the future, of a 60 foot high dam, the excavation of a tailrace, and the installation of 24,000 kw of generating capacity. In view of the latter proposal, the Corps recommended for inclusion in any license for the subject project a condition to protect the authorized functions of any future development in the James River Basin under the Corps' jurisdiction. The Corps also recommended for inclusion in any license for the project, the terms and conditions in the interest of navigation contained in Form L-3 (Revised August 1, 1964) (32 FPC 1114), which is incorporated herein and made a part hereof.

The Department of the Interior, in reporting on the Application, referred to the aforementioned 1945 Corps of Engineers' comprehensive plan for development of the James River Basin and to the relation of the subject project to such plan. The Department pointed out that the project has little effect on fish and wildlife and offers no opportunity for conservation and development of such resources, and made no recommendation that any license for the project should include the terms and conditions in the interests of fish and wildlife and recreation contained in Form L-3.

The Department of Health, Education, and Welfare has advised that while a sewer owned by the City of Richmond discharges into the tailrace of the subject project, plans are underway between Applicant and the City for discontinuation of the sewer and interception of the flow therefrom which should eliminate any water quality problem in the project tailrace. Construction to intercept the flow is scheduled to begin late this year.

---

*See order issued July 16, 1965 granting rehearing for further consideration.

[1] In our order issued August 12, 1964. 32 FPC 591, Appalachian Power Company, Project No. 2376, we found that the James River from its mouth at Newport News at least to its confluence with Jackson's River at about mile 340 is a navigable waterway of the United States. Project No. 2463 is located in this navigable reach of the river.

[2] House Document No. 207, 80th Cong., 1st Sess.. 1945.

While Applicant filed as part of its application an Exhibit R, it has not filed a recreational use plan. By Article 34 herein we are requiring Applicant to cooperate with Federal, State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of May 1, 1939 and a termination date of April 30, 1989.

The Commission finds:

(1) Project No. 2463 affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the Commonwealth of Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 2,800 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Virginia Electric & Power Company (Licensee) of Richmond, Virginia, under Section 4(e) of the Federal Power Act (Act) for a period effective as of May 1, 1939, and terminating April 30, 1989, for the continued operation and maintenance of Project No. 2463, located on the Chesapeake and Ohio Canal which takes water from the James River, a navigable water of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Park Hydroelectric Project No. 2463 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States—such project area and project boundary being more specifically shown and described by exhibits of the application for license which are designated as follows:

Exhibit J: (FPC No. 2463-1) "General Property Map."
Exhibit K: (FPC No. 2463-2) "Detail Map of Project Area."

(ii) all project works described as follows: (1) a short headrace from the Chesapeake and Ohio canal to the plant; (2) a short penstock connecting the headrace to the scroll case; (3) a concrete powerhouse containing one 3,380 hp water wheel connected to one generating unit rated at 2,100 kw; (4) appurtenant electrical and mechanical facilities—the location and designation of which are more fully shown and described on Exhibit L and M of the application for license which are designated as follows:

Exhibit L: (FPC No. 2463-3) "General Arrangement—Plan and Sections."

Exhibit M: One typewritten page entitled, "General Description of Equipment," filed with the Commission on April 20, 1964, and supplemented on October 14, and October 22, 1964.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof except Articles 15, 16, 17, and 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective May 1, 1939:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 2,800 horsepower.

Article 31. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation, and maintenance of a hydroelectric project which will more completely utilize the water resources of the reach of the James River in which the project is located.

Article 32. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement, made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States or the person or persons hereinafter constructing, operating and maintaining the more complete development or his or their successors and assigns, that said license shall be deemed surrendered at such time as Project No. 2463 becomes inoperative by reason of such more complete development, and that said Licensee, its successors or assigns shall not be entitled to any compensation for damages sustained by reason of such more complete development, other than (1) the right to receive from the owner of said more complete development for the unexpired term of the license for Project No. 2463 an annual amount of electric capacity and energy equal to the average annual amount generated by the project during the last five full years preceding commencement of construction of said more complete development upon payment to the owner of the more complete development of an annual amount equal to the average annual cost to the Licensee of producing the capacity and energy at Project No. 2463 during the last five full years preceding commencement of construction of said more complete development; or (2) in the event the owner of the more complete development is unwilling or unable to provide Licensee with the said amount of capacity or energy, the right to receive the difference, if any, between the annual cost of providing the lost capacity and energy from Project No. 2463 and the lowest reasonable cost of securing equivalent capacity and energy from an alternate source. If the Licensee for Project No. 2463 and the owner of such more complete development are unable to agree, the amount of capacity and energy lost to the Licensee by reason of such more complete development and the annual cost of producing equivalent capacity and energy at Project No. 2463, or the lowest reasonable cost of securing equivalent capacity and energy from an alternate source shall, upon application of the more complete development, be determined by the Commission.

Article 33. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the Applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

Article 34. Licensee shall cooperate with Federal, State and local agencies and individuals in the development and maintenance of fishing access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and adjacent waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, licensee shall advise the Commission of the results of cooperation with Federal, State and local agencies and of further recreation development at the project.

Article 35. The Commission reserves the right to determine at a later date what transmission facilities, if any, shall be included in this license as part of the project works.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PUBLICIZING LICENSE CONDITIONS RELATING TO RECREATIONAL OPPORTUNITIES AT HYDROELECTRIC PROJECTS, DOCKET NO. R-255

ORDER NO. 299

PROMULGATING NEW PART 8 OF REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued May 27, 1965)*

On January 30, 1964, the Commission gave notice by publication in the Federal Register (29 F.R. 1589) that it proposed to require licensees under the Federal Power Act to publicize license conditions of general public interest relating to the recreational aspects of project operations. Comments were invited from interested persons, particularly state recreation agencies and existing licensees, to be submitted by March 31, 1964. In response to this notice and invitation, the Commission has received a number of comments[1] with regard to the proposed requirement, and has taken them into consideration in preparing the text of the rule which is herein promulgated.

The comments disclosed a general accord with the objectives of the proposed rule, but some doubts were expressed as to its effectiveness. The rule has been amended to express more clearly the strong conviction of the Commission that where a licensed project contains recreational resources, it becomes the duty of the licensee to furnish adequate publicity of such resources.

The several types of notice required by the rule are intended to serve two important, but not all-encompassing purposes: to put prospective purchasers of land in the vicinity of the project on notice of the fact of public access, as implemented by a recreation plan, and the impact on recreational suitability of the necessary operations of the project; and to inform members of the public in search of recreational facilities in the neighborhood of the project of the location and terms of use of such facilities within the project. The proposed rule has been modified to accomplish these purposes more effectively. In the provisions enumerating the contents of the signs to be posted, the emphasis has been changed to make the signs more directly an invitation to use the facilities. We have also revised the proposal so as to avoid the posting of signs at unnecessary places.

The few adverse comments either resulted from the belief that existing publicity through cooperation with state and local agencies is adequate, or that the rule should be amended simply to require notice to such agencies. Interested state agencies already receive notice of license applications with opportunities for comment, and future applicants will be cooperating with these agencies to develop recreational plans. The requirements contemplated by this rule, which is overwhelmingly supported by the state recreational agencies, are not in conflict with, but rather complement, the activities of licensees and state and local agencies.

The Commission further finds:

(1) In view of the foregoing, and upon consideration of all relevant matters presented, this amendment is necessary and appropriate for the purposes of the Federal Power Act.

---

*Published in the Federal Register on June 3, 1965 (30 F.R. 7313).

[1] Comments were received from one public power association, one public utility (also a licensee), 11 other licensees and 13 State recreation agencies.

The Commission, acting pursuant to the Federal Power Act, as amended, particularly sections 4, 10 and 309 thereof (41 Stat. 1065, 1068; 16 U.S.C. 797, 803, 825h), *orders:*

(A) Subchapter B, Regulations Under the Federal Power Act, Chapter I, Title 18, of the Code of Federal Regulations, is amended by inserting new Part 8, to read as follows:

Part 8—PUBLICIZING LICENSE CONDITIONS RELATING TO RECREATIONAL OPPORTUNITIES.

§ 8.1—Publication of license conditions relating to recreation.

Following the issuance or amendment of a license, the licensee shall make reasonable efforts to keep the public informed of the availability of project lands and waters for recreational purposes, and of the license conditions of interest to persons who may be interested in the recreational aspects of the project or who may wish to acquire lands in its vicinity. Such efforts shall include but not be limited to: the publication of notice in a local newspaper once each week for four weeks of the project's license conditions which relate to public access to and the use of the project waters and lands for recreational purposes, recreational plans, installation of recreation and fish and wildlife facilities, reservoir water surface elevations, minimum water releases or rates of change of water releases and such other conditions of general public interest as the Commission may designate in the order issuing or amending the license.

§ 8.2—Posting of project lands as to recreational use and availability of information.

(a) Following the issuance or amendment of a license, the licensee shall post and shall maintain at all points of public access which are required by the license (or at such access points as are specifically designated for this purpose by the licensee) and at such other points as are subsequently prescribed by the Commission on its own motion or upon the recommendation of a public recreation agency operating in the area in which the project is located, a conspicuous sign giving the name of the project and the owner of the project, a statement that it is licensed by the Commission and the project number, directions to the areas of the project which are available for public recreational use, permissible times and activities, and other regulations regarding such use, and advising that further information may be obtained at local offices of the licensee in the vicinity of the project.

(b) The licensee shall make available for inspection at its local offices in the vicinity of the project the recreation plan approved by the Commission and the entire license instrument, properly indexed for easy reference to the license conditions designated for publication in § 8.1.

[Sections 4, 10, 309, 41 Stat. 1065, 1068; 49 Stat. 839, 842, 858; 16 U.S.C. 797, 803, 825h]

(B) This amendment herein adopted shall become effective July 1, 1965.

(C) The caption of this proceeding is amended to read as set forth above.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WILLIAM G. WEBB, ET AL., DOCKET NO. G-6887, ET AL.

ORDER REQUIRING EL PASO NATURAL GAS COMPANY, RESPONDENT, TO SUBMIT IN EVIDENCE COST OF SERVICE SUMMARY AND SUPPORTING PREPARED TESTIMONY

(Issued May 27, 1965)

On March 15, 1965, the Public Utilities Commission of the State of California (California) filed a petition, pursuant to Section 1.7 of the Commission's Rules of Practice and Procedure requesting an order requiring El Paso Natural Gas Company (El Paso) to submit at the hearing in these proceedings a cost of service summary, supported by the prepared testimony of a qualified witness, which will indicate El Paso's unit cost-of-service attributable to the total recoverable reserves to be transferred by the producer applicants to El Paso pursuant to all the contracts at issue in these proceedings under which applicants have the option of assigning gas leaseholds to El Paso. Timely answers in opposition were filed by El Paso and William G. Webb, *et al.* and answers in support by intervenors Southern California Gas Company and Southern Counties Gas Company of California (Southern Companies) and by the staff of the Commission.

These proceedings involve applications by independent producers seeking permission and approval to abandon in whole or in part certificated sales of natural gas for resale in interstate commerce from acreage in the San Juan Basin of New Mexico and Colorado. The prices under the applicants' currently effective rate schedules range from 10 cents to 14 cents per Mcf. Pursuant to options granted them by El Paso, the applicants seek to assign their leasehold interests to El Paso and to discontinue the gas sales.

As we stated in our order consolidating these applications for hearing issued in these proceedings on December 1, 1964, we are concerned lest the proposed abandonments result in an unwarranted increase in El Paso's jurisdictional unit cost of service to the detriment of El Paso's jurisdictional customers. This gas presently costs the consumer somewhere between 10 cents and 14 cents an Mcf and the record in this case should reflect what this gas will cost them if the abandonment is permitted and the leaseholds are assigned to El Paso. As pointed out by California, in order to measure the difference in cost it is necessary to determine El Paso's unit cost of service attributable to the total recoverable reserves which are, by assignment of the leaseholds, to be transferred to El Paso.

The Commission finds:

For the foregoing reasons the petition of California should be granted.

The Commission orders:

El Paso Natural Gas Company, respondent, is hereby ordered to submit in evidence in these proceedings a cost of service summary supported by the prepared testimony of a qualified witness, which will indicate El Paso's unit cost of service attributable to the total recoverable reserves to be transferred by applicants to El Paso pursuant to all the contracts at issue in these proceedings. The foregoing will be filed with the Commission and served upon all the parties to this proceeding on or before July 26, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA ELECTRIC COOPERATIVE, INC. v. ALABAMA POWER COMPANY, DOCKET NO. E-7183

ORDER ACCEPTING RATE SCHEDULES FOR FILING AND AMENDING ORDER FOR HEARING ISSUED FEBRUARY 5, 1965

(Issued May 28, 1965)

This order accepts for filing as initial rate schedules, two wholesale electric service contracts between Alabama Power Company and the Cities of Troy and Luverne, Alabama, respectively. Those contracts and the rates and charges reflected therein are subject to an investigation and hearing directed by order of the Commission issued February 5, 1965, 33 FPC 183.* That order and the commencement of this proceeding followed complaints by the Alabama Electric Cooperative, Inc. against Alabama Power Company, which complaints contemplated the filing of the wholesale electric service contracts as rate schedules of the company.

In accepting these contracts for filing as rate schedules of Alabama Power Company effective June 1, 1965, as hereinafter provided, this order supplements the former order for hearing issued February 5, 1965, so as to expressly provide among the issues to be heard in this proceeding the question of lawfulness of these rate schedules. Alabama Power Company requests an effective date of June 1, 1965 for the schedules for service to the two cities, that date being the proposed date for commencement of service to the cities. Currently, Troy and Luverne receive their electric power and energy requirements at wholesale from Alabama Electric Cooperative, Inc. The contract for service to the City of Luverne has been designated in the files of the Commission as Alabama Power Company's Rate Schedule FPC No. 85. The contract for service to the City of Troy has been designated as that Company's Rate Schedule FPC No. 86.

In requesting an effective date of June 1, 1965, Alabama Power Company completed its filing with respect to the City of Luverne, including all supporting materials, on April 21, 1965. The Company's filing was completed on May 7, 1965, with respect to the City of Troy. The Company requests, pursuant to Section 35.11 of the Regulations under the Federal Power Act, a waiver of the Commission's 30-day prior notice requirement so as to permit an effective date for its rate schedule for service to the City of Troy of June 1, 1965.

The City of Troy, by letter dated May 6, 1965, supports the Company's request for waiver of the Commission's Regulations pursuant to Section 35.11 thereof. Troy indicates that it has terminated, effective June 1, 1965, its existing power supply contract with the Cooperative and that it is essential that Troy have a power supply and receive power from the Company on June 1, 1965. In our opinion, the pendency of the above-entitled proceeding and the circumstances as alluded to by Alabama Power Company and the City of Troy constitute a sufficient showing of good cause for waiver of our requirements for filing and posting by the Company of its proffered rate schedule for wholesale electric service not less than 30 days prior to the date on which the electric service is to commence.

Alabama Electric Cooperative, Inc. on May 19, 1965 filed protests against the filing by Alabama Power Company of its initial rate schedules for wholesale electric service to the Cities of Troy and Luverne. The grounds of these protests are the allegations previously made by the Cooperative in Docket No.

---

*Rehearing denied by Commission order issued March 19, 1965, 33 FPC 586.

E-7183 with respect to the lawfulness of the rates and charges of the Company to the Cooperative as related to its rates and charges to other customers. No claim is made that the filings are not complete under our rules. Since these are initial service filings they are not subject to suspension under Section 205 of the Act. As indicated, *supra*, however, the filings are being accepted subject to the outcome of pending Docket No. E-7184 within which the question of the lawfulness of the newly filed rates will be considered.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 306, 307, 308 and 309 thereof, that Alabama Power Company's Rate Schedules FPC Nos. 85 and 86 be accepted for filing to become effective as of June 1, 1965, good cause having been shown for waiver of the 30-day notice period provided in Section 35.3 of Part 35 of the Commission's Regulations under the Federal Power Act with respect to Alabama Power Company's Rate Schedule FPC No. 86; that the Commission's order for hearing issued February 5, 1965, be amended so as to include expressly among the issues to be heard in this proceeding the lawfulness of Alabama Power Company's Rate Schedules FPC Nos. 85 and 86.

The Commission orders:

(A) The 30-day notice period provided in Section 35.3 of Part 35 of the Commission's Regulations under the Federal Power Act is hereby waived with respect to Alabama Power Company's Rate Schedule FPC No. 86.

(B) Alabama Power Company's Rate Schedules FPC Nos. 85 and 86 are hereby accepted for filing to become effective as of June 1, 1965.

(C) Paragraph (A) of the Commission's order issued February 5, 1965, in the above-entitled matter is amended so as to include expressly as among the issues to be heard in this proceeding the lawfulness of Alabama Power Company's Rate Schedules FPC Nos. 85 and 86.

(D) This acceptance for filing does not constitute approval of any rate, charge, classification, service or any rule, regulation, contract or practice relating thereto provided for in the above-designated rate schedules, nor shall such acceptance be deemed as recognition of any claimed contractual right or obligation affecting or relating to such rate, charge, classification or service; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in this or in any other proceeding now pending or hereafter instituted by or against Alabama Power Company.

Before Commissioners: Joseph C. Swidler, Chairman: L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA ELECTRIC COOPERATIVE, INC. v. ALABAMA POWER COMPANY, DOCKET NO. E-7183

ORDER DEFERRING PROCEEDINGS

(Issued May 28, 1965)

There are now before us pleadings filed by the Cities of Troy and Luverne, Alabama, which raise the question of our jurisdiction over the sales of electric energy by Alabama Electric Cooperative, Inc., (Cooperative) to them and the lawfulness of its rates. It appears that Alabama Power Company (APC) has been selling electric energy to the Cooperative, and the Cooperative has been selling energy to the Cities, but that beginning June 1, 1965, APC has contracted to begin selling energy directly to the Cities. APC has filed its contracts for such service as rate schedules, and by our order of May 28, 1965 we have accepted them for filing effective June 1, 1965.

These proceedings arose with the filing of a complaint by the Cooperative against APC alleging, among other things, that the rates proposed to be charged by the company to the Cities give a preference to the Cities and subject the Cooperative to prejudice and disadvantage. On March 1, 1965, the Cities each filed a document entitled "Petition * * * to Intervene, Motion to Dismiss, Answer and Complaint." Both Cities asked that they be permitted to intervene and asserted that it is in the best interests of their citizens to be connected with a regulated public utility rather than an unregulated cooperative. Intervention was granted by the Commission's order of March 19, 1965.

Both Cities also asked that the Cooperative's complaint be dismissed insofar as it attempts to establish a differential between rates charged by APC to a cooperative and rates charged to a municipality, and insofar as it seeks to deprive the Cities of their right to purchase power from APC. The Commission in its order of March 19, 1965, denied the Cities' request to dismiss the complaint.

In their complaint the Cities affirmatively seek relief against the Cooperative alleging that its rates to them are unreasonable and discriminatory and place the Cities at a competitive disadvantage. They refer to the Commission's order of August 6, 1964, in *Dairyland Power Cooperative, et al.*, 32 FPC 529, Docket No. E-7113, where we deferred further Commission proceedings until January 1, 1966, on a test case to determine the Commission's jurisdiction over several electric cooperatives, in order to provide the Congress with an opportunity to consider the matter. However, noting that the Cooperative has here invoked the jurisdiction of the Commission to secure relief at their expense, the Cities ask that the Commission take jurisdiction over the Cooperative's sales to them and grant appropriate relief. The Cooperative filed brief answers on March 25 and 26, 1965, and the Cities filed replies on April 12, 1965.

We see no need for immediate proceedings on the complaints filed by the Cities. They may become moot insofar as relief for the future is concerned since the Cities propose to commence buying power from APC on June 1, 1965. The Cities presumbly will continue to buy power from APC unless some determination made in the present proceedings with respect to the complaint of the Cooperative significantly changes the situation. In view of our lack of reparations authority any possible relief to the Cities resulting from any conceivable over charges or improper restrictions during past periods is legally questionable; in any event it can be considered at a future time, if necessary. In view of the above, we believe consideration of the complaints of the Cities should be deferred pending our determination of the Cooperative's complaint against APC. Meanwhile, the hearings and other proceedings on the Cooperative's complaint can go forward. The Cities have been granted intervention and are in a position to protect their interests in buying power directly from APC at lawful rates; this includes full opportunity to renew their request that we consider their complaint prior to any final action which would substantially affect their future course of action. Since the Cooperative has opposed consideration of these matters at this time it will not be in a position to object in the event that our following the course of action it advocates necessarily results in delay in the ultimate resolution of this proceeding.

The Commission further finds:

Consideration of the complaints of the Cities of Troy and Luverne, Alabama, against the Alabama Electric Cooperative, Inc., at this time, pending further developments in this proceeding, is not in the public interest.

The Commission orders:

Hearings and other proceedings on the issues raised by the complaint of the Cities of Troy and Luverne, Alabama, are hereby deferred until further order of the Commission in the above-entitled proceedings, without prejudice to the complainants' renewing their request for immediate consideration at such time as it may appear that their future operations as customers of the Alabama Electric Cooperative, Inc., would be adversely affected in the absence of such consideration.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ZENITH NATURAL GAS COMPANY AND ZENITH GAS SYSTEM, INC., DOCKET NO. CP65-316; OKLAHOMA NATURAL GAS COMPANY, DOCKET NO. CP65-317

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DECLARATION OF EXEMPTION, ACCEPTING TARIFF FOR FILING AND CANCELLING TARIFF

(Issued May 28, 1965)

On April 6, 1965, Zenith Natural Gas Company (Zenith) and Zenith Gas System, Inc. (Gas System) filed in Docket No. CP65-316 a joint application, as supplemented on April 9, May 12 and May 13, 1965, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, wherein Gas System seeks permission and approval to abandon its natural gas facilities and operations, and wherein Zenith requests a certificate of public convenience and necessity authorizing the acquisition of certain facilities from Gas System, and authorizing, in addition, the construction and operation of certain natural gas facilities, the sale of natural gas, and the exchange of natural gas, all as more fully set forth in the application.

Gas System owns and operates a small gas system in southern Kansas and northwestern Oklahoma, and was issued a "grandfather" certificate by the Commission on December 11, 1945, in Docket No. G-393 (4 FPC 1122). Zenith is a newly-formed and wholly-owned subsidiary of Oklahoma Natural Gas Company (Oklahoma), a large, intrastate corporation operating entirely within the State of Oklahoma. Oklahoma purchases, transports and distributes natural gas throughout most of the State of Oklahoma, serving 181 cities and towns at retail and 36 towns at wholesale.

The application herein filed by Zenith and Gas System sets forth a proposal whereby Gas System is to dispose of all of its natural gas facilities and terminate all of its natural gas operations, and whereby Zenith and Oklahoma are to acquire its facilities and continue its service.

The transfer of facilities, which will be carried out pursuant to an agreement between Gas System and Oklahoma dated December 21, 1964, is proposed as follows:

a. Zenith is to acquire from Gas System all of Gas System's physical properties in Kansas, with the exception of the distribution system in Hardtner, Kansas and the facilities used for farm-tap mainline sales in Kansas, and including one mile of Gas System's 8-inch line extending south into Oklahoma;

b. Oklahoma is to acquire from Gas System all of Gas System's physical properties in Oklahoma, excluding the aforementioned one-mile segment of 8-inch line, and including the aforementioned Hardtner distribution system and farm-tap facilities in Kansas.

c. In addition, Zenith proposes to construct and operate a measuring station at the terminus of the aforementioned one-mile segment of 8-inch line, and seeks authorization for the sale of natural gas to Oklahoma by means of such facility, pursuant to an agreement dated April 5, 1965. Annual volumes in the third year are estimated to total 942,693 Mcf (at 14.73 psia).

Gas System has only one jurisdictional sale. It is a sale and exchange of gas to and with Cities Service Gas Company (Cities)[1] pursuant to an agreement between the parties dated July 23, 1960. Zenith proposes to continue said sale and exchange of gas pursuant to an agreement with Cities dated April 2, 1965. Zenith and Oklahoma will also assume the non-jurisdictional natural gas service now provided by Gas System. No existing customer of Gas System will cease to be served, nor will present rates be changed as a result of the implementation of the subject proposals.

Total estimated cost of Zenith's proposed construction is $2,800, and will be financed with general funds.

On April 6, 1965, Oklahoma filed in Docket No. CP65-317 an application pursuant to Section 1(c) of the Natural Gas Act for exemption from the provisions thereof, alleging that any natural gas it receives, transported in interstate commerce or sold in interstate commerce for resale, will be received from another person (Zenith) and consumed within the boundaries of the State of Oklahoma; and alleging further that its rates, services and facilities are and will be subject to regulation by the Corporation Commission of the State of Oklahoma, and that such Commission is and will continue to exercise its jurisdiction. Attached as Exhibit X-1 to its application was a Certificate of Jurisdiction and Exercise Thereof, duly executed by the Corporation Commission of the State of Oklahoma on April 1, 1965.

Upon consideration of Oklahoma's application, and in view of the nature of its prospective operations as a result of the proposed acquisition of facilities from Zenith Gas System, Inc., it appears that Oklahoma should be declared exempt from the provisions of the Natural Gas Act with respect to such facilities and operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Zenith Gas System, Inc., a Delaware corporation having its principal place of business in Alva, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 11, 1945, in Docket No. G-393 (4 FPC 1122).

(2) Zenith Natural Gas Company, a Delaware corporation having its principal place of business in Tulsa, Oklahoma, upon completion of the proposed acquisition, and upon completion of construction and commencement of operation of the proposed facilities will be engaged in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and will be a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The proposed acquisition, construction and operation of facilities by Zenith, the proposed sale of natural gas by Zenith to Oklahoma, and the pro-

---

[1] Authorized by Commission order issued December 19, 1960, in Docket No. CP60-113, 24 FPC 1101.

posed sale and exchange of natural gas by Zenith to and with Cities Service Gas Company, as hereinbefore described and as more fully described in the application in Docket No. CP65-316, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid acquisition, construction and operation of facilities, and the aforesaid sale and sale and exchange of natural gas by Zenith are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Zenith is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter to Zenith, and the rights granted thereunder be conditioned upon its compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(7) The natural gas facilities and service proposed to be abandoned by Gas System, as hereinbefore described and as more fully described in the application in Docket No. CP65-316, are subject to the jurisdiction of the Commission, and the abandonment thereof by Gas System is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(8) The proposed abandonment by Gas System is permitted by the public convenience and necessity, and approval therefor should be granted as hereinafter ordered.

(9) Oklahoma Natural Gas Company is a Delaware corporation having its principal place of business in Tulsa, Oklahoma, and is authorized to do business in the States of Oklahoma and Kansas.

(10) All natural gas received by Oklahoma from Zenith in Oklahoma is to be consumed ultimately within the State of Oklahoma.

(11) The Corporation Commission of the State of Oklahoma has certified to the Federal Power Commission that it has and is exercising regulatory jurisdiction over the rates, service and facilities of Oklahoma.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Zenith Natural Gas Company, authorizing the acquisition, construction and operation of facilities, the sale of natural gas to Oklahoma Natural Gas Company, and the sale and exchange of natural gas to and with Cities Service Gas Company, as hereinbefore described and as more fully described in the application in Docket No. CP65-316, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Zenith's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The acquisition and construction of facilities hereby authorized shall be completed and in actual operation by Zenith, and the sale of natural gas to Oklahoma shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

(D) Zenith Natural Gas Company FPC Gas Tariff, Original Volume No. 1 is hereby accepted for filing, to become effective on the date of the transfer of the properties.

(E) Permission for and approval of the abandonment by Gas System of the natural gas facilities and service hereinbefore described, as more fully described in the application in Docket No. CP65-316, be and the same are hereby granted.

(F) Gas System shall advise the Commission of the date of the abandonment of said facilities within 10 days thereof.

(G) Zenith Gas System, Inc., FPC Gas Tariff, Original Volume Nos. 1 and 2 is hereby cancelled, effective on the date of the transfer of the properties.

(H) The certificates heretofore issued to Gas System in Docket Nos. G-393, G-9084, G-9085 and G-12013 are hereby vacated, effective the date of abandonment. The certificate heretofore issued in Docket No. CP60-113 is hereby vacated, effective the date of abandonment, only insofar as it pertains to Gas System.

(I) Oklahoma Natural Gas Company is hereby declared exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of this Commission issued thereunder, with respect to the facilities to be acquired and the natural gas service to be assumed by it as a result of the authorizations granted herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLUE DOLPHIN PIPE LINE COMPANY, DOCKET NO. CP65-323

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 1, 1965)

On April 9, 1965, Blue Dolphin Pipe Line Company (Applicant) filed in Docket No. CP65-323 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, all as more fully set forth in the application.

Applicant, a wholly-owned subsidiary of Shell Oil Company (Shell), proposes to construct and operate a multiphase pipeline extending from a point in the Gulf of Mexico to a point near Freeport, Texas. Applicant will utilize this line to provide natural gas transportation service for Dow Chemical Company (Dow), and will transport gas, crude oil and condensate liquids for Shell simultaneously through the same line. The gas transported will be solely for use in the plants of Dow and Shell and will not be for resale. Dow will use its gas in processing chemicals and metals in its Freeport plants; Shell will use its gas for fuel in a proposed crude oil and condensate liquid processing plant to be located in Freeport.

The proposed line will consist of 40.6 miles of 20-inch pipeline and 9.2 miles of 16-inch pipeline, together with orifice meter and regulator stations and related equipment, and will be maintained by Shell Pipe Line Corporation, also a wholly-owned subsidiary of Shell.

The gas will be purchased by Dow at the wellhead from Shell's reserves in the Federal Block No. 288 Field on the Outer Continental Shelf of the Gulf of Mexico, offshore from Texas Railroad Commission District No. 3 at a price of 16¢ per Mcf. In the third year, Applicant will transport an estimated 66,329,000 Mcf of gas for Dow, and 874,000 Mcf of gas and 2,353,393 barrels of crude oil and condensate liquids for Shell. The 15 year gas transportation agreement dated March 1, 1965 between Applicant and Dow provides a price of 1.5 cents per Mcf. Shell will pay Applicant the same transportation price and in addition, 6.0 cents per barrel for the transportation of crude oil and condensate liquids.

Total estimated cost of Applicant's facilities is $7,400,000, and will be financed by the sale of common stock to Shell and by means of an unsecured loan from Shell, in the amounts of $1,850,000 and $5,550,000 respectively.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Blue Dolphin Pipe Line Company, a Delaware corporation having its principal place of business in Houston, Texas, upon completion of construction and commencement of operation of the proposed facilities will be engaged in the transportation of natural gas in interstate commerce, and will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Blue Dolphin Pipe Line Company, authorizing the construction and operation of facilities and the transportation of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the proposed transportation of natural gas undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65–40; KANSAS-COLORADO UTILITIES, INC., DOCKET NO. CP65–55

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 1, 1965)

On August 10, 1964, Colorado Interstate Gas Company (Colorado) filed in Docket No. CP65–40 an application, as supplemented on March 10, 1965, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, and for a certificate of public convenience and necessity authorizing the sale of natural gas, all as more fully set forth in the application.

On August 27, 1964, Kansas-Colorado Utilities, Inc. (Kansas-Colorado) filed in Docket No. CP65–55 an application, as amended on September 21, 1964 and October 1, 1964, as revised on December 14, 1964, and as supplemented on March 9, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition and continued operation of certain natural gas facilities, the construction and operation of other facilities, and the sale of natural gas, all as more fully set forth in the application.

The above applications are related. Colorado proposes to abandon, by sale to Kansas-Colorado, approximately 86.5 miles of 22-inch pipeline, together with 10.8 miles of lateral line and 27 sales meter stations, extending from Colorado's Bivins Compressor Station in Moore County, Texas to Clayton, New Mexico, pursuant to an agreement between the parties dated July 28, 1964. In addition, Colorado seeks authorization for the sale of natural gas to Kansas-Colorado, with total volumes estimated to be 3,322,622 Mcf[1] in the third year. Said sale will be made under Colorado's initial rate schedule F–2 at the flat rate of 17 cents per Mcf. The above abandonment of facilities and sale of gas will enable Kansas-Colorado to take over, in lieu of Colorado, all service provided from the Bivins-Clayton line.

Kansas-Colorado, in addition to the acquisition of the above facilities, proposes to construct and operate five pipeline systems in the general area between the Bivins Station and Clayton, New Mexico, aggregating approximately 282 miles of 2 to 6-inch pipeline, for service to irrigation customers, and proposes to purchase a sixth system in the same area consisting of 70 miles of 2 to 6-inch pipeline serving irrigation customers.

Kansas-Colorado also seeks authorization for the sale of natural gas to Pioneer Natural Gas Company (Pioneer) and Southern Union Gas Company (Southern). Estimated annual sales in the third year are as follows: (1) 36,699 Mcf on a firm basis to Pioneer for resale in Texline, Texas; and (2) 226,466 Mcf on a firm basis and 145,517 Mcf on an interruptible basis to Southern for resale in Clayton, New Mexico. Kansas-Colorado proposes to continue the sale of gas on an interruptible basis to Felt Water Development Co. for resale to irrigation customers.[2] Volumes are estimated to total 191,295 Mcf in 1967. Kansas-Colorado also plans direct interruptible sales to main line irrigation customers of an estimated 2,534,609 Mcf in the third year.

Kansas-Colorado will provide jurisdictional firm service at the flat rate of 28 cents per Mcf under its proposed GS–1 Rate Schedule, and will provide jurisdictional interruptible service for 21.5 cents per Mcf under its proposed IS–1 Rate Schedule.

The estimated total cost of the facilities to be constructed and acquired by Kansas-Colorado is $2,445,350, and will be financed by means of bank loans.

On November 10, 1964, Southern filed a petition to intervene in this proceeding, stating that it desired to protect its own interest and the interest of the consuming public served by it. On March 9, 1965, Kansas-Colorado filed a supplement to its amended application of December 14, 1964, and therein stipulated that it agrees not to file for an increase in its filed F.P.C. rates for resale service off the Bivins-Clayton line for a period of not less than five years commencing with the date of authorization in Docket No. CP65–55, provided that Colorado does not increase its rates to Kansas-Colorado, and provided further that Kansas-Colorado is not required to pay any new or increased taxes subsequent to the date of authorization. As a result of the above filing by Kansas-Colorado, Southern, on March 12, 1965, withdrew its petition to intervene. No other intervention has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

---

[1] All volumes herein at 14.65 psia.

[2] Authorized by Commission order issued May 6, 1964, in Docket No. CP64–137, 31 FPC 1121. This service will be provided under Kansas-Colorado's existing rate schedule I–1 at 23.5 cents per Mcf.

The Commission finds:

(1) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) Kansas-Colorado Utilities, Inc., a Kansas corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 5, 1953, in Docket No. G-2138 (12 FPC 750).

(3) The proposed sale of natural gas by Colorado hereinbefore described, as more fully described in the application in Docket No. CP65-40; and the proposed acquisition, construction and operation of facilities and sales of natural gas by Kansas-Colorado hereinbefore described, as more fully described in the application in Docket No. CP65-55, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid sale of natural gas by Colorado, and the aforesaid acquisition, construction and operation of facilities and sales of natural gas by Kansas-Colorado are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Colorado and Kansas-Colorado are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate hereinafter issued to Colorado be conditioned upon its compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(7) Public convenience and necessity require that the certificate hereinafter issued to Kansas-Colorado be conditioned upon its compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Colorado Interstate Gas Company authorizing the sale of natural gas to Kansas-Colorado Utilities, Inc., hereinbefore described, as more fully described in the application in Docket No. CP65-40, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Kansas-Colorado Utilities, Inc., authorizing the acquisition, construction and operation of facilities and sales of natural gas to Pioneer Natural Gas Company and Southern Union Gas Company, as hereinbefore described, as more fully described in the application in Docket No. CP65-55, upon the terms and conditions of this order.

(C) The certificate issued to Colorado by paragraph (A) above and the rights granted thereunder are hereby conditioned upon its compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(D) The certificate issued to Kansas-Colorado by paragraph (B) above and the rights granted thereunder are hereby conditioned upon its compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) and (e) of Section 157.20 of such Regulations.

(E) The certificate herein issued to Kansas-Colorado is granted on the express condition that the interruptible service authorized therein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Kansas-Colorado for firm service to its customers.

(F) Colorado's initial Rate Schedule F-2, consisting of Original Sheet Nos. 18b and 18c to its FPC Gas Tariff, First Revised Volume No. 1 is hereby accepted for filing, effective on the date on which this order issues.

(G) The acquisition, construction and operation of facilities hereby authorized shall be completed and in actual operation, and the sales of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

POWER AUTHORITY OF THE STATE OF NEW YORK, PROJECT NO. 2216

ORDER MODIFYING COMMISSION ORDER AND AMENDING LICENSE (MAJOR)

(Issued June 1, 1965)

The Power Authority of the State of New York (Applicant), licensee for Project No. 2216, located at Niagara Falls on the Niagara River in New York State, filed under Section 6 of the Federal Power Act for amendment of Article 26 of its license and modification of paragraph (B) of the Commission's order of May 23, 1961, 25 FPC 1013.

Subparagraph (b)(7) of Public Law 85-159 (71 Stat. 401), which authorized the Commission to issue a license to Applicant for the Niagara project requires that the licensee of such project pay the United States' share of the cost of the remedial works necessary to preserve and enhance the beauty of the Niagara Falls and the River. Pursuant to that provision, the Commission included in the license for Project No. 2216 the present Article 26 which requires the licensee to pay to the United States its share of the construction costs of remedial works in addition to its share of the operation, maintenance, and replacement costs of the remedial works. This article further provides that the amounts to be paid thereunder would be determined by the Commission.

Article II of the Treaty between the United States and Canada executed on February 27, 1950, concerning uses of the Niagara River, provides that the construction of remedial works be undertaken under the supervision of the International Joint Commission and that the cost of such works be divided equally between the United States and Canada.

Since the remedial works are located primarily in Canada and facilities for controlling them are likewise located in Canada, the bulk of the cost of maintaining and operating these works are incurred in the first instance by The Hydro Electric Power Commission of Ontario (Ontario Hydro). To a lesser extent related costs are incurred by the United States Corps of Engineers.

Under paragraph (B) of the Commission's order of May 23, 1961, bills for operational and maintenance costs, with regard to the existing remedial works, have been submitted by Ontario Hydro to the Corps of Engineers. The Corps of Engineers then submitted this bill along with its own bill, to this Commission which in turn has billed the Applicant for its share of the costs. Applicant has proposed to Ontario Hydro, the Corps of Engineers and the International Joint Commission that a revised billing procedure be adopted whereby Applicant would be billed directly by Ontario Hydro and by the Corps of Engineers for its share of the cost of operating, maintaining, and replacing the remedial works, as well as for its proportionate share of any future remedial works, along with their operational, maintenance, and replacement costs.

All of the interested parties are in agreement that the proposed change in billing procedure will reduce delays and expense.

The Commission finds:

Amendment of Article 26 of the license for Project No. 2216 and modification of paragraph (B) of the aforementioned May 23, 1961, order of the Commission as proposed by the Applicant, is in the public interest.

The Commission orders:

(A) Effective as of January 1, 1965, Article 26 of the license for Project No. 2216 is hereby amended to read as follows:

> *Article 26.* The Licensee shall pay to the United States and include in its net investment in the project herein authorized the United States share of the cost of the construction of the remedial works, including engineering and economic investigations, undertaken in accordance with Article II of the treaty between the United States of America and Canada concerning uses of the waters of the Niagara River signed February 27, 1950, whenever such remedial works are constructed. The Licensee shall also pay the United States share of the cost of operation, maintenance, and replacements of the remedial work. The amounts paid under this article shall be subject to review by the Commission.

(B) Effective as of January 1, 1965, paragraph (B) of the aforementioned Commission order issued May 23, 1961, is hereby modified to read as follows:

> (B) Payments for the United States share of further costs incurred in construction, alteration, operation and maintenance of remedial works shall be made by the Power Authority of the State of New York within 30 days of the rendition hereafter of bills therefor. Copies of such bills shall be submitted to the Commission promptly after payment thereof.

(C) The amendment of the license for Project No. 2216 in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 462

WESTERN LIGHT & TELEPHONE COMPANY, INC., DOCKET NO. E-7187

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION AUTHORIZING MERGER

(Issued June 1, 1965)*

Syllabus

1. Proposed merger of two Class A public utilities operating in different states with nearest reasonable junction points approximately 150 miles apart, and no immediate physical interconnection contemplated, is approved as consistent with public interest. P. 1148.
2. In exercising its jurisdiction over mergers, Commission cannot ignore standards underlying parallel regulation of holding companies by Securities and Exchange Commission. P. 1149.
3. Showing of positive benefit to counteract detrimental consequences of one-company ownership is essential to approval of merger where, as here, two isolated utility systems are located in different states and participating in separate pooling and other coordinating efforts. P. 1149.
4. Evidence indicates merger will have positive effect upon acceleration of effective interconnection between two parts of resulting system and electric utilities in Kansas and Colorado in general. P. 1149.
5. Merger conditioned on continuation of studies of methods for accelerating interconnection and coordination. P. 1149.
6. Merged company required to maintain separate accounts for two-part utility system. P. 1150.
7. In a proceeding under Section 203 of the Federal Power Act, Commission *authorizes* merger of facilities.

Alan R. Johnston and *Melvin A. Hardies* for Western Light & Telephone Company, Inc.

John C. Woelk for Kansas Corporation Commission.

Wallace Edward Brand for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACK, *Commissioner:*

This proceeding is before us on review of an initial decision issued April 22, 1965, by Examiner Harry W. Frazee authorizing the merger of Western Light & Telephone Company, Inc., a Kansas corporation (Western Light), the applicant herein, with Western Power & Gas Company, a Delaware corporation (Westgas). The decision is pursuant to an application originally filed by Western Light on October 24, 1964, wherein it requested that the Commission either grant authorization for the merger as provided in Section 203(a) of the Federal Power Act[1] or, alternatively, that an order be issued disclaiming jurisdiction over the proposed consolidation. Applicant and the staff are the only parties to the case.

The facts concerning the two companies proposed to be merged are set out in full in the Examiner's decision and restatement thereof is not required. By letter dated April 26, 1965, applicant waived the filing of exceptions to the initial decision. Staff, on May 4, 1965, although indicating some reservation in regard to the Examiner's rationale underlying his recommended approval of the merger insofar as it is to be used "as a full exposition of the standard against which future merger applications are to be measured," likewise concluded that it does not except to the decision in this case. By a further letter dated May 7, 1965, applicant advised that the staff's statement did not affect its waiver of exceptions.

---

*Initial decision appears on p. 1151.

[1] 49 Stat. 849, 16 U.S.C. 824(b).

We agree with the finding made by the Examiner and with our staff, for the reasons sufficiently stated in the decision, that each of the named corporations is a "public utility" within the meaning of that term as used in the Federal Power Act and that, under the requirement of Section 203(a), the merger cannot lawfully be effected without our authorization and approval. The evidence clearly establishes that the facilities of both Western Light and Westgas are owned and operated for the transmission and sale at wholesale of electric energy in interstate commerce. By these facts alone the companies are jurisdictional and the provision of the Act controlling mergers is applicable to them.

We further agree with the ultimate finding that the proposed merger is consistent with the public interest and should be approved. As to this aspect of the decision, however, we believe that a more complete discussion of the underlying problem presented by the case is necessary.

As the Examiner's decision notes, the instant merger proposal differs from the usual applications of this class upon which the Commission has been called to pass, in that it proposes to merge two Class A public utilities operating in different states under circumstances where their nearest reasonable junction points are approximately 150 miles apart and no immediate physical interconnection is contemplated. As indicated in our order setting this matter for hearing, this circumstance presents an important issue as to the proper standard for passing on merger applications, pursuant to our authority under Section 203 of the Federal Power Act.

Section 203 merely provides that "No public utility shall * * * merge or consolidate [its] facilities * * * with those of any other person [unless] the Commission finds that the proposed consolidation, acquisition, or control will be consistent with the public interest", and there is little in the way of a gloss on the quoted language contained in the legislative history of Section 203 itself, or in our previous opinions. The Commission's responsibility under this section, however, must obviously be evaluated in the light of the broader context of which Section 203 of the Act is a part, namely, the 1935 Wheeler-Rayburn legislation[3] directed to curing abuses of public utility operation which had developed during the twenties and early thirties. Specifically, the Commission's responsibilities must be considered as forming an integral part of the federal utility regulation pattern adopted by that legislation, along with the provisions of Title I of the Wheeler-Rayburn Act which gave to the Securities and Exchange Commission plenary authority with respect to the regulation of public utility holding companies.

One of the primary objectives of the Wheeler-Rayburn Act was the provisions of Section 11 of Title I (15 U.S.C. 79k), under which the SEC was directed to take action to require the breakup and simplification of existing holding companies' systems to insure that any remaining holding company system would constitute an "integrated public utility system." Under Section 9 of the Act (15 U.S.C. 79i), no new holding company system was to be authorized which was not an "integrated public utility system." "Integrated public utility system" was in turn defined in Section 2(a)29(A) as follows:

> As applied to electric utility companies, a system consisting of one or more units of generating plants and/or transmission lines and/or distributing facilities, whose utility assets, whether owned by one or more electric utility companies, are physically interconnected or capable of physical

---

[3] Public Utility Act of 1935, 49 Stat. 803, *et seq.*

> interconnection and which under normal conditions may be economically operated as a single interconnected and coordinated system confined in its operations to a single area or region, in one or more States, not so large as to impair (considering the state of the art and the area or region affected) the advantages of localized management, efficient operation, and the effectiveness of regulation;

The SEC has held that under this test more than a "mere possibility of interconnection at a future time" is required before it will permit a holding company to own the stock of two operating companies which are not interconnected with one another. See *General Public Utility Corp., et al.*, 32 SEC 807, 825; 37 SEC 28, 32.

As indicated, this Commission's authority to approve the merger of two existing public utilities is couched in somewhat broader terms. But it is clear that in exercising our authority over mergers we cannot ignore the standards underlying the parallel regulation of holding companies and that we should not approve a merger involving a substantial period of operation of two isolated systems unless the record clearly indicates that the immediate benefits of the merger outweigh the detrimental effect of a single ownership of two isolated utility systems particularly where, as here, they are located in different states and presently participating in separate pooling and other coordination efforts. Whatever validity the Ninth Circuit's opinion in *Pacific Power & Light Company* v. *Federal Power Commission*, 111 F. 2d 1014, may otherwise have, it is clear that in such a situation a showing of positive benefit to counteract the detrimental consequences of one-company ownership of two unconnected utility systems is essential. And this showing cannot be limited to the types of minor savings in overhead which any merger will provide.

We agree, however, with staff counsel that on balance the present proposal can be said to be consistent with the public interest even under these more vigorous standards. We reach this conclusion largely on the basis of the evidence of record indicating that the present consummation of the merger will have a positive effect upon the acceleration of effective interconnection not only between the two parts of the resulting system (thus making possible central operation and single area planning of a sophisticated variety) but between the electric utilities in Kansas and Colorado in general. There are real difficulties in effectuating interconnection in this area, resulting from the fact that the intervening area in western Kansas and eastern Colorado is sparsely populated and has little in the way of industrial load. The merger of two principal private utilities at both ends of this gap, and the strengthened financial position that the resultant company will occupy *vis-a-vis* the other utilities in Kansas and Colorado, should provide a real impetus to the development of effective interties at an earlier period than would otherwise be the case. Nor is this merely a theoretical advantage of the proposed merger; the testimony of the witnesses for the applicant made clear that the merged company will in fact devote its efforts to the earliest possible implementation of this objective.

We understand why the applicant could not positively guarantee that the foregoing consequences would result from the merger. Nevertheless, we agree with staff and the Examiner that we should not rest simply on the possibilities that the interconnection will be made and the coordination which has been discussed will occur. For this reason we adopt the Examiner's finding that the merger should be expressly conditioned upon the merged company's continuing to conduct studies of methods for accelerating the complete interconnection and coordination of the two parts of its system, and reporting to the Commission biennially the results of such planning as well as upon its obligation, on or after January 1, 1970, to take such action to interconnect its facilities as the Commission may order after notice and opportunity for hearing. We also agree with the condition which the Examiner inserted at the request of the staff under which, at least pending such full interconnection and coordination, the merged company will be required to maintain separate accounts for the two parts of its utility system to facilitate informed regulation by the regulatory authorities, including this Commission, which will have cognizance over its operations.

The Commission finds:

(1) Western Light & Telephone Company, Inc. is a corporation organized and existing under the laws of the State of Kansas with its principal office at Great Bend, Kansas.

(2) Western Power & Gas Company is a corporation organized and existing under the laws of State of Delaware with its principal office at Lincoln, Nebraska.

(3) Western Light and Westgas each own and operate facilities for the transmission and sale at wholesale of electric energy which is transmitted in interstate commerce and consumed outside of the state in which it was generated. Each is, therefore, a public utility within the meaning of that term as used in the Federal Power Act.

(4) Western Light and Westgas are each members of, interconnected with, dependent upon and operate in synchronism with interstate power pools which are further organized into an integrated and coordinated interstate electric system. The wholesale sales of electric energy made by Western Light and Westgas of electric energy received from these coordinated systems are sales for resale in interstate commerce and subject to the jurisdiction of the Commission.

(5) The transmission facilities of Western Light, including its interconnections with the Interconnected Systems Group as well as its independent and separate interconnection with the Southwest Public Service Company, and the transmission facilities of Westgas, including its interconnection with the Pacific Northwest Power Pool, are in addition to and do not include facilities used for generation of electric energy, or facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter.

(6) The acquisition by Western Light of the facilities of Westgas upon the terms and conditions specified in the application and subject to the provisions of this order is consistent with the public interest as provided in Section 203 of the Federal Power Act.

The Commission orders:

(A) The merger of the facilities of the Western Power & Gas Company into the facilities of the Western Light & Telephone Company, Inc. is hereby authorized upon the terms and conditions as set out in the application, subject to the provisions of this order.

(B) The Western Light & Telephone Company, Inc. shall enter upon its records the transaction herein authorized and the facilities and properties herein referred to as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) The survivor company, Western Power & Gas Company, Inc., shall maintain in conformity with the Uniform System of Accounts Prescribed for Public Utilities and Licensees, supplemental accounts in scope and form, satisfactory to the Commission, designed to show separately: the electric plant depreciation reserve, operating revenue, operating expenses, depreciation, taxes, and return on investment, which would be involved in any determination of the merged company's cost of service for the system areas formerly served by (i) Western Light & Telephone and (ii) Southern Colorado Power Division of Western Power & Gas Company.

(D) The Western Power & Gas Company, Inc., shall submit on or before January 1, 1966, and thereafter at biennial intervals, unless relieved of such obligation by further order of the Commission, comprehensive reports of studies and plans for the proposed Hugoton generating plant and the physical interconnection, directly or through interconnections with interstate suppliers, of the two parts of its electrical system. It is further directed to contact the Southwestern Public Service Company to explore the feasibility of its utilization of that Company's system and the proposed transmission line from Midway Substation in Colorado, to Amarillo, Texas for interconnecting the two parts of its system on an emergency basis and shall include the results of such studies in its report to be filed on January 1, 1966. It shall take such action to interconnect directly or indirectly the two parts of its electric power system as the Commission may determine is required by the public interest, after notice and opportunity for further hearing, provided that no such action shall be required to be taken prior to January 1, 1970, nor place any undue burden upon it, or compel the enlargement of its generating facilities or impair its ability to render adequate service to its customers.

(E) This authorization shall expire unless the merger herein authorized is consummated within 90 days from the date of issuance of this order.

(F) Upon consummation of the proposed merger, applicant shall report such fact to the Commission within 10 days, together with the date of the effectiveness thereof.

(G) The initial decision and order issued in the proceeding on April 22, 1965, as modified by the Opinion herein, is adopted by and as the decision of the Commission, to be effective as of the date of issuance of this order.

(H) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION UNDER SECTION 203 OF THE FEDERAL POWER ACT TO MERGE FACILITIES

(Issued April 22, 1965)

FRAZEE, *Presiding Examiner:*

This proceeding originated from an application filed on October 20, 1964, as subsequently amended and supplemented, by the Western Light & Telephone Company, Inc. (Western Light) for authorization, pursuant to Section 203 of the Federal Power Act, to merge with the Western Power & Gas Company (Westgas), or a disclaimer by the Federal Power Commission (Commission) of jurisdiction over the proposed merger.

Notice of Western Light's application was duly published in the Federal Register on November 5, 1964, 29 F.R. 15002, notifying all persons interested to file their petitions or protests with the Commission on or before November 20, 1964. None were received by the Commission.

As required by Section 203(a) of the Federal Power Act, the Commission gave written notice of the filing of Western Light's application to the Delaware Public Service Commission, the Kansas State Corporation Commission, the Iowa State Commerce Commission, the Missouri Public Service Commission, the Colorado Public Service Commission, the Nebraska State Railway Commission, the South Dakota Public Utilities Commission, and to the Governor of each of these States.

Copies of their orders approving the proposed merger were filed with the Commission by the Kansas State Corporation Commission on November 25, 1964, by the Colorado Public Service Commission on December 2, 1964, and by the Missouri Public Service Commission on December 7, 1964.

The Commission issued an order on February 15, 1965, fixing the date of the hearing to commence on March 9, 1965. The hearing was convened on that date and an opportunity was afforded all proper parties desiring to do so to offer evidence, and a substantial volume was offered and received during the two days of hearing. Further, those desiring to do so were authorized to file briefs.

The applicant, Western Light, is a corporation organized under the laws of the State of Kansas and has its principal office at Great Bend, Kansas. Western Light is engaged in generating, transmitting, distributing, and selling electric energy in 33 counties in central and southwestern Kansas. It retails electric energy to some 53,135 customers in 144 communities and it sells electric energy at wholesale to 13 municipalities and to 12 cooperatives. Western Light also furnishes telephone service to 5 communities in Kansas, 12 communities in Iowa, and 25 communities in Missouri. In addition to the electric and telephone service, Western Light furnishes natural gas service in 11 communities and water service in 5 communities in Kansas.

Westgas is a corporation organized under the laws of the State of Delaware and has its principal office at Lincoln, Nebraska. Westgas is engaged (through its Southern Colorado Power Division) in generating, transmitting, distributing and selling electric energy at retail to 51,283 customers in 43 communities and at wholesale to 2 municipalities and an association of cooperatives in a contiguous area covering parts of 7 counties in southeastern Colorado. Westgas also owns and operates natural gas distribution properties serving 69 communities in Nebraska and South Dakota. In addition to its electric and natural gas properties, Westgas owns all, or part, of the common stock of three telephone companies: Central Telephone Company, Southeastern Telephone Company, and Worthington Telephone Company. These telephone companies own and operate 176 exchanges located in the States of Florida, Illinois, Minnesota, Nevada, North Carolina, Virginia, and Wisconsin.

Western Light and Westgas have entered into an Agreement of Merger, dated September 17, 1964, under which Westgas will merge into Western Light, which will then change its name to the Western Power & Gas Company, Incorporated, a Kansas corporation. Under the Agreement of Merger, the shares of common stock of Western Light outstanding immediately prior to the merger will be split in the ratio of four shares for three shares. After the Western Light stock split and after the merger, each share of Westgas and each share of Western Light will represent one share of the surviving corporation, the Western Power & Gas Company. Also, upon the effectiveness of the merger, each outstanding share of preferred stock of Westgas shall be converted into a share of stock in the surviving corporation at the same par or stated value and with the same rights and privileges as the shares had prior to the merger. The surviving corporation will acquire all assets of Westgas and will assume its liabilities for outstanding debt, including its various classes of debt securities.

The proposed merger differs from the usual merger proposals of electric systems in that Western Light and Westgas have no previous operational relationship with each other, their nearest reasonable junction point, or points of interconnection, are approximately 150 miles apart and, under current circumstances, an immediate interconnection would not be practical. The nearest reasonable junction points are between the Southern Colorado Power Division of Westgas in southeastern Colorado and that of Western Light in southwestern Kansas. No investor owned electric utility presently operates between these two points of possible interconnection. The eastern Colorado area is served by rural cooperative lines and by municipal utilities.[1] The Southern Colorado Power Division of Westgas is interconnected with the rural cooperatives and, through them, with the municipals. (See Ex-5.) It sells electric energy at wholesale to the cooperatives and the municipals. The western Kansas area, from the Western Light terminus to the Colorado line, is also served by rural cooperatives and by municipals that are directly, or indirectly through others, interconnected with Western Light from whom they purchase electric energy at wholesale.

The evidence shows that Western Light normally operates its system interconnected to and synchronized with the Interconnected Systems Group which is, in turn, connected to and operated in synchronism with the Pennsylvania, New Jersey and Maryland (PJM) and CANUSE. (Ex. 17.) This integration of electric systems covers roughly the eastern half of the United States and a portion of Canada and has a combined generating capacity of approximately 149 gigawatts (149 million kilowatts). As an integrated member of the Interconnected System Group, Western Light currently has a generating capacity of 250,000 KW and it is anticipated that additional generating capacity will be necessary by 1968 or 1969 as its annual load growth varies from 6% to 13%.

The record also shows that Westgas, through its Southern Colorado Power Division, is a member of the Colorado Power Pool and normally operates its system interconnected to and synchronized with that Pool, which is, in turn, connected to and operated in synchronism with the Rocky Mountain Power Pool, which is connected to and operates in synchronism with the Pacific Northwest Power Pool. The Rocky Mountain and Pacific Northwest Power Pools have combined generating capacity of approximately 17 gigawatts. The current generating capacity of the Southern Colorado Division of Westgas is, in the aggregate, approximately 105,000 Kw but it has an anticipated need for an additional 44,000 Kw by 1969 since the annual load growth is between 5% and 6%. It presently has no firm plans for procuring this generating capacity. Ties presently connect the Pacific Northwest-Rocky Mountain Pool to the Pacific Southwest-New Mexico Pool on an experimental basis, which is expected to become firm in the near future. The Pacific Southwest Power Pool and the New Mexico Power Pool, which does not include Southwestern Public Service, are interconnected and synchronized and have a combined generating capacity of approximately 20 gigawatts.

The record clearly indicates that Western Light is operating in synchronism with and dependent upon the interconnected power systems in the eastern part of the United States and Westgas is operating in synchronism with and dependent upon the interconnected power systems in the western part of the United States. Therefore, as the Commission said in its Opinion No. 458, issued April 14, 1965, 33 FPC 739, in *Indiana & Michigan Electric Company*, where a public utility participates in and is dependent upon an integrated interstate power pool, all of its wholesale sales for resale are subject to the jurisdiction of the Commission.

Western Light and four other utility companies are presently studying the feasibility of constructing a two million Kw generating plant in the Hugoton gas field of western Kansas. The construction and operation of such a plant would make possible a 345 Kv transmission line extending west from Wichita, Kansas, to Midway, Colorado, with a leg south to Amarillo, Texas, as shown in the National Power Survey. This would enable Western Light and Westgas to tie into this 345 Kv line and thus become an interconnected synchronized system. Witnesses testified the generating plant and interconnection are actively in the planning stage and reasonably foreseeable. The Kansas Corporation Commission anticipates completion of this plant by 1968 or 1969.

---

[1] Lamar Light-Power and the Las Animas Municipal Plant.

The Public Service Company of Colorado is presently constructing a pumped storage plant in Colorado, with another in the active planning stage, to produce peaking power to be fed into and transmitted east over the proposed 345 Kv line.

Western Light is interconnected with the Southwest Public Service Company at a point on the Oklahoma-Kansas border near Liberal, Kansas (Exhibits 3 and 4) where, when the switch is closed, energy flows in either direction depending upon the load. Western Light cannot operate its system in synchronism with the Southwest Public Service Company and the Kansas Gas & Electric Company at the same time. Therefore, when the switch to one of these companies is closed the switch to the other must be open.

Since the application requesting authority to merge was filed pursuant to Section 203(a) of the Federal Power Act, it becomes necessary to determine first, if Western Light and Westgas, or either of them, are public utilities as defined in Section 201(e) of the Act.

The evidence of record clearly shows that Western Light, as well as Westgas, own and operate facilities for the transmission of electric energy in interstate commerce and for the sale of electric energy at wholesale in interstate commerce. Section 201(b) of the Act states "The Commission shall have jurisdiction over all facilities for such transmission or sale of electric energy * * *" *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U.S. 515; *Jersey Central Power & Light Co.* v. *Federal Power Commission*, 319 U.S. 61; *State of Wisconsin* v. *Federal Power Commission*, 201 F. 2d 183, cert. den. 345 U.S. 934; *Federal Power Commission* v. *Arizona Edison Co.*, 194 F. 2d 679; *Hartford Electric Light Co.* v. *Federal Power Commission*, 131 F. 2d 953, cert. den. 319 U.S. 741; *Federal Power Commission* v. *Southern California Edison Co.*, 376 U.S. 205. Therefore, Western Light, the applicant herein, and Westgas are public utilities within the meaning of that term as used in the Federal Power Act and subject to the jurisdiction of the Commission.

Section 203(a) of the Act further provides that no public utility shall merge or consolidate its facilities, or any part thereof of a value in excess of $50,000, with those of any other person without first securing an order of the Commission authorizing same. The Act further provides if the Commission finds the proposed consolidation, or merger, to be consistent with the public interest it shall approve the same.

There is ample evidence in the record to demonstrate that the proposed merger is consistent with the public interest. The merger, according to the testimony of witnesses for Western Light and Westgas, will enhance the position of Western Light in the construction and operation of the Hugoton generating plant and the 345 Kv transmission line, and it will, over a period of time, result in many economies of operation by (1) an estimated savings of up to $50,000 (about 15%) annually in financing costs, (2) the electric operations of the two companies will be combined into one company which will enable it to recruit, train and retain more competent personnel, (3) by the elimination of duplication of functions an estimated annual savings of $100,000 in operating costs will be achieved, (4) no jobs will be eliminated but through the process of normal attrition the overall employment will be reduced. The merger would, it was said, permit improved service to customers and greater sales of energy, all of which would in time redound to the benefit of customers in reduced rates.

According to the application, the electric facilities of Westgas to be merged into Western Light are carried on the books of Westgas at their original cost of $41,909,142 at June 30, 1964. Accumulated depreciation of these facilities on this date was $11,645,515. The accounting entries upon the merger will transfer these items to the records of Western Light.

From the record herein it is found and determined that the applicant, Western Light, has made a full disclosure of the facts relevant to the proposed merger and has shown affirmatively that the merger is consistent with the public interest. A showing of positive benefit to the public as a result of the merger is not required by the Act, only that the proposed merger will be consistent with the public interest is sufficient. *Pacific Power & Light Co.* v. *Federal Power Commission*, 111 F. 2d 1014. The Staff of the Commission, at page 26 of their brief, recommend approval of the proposed merger subject to certain accounting and reporting conditions.

The Staff in its brief recommend certain conditions be attached to the approval of the merger. Counsel for Western Light upon receipt of the Staff brief wrote the Examiner on April 7, 1965, saying, "Having received and reviewed the brief of the Commission's staff in the above matter, I am prepared to and do waive the filing of any reply brief." It is assumed, therefore, that the applicant, Western Light, does not object to the conditions proposed by the Staff. On April 12, 1965, Counsel for the Commission's staff wrote the Examiner that the Staff "does not propose to file a reply brief."

Under Section 203(b) of the Act the Commission may grant any merger application upon such terms and conditions as it finds necessary or appropriate to secure the maintenance of adequate service and the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

The accounting and reporting conditions, proposed by the Staff, are found to be necessary and appropriate and are set forth in detail in Ordering Paragraphs (C) and (D) herein.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Examiner further finds and concludes, in addition to the findings and conclusions hereinabove stated, that:

(1) Western Light & Telephone Company, Incorporated, is a corporation organized and existing under the laws of the State of Kansas with its principal office at Great Bend, Kansas.

(2) Western Power & Gas Company is a corporation organized and existing under the laws of the State of Delaware with its principal office at Lincoln, Nebraska.

(3) Western Light and Westgas each own and operate facilities for the transmission and sale at wholesale of electric energy which is transmitted in interstate commerce and consumed outside of the state in which it was generated. Each is, therefore, a public utility within the meaning of that term as used in the Federal Power Act.

(4) Western Light and Westgas are each members of, interconnected with, dependent upon and operate in synchronism with interstate power pools which are further organized into an integrated and coordinated interstate electric system. The wholesale sales of electric energy made by Western Light and Westgas of electric energy received from these coordinated systems are sales for resale in interstate commerce and subject to the jurisdiction of the Commission.

(5) The transmission facilities of Western Light, including its interconnections with the Interconnected Systems Group as well as its independent and separate interconnection with the Southwest Public Service Company, and the transmission facilities of Westgas, including its interconnection with the Pacific Northwest Power Pool, are in addition to and do not include facilities used for generation of electric energy, or facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter.

(6) The acquisition by Western Light of the facilities of Westgas upon the terms and conditions specified in the application and subject to the provisions of this order is consistent with the public interest as provided in Section 203 of the Federal Power Act.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) The merger of the facilities of the Western Power & Gas Company into the facilities of the Western Light & Telephone Company, Incorporated, are hereby authorized upon the terms and conditions as set out in the application, subject to the provisions of this order.

(B) The Western Power & Light Company shall record upon its records the transaction herein authorized and the facilities and properties herein referred to as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) The survivor company, the Western Power & Gas Company, Incorporated, shall maintain in conformity with the Uniform System of Accounts Prescribed for Public Utilities and Licensees, supplemental accounts in scope and form, satisfactory to the Commission, designed to show separately: (a) electric plant depreciation reserve, operating revenue, operating expenses, depreciation, taxes, and return on investment, which would be involved in any determination of the merged company's cost of service for the system areas formerly served by (i) Western Light & Telephone and (ii) Southern Colorado Power Division of Western Power and Gas Company.

(D) The Western Power & Gas Company, Inc., shall submit on or before January 1, 1966, and thereafter at biennial intervals, unless relieved of such obligation by further order of the Commission, comprehensive reports of studies and plans for the proposed Hugoton generating plant and the physical interconnection, directly or through interconnections with interstate suppliers, of the two parts of its electrical system. It is further directed to contact the Southwestern Public Service Company to explore the feasibility of its utilization of that Company's system and the proposed transmission line from Midway Substation in Colorado, to Amarillo, Texas for interconnecting the two parts of its system on an emergency basis and shall include the results of such studies in its report to be filed on January 1, 1966. It shall take such action to interconnect directly or indirectly the two parts of its electric power system as the Commission may determine is required by the public interest, after notice and opportunity for further hearing, provided that no such action shall be required to be taken prior to January 1, 1970, nor place any undue burden upon it, or compel the enlargement of its generating facilities or impair its ability to render adequate service to its customers.

(E) This authorization shall expire unless the merger herein authorized is consummated within 90 days from the date of issuance of this order.

(F) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

HARRY W. FRAZEE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL MAINE POWER COMPANY, DOCKET NO. E-7215

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued June 2, 1965)

Central Maine Power Company (Central Maine) filed an application on April 1, 1965, with the Federal Power Commission, and an amendment thereto on May 10, 1965, for an order, pursuant to Section 203 of the Federal Power Act, authorizing the acquisition of electric facilities from Cornish and Kezar Falls Light and Power Company (Cornish).

Central Maine is an electric utility organized under the laws of the State of Maine with its principal business office at Augusta, Maine, and is engaged principally in the generation, purchase, transmission, distribution and sale of electric energy and serves all of the 16 counties in the State of Maine except the counties of Aroostook and Washington. It is interconnected with and interchanges energy with Bangor Hydro-Electric Company and with Public Service Company of New Hampshire. It purchases energy from 10 industrial establishments and one municipal system and supplies energy to five small privately-owned electric systems and three municipal systems.

Cornish is a corporation organized under the laws of the State of Maine with its principal business office at Kezar Falls, Maine, and is engaged in the generation, purchase, transmission, distribution and sale of electric energy, serving all or part of the Towns of Parsonsfield and Cornish in the County of York and the Towns of Porter and Hiram in the County of Oxford and is authorized to serve the Town of Baldwin in the County of Cumberland, all in the State of Maine.

The facilities to be acquired include Cornish's hydroelectric generating station, and its transmission and distribution systems serving about 1100 customers. The properties include a limited capacity 12,470 volt connection with the Central Maine system. According to the application, Cornish's facilities would be fully integrated with Central Maine's operations in contiguous areas and Central Maine will assume full obligations to serve all customers in the area now served by Cornish.

Central Maine's cash consideration for Cornish's facilities will be $320,568 as of December 31, 1964. This amount is based on $486,326 original cost of such facilities, less applicable accumulated provision for depreciation of $229,982, and plus $49,224 for accounts receivable and $15,000 for materials and supplies. The transaction will not result in the creation of an acquisition adjustment.

According to the application, Central Maine's residential rates, with the exception of a few minimal use customers are lower than those of Cornish and its commercial and small power rates based on customer demands are higher than Cornish's rates which are simple block rates. Charges of both systems to large power users are approximately the same.

Based on 1964 consumption, Central Maine estimates that Cornish's residential customers would save 10.6 percent or $9,289 annually if served under Central Maine's rates. However, charges to commercial and small power users of Cornish would be increased 22 percent or $21,120 annually under Central Maine's rates. Central Maine proposes to put its residential and large power rates into effect immediately after completion of the contract as they would result in no change or a reduction in charges. It proposes a transition period of five years during which the Cornish rates to commercial and small power customers would be gradually raised to conform to Central Maine's rates. Charges for street lights would remain on Cornish rates until Central Maine could make arrangements with the communities concerned to put Central Maine's rates into effect.

According to the application, the proposed acquisition of Cornish by Central Maine will integrate the small local electric utility system of Cornish with the larger system of Central Maine which in its turn is interconnected with other utilities in the State of Maine and in New England. Central Maine represents that by reason of its larger size and its interconnection with other utilities, it can insure a more adequate supply of energy to Cornish's customers at generally lower rates than they now pay, avoiding the increase which Cornish's management advises will be necessary were they to continue to serve the area.

Written notice of the application has been given to the Public Utilities Commission of Maine and to the Governor of that State. Notice was published in the Federal Register on April 14, 1965 (30 F.R. 4774), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before April 29, 1965, file with the Federal Power Commission, Washington, D.C., 20426, petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy generated in the State of Maine and consumed outside thereof, and for the transmission and sale at wholesale of electric energy generated in the State of New Hampshire and consumed in the State of Maine, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter, and Applicant is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, Central Maine will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Cornish, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Central Maine, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Central Maine of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Central Maine shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this

Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by this Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61-92

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1965)

On April 13, 1965, El Paso Natural Gas Company (Applicant), filed in Docket No. CP61-92 an application to amend the order of the Commission issued in said docket January 11, 1965, 33 FPC 34, which order authorized Applicant to construct and operate certain facilities and to deliver natural gas to Northern Natural Gas Company (Northern), on an exchange basis, at points in Ochiltree County, Texas, as a part of the previously authorized exchange under Applicant's Rate Schedule Z-1, FPC Gas Tariff, Third Revised Volume No. 2, all as more fully set forth in the application to amend.

Applicant states that the J. W. Daniel "C" Unit No. 1, from which gas was to have been delivered to Northern, is a dry hole, and the W. B. Barnes No. 1 well, which was also the subject of the order issued January 11, 1965, was completed as an oil well and no gas has been delivered therefrom to Northern. Applicant therefore requests that the order of January 11, 1965, be amended to delete therefrom the authorization for the construction and operation of approximately 0.3 mile of 3½-inch O.D. pipeline and appurtenances and approximately 1.4 miles of 4½-inch O.D. pipeline and appurtenances, which were authorized for the respective wells, at an aggregate cost estimated to be $9,377, and to delete therefrom the authorization for the delivery of gas to Northern from such wells.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 27, 1965 (30 F.R. 5870). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 11, 1965, in Docket No. CP61-92 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 11, 1965, in Docket No. CP61-92, be and the same is hereby amended so as to delete therefrom (1) the authorization for the construction and operation of approximately 0.3 mile of 3½-inch O.D. pipeline and appurtenances, and approximately 1.4 miles of 4½-inch O.D. pipeline and appurtenances, authorized to connect the J. W. Daniel "C" Unit No. 1, and W. B. Barnes No. 1 well, respectively, and (2) the authorization to deliver natural gas therefrom to Northern Natural Gas Company, on an exchange basis.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–99

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1965)

On April 12, 1965, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP64–99 a petition to amend the order of the Commission issued in said docket February 18, 1964, 31 FPC 422, which order, as amended August 7, 1964, October 21, 1964 and December 15, 1964, 32 FPC 539, 1152, 1424, authorized Petitioner to participate with Washington Natural Gas Company and Washington Water Power Company in the testing and development of underground natural gas storage in the Jackson Prairie area of Lewis County, Washington (storage unit). By the terms of the above order, as amended, the inventory of gas in the storage unit is limited to 1,400,000 Mcf, and the testing activities are to cease on June 30, 1965 or upon divestiture of El Paso's Northwest Division system, whichever first occurs. The estimated cost of the testing and development authorized in the above orders is $2,100,000, of which $1,796,400 has been expended as of March 1, 1965.

By the subject filing Petitioner seeks further amendment of the order issued in this docket on February 18, 1964, so as to authorize an increase in the volumetric limitation on the inventory of gas in the storage unit of 600,000 Mcf, from the presently authorized 1,400,000 Mcf to 2,000,000 Mcf; and extension of the period during which testing activities may be carried on, through the date of divestiture of Petitioner's Northwest Division system, but not beyond June 30, 1966; and additional authorization for the: (1) construction and operation of approximately 2 miles of 14-inch pipeline, together with appurtenances, replacing existing 4½-inch pipeline; and (2) installation of a portable 600 horsepower compressor and appurtenances, in addition to an existing 300 horsepower compressor, all located at the development site in Lewis County, Washington.

Total estimated cost of the extended program of testing and development is $3,579,000, including the $1,796,400 expended as of March 1, 1965. El Paso's one-third share of such expenditures will be financed with current working funds and by means of short term borrowings.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the petition has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 18, 1964, in Docket No. CP64–99, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 18, 1964, in Docket No. CP64–99, as amended, be and the same is hereby further amended by authorizing:

(1) With respect to Petitioner as an undivided one-third interest participant, the extension of the period for joint testing of the Jackson Prairie Storage Reservoir through the date of divestiture of Petitioner's Northwest Division system, but not beyond June 30, 1966;

(2) An increase in the volumetric limitation on the inventory of gas in the storage unit from 1,400,000 Mcf (at 14.73 psia) to 2,000,000 Mcf (at 14.73 psia); and

(3) The expansion of the testing facilities of the Jackson Prairie Storage Reservoir as proposed, at an estimated total cost of $3,579,000, including the $1,796,400 expended as of March 1, 1965, and increasing Petitioner's commitment to one-third of total expenditures made pursuant to the authorization granted herein.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MANUFACTURERS LIGHT AND HEAT COMPANY, CUMBERLAND AND ALLEGHENY GAS COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64-244

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1965)

On April 2, 1965, The Manufacturers Light and Heat Company (Manufacturers), Cumberland and Allegheny Gas Company (Cumberland), and Texas Eastern Transmission Company (Texas Eastern), filed in Docket No. CP64-244 a joint petition to amend the order of the Commission issued in said docket March 23, 1965, 33 FPC 598, which order authorized the exchange and delivery of natural gas between Texas Eastern, Cumberland and Manufacturers to permit Texas Eastern to maintain production of natural gas from Accident Field, Garrett County, Maryland, pending conversion of such field into a natural gas storage field and until Texas Eastern was ready to commence injecting natural gas into storage. Authorization for this exchange was granted by the Commission's order of March 23, 1965, for one year from May 1, 1964.[1] Texas Eastern, Cumberland and Manufacturers seek to have the authorization extended for one year from May 1, 1965, all as more fully set forth in the joint application.

Temporary and permanent certificates heretofore issued in said docket have permitted Texas Eastern to maintain production from Accident Field while acquiring a substantial portion of the royalty interests in the natural gas reserves remaining in the reservoir. Texas Eastern does not expect to conclude its royalty purchasing program by May 1, 1965. The additional year will also provide Texas Eastern with an additional supply of gas for injection into the field when injection operations commence and will assist Manufacturers in meeting its system requirements and at the same time receive a small buildup of winter delivery volumes from Texas Eastern.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 15, 1965 (30 F.R. 5397). No protest, petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the order of the Commission issued in Docket No. CP64-244 on March 23, 1965 be amended so as to extend the period during which Manufacturers, Cumberland and Texas Eastern may exchange natural gas for one year, beginning May 1, 1965, as requested in the joint application to amend filed herein.

---

[1] Temporary authorization for the exchange was granted initially by the Commission's letter-order of April 24, 1964, for one year.

The Commission orders:

(A) The order of the Commission issued on March 23, 1965, is hereby amended so as to authorize the extension of the period during which Manufacturers, Cumberland and Texas Eastern may exchange natural gas for one year, beginning May 1, 1965, as requested in the joint application to amend filed herein.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP63-80

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1965)

On April 7, 1965, Midwestern Gas Transmission Company (Petitioner) filed in Docket No. CP63-80 a petition to amend the order of the Commission issued in said docket on January 25, 1963, 29 FPC 154, which order issued a certificate of public convenience and necessity authorizing Petitioner to construct and operate facilities for the injection of natural gas into certain reservoirs in Illinois and Indiana to evaluate the characteristics of these reservoirs and to determine each reservoir's capability as a natural gas storage reservoir, by authorizing a revised and expanded testing and evaluation program, all as more fully set forth in the petition to amend.

Petitioner proposes to construct and operate additional facilities and to inject additional gas into the reservoirs. Total expenditures for construction and injected gas is proposed to be increased to $8,073,343 and total volume of natural gas to be injected is proposed to be increased to 11,100 MMcf at 14.73 psia. The additional facilities consist of 18 wells, 5.4 miles of pipeline, storage rights of approximately 194 acres, and miscellaneous auxiliary and appurtenant facilities. The proposed limit of 11,100 MMcf of testing gas results from the 4,000 MMcf presently authorized and a proposed increment of 7,100 MMcf.

Petitioner has drilled 30 wells and constructed gathering facilities at a cost of $3,317,686 and has injected 829 MMcf of gas at a cost of $171,847 as of February 28, 1965, pursuant to the authorization in the certificate. The additional volume of 7,100 MMcf of gas and the remaining original volume of 3,171 MMcf of gas, amounting to a total of 10,271 MMcf of gas, is estimated to cost $2,098,400. The cost of the additional facilities is estimated to be $2,485,410. The total cost of the testing and evaluation program is estimated to be $8,073,343, inclusive of $3,489,533 presently expended.

Petitioner has undertaken the testing and evaluation program proposed in its original application and has concluded that the information obtained from the tests indicates that the presently authorized testing program will not allow accumulation of sufficient data with respect to the capabilities and the characteristics of the proposed storage reservoirs to determine the cost of service necessary to offer a definite storage service.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the petition to amend has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity to Petitioner in Docket No. CP63–80 should be amended as hereinafter ordered.

The Commission orders:

(A) The order issuing a certificate to Petitioner in Docket No. CP63–80 be and the same is hereby amended by authorizing the construction and operation of additional facilities at a cost of $2,485,410 and the injection of additional volumes of natural gas.

(B) The cost of the completed testing and evaluation program, including 11,100 MMcf of gas, is limited to $8,073,343.

(C) The total volume of natural gas to be injected during the testing program shall not exceed 11,100 MMcf.

(D) In all other respects the order issuing a certificate in Docket No. CP63–80 shall remain in full force and effect.

OPINION NO. 463

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–255 (PHASE II)

OPINION AND ORDER MODIFYING AND ADOPTING EXAMINER'S DECISION ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, DECIDING APPEAL, AND DENYING ORAL ARGUMENT

(Issued June 2, 1965)*

Syllabus

1. Evidence of record adequately establishes economic feasibility of pipeline's project. P. 1166.
2. Pipeline's use of average system purchased gas costs in incremental cost study was proper. P. 1166.
3. Incremental cost study in pipeline certificate case normally includes specific costs directly associated with particular service proposed and not general, system-wide costs, except that average gas purchased costs are normally used since system gas supply is considered available to all customers through-out system and no particular reserves are deemed earmarked for any particular service. P. 1166.
4. Pipeline properly excluded cost of uncertificated transmission facilities through which gas from Coyanosa Field would be transported with other gas to its main transmission line since such costs obviously cannot be considered incremental to present project. P. 1166.
5. Proposal to assign so-called average system "gathering" costs and treat them as if they are incremental costs is without support in principal and has been previously rejected. P. 1166.
6. There is no valid basis for recognizing any costs associated with claimed pre-emptions of "cheap expansibility" on Northern's system. P. 1166.
7. Pipeline's unusually aggressive policy of expansion into unserved market areas makes benefits of natural-gas service widely available to public and should be encouraged. P. 1167.

---

*Initial decision appears on p. 1172. Rehearing denied by order issued July 29, 1965, 34 FPC 146.

8. Adhering to general rule stated in *Opinion No. 404*, Commission *requires* written contracts for sales accounting for more than 15 percent of projected branchline revenues without establishing any specific terms therefor. P. 1168.
9. *Concluding* that objections to alleged escape clauses in Northern-Cleveland Cliffs contract do not justify denying or conditioning certificate, Commission *notes* such holding will not foreclose Northern's jurisdictional customers from raising such objections in any future rate case. PP. 1168, 1169.
10. Secretary's rejection of appeal from Examiner's ruling refusing to require pipeline or Commission Staff to explore alternatives, that would possibly be more economic than instant project, upheld; passing on merits of petition, Commission *concludes* that further evidence of such nature is not needed for decision here. P. 1169.
11. Consolidation of pipeline applications is not required by law where the projects are not mutually exclusive. P. 1169.
12. Since Interveners had previously briefed and orally argued major issues before Examiner, they were not unduly hampered by shortening of time for filing exceptions from 30 to 10 days. P. 1171.
13. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificate of public convenience and necessity authorizing initial gas service into Northern Wisconsin and portion of Upper Peninsula of Michigan.

Arthur R. Seder, Jr. for Michigan Consolidated Gas Company

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company

F. Vinson Roach, Justin R. Wolf, C. A. Case, Jr., J. C. Osborne, D. B. O'Brien, Jr. and *Stanley Wanger* for Northern Natural Gas Company

Frank J. Kelly and *Hugh B. Anderson* for Michigan Public Service Commission

William E. Torkelson for Public Service Commission of Wisconsin

James R. Fitzharris for City of Escanaba, Michigan

Glen H. Bell for Lake Superior District Power Company

Albert J. Feigen for Peninsula Gas Company

John W. Scott and *Louis L. DaPra* for Minnesota Valley Natural Gas Company

Mark W. Putney for Iowa Power and Light Company

Jerome J. McGrath for Upper Lake Docks Coal Bureau, Inc.

Edward J. Hartman for Iowa-Illinois Gas and Electric Company

George C. Pardee for Metropolitan Utilities District of Omaha

J. F. Kinney for Iowa Public Service Company

Lloyd J. Marti for Western Power & Gas Company

George C. Mastor for Minneapolis Gas Company

John F. Gaston for Iowa Electric Light & Power Company

Ned Willis for North Central Public Service Company

Seymour Tabin for Wisconsin Public Service Corporation

David B. Ward and *Charles R. Brown* for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACK, *Commissioner:*

This is a certificate case, arising under Section 7(c) of the Natural Gas Act, and coming before us on exceptions to the initial decision of Presiding Examiner Francis L. Hall, issued April 12, 1965.[1] Northern Natural Gas Company (Northern) seeks a certificate of public convenience and necessity authorizing it to construct and operate an extension from a point on its main line near Duluth, Minnesota, eastward across northern Wisconsin and into the Upper Peninsula of Michigan, and to sell natural gas in these areas. Related facilities proposed include some 55 miles of 30-inch loop line and 11,400 compressor horsepower at various points along Northern's main line, all as fully described in the Examiner's decision. Total estimated cost of the facilities now proposed is $24,137,800.

Utilizing these facilities, Northern proposes to make new sales totaling some 49,741 Mcf of gas a day (third-year contract-demand volumes) to three distribution companies for resale, and to one industrial customer. The distribution companies would purchase the following volumes: Michigan Gas & Electric Company (MG&E), 8,826 Mcf a day; Lake Superior District Power Company (Lake Superior), 7,079 Mcf a day; and Peninsula Gas Company (Peninsula), 2,176 Mcf a day, for a total of 18,081 Mcf a day; and the industrial customer, Cleveland Cliffs Iron Company (Cleveland Cliffs), would purchase 31,660 Mcf a day (all third-year contract-demand volumes).

The Examiner would grant the authorizations Northern seeks substantially as requested. His decision is supported by the Commission's Staff (except as to two minor points discussed hereinafter), and the Wisconsin and Michigan Public Service Commissions, among others.

A single set of joint exceptions opposing the Examiner's decision was filed by eight of Northern's major existing customers (Interveners). The principal question raised by Interveners is whether Northern's project is economically feasible and would burden them with excessive costs. Other questions they raise include whether we should require the filing of contracts covering sales by certain distribution companies to industrial customers; whether the service to Cleveland Cliffs unduly discriminates against jurisdictional customers; and whether we should decide an appeal filed by Interveners from certain adverse rulings by the Examiner at the hearing.

By way of relief, Interveners ask that Northern's project be denied, or alternatively, that we impose a condition providing in effect that any revenue deficiency caused by Northern's new facilities would not be reflected in the rates of its existing jurisdictional customers. Interveners also request oral argument.

We conclude that the Examiner's decision is correct in most material respects, and that with the few small modifications hereinafter described, it should be adopted by us as our decision in this case. Oral argument was held before the Examiner and no further oral argument is justified.

Economic feasibility of Northern's project.—Northern adduced evidence (Exh. 41 as revised) to show that in the third year of service, the incremental revenues attributable to its project would exceed the incremental cost of service, including a 6.25 percent rate of return, by $115,990. The Examiner accepted Northern's showing as reasonable and in conformity with Commission requirements for establishing economic feasibility.

---

[1] This opinion deals with the remaining authorizations requested by Northern in the consolidated proceeding involving docket Nos. CP64-255 (Phase II), CP65-38, and CP65-39. Northern's Phase I project, which involved extending service into the Mesabi Iron Range area of Minnesota, was separated from the instant Phase II project and was granted by Commission order issued December 21, 1964, 32 FPC 1491. Docket Nos. CP65-38 and CP65-39 involved authorizations sought by Michigan Wisconsin Pipe Line Company and Michigan Consolidated Gas Company for service in the southern part of the Upper Peninsula of Michigan, and were approved by a separate decision by the Examiner which we adopted by order issued April 30, 1965, 33 FPC 912.

As indicated above, Intervener's principal challenge to Northern's project is that it has not been shown to be feasible. Interveners contend that Northern has understated costs and overstated revenues so that instead of excess revenues, Northern would experience a revenue deficiency in the third year of some $1.8 million, and therefore Interveners and other existing customers would be unduly burdened by unjustified costs.

We conclude that the evidence of record, particularly Northern's presentation, adequately establishes the economic feasibility of Northern's project.

We are satisfied that Northern has not understated costs in any material respect. Interveners contend first that Northern understated costs by utilizing a system average of all purchased gas costs at the wellhead or points of purchase, whereas to be consistent with its incremental approach, it should have used incremental purchased gas costs. Furthermore, Interveners allege that Northern completely excluded costs of more expensive gas recently purchased in the Coyanosa Field, Texas.

However, it is clear that Northern's use of average system purchased gas costs in its incremental cost study was proper. An incremental cost study in a pipeline certificate case normally includes the specific costs directly associated with the particular service proposed, and not general, system-wide costs, except that average gas purchased costs are normally used since the system gas supply is considered available to all customers throughout the system and no particular reserves are deemed earmarked for any particular service.[2] Northern's presentation properly follows this approach. As to Coyanosa Field gas, the record indicates that its cost was included in computing the system average purchased gas costs, even though the requested authorizations permitting Northern to receive and transport this gas are still before the Commission.[3] In any event, the omission of such costs would not materially affect Northern's gas supply costs, or the result in this case.

Interveners further contend that Northern erroneously failed to include the cost of delivering gas from the fields to its mainline transmission system, excluding for example some $33,561,000 of facilities for delivering the Coyanosa Field gas to Northern's system.

However, the record shows that Northern included the small amount of gathering costs that are incremental to its new service. It properly excluded the cost of facilities such as the 365-mile, 26-inch pipeline through which gas from the Coyanosa Field would be transported with other gas to Northern's main transmission line, since such costs obviously cannot be considered incremental to Northern's present project. Interveners' proposal to assign so-called average system "gathering" costs and treat them as if they are incremental costs, is without support in principle and has previously been rejected by the Commission.

Additionally, Interveners contend that Northern's new service would pre-empt existing "cheap expansibility" on its system amounting to 8,708 compressor horsepower (the difference between 20,108 horsepower Northern needs and the 11,400 horsepower it would install), so that such capacity will no longer be available to Northern's existing customers who paid for it, but expensive new facilities will be required, resulting in increased rates for existing customers.

However, there is no valid basis for recognizing any costs associated with claimed pre-emptions of "cheap expansibility" on Northern's system. Apart from the fact that Interveners assign no dollar value to such capacity, it is fallacious to assume that only existing customers pay for such capacity so that they exclusively are entitled to its benefit. All customers on Northern's transmission system contribute to the cost of system facilities of which this capacity is part, and its fullest utilization should be encouraged so that all may also benefit from it.

---

[2] See *Trunkline Gas Supply Co.*, 8 FPC 250, 257; *Northern Natural Gas Company*, Opinion No. 404, 30 FPC 859.

[3] See *Northern Natural Gas Company*, Docket No. CP65-1, *et al.*, which includes Northern's application to construct and operate facilities to transport Coyanosa Field gas to Northern's main line.

Likewise, we are satisfied that Northern has not overstated its revenues.

Interveners attack principally Northern's estimates of revenues from its estimated third-year contract-demand sale of 31,660 Mcf to Cleveland Cliffs for use in six iron ore benefication plants located near Marquette, Michigan.[4] They contend that Northern erroneously based estimated revenues on the third-year maximum daily volume of 28,160 Mcf per day permitted by the contract (Exh. 64, pp. 7–8), instead of on the 22,000 Mcf minimum Cleveland Cliffs is obligated to purchase, and that Northern further erred in adding 3,500 Mcf per day for estimated volumes for a proposed addition to Cleveland Cliffs' Empire Mine Plant. Also, Interveners point out that Cleveland Cliffs' purchases would account for some 52 percent of Northern's annual third-year sales from the extension, and contend that such a large proportion of industrial sales[5] raises further doubts as to the project's feasibility and at least justifies imposing the protective condition summarized at the outset of this opinion.

Considering all the circumstances, we think that Northern's reliance on maximum contract-demand, third-year sales is justified. As the Examiner points out, Cleveland Cliffs' indicated savings from using gas instead of fuel oil are at least $600,000 a year, and such savings give the company a strong incentive to take the maximum volumes permitted, and indeed, probably eventually to increase the maximum, as the contract permits. Inclusion of the 3,500 Mcf for the Republic Plant addition seems justified in view of the probability that construction will be completed by 1967. Further, the record indicates that in the event Cleveland Cliffs does not purchase all its estimated volumes, other markets will. As to the large proportion of industrial sales proposed, it must be kept in mind that Northern is a seasoned utility with many years of profitable operations, and that the entire 16,892,000 Mcf of third-year sales proposed by Northern in this case constitutes less than three percent of Northern's total 1964 sales of approximately 593,600,000 Mcf. Clearly, no material adverse impact is to be anticipated in the unlikely event that Northern's estimates of industrial sales are not fully realized.

Finally, we may point out, as did the Examiner, that Northern follows an unusually aggressive policy of expansion into unserved market areas accessible to its pipeline system, and that, while such a policy involves risks, it also makes the benefits of natural-gas service widely available to the public. As we have previously indicated,[6] such a policy merits encouragement. Considering all the relevant circumstances, including Northern's experience over the years in extending service without detriment to overall system operations, we conclude that Northern's present expansion is adequately supported and should be approved. Also, we are satisfied that Interveners' requested protective condition is unnecessary and should be denied.

In light of the foregoing, no detailed discussion is needed of Interveners' remaining arguments respecting Northern's alleged overstatement of revenues.

---

[4] The distribution companies' proposed sales are fully supported by the record evidence summarized by the Examiner; indeed, their firm sales are not seriously challenged. Certain conditions requested by Interveners respecting their interruptible sales are discussed hereinafter.

[5] Interveners contend that including industrial sales by both Northern and the distribution companies, some 75 percent of third-year revenues would come from industrial sales.

[6] *Northern Natural Gas Company*, Opinion No. 404, 30 FPC 859, 866.

Interveners' contention that the Northern-Cleveland Cliffs contract contains "escape" clauses and other provisions that could reduce Northern's revenues and thereby imperil the feasibility of its project we discuss briefly hereinafter, in connection with Interveners' related argument that the said contract unduly discriminates against jurisdictional customers in favor of Cleveland Cliffs.

Contracts covering certain distribution companies' industrial sales.—Interveners contend that, considering particularly the large proportion of industrial sales involved in Northern's project, the Commission policy in the *Northern* Opinion No. 404 of requiring contracts covering industrial sales accounting for more than 15 percent of the revenues estimated for a particular branch line should be rigorously enforced. Accordingly, they argue that signed, 10-year contracts should be required for Lake Superior's sale to a municipal power plant, which constitutes 38 percent of estimated third-year annual sales on the Bessemer branchline; and for MG&E's sale to the J. C. Worden Plant, which constitutes 64 percent of estimated third-year sales on the Lake Linden-Hubbell branchline.

The general rule stated in our *Northern* Opinion No. 404, 30 FPC at 864 is that firm commitments are required where the contemplated sales appear to have a strong bearing on the feasibility of the project and where there is reason to question whether in fact the sales will be made. We there concluded that, although there was little ground to question that sales would in fact be made, sales which account for more than 15 percent of the projected branchline revenues would require support in the form of written contracts. No specific term for such contracts was established.

We agree with interveners that this rule should apply here. Accordingly, we shall condition our order upon the submission of contracts covering the sales by Lake Superior to the Municipal Power Plant, as well as the sales by MG&E to the J. C. Worden Plant.

The record in this case, including the evidence of indicated savings to the industrial customers from using natural gas instead of other fuels, provides little reason to question that the above-described sales will be made. Therefore, we find no need to specify any particular terms for these contracts.

Interveners' objections to the Northern-Cleveland Cliffs contract.—Interveners contend that the contract covering Northern's sales to Cleveland Cliffs[7] contains numerous escape clauses and other provisions that could reduce the feasibility of Northern's project, and would unduly discriminate against Northern's existing jurisdictional customers and prefer Cleveland Cliffs. We conclude that these objections of Interveners likewise do not justify denying or conditioning Northern's requested certificate.

As to feasibility, certain of the alleged escape clauses, such as the provisions permitting cancellation if authorization in satisfactory form is not received by a certain date (Exh. 64, pp. 13–14, 19), are not escape clauses in the usual sense of permitting cancellation of the contract. Upon receipt of timely and satisfactory authorizations, Cleveland Cliffs is bound to use natural gas for at least ten years and cannot cancel the contract. As noted above, the circumstances in this case make it appropriate to rely on Cleveland Cliffs' maximum contract-demand third-year sales in evaluating the economic feasibility of the project. Thus, the annual minimum bill requirements reflecting a 65 percent load factor do not adversely affect its economic feasibility, and they are otherwise appropriate for the reasons discussed in detail in our recent Opinion No. 453, issued March 9, 1965, in *Northern Natural Gas Company*, Docket No. CP64-228 33 FPC 501. Other provisions of the contract, which, for example, permit Cleveland Cliffs' minimum annual bill to be calculated on an even lower load factor in the event of a strike or other force majeure situation, provide a measure of flexibility appropriate to Cleveland Cliffs' needs and are acceptable in the particular circumstances of this case. In so holding, we note that these findings will not foreclose Northern's jurisdictional customers from raising the Interveners' objections in any future rate case, should fears such as those voiced by Interveners materialize.

---

[7] Northern's service would actually be rendered to six different purchasers which own or have an interest in the six plants, but Cleveland Cliffs is the operator of each plant and all the gas is to be sold pursuant to the terms of a single contract, which is Exh. 64 in the record.

Inquiry into possible alternatives to Northern's project.—Interveners renew their petition filed with the Commission on March 4, 1965, by which they requested that we reverse the action of the Commission's Secretary on February 19, 1965, rejecting their appeal from certain rulings by the Examiner at the hearing. Interveners contend that the Examiner erred in not requiring Northern or the Commission staff to explore on the record alternatives that would possibly be more economic and less burdensome than Northern's present project, arguing that he thereby denied the Commission and the Courts the benefits of a full record for deciding this case. In the alternative, they argued that the instant case should be consolidated with an application recently filed by Great Lakes Gas Transmission Company (Great Lakes) in Docket No. CP65-171, *et al.*, proposing a new pipeline transporting gas from the Western Canada gas fields to Eastern Canadian consumers, and passing through the area Northern proposes to serve.

Having considered Interveners' petition, we concur with the Examiner and the Secretary that, under the rules, no grounds for intermediary appeal to this Commission was presented. Considering the merits of the petition, we conclude that further evidence of possible alternatives from Northern's project is not needed for deciding this case.

We, of course, recognize our obligation to consider available alternatives in determining whether a certificate should be granted. The difficulty we have with this motion is that it is predicated on the assumption that the Great Lakes' project will be constructed as proposed in the application as filed, and within the time limits required by the market circumstances of this record. Further, inherent in the petition is the underlying assumption that the Northern Wisconsin-Upper Peninsula market is unable to support Northern's project. These are assumptions we cannot make.

As to possible alternatives involving facilities owned and operated exclusively by Northern, the record makes clear that Northern's present project reflects a very extensive consideration of all reasonable alternatives, and that the selection of the particular project before us is fully justified by the record. The project is reasonable in location and design and is well adapted to serve the existing and prospective consumers in Northern Wisconsin and the Upper Peninsula on an economic and otherwise satisfactory basis.

As to consolidating the application of Great Lakes with this case, or considering an alternative plan whereby Northern might utilize some of Great Lakes' proposed facilities in bringing gas to its proposed markets, we think that such action is neither required by law nor in the public interest. Consolidation is not required by law since the projects of Northern and Great Lakes are not mutually exclusive under *Ashbacker Radio Corporation* v. *F.C.C.*, 326 U.S. 327, because Great Lakes does not propose any service competitive with that of Northern. Thus, the only reason why we would be required to consolidate the instant application with that of the Great Lakes' application would be if such action were necessary to permit the Commission to consider whether the public interest in bringing service to this new area would better be served through utilization of some of the proposed Great Lakes facilities in lieu of some of those proposed by Northern. We do not so find.

First we take notice of the fact that, at the time Interveners' motion was filed, there were 12 motions to intervene in the Great Lakes proceeding. Thus at the time the Examiner was required to rule on the motion now before us, the outcome of that proceeding, including the probable "in service" date of any project which might be authorized, as well as its nature, was highly uncertain. Moreover, since the close of the record in this proceeding, the Great Lakes project has become subject to even greater uncertainty by virtue of the submission for filing of competitive applications by Midwestern Gas Transmission Company and Michigan Wisconsin Pipe Line Company. Thus it is virtually certain that in no event could final action be taken on the Northern proposal, were such action to be tied to the possibility of utilizing some of the Great Lakes' facilities, in time to be capable of being "in service" by March 1, 1966, the terminal date of obligation to take service from Northern-Cleveland Cliffs. As Interveners recognize, the economic feasibility of the Northern project proposing service to the consumers of the Upper Peninsula, is dependent upon the sale of gas to Cleveland Cliffs. Thus grant of the intervener motion at the very best, involves a risk that the entire project would fail, irrespective of its other merits.

Despite this real risk we might, nevertheless, feel justified in giving further attention to the proposed Great Lakes alternative if we believed that the market potential for the Northern proposal was both marginal and static. However, we are of the opinion that a sound market awaits the Northern project. It is our anticipation, based on persuasive evidence of record, that the gas needs of Northern Wisconsin-Upper Peninsula area will continue to grow once a gas supply is available. At best the so-called Great Lakes alternative as presented can only provide a limited amount of capacity available for serving Northern Wisconsin-Upper Peninsula customers, since the present and future needs of Canadian users of gas will obviously have to be its paramount concern. In contrast, the Northern project will provide ample surplus capacity to meet the reasonably foreseeable needs of this market area. Thus, even assuming Great Lakes, ability and willingness to provide service in this area, or that we could require it to do so, any temporary price advantage resulting from such an arrangement would be offset in large part by the cheap expansibility available in the Northern project. We conclude that it would not be in the public interest to consolidate this proceeding with the Great Lakes' application or otherwise delay its authorization to consider it in connection with the Great Lakes proposal because it would unnecessarily jeopardize a viable project to provide a much needed gas service and because the alternate proposal would at best be a temporary palliative not satisfying the long-term needs of the area.

Alleged unnecessary and unsupported findings of Examiner; Commission action in shortening time for exceptions.—Interveners in their exceptions complain that the Examiner at the hearing and in his decision advanced various observations and views that are unnecessary to decision, are unsupported by the record, and do not furnish the required factual basis for concluding that Northern's project meets the requirements of public convenience and necessity. Most of the criticized statements fall into two categories, as appears on their face. First, some of the Examiner's statements represent his judgment respecting factors and evidence pertinent to decision and are wholly proper. Second, certain statements reflect broad opinions on matters not particularly pertinent to decision but are not harmful because the decision can stand without them. However, the Examiner's statement that (*infra*, p. 1182), "Great Lakes apparently hopes to pick up substantial markets in the United States, otherwise its proposed pipeline would apparently not be economically feasible" goes beyond the permissible limits of judgment or opinion in view of the issues and record in this case, and therefore this statement should be deleted.

Finally, Interveners object to our shortening the time for filing exceptions from 30 days to 10 days, contending that this action prevented adequately briefing their position, denied them a fair hearing, and deprived them of due process.

We are concerned that all parties be afforded adequate opportunity to defend their interests and generally if we change the time permitted by our regulations, it is to extend it. However, in the circumstances of this case, we feel that the opposite course is justified, since it may enable service this coming heating season. We feel that Interveners were not unduly hampered by this action, since they had previously briefed and orally argued the major issues before the Examiner.

Interveners alternative relief.—By way of an alternative relief to the granting of its exceptions, Interveners propose that the Commission attach the following condition to its certificate for these facilities:

> In any future rate proceeding involving Northern, any deficiency in revenues resulting from or occasioned by the construction or operation of the facilities herein authorized shall not be taken into account in computing the cost of service for Northern's jurisdictional facilities certificated prior to this order and shall not be used as support for increased rates to Northern's jurisdictional customers receiving service prior to this order.

The propriety or necessity for such treatment is, of course, a matter which the Interveners are free to raise in any future rate proceeding. On the present record, its fundamental assumption, that Northern's project is of questionable or marginal economic feasibility contravenes our findings here. Accordingly, the condition will be denied.

The Commission further finds:

(1) Northern is a Delaware corporation having its principal place of business in Omaha, Nebraska, and is a "natural-gas company" within the meaning of the Natural Gas Act as the Commission has heretofore found.

(2) The facilities hereinabove described, as more fully described in Northern's application and the record in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Northern is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the facilities and the transportation, sale and delivery of natural gas proposed by Northern are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Northern Natural Gas Company to construct and operate the proposed facilities and to sell and deliver natural gas as hereinabove described, and as more fully described in Northern's application and the record in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are subject to the following terms and conditions:

(i) Northern shall comply with all applicable provisions of the Commission's Regulations under the Natural Gas Act and specifically with paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations. The time within which Northern's facilities shall be completed and in actual operation in conformity with Section 157.20(b) shall be 12 months from the date of issuance of this Opinion.

(ii) Northern's certificate shall not become effective, insofar as it authorizes Northern to construct the branch lines for sales by Lake Superior to the Lakehead Pipeline Company and to the municipal power plant at Bessemer, and for the sale by MG&E to the J. C. Worden Plant on the Lake Linden-Hubbell branch line, until Northern submits contracts covering the said sales of natural gas.

(C) This certificate shall not entitle the industrial customers to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(D) Northern shall file a request for an amendment to its certificate to authorize the lower contract demand for Cleveland Cliffs, in the event such contract demand is lower than the maximum volumes herein authorized.

(E) Northern shall, on or before July 31, 1967, file a request for an amendment to its certificate to reduce its total firm sales capacity allocated by Cleveland Cliffs by 3,500 Mcf per day if the "First Addition to the Empire Plant" is not in operation and using natural gas by July 1, 1967.

(F) Within 30 days after being notified in the manner contemplated by Article II, section 3 of the contract between Northern and the Cleveland Cliffs, Northern shall notify the Commission in writing of Cleveland Cliffs' decision to construct the "First Addition to the Empire Plant."

(G) Except as granted hereinabove, the application of Northern filed in Docket No. CP64-255 (Phase II) is hereby dismissed.

(H) The initial decision of the Presiding Examiner issued herein on April 12, 1965, is, to the extent consistent with this Opinion, hereby adopted by the Commission as of the date of issuance of this Opinion, to constitute with this Opinion the Commission's decision in this proceeding.

(I) Except to the extent herein granted, the exceptions filed to the Presiding Examiner's decision, and the appeal from the Examiner's rulings at the hearing are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 12, 1965)

HALL, *Presiding Examiner:*

Involved here is that portion of the application filed by Northern Natural Gas Company (Northern), pursuant to Section 7 of the Natural Gas Act (Act), to extend its pipeline from a point near Duluth, Minnesota across northern Wisconsin and into the northern portion of the Upper Peninsula of Michigan. The new facilities will enable Northern to sell natural gas to three distributors and six iron ore plants operated by the Cleveland Cliffs Iron Company (Cleveland Cliffs).

The Michigan Public Service Commission, Public Service Commission of Wisconsin and the Staff of the Federal Power Commission urge that the certificate of public convenience and necessity requested by Northern be granted.

Northern's application filed April 28, 1964, as supplemented, involved a two-phase construction program. Phase I, to provide natural gas service in the Mesabi Iron Range area of Minnesota, was certificated by order of the Commission issued December 21, 1964, 32 FPC 1491. Phase II, as revised during the hearing to limit Northern's proposed service to areas not competitive with the joint proposal of Michigan Consolidated Gas Company (Michigan Consolidated) and Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) in Docket Nos. CP65–38 and CP65–39, is the subject of this decision.

Phase II, as originally proposed by Northern,[1] was partially competitive with the Michigan Consolidated-Michigan Wisconsin proposal, it being proposed by Northern to serve the competitive area through the construction of what is referred to herein as the Escanaba lateral. Thus there was need for the comparative hearing ordered by the Commission on November 9, 1964.

Near the close of the expedited hearing[2] and in response to a suggestion made by the Examiner, Northern withdrew from the competitive area, stating its willingness to accept a certificate covering the requisite facilities and service in the noncompetitive area of the Upper Peninsula of Michigan as an alternative to its total Phase II project. It took this action after giving consideration to the need of the entire Upper Peninsula and northern Wisconsin for immediate gas service. Northern's proposed distributor in the competitive area, Michigan Gas and Electric Company, concurred in Northern's alternative proposal. Accordingly, the issues now to be decided are narrowed to certificate issues.

The facilities comprising Northern's presently proposed project consist of:[3]

55.1 miles of 30-inch mainline looping of existing mainline transmission system in Kansas and Nebraska;

11,400 additional horsepower compression at existing compressor stations at Mullinville, Kansas and Farmington, Minnesota;

Branchlines extending from Northern's mainline near Duluth, Minnesota, easterly across northern Wisconsin and into the Upper Peninsula:

53.8 miles of 20-inch branchline; 166.9 miles of 16-inch branchline; 109.2 miles of varying, smaller sized branchlines; 25 measuring stations.

---

[1] Phase II originally contemplated that Northern would (1) construct 86.5 miles of 30-inch mainline looping of its existing transmission system; (2) add 15,400 compressor horsepower; (3) extend its mainline 270 miles from a point near Duluth, Minnesota east across Wisconsin and into the Upper Peninsula, one branch terminating at Marquette, Michigan and the other (the Escanaba lateral) at Escanaba and Gladstone, Michigan; and (4) construct some 224 miles of branchlines and 36 measuring facilities of varying sizes. The total estimated cost of that project was $35,715,000 as compared with the $24,137,800 that Northern's present project is estimated to cost with the elimination of the Escanaba lateral and other adjustments.

With its originally proposed Phase II project Northern intended to sell third year contract demand volumes of 66,540 Mcf to three distributors and to Cleveland Cliffs and Hanna Mining Company for the benefication of low grade ores, although at the time it filed its application Northern did not have a contract with either company and was never able to obtain one with Hanna Mining Company. Hanna has agreed to purchase its natural gas requirements from Michigan Consolidated under a five-year commitment.

[2] The hearing covered fourteen days, concluding on February 18, 1965. Numerous interested parties, including a number of existing customers of Northern, intervened in the consolidated proceeding.

[3] Construction of the proposed facilities will provide Northern with a system salable contract demand capacity of 2,066,605 Mcf per day, including 49,741 Mcf per day of contract demand estimated to be required for the additional service here proposed. The adequacy of Northern's gas supply is undisputed.

These new facilities will enable Northern to sell natural gas to (1) three distributor customers, namely, Michigan Gas and Electric Company (for distribution in Marquette, Ishpeming, Negaunee, Houghton, Hancock, Ripley and L'Anse, Michigan), Peninsular Gas Company (for distribution in Calumet, Laurim, Lake Linden, Hubbell and Dollar Bay, Michigan), and Lake Superior District Power Company (for distribution in the Cities of Ashland, Hurley and Montreal, and the Towns of Iron River, Saxon and Kimball in Wisconsin; the Cities of Ironwood, Bessemer and Wakefield, and the Townships of Ironwood and Bessemer in Michigan), and (2) Cleveland Cliffs for use in six iron ore benefication plants operated by it and located near Marquette, Michigan.

The estimated third-year contract demand volume is 49,741 Mcf per day of which 31,660 Mcf per day is intended for Cleveland Cliffs and 18,081 Mcf for the three distributor customers.

Northern proposes to make direct firm sales of natural gas to the iron ore benefication plants operated by Cleveland Cliffs in the amount of 31,660 Mcf per day in the third year of operation of its proposed facilities pursuant to the provisions of a ten-year firm contract which contains no escape clause after service is commenced. Annual sales under this contract in the third year of service are estimated to be 8,874,000 Mcf. The peak day and annual requirements of natural gas of the plants operated by Cleveland Cliffs[4] are supported by reasonable and proper studies of its fuel requirements, it being shown in this connection that the use of natural gas for pelletizing instead of fuel oil will save Cleveland Cliffs at least $600,000 per year and that the cost of converting to natural gas is feasible and reasonable.[5]

While Northern's principal market is Cleveland Cliffs, its other markets are covered by service agreements with three distributors with third year contract demand volumes aggregating 18,081 Mcf:

Distributor	*Third Year Contract Demand (Mcf)*
Lake Superior District Power Company	7,079
Peninsula Gas Company	2,176
Michigan Gas and Electric Company	8,826

These distributor customers have fully supported their ability to finance, the propriety of their engineering designs and the economic feasibility of their respective distribution operations. The history of each distributor and a description of each of their proposed projects will be considered.

Proposals of Northern's Distributors

A. *Michigan Gas and Electric Company.*

Michigan Gas and Electric Company is a long-established electric and gas utility operating distribution properties in both the Lower[6] and Upper Peninsula of Michigan, its net plant, at original cost, being $16,964,054 as of September 30, 1964.

---

[4] Northern proposes service to six different purchasers which either own or have an interest in six separate iron ore processing plants. Since Cleveland Cliffs is the operator of each plant and, because all of the gas is to be sold pursuant to the terms of a single contract, the sales to be made by Northern to these plants are, as a matter of convenience, referred to herein as sales to Cleveland Cliffs.

[5] In their brief, counsel for Northern state that "The significant provisions of [the Cleveland Cliffs] contract are substantially the same as the provisions of the contracts between Northern and Erie Mining Company and Eveleth Taconite Company which were the basis of the Northern project in the Mesabi Iron Range of Minnesota certificated by the Commission in Phase I on December 21, 1964."

[6] In the southwestern portion of the Lower Peninsula of Michigan, Michigan Gas and Electric Company owns and operates local distribution systems from which it provides electric service in a four-county area and natural gas service in fourteen communities, of which the principal ones are Niles, Buchanan, Holland, Zeeland, Dowagiac and Three Rivers.

In the Upper Peninsula area the company has for many years been providing propane-air gas service in Marquette, Ishpeming and Negaunee. In addition to serving these three communities with natural gas it also proposes to distribute natural gas in L'Anse, Hancock, Ripley and Houghton. The estimated third-year investment in new distribution facilities in these seven communities is $2,933,833, and the estimated firm requirements for the third and fourth heating seasons (third full year) are 8,826 Mcf and 11,533 Mcf, respectively. The estimated third-year annual requirements are 3,810,160 Mcf. No challenge has been made to these estimates.

The rate of return estimated for Michigan Gas and Electric Company's project in the third year is about 7.45 percent.

Michigan Gas and Electric Company's present investment at original cost in existing facilities in the Marquette-Negaunee-Ishpeming area is $792,194. Its modern propane-air plant, located in Marquette was designed to enable its use for peak shaving purposes when natural gas becomes available.

At the end of September 1964, the company had 1449 customers using propane-air gas service in the Upper Peninsula. These operations are, however, being conducted at an unavoidable loss because the cost of making propane-air gas precludes any substantial customer additions, and an increase in rates would only produce a loss of customers and larger operating deficits.

The record makes it clear that natural gas service will eliminate the operating deficits which Michigan Gas and Electric Company has incurred to maintain some gas service in the Upper Peninsula, will provide opportunity for a reasonable return to investors, and will provide substantial monetary savings and other benefits to the areas. The spreads between the cost of other fuels and natural gas should permit the estimated sales to be made.

There is every reason to also conclude that the anticipated sales of natural gas by Michigan Gas and Electric Company to interruptible customers will materialize, although the consummation of the company's project is not dependent upon the attachment of such customers and no one of the sales represents 15 percent or more of the branch line revenues. In these circumstances, authorization to Northern to sell natural gas to Michigan Gas and Electric Company does not require a condition that the latter submit contracts covering the proposed sales to interruptible industrial customers. *Northern Natural Gas Company*, 30 FPC 859, 864–865.

B. Lake Superior District Power Company.

Lake Superior District Power Company is an operating public utility supplying electric energy in two counties in the Upper Peninsula of Michigan and eleven counties in northern Wisconsin. Its net utility plant exceeds $25,000,000.

The company's principal office is located in Ashland, Wisconsin. It has a complete operating organization throughout the territory proposed to be served with natural gas, consisting of eleven communities[7] in which distribution facilities estimated to cost $2,884,891 will be constructed. The estimated peak day and annual requirements for the eleven communities are:

---

[7] Lake Superior District Power Company proposes to provide natural gas service in the Cities of Ashland, Hurley, and Montreal, Wisconsin, the Town of Iron River in Bayfield County, Wisconsin, and the Towns of Saxon and Kimball in Iron County, Wisconsin; the Cities of Ironwood, Bessemer, and Wakefield in Michigan, and the Townships of Ironwood and Bessemer in Gogebic County, Michigan.

Peak day (contract demand)				Annual requirements		
1st year	2d year	3d year	4th year	1st year	2d year	3d year
4,226	6,119	7,079	7,634	2,607,273	3,105,900	3,453,064

The peak day and annual requirements appear to be reasonable and attainable. They are based upon an analysis of climatological data for the areas involved and analysis of present fuel use of a representative sample of customers.

The company's market analysis indicates that it will make the following rates of return on its projected gas utility property: first year, 5.6 percent; second year, 7.2 percent; third year, 7.9 percent.

A substantial portion of the estimated volume of annual sales is attributable to four large interruptible customers proposed to be served, namely, Bay Front electric generating station (owned and operated by Lake Superior District Power Company), Marathon Corporation (which operates a papermill in Ashland), Lakehead Pipe Line Company,[8] and the municipal power plant at Bessemer. While none of these interruptible loads are required to make Lake Superior's project feasible, each will achieve substantial savings by converting, to the extent anticipated, to the use of natural gas. In fact, so great are the savings to be realized that it clearly appears that the four industrials cannot afford not to convert to natural gas on an interruptible basis.[9] Moreover, the use of valley gas in the Bay Front electric generating station should redound to the benefit of the company's electric customers for the savings involved in the use of natural gas are to be passed on to such customers under rate schedules containing provisions for automatic adjustment of retail rates.

In connection with the proposed lateral to serve the Lakehead Pipe Line Company, Staff counsel point out that Northern proposes to expend $16,695 to construct this lateral to be used solely in making deliveries to Lakehead. Since the economic feasibility of this lateral is totally dependent upon the sale to Lakehead, the certificate issued herein will require that, insofar as it authorizes Northern to construct and operate the Lakehead lateral, it shall not become effective until such time as Northern submits a signed contract covering the sales of natural gas which Lake Superior District Power Company proposes to make to the Lakehead.

C. *Peninsular Gas Company.*

Peninsular Gas Company owns and operates an integrated propane-air gas distribution system which serves at retail the Michigan communities Calumet, Laurium, Lake Linden, a portion of Hubbell, and in most of the areas adjacent thereto.[10] It now proposes to convert its propane-air gas service in these communities (including the whole of Hubbell) to natural gas and to also initiate natural gas service in Dollar Bay, Michigan, in which it will construct and operate a new natural gas distribution system. It is estimated that the company's third-year distribution plant cost will amount to $402,553.

---

[8] It is contemplated that Lakehead Pipe Line Company will use gas in one of its pumping stations for pumping its oil across northern Wisconsin and through the Upper Peninsula of Michigan.

[9] The savings in the Bay Front station (in which the company will convert the largest of its five boilers to burn either natural gas or coal) will be $42,000 a year based on present fuel costs; the annual savings to the Marathon Corporation will amount to $10,214 a year plus $10,000 a year saving in coal and ash handling maintenance; the annual savings to Lakehead Pipe Line Company will be $6,736 plus substantial savings in maintenance expense; and the annual savings to the Bessemer municipal power plant will be $20,289. But as has been indicated, if any part, or all of the interruptible loads fail to materialize, Lake Superior would still have an economically feasible gas operation.

[10] Peninsular Gas Company and its predecessors have supplied various types of gas service continuously since 1907 in Calumet, Laurium, Linden, and Hubbell. It is now serving 688 residential general, 158 house heating, and 67 commercial customers. The economy of the area served is primarily centered around the copper mining industry. However, in recent years the area has become popular as a tourist attraction because of its great scenic beauty.

Peninsular Gas Company's estimated third-year peak day and annual requirements are 2,176 Mcf and 754,528 Mcf, respectively. These estimates were based on recent market surveys of each of the communities to be served, including consideration of climatological statistics, the present and past experience of the company, competitive fuel costs, etc., and appear reasonable. The record shows the company's project to be economically and financially feasible. Its rates will be regulated by the Michigan Public Service Commission.

In addition to firm residential, commercial and industrial service, one industrial customer, namely, the Calumet and Hecla power plant located in Lake Linden, is proposed to be served on an interruptible basis, such sale constituting 56 percent of total third-year annual sales and 25 percent of the total revenues.

The Calumet and Hecla power plant does not distribute or sell power, but generates electric energy solely for use in the Calumet and Hecla copper mining operations. The plant currently consumes about 64,000 tons of powdered coal annually, of which Peninsular Gas Company is proposing to displace about 16,000 tons at this plant with the equivalent of 427,350 Mcf of gas in the third year.

It is expected that the bulk of the interruptible gas for the Calumet and Hecla plant will be available in the summer season, but it is assumed that the company will be able, at least to some extent, to deliver gas to the power plant on most days except during peak periods. It seems clear that, in view of the substantial savings (3½ cents per million Btu) which it is estimated will accrue to the owners of the Calumet and Hecla plant, this sale will materialize.

Economic Feasibility of Northern's Proposal

According to Northern's computations, in the third year of service, the incremental revenues attributable to its proposed project will exceed the incremental cost of service (inclusive of a 6.25 percent rate of return) by $115,990. In this connection, Northern's policy witness testified that he was certain that construction of the project would not "in and of itself cause any rate increase on Northern's system" (Tr. 2053, 2058).

In their joint brief, eight of Northern's existing customers allege that Northern's claim that its present project will produce excess revenues of $115,990 understates third year incremental costs and overstates third-year incremental revenues; that Northern's feasibility test by using the zone differential charged to build branchlines results in a preference to the proposed Upper Peninsula customers and discrimination against Northern's existing customers; and that the terms and conditions of Northern's sales to Cleveland Cliffs are unduly discriminatory and preferential.

Northern's proposed sale to Cleveland Cliffs is hereinafter further considered. The other complaints advanced by Northern's existing customers seem to be no more than an attempt to re-argue matters which they have unsuccessfully pressed on the Commission in prior proceedings. As far as the Examiner is able to determine, the economic feasibility of Northern's present proposal has been tested on a basis which the Commission has many times found to be reasonable and appropriate. That feasibility test uses a rolled-in average cost of gas and an incremental cost attributable to the new, additional proposed facilities.

Northern's project, from the standpoint of branchline feasibility, complies with the principles formulated and approved by the Commission in *Northern Natural Gas Company*, 30 FPC 859, 865–866. The branchlines are clearly feasible without contributions in aid of construction from the proposed distributors.

Northern proposes to provide service to customers located in its existing Rate Zone C pursuant to the rates, terms and conditions of Northern's presently effective CD and R rate schedules on file with the Commission. As to the customers located beyond the geographical limits of Zone C, Northern proposes to establish a new rate Zone D. The proposed rate for Zone D represents a 2-cent differential from Zone C at a 70 percent load factor. One and one-half cents is applied to the demand charge and one-half cent is applied to the commodity charge. The new rates were determined by applying to Rate Zone C the same rate and mileage price differential factors set forth by the Commission in *Northern Natural Gas Company*, 14 FPC 11.

Counsel for the intervener-customers of Northern, in their joint brief and at the oral argument, also made reference to the Commission's decision issued July 31, 1959, 22 FPC 164,[11] which was sustained on review, *Minneapolis Gas Co.* v. *Federal Power Commission*, 278 F. 2d 870, cert. den. 364 U.S. 891. In that case the Commission granted Northern's applications for certificates of public convenience and necessity for the construction and operation of facilities to serve 342 communities, an exceptionally large number, upon the condition that 124 of the communities either make stated capital contributions or be eliminated. In that case Northern presented evidence which showed that with estimated revenues, based on the rates it was then collecting from present customers, and the added costs of providing the new services, the expanded system as a whole would earn during the third year in excess of the 6½ percent rate of return which the rates were intended to produce. Exhibits introduced by the Commission staff witnesses supported Northern's showing of an estimated system-wide rate of return of 6½ percent. In addition, Northern introduced evidence that the incremental rate of return on the new facilities, without reference to Northern's system-wide operations, would be somewhat short of 6½ percent, but would still represent a substantial return on its investment.

The Court of Appeals affirmed the Commission's order, holding, *inter alia*, that the various parts of a public utility system need not and cannot be equally profitable; that the record supported the Commission's finding of economic feasibility and its conclusion that the new service was required by the public convenience and necessity; and that the Commission properly weighed the interests that would be served against those that would be injured and did not strike an arbitrary balance.

Ignoring the instances in which Northern's estimates were lower than later actually experienced, and the further fact that year in and year out Northern's revenues, sales, earnings and number of customers have continued to increase, the intervener customers of Northern complain that some of the third year estimates in the prior proceeding have not materialized. But at the oral argument there was no challenge to the statement of counsel for Northern that the reductions complained of "were actually offset against other increases on the system" (Tr. 2266). At the outset of the oral argument the Examiner had observed (Tr. 2212–2213):

---

[11] The Commission's opinion reported at 22 FPC 164, considered, *inter alia*, Northern's applications filed in Docket Nos. G–17485 and G–18486. In Docket No. G–17485, Northern sought authorization to extend its existing natural gas pipeline system beyond Minneapolis, Minnesota, by constructing and operating 170 miles of pipeline to Duluth, Minnesota, and Superior, Wisconsin, in order to make available for the first time natural gas service to those cities and to 37 other communities located along the route of the proposed extension. In Docket No. G–17486, Northern sought authorization to construct and operate facilities to provide initial natural gas service to 303 communities in Nebraska, South Dakota, Illinois, Iowa, Wisconsin and Minnesota. The original estimated construction cost was approximately $115,000,000.

> The regard of Northern's customers for Northern's activities may rise or fall as events please or displease them. But this is not the measure of Northern. The measure is the success or failure of its policies. Northern must have stayed within safe bounds up to now for each year it reaches new heights in revenues, sales, earnings and number of customers served. The Examiner would be greatly surprised if its intervener-customers do not have a similar record.
>
> Northern can never be stronger than the market it serves. For this reason it must, and it is reasonable to expect that it will, continue to protect its markets be they new or old. If its past policies have made it strong, perhaps they can be depended upon to continue to guarantee its strength. Normally if a company does not continue to move forward it goes back and fails in its mission.

Northern knows itself best and is none the worse for its constant vigor. It makes its decisions on a project by project basis, and it is not astounding that some of its hundreds of estimates have not fully materialized. But the fact that Northern's underestimates have, over the years, more than offset its overestimates affords reason for confidence that its policies and methods have been, and will continue to be, soundly directed. It uses its experiences in proven expansion as springboards to greater efforts. In so doing it recognizes that risk and uncertainty have always been the ordinary incidents of business.

If there be those who begrudge an occasional failure of a community to initially measure up to expectations insofar as the use of gas is concerned, those living in such communities and enjoying improved living and economic conditions are not among them. The lights of their future are now much brighter.

It would seem to the Examiner that the ever widening service areas of pipelines and distributors are not the factors which should cause the greatest concern of those in the industry. Rather it is the possibility that some might be misled by the success of the industry to think that increasing producer prices can continue indefinitely without imperiling that success.

It is becoming more and more the duty of this Commission and all levels of government to give greater heed to the needs of the needy than to the complaints of the comfortable.[12] The public is grateful when its needs are properly met. One of its needs is natural gas. Natural gas should be kept up front and selling. The manner in which it can best be kept up front and selling is a controversial subject, but anything worthwhile usually is.

Financing

Northern's ability to finance its presently proposed project is conceded. It proposes to finance construction through the sale of sinking fund debentures and from internal sources such as reserve accruals, retained earnings and cash on hand.

Northern's Proposed Sale to Cleveland Cliffs

As has peen pointed out (*supra*, pp. 1173—1174), Northern has entered into a ten-year contract with Cleveland Cliffs calling for the delivery of up to 31,660 Mcf of firm gas per day in the third year of service assuming construction of the "First Addition" to the Empire plant which now appears certain (Tr. 1615). Exclusive of the first addition to that plant, the daily contract demand would range between 22,000 and 28,160 Mcf. Under the terms of the contract, (1) Cleveland Cliffs is permitted to gain at least six months of operating experience before it is required to nominate the precise volume for each plant, and (2) there is a 65 percent minimum bill with allowance for down time on strikes. Considering the operating and other problems of Cleveland Cliffs, the contract provisions appear to constitute a reasonable arrangement and to be of the type which is acceptable to the Commission (see *supra*, p. 1174, n. 5).

---

[12] The government can build roads into areas, retrain workers, and do other things, but there are instances in which it cannot force a public utility to render the service that might make the government contribution much more worthwhile. Where there are public utilities willing and able to make the government's efforts more worthwhile, perhaps all possible and reasonable regulatory action should be taken to remove roadblocks from their path.

Although the contract permits Cleveland Cliffs a limited degree of flexibility in establishing the precise volume of contract demand (Exhibit 64, p. 4), Northern's estimates of the annual volumes that will be consumed by Cleveland Cliffs will be unaffected by the modification of the contract demand volumes. In any event, Northern appears to have taken the necessary precautions and is prepared to deal with whatever may develop. It has alternative uses for gas not utilized by Cleveland Cliffs, and some of the estimates of its three proposed distributor-customers in northern Wisconsin and the Upper Peninsula appear to be on the conservative side. Moreover, the prospect for growth in sales in the Upper Peninsula is attractive (Tr. 2050).

The evidence amply supports the estimates of natural gas to be consumed by the plants operated by Cleveland Cliffs, both on a peak day and on an annual basis. The use of natural gas instead of fuel oil in those plants[13] for iron ore processing is estimated to save Cleveland Cliffs approximately $600,000 per year, a saving of great importance because "It is essential that [the] benefication operations be conducted at the lowest possible cost to meet * * * foreign competition" (Tr. 281). As a witness for Cleveland Cliffs further testified:

> * * * The development of the benefication of low grade iron ore was essential to the economic survival of the iron ore industry of the area and was also necessary if Cleveland Cliffs were to continue its operations in that area. Since 1954 the use of domestic direct shipping ores has been steadily declining. The country is fast running out of high quality direct shipping ores. The development of low grade iron ore benefication processes have resulted in the greater utilization of domestic natural resources which otherwise have dwindled in use because of foreign competition. * * * (Tr. 281).
>
> * * * * * * *
>
> Q. Would you explain why Cleveland Cliffs has contracted to purchase natural gas from Northern?
>
> A. Our costs of producing an end product are constantly going up. The use of natural gas which will be purchased from Northern will provide us with a lower cost of fuel which will materially assist us in keeping our costs at a lower level than they otherwise might be. As * * * testified, the annual savings will amount to approximately $600,000. (Tr. 828.)

In connection with the risks that Northern's intervener-customers assert that Northern is taking in regard to its present proposal, it is to be borne in mind that the hazards of this or any other single undertaking does not measure the risk of Northern. Rather such risks, which are simply the natural results of all business freely carried on and against which the law is powerless to afford protection, are properly evaluated only in relation to the results of Northern's total operations. This is the same basis, for example, on which insurance companies and producers of natural gas successfully carry on their businesses. So far as producers are concerned, it is repeatedly pointed out to the Commission that on the average only one wildcat well in nine is successful. The producers, however, live and prosper with this success ratio. So far as Northern is concerned, it is on the basis of past experience and system-wide operations that it continues to emerge as a stronger and stronger company. The Examiner knows of nothing upon which to base a reliable assumption that the onrush of its efforts will outrun its wisdom. Thus is posed the question: Why should a company and its wholesale customers which continue to gain strength on the basis of proven methods change their ways of doing business? In this connection, there comes to mind the old adage oftquoted under similar conditions—"Today is the tomorrow that you worried about yesterday, and it never happened."

---

[13] The six plants operated by Cleveland Cliffs are designed to process low grade iron ore into an acceptable blast furnace feed. The plants and related operations represent an investment of over $150,000,000 and provide employment for some 2500 people. They are capable of producing approximately eight million tons of pellets annually.

The fact is that the profitability of Northern's aggregate operations have been about as rewarding as could possibly have been hoped for. All companies, whether regulated or not, assume "the risk of loss in the hope of proft", *Puget Sound P. & L. Co.* v. *Federal Power Commission*, 137 F. 2d 701, 702, and no regulatory Commission should ever attempt to take the "loss" out of the profit and loss system. The principle has long been established,[14] and has been reasserted in specific reference to the Act, *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 590. No one can ignore present evidence of progress or seek assurance against the unforeseen, forgetting that risk and uncertainty have always been the ordinary incidents of business. While ordinary business risks may be discouraging to some, Northern sees the plight of the unserved as a challenge and opportunity. It seems committed to service for the benefit of all within economical reach of its pipeline system. This is as it should be, for tomorrow ought not to be defrauded by lack of effort today.

Northern's Proposal Required by Public Convenience and Necessity

The record demonstrates that the natural gas service proposed by Northern in northern Wisconsin and the noncompetitive area of the Upper Peninsula of Michigan is required by public convenience and necessity. The areas to be served are in need of such service which will provide them with new hope and opportunity for a higher level of economic development.

In addition to the many benefits natural gas will bring to the residents of those areas and the attraction natural gas will be to new industry, the development of the economy in those areas will be fostered through the use of natural gas in the copper and iron ore mining and processing industry. While the reserves of high grade ore in the areas have been diminishing at a great rate, there remains tremendous reserves of low grade iron ore. The processing of such low grade iron ore to permit its sale in competition with higher grade iron ore imports and improved domestic taconite ores is greatly facilitated by the use of natural gas.

As one witness testified, "the urgent requirement of the Upper Peninsula is the maximum quantity of gas available for industrial use at the lowest possible price consistent with equitable and beneficial rates for residential and commercial consumers" (Tr. 2065). Another pointed out that "the citizens residing and working in the Upper Peninsula of Michigan feel they have been neglected too long a time, and want in every way possible to improve their economy" (Tr. 215).

Motion Made by Intervener-Customers of Northern

During the hearing, and after extended argument and consideration (Tr. 1044–1122; see also Tr. 2073–2078), the Examiner denied a motion made on behalf of eight intervener-customers of Northern that Northern and the Commission Staff be directed to investigate and submit evidence on supposed alternatives to Northern's initially proposed project—the economic feasibility of which has now been enhanced in that construction of Northern's initially proposed 16-inch lateral to Escanaba has been avoided at savings in construction costs of more than $11,000,000—upon the chance that such evidence might show a better project, or, in the alternative, to recommend to the Commission that the applications of Great Lakes Transmission Company (Great Lakes), Docket Nos. CP65-171, CP65-172 and CP65-173, be consolidated with this proceeding for hearing.[15] The appeal from the Examiner's ruling was rejected by the Secretary of the Commission and a petition is now pending before the Commission to reverse the action of the Secretary.

---

[14] See *Reagan* v. *Farmers' Loan & Trust Co.*, 154 U.S. 362, 409; *Covington and Lexington Turnpike Road Co.* v. *Sanford*, 164 U.S. 578, 596–597; *Los Angeles Gas Co.* v. *Railroad Commission*, 289 U.S. 287, 313.

---

[15] The Great Lakes proposal is still in its application stage. Because of filed interventions—some expressing concern as to the sufficiency of Great Lakes' showing, that application will apparently be the subject of a full blown certificate hearing when ready for consideration. The prior application of Great Lakes, proposing a similar project, had been rejected by the Secretary of the Commission as ambiguous and incomplete.

Great Lakes contemplates importing gas from its parent, Trans-Canada, at a point on the international boundary near Emerson, Manitoba for export to Trans-Canada at other boundary points near St. Clair and Sault Ste. Marie, Michigan. Its proposed pipeline is estimated to cost $192,000,000 and to be about 1,000 miles in length. At present, Trans-Canada is the only customer to be served by Great Lakes.

Trans-Canada has a system, constructed with government assistance, which extends some 2,300 miles from the Province of Alberta eastward via Winnipeg. Kapuskasing and Toronto to Montreal, with branch-lines extending to the United States-Canadian border at two points, namely, Emerson, Manitoba and Niagara Falls. The first branch-line extends from the Alberta-Winnipeg section connecting with the northern portion of Midwestern Gas Transmission Company's (Midwestern) system south of Emerson (16 FPC 466, 468; 20 FPC 575, 588–591). The second connects with the system of Midwestern's parent, Tennessee Gas Transmission Company (Tennessee), at the international boundary near Niagara Falls. Tennessee's system extends from its sources of supply in Texas and Louisiana to the international boundary and the New England area.

Tennessee is currently authorized to import and export gas to Trans-Canada (26 FPC 830). In fact it has pending applications (Docket Nos. CP65-158, CP65-157 and G-1922) which, if approved, will enable it to construct additional facilities and sell and deliver 76,500 MMcf of natural gas to Trans-Canada over a five-year period ending November 1, 1970, the deliveries to be made at a declining rate—25,500 MMcf by November 1, 1966, shrinking to 5,100 MMcf for the twelve-month period ending November 1, 1970.

Part of the Canadian gas received by Midwestern south of Emerson is resold to Michigan Wisconsin (22 FPC 775), the latter being the principal customer of the former. In fact the physical source of gas to be delivered to Michigan Consolidated by Michigan Wisconsin at Menominee is Marshfield, Wisconsin, where Michigan Wisconsin purchases Canadian gas from Midwestern (Tr. 341). It is of interest to point out here that, as shown by Midwestern's applications in Docket Nos. CP64-308, G-18314 and G-18315, now pending for decision, Midwestern has indicated its ability to increase its firm sales of gas to its customers by increasing imports from Canada. It is presently seeking to increase its imports from 204,000 to 222,360 Mcf per day.

The primary purpose of the Trans-Canada system is to transport natural gas from fields in the Province of Alberta to Canadian markets within economic reach of its pipeline, particularly those in eastern Canada where the bulk of Canadian industry is located.

Great Lakes' proposed pipeline through the United States would more or less parallel Trans-Canada's pipeline across Canada and would, in effect, be a looping—over a shorter route—of the Trans-Canada system for additional service to markets served by Trans-Canada in eastern Canada. Great Lakes apparently hopes to pick up substantial markets in the United States, otherwise its proposed pipeline would apparently not be economically feasible. But when Northern requested Great Lakes and Trans-Canada to submit proposals for the sale of gas to Northern "They did not do so." However, by order issued March 23, 1965 in Docket No. CP65-48, 33 FPC 600, the Commission authorized Midwestern to sell to Northern, at an existing interconnection in Minnesota, up to 5,255,200 Mcf of interruptible gas at a price of 24.92 cents per Mcf until December 31, 1965. The deliveries will be made when Midwestern has gas available, in excess of existing requirements and when Northern is able to take it.

While the motion denied by the Examiner expressed an interest in possible avoidance

In denying the motion sponsored by the intervener-customers of Northern the Examiner ruled that Northern's policy witness could be interrogated with reference to the Great Lakes proposal (Tr. 1122). The policy witness later testified that Great Lakes and its parent, Trans-Canada Pipe Lines, Limited (Trans-Canada) "refused to ever submit a contract." He further testified (Tr. 2023):

Q. Did you ask them for a contract?

A. Well, I told them that if they had any proposals to put it in writing in the form of a contract.

Q. And they did not do it?

A. They did not do so.

In this connection, the Commission has had occasion to point out that, when satisfactory commitments are made and supplies are shown to be adequate, Canadian gas should be made available "to the mutual benefit of both United States purchasers and Canadian sellers. This, of course, would be consistent with the policies of cooperation and joint endeavor which have long characterized the relations of this Nation and Canada not only in matters pertaining to the import and export of natural gas but in our general economic relationships and matters of national defense as well" (20 FPC at 584–585).

While interveners may make motions in a Commission proceeding, any motion made must be substantiated by some reasonable promise of success. Where, as here, it is not so substantiated, the motion must be denied (*Cf. South Carolina Public Service Authority* v. *Federal Power Commission*, 170 F. 2d 948, cert. den. 336 U.S. 953). Even assuming that it would have been proper to have directed Northern and the Commission Staff to have studied the alleged alternative proposals, no one attempted to forecast the probable outcome or the period necessary to make the study. Long delay and ultimate failure could easily have been the result. Moreover, to have granted the motion would have frustrated the procedure prescribed at the outset of this proceeding which was designed to and did avoid a protracted hearing. A delay of as much as thirty to sixty days would undoubtedly have delayed natural gas service in the Upper Peninsula for at least a year and required all perfected plans for service this year to be abandoned. In the Examiner's view, any victory causing unjustified delay in Commission action will be found in the Pyrrhic category.

On the basis of the motion made by Northern's intervener-customers, the Examiner was persuaded that the granting thereof would have resulted in a total breakdown of orderly procedure. By denying the motion and following orderly procedure, a record was made demonstrating that the presently proposed projects of both Northern and the Michigan Consolidated-Michigan Wisconsin are economically feasible and capable of being installed and placed in service by the Fall of 1965.

FINDINGS

Based on the evidence of record, the briefs and arguments of counsel, as well as the preceding portion of this decision, it is further found and concluded that:

(1) Northern is a "natural-gas company" within the meaning of the Act and subject to the jurisdiction of the Commission.

(2) The facilities Northern proposes to construct and operate to enable it to provide natural gas service in northern Wisconsin and the non-competitive area

---

of duplication of facilities, such avoidance is not only the element of public interest involved. That interest also requires that the public be served seasonably and on the best possible terms. This means, among other things, that the total price to be paid for gas, including the cost of facilities, must be on the best possible terms and conditions. It goes without saying, of course, that purchasers of natural gas have their own knowledge, experience and ideas as to what constitutes economies and desirable circumstances in which to negotiate.

of the Upper Peninsula of Michigan consist of 55.1 miles of 30-inch mainline looping of its existing mainline transmission system, 11,400 of additional compressor horsepower at stations near Mullinville, Kansas and Farmington, Minnesota, a mainline extension from a point near Duluth, Minnesota east across northern Wisconsin and into the Upper Peninsula consisting of 53.8 miles of 20-inch pipeline and branch-lines consisting of 166.9 miles of 16-inch pipeline, 16.3 miles of 12¾-inch pipeline, 6.7 miles of 10¾-inch pipeline, 55.4 miles of 8⅝-inch pipeline, 11.6 miles of 6⅝-inch pipeline, 10.3 miles of 4½-inch pipeline, 5.5 miles of 3½-inch pipeline, 3.4 miles of 2⅜-inch pipeline plus 25 measuring stations.

(3) The facilities described in paragraph (2) will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Northern are subject to the requirements of subsections (c) and (e) of Section 7 of the Act.

(4) The estimated cost of the facilities described in paragraph (2) is $24,137,800, such facilities to be used initially to provide the service set forth hereinafter in paragraphs (5) and (6).

(5) Northern proposed to make direct firm sales of natural gas to the iron ore benefication plants operated by Cleveland Cliffs in the amount of 31,660 Mcf per day in the third year of operation of its proposed facilities pursuant to the provisions of a ten-year firm contract which contains no escape clause after service is commenced. Annual sales under this contract in the third year of service are estimated to be 8,874,000 Mcf. The peak day and annual requirements of natural gas of the plants operated by Cleveland Cliffs are supported by reasonable and proper studies of its fuel requirements.

(6) While Northern's principal market is Cleveland Cliffs, its other markets are covered by service agreements with three distributors, namely, Lake Superior District Power Company, Peninsula Gas Company, and Michigan Gas and Electric Company, with third year contract demand volumes aggregating 18,081 Mcf. The peak day and annual requirements of these distributors are supported by reasonable and proper market estimates.

(7) The three distributors named in paragraph (6) have fully supported their ability to finance, the propriety of their engineering designs and the economic feasibility of their respective distribution operations.

(8) Northern has shown that (a) it has an adequate gas supply to render the proposed gas service without adverse effects on its existing customers, (b) that it is able to finance the construction of the project and (c) that its proposed project is economically feasible.

(9) Northern is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder.

(10) The construction and operation of the proposed facilities and the transportation and additional sales of natural gas by Northern are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(11) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Northern's compliance with all applicable Commission Regulations under the Act and particularly the General Terms and Conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(12) The certificate issued hereinafter will not entitle the industrial customers to which firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the ex-

pense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(13) The economic feasibility of the proposed Lakehead lateral is totally dependent on the revenues to be derived from the proposed sales of natural gas which will be made on an interruptible basis to the Lakehead Pipe Line Company.

(14) Public convenience and necessity require Northern to:

(a) File an amendment to the certificate issued hereinafter to authorize any lower contract demand for the Cleveland Cliffs sale should the precise contract demand be lower than the maximum volumes herein authorized.

(b) Promptly file an amendment to the certificate issued hereinafter to reduce its allocated firm sales capacity by 3,500 Mcf per day if the "First Addition to the Empire Plant" is not in operation and using natural gas by July 1, 1967.

(c) Promptly notify the Commission of Cleveland Cliffs' decision to construct the "First Addition to the Empire Mine Plant."

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Northern to construct and operate the facilities and to sell, transport and deliver natural gas as described hereinabove in paragraphs (2), (5) and (6), all as more fully described in the record in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Northern's compliance with all applicable Commission Regulations under the Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales, transportation and deliveries of natural gas authorized hereinabove in paragraph (A) shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Act, within 12 months from the date on which this order issues.

(D) This certificate shall not entitle the industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) Except as granted hereinabove, the application of Northern filed in Docket No. CP64-255 (Phase II) is hereby dismissed.

(F) The certificate issued herein to Northern, insofar as it authorizes Northern to construct and operate the Lakehead lateral, shall not become effective until such time as Northern submits a signed contract covering the sales of natural gas which Lake Superior District Power Company proposes to make to Lakehead Pipe Line Company on an interruptible basis.

(G) Northern shall file an amendment to the certificate issued herein to authorize any lower contract demand for Cleveland Cliffs should the precise contract demand be lower than the maximum volumes herein authorized.

(H) Northern shall, on or before July 31, 1967, file an amendment to the certificate issued herein to reduce its total firm sales capacity allocated by Cleveland Cliffs by 3,500 Mcf per day if the "First Addition to the Empire Plant" is not in operation and using natural gas by July 1, 1967.

(I) Within 30 days after being notified in the manner contemplated by Article II, section 3 of the contract between Northern and the Cleveland Cliffs, Northern shall notify the Commission in writing of Cleveland Cliffs' decision to construct the "First Addition to the Empire Plant."

FRANCIS L. HALL,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH PENN POWER COMPANY, DOCKET NO. E-7218

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued June 2, 1965)

South Penn Power Company (South Penn) filed an application on April 14, 1965, with the Federal Power Commission, for an order, pursuant to Section 203 of the Federal Power Act, authorizing the acquisition of electric distribution facilities from Stoufferstown Electric Company (Stoufferstown).

South Penn is incorporated under the laws of the Commonwealth of Pennsylvania and is qualified to do business only in Pennsylvania and has its principal business office at Waynesboro, Pennsylvania. It is a wholly owned subsidiary of the Potomac Edison Company (Potomac Edison), which in turn is a wholly owned subsidiary of Allegheny Power System, Inc. South Penn is engaged in the transmission, purchase, sale at wholesale and distribution of electric energy in the Counties of Adams, Bedford, Franklin, Fulton, and Somerset in southern Pennsylvania. It has no generating capacity and purchases energy to meet all requirements from Potomac Edison.

Electric energy which is generated by Potomac Edison in West Virginia is transmitted by South Penn for sale at wholesale in Pennsylvania and part of this energy is sold at wholesale to Potomac Edison for distribution and consumption in Maryland.

During 1964, South Penn purchased 34,120,627 kwh, sold 20,107,508 kwh at wholesale, and distributed 288,041,543 kwh to some 27,000 ultimate consumers.

Stoufferstown is incorporated under the laws of the Commonwealth of Pennsylvania and is qualified to do business only in Pennsylvania and has its principal office at Chambersburg, Pennsylvania. It was formed in 1922 to distribute electric energy in the part of Guilford Township, Franklin County, Pennsylvania known as Stoufferstown. It has no generating capacity and purchases electric energy to meet all requirements from the Borough of Chambersburg municipal system. Its service area is small, approximately 0.6 of a mile by 1.1 of a mile in size. At the end of 1964 it was serving 454 residential customers and nine commercial customers.

According to the application, South Penn proposes to acquire a portion of Stoufferstown's distribution system, pursuant to the terms and provisions of an agreement between South Penn and Stoufferstown, dated March 1, 1965. The facilities to be acquired by South Penn are electric distribution facilities which are presently used and will continue to be used in local distribution of electric energy in a small portion of Guilford Township, Franklin County, Pennsylvania. The facilities to be acquired constitute approximately one-half of the utility plant owned by Stoufferstown. According to the application, South Penn has agreed to pay $80,000 for these facilities, subject to adjustment for any changes between October 1, 1964 and the closing date. Upon acquisition, South Penn proposes to connect the facilities with its present facilities.

Applicant proposes to acquire only the above part of the Stoufferstown system because the Borough of Chambersburg holds an option to purchase the remaining portion if it is annexed by the Borough within 18 months. If the pending annexation is not successful, Applicant plans to negotiate for the acquisition of the remaining property.

The original cost of the facilities is not known. South Penn estimates that the facilities have a depreciated original cost of $25,443. South Penn's payment of $80,000 for the facilities will, therefore, create an acquisition adjustment of $54,557 which South Penn proposes to eliminate by a charge to Account 435, Miscellaneous Debits to Surplus.

According to the application, the proposed acquisition will be consistent with the public interest because the majority of the consumers affected would pay lower rates for electric service while no customer's electric rates would be increased and the customers affected will receive improved and more reliable service because of South Penn's size and interconnections with affiliated and non-affiliated companies.

Written notice of the application has been given to the Pennsylvania Public Utility Commission and to the Governor of that State. Notice was also published in the Federal Register on April 30, 1965 (30 F.R. 6128), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before May 12, 1965, file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) South Penn, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy generated in the State of West Virginia and consumed in the States of Maryland and Pennsylvania, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilites used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter, and South Penn is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, South Penn will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Stoufferstown, another person within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by South Penn, as described above, upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given on this application is reasonable.

The Commission orders:

(A) The proposed acquisition by South Penn of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) South Penn shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this

Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by this Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-107

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1965)

On March 26, 1965, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64-107 an application and a supplement thereto on April 16, 1965, to amend the order of the Commission issued in said docket May 26, 1964, 31 FPC 1292, which order, among other things, granted Applicant a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to increase contract demand service to then existing customers, all as more fully set forth in the application to amend.

Applicant requests that the Commission amend the referenced order by further authorizing it to install and operate three new delivery points (consisting of three side valves and metering equipment) for an existing customer, Western Kentucky Gas Company (Western), in Henderson, Muhlenberg and Marshall Counties, Kentucky, in order to increase its annual deliveries to Western by an estimated 51,200[1] Mcf beginning in June 1965. No increase in Western's contract demand with Applicant is required for the additional service. The new delivery points will enable Western to serve the communities of Zion, Henderson County, and Luzerne, Muhlenberg County, and a recreational area being developed at Kentucky Lake, in Marshall County, known as the "Ken Bar" development.

Applicant states that Western has received all the requisite local authorizations. The total estimated construction cost of $15,380 will be financed from cash on hand. In light of the small volumes and minor facilities involved, the new service will have no significant effect on Applicant's total system gas supply, expenses and revenue.

Due notice of the subject application to amend has been given by publication in the Federal Register on April 13, 1965 (30 F.R. 4730). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 26, 1964, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 26, 1964, in Docket No. CP64-107 be and the same is hereby amended by authorizing Applicant to construct and operate three side valves and meters for the establishment of three new delivery points, one each in Henderson, Muhlenberg and Marshall Counties, Kentucky, in order to increase its annual deliveries of natural gas to Western Kentucky Gas Company by an estimated 51,200 Mcf beginning in June, 1965.

(B) In all other respects said order shall remain in full force and effect.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65-148; CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-150

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 2, 1965)

On April 22, 1965, Transwestern Pipeline Company (Transwestern) and Cities Service Gas Company (Cities) filed a joint petition in Docket Nos. CP65-148 and CP65-150, respectively, requesting the amendment of the Commission's order issued January 28, 1965, 33 FPC 120, in said dockets, which order authorized the construction and operation of facilities and the sale of natural gas by Transwestern, and the construction and operation of facilities and transportation of natural gas by Cities, by extending the time during which Transwestern may sell natural gas to Cities to December 22, 1965, or until Transwestern is ready to commence deliveries under authorization pending in Docket No. CP64-104, whichever is earlier.

The Commission's order issued on January 28, 1965, authorized sales of up to 50,000 Mcf of natural gas per day at 17.5 cents per Mcf for a period of 6 months after the date of first deliveries or until the date Transwestern is ready to commence deliveries under authorization pending in Docket No. CP64-104, whichever is earlier. Initial deliveries commenced on December 22, 1964.

The instant filing is based upon Transwestern's over-supply of gas and Cities' need of additional gas to satisfy the requirements of its summertime load customers and the requirements of summer filling of its storage facilities, and to offset reductions in pipeline capacities due to normal summertime overhaul and maintenance.

Cities had anticipated that the summertime requirements would be satisfied by a commencement of deliveries by Transwestern and Arkansas Louisiana Gas Company under authorization sought in Docket No. CP64-104. However, that proceeding will not be terminated in time for relief during the coming summer.

Transwestern and Cities have entered into a letter agreement dated April 19, 1965, in which the time of the Gas Sale Agreement of November 6, 1964, is extended in conformity with the request in the instant filing.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity heretofore issued in Docket Nos. CP65-148 and CP65-150 be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Transwestern and Cities in the Commission's order of January 28, 1965, in Docket Nos. CP65-148 and CP65-150 be and the same is hereby amended by extending the period of time during which Transwestern may sell and deliver to Cities volumes of natural gas to December 22, 1965, or until Transwestern is ready to commence deliveries pursuant to the authorization pending in Docket No. CP64-104, whichever is earlier.

(B) In all other respects the order in Docket Nos. CP65-148 and CP65-150 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INDEPENDENT PRODUCERS OF NATURAL GAS—ANTI-TRIGGERING CONDITIONS IN CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, DOCKET NO. R-273

ORDER DENYING RECONSIDERATION

(Issued June 2, 1965)

On May 5, 1965, Sun Oil Company (Sun) filed a pleading denominated as an Application for Rehearing of Order No. 296 (30 F.R. 4670, 33 FPC 682.) The Commission through this order, issued on April 5, 1965, promulgated its Tenth Amendment to its Statement of General Policy No. 61-1. The purpose of this amendment to the Statement of General Policy was to advise all persons of the Commission's intent to condition uncontested producer certificates where necessary to prevent subsequent filings which would be at such a high level that they might result in triggering of several price increases. In issuing the order, the Commission made clear that any interested person would be entitled to a hearing both as to the legality and propriety of any anti-triggering condition and as to the validity of the particular area triggering level. The order in other words merely followed our normal course in connection with the Statement of Policy of advising interested parties how we proposed to act in the absence of a timely request for a hearing.

Considered as an application for rehearing, Sun's pleading must be dismissed since it is clear that Order No. 296 is not of the type which comes within the provisions of § 19(b) of the Natural Gas Act or § 1.34 of the Commission's Rules of Practice and Procedure. See *United Gas Pipe Line Co.* v. *F.P.C.*, 181 F. 2d 796 (CADC), certiorari denied, 340 U.S. 827; *Wisconsin* v. *F.P.C.*, 292 F. 2d 753. Sun was not a party to the proceeding leading to the formulation of the order within the meaning of the statute and is not aggrieved thereby. Moreover the order itself is not a final order of the type from which rehearing lies since it imposes no obligation upon Sun or anybody else but merely advises parties as to the intended course of action on the part of the Commission, in passing upon any future certificate applications which Sun or other producers might choose to file.

Considered as a petition for reconsideration of our action of April 5, 1965, Sun's application will be denied. We are, of course, aware that our authority to impose maximum price conditions in any permanent certificate of public convenience and necessity is an issue in the pending Callery case (*Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5), certiorari granted, *sub nom. F.P.C.* v. *Callery Properties, Inc.*, 380 U.S. 931 (March 8, 1965)). While the validity of any price condition imposed by the Commission over the objection of the applicant will therefore necessarily depend upon the outcome of the Supreme Court's decision in that case, we remain of the view that such conditions are an appropriate means of protecting public interest and that there is no basis for distinguishing between the grants made after formal hearing and grants made under the abridged procedures in noncontested proceedings.

Sun suggests that the "practical effect" of the rule is to "impose upon certificate applicants the unreasonable burden of disproving the results of a secret 'Commission study' upon which the 'triggering price' levels are founded". This is not correct. The Commission stated in its order that moratorium levels had been fixed at 2¢ above present initial price ceilings, in the various pricing areas in which triggering levels had not been established in litigated cases, as a reflection of a Commission's study indicating that in such areas "any price more

than 2¢ above the new gas ceiling is likely to result in triggering findings * * *". But we made clear that any applicant upon request would be granted the right to contest the particular triggering level at a hearing on its application. At any such hearing, the triggering level set forth in the table annexed to § 2.56(d) of the Commission's Rules would, in the absence of supporting evidence, have no greater validity presumptive or otherwise than do the various price ceilings set forth as guidelines in the table annexed to subparagraph (a) of § 2.56.

Accordingly, the Commission orders:

The application filed by the Sun Oil Company on May 5, 1965, in the above styled proceeding considered as an application for rehearing is hereby dismissed, and considered as an application for reconsideration is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP65-299

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 3, 1965)

On March 25, 1965, Central Illinois Public Service Company (Applicant) filed in Docket No. CP65-299 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Trunkline) to establish physical connection of its transmission facilities with the proposed facilities of, and to sell natural gas to Applicant for resale and distribution in the Village of Gays, Moultrie County, Illinois, and environs, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate a lateral transmission line from a point on Trunkline's pipeline, approximately three miles northeast of Gays, to said Village. Applicant will also construct and operate the distribution facilities necessary to provide the subject natural gas service to Gays and environs.

The total estimated third year peak day and annual natural gas requirements for Gays are 201 Mcf and 20,850 Mcf, respectively.

The total estimated cost of transmission and distribution facilities for the project is $55,225, which cost will be financed from internal funds.

It appears that Applicant has received appropriate state and local authorization.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on April 7, 1965 (30 F.R. 4508). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) Applicant, Central Illinois Public Service Company, is a public utility duly organized and existing under the laws of the State of Illinois and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Trunkline be directed to establish physical connection of its natural gas transmission system

with the proposed facilities of Applicant and to sell and deliver up to 201 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Trunkline within one year from the date of issuance of this order.

(5) The requirement that Trunkline serve Applicant, as proposed, will not place any undue burden upon Trunkline nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Trunkline Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 201 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Trunkline within one year from the date of issuance of this order.

(C) Trunkline shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

(D) Trunkline shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED GAS SUPPLY CORPORATION, TEXAS EASTERN TRANSMISSION CORPORATION AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65-296

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 3, 1965)

On March 23, 1965 Consolidated Gas Supply Corporation (Consolidated), Texas Eastern Transmission Corporation (Texas Eastern) and Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP65-296 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities necessary for the additional development and activation of the Leidy Storage Pool, Clinton and Potter Counties, Pennsylvania, all as more fully set forth in the joint application in this proceeding.

Specifically, Applicants proposed to construct and operate an additional 2,000 horsepower compressor unit and related facilities in order to increase the top storage capacity of the Leidy Storage Pool by 5,000,000 Mcf, from 40,000,000 Mcf to 45,000,000 Mcf. The proposed increase in top storage capacity is for the use of Consolidated. Upon completion of the subject phase of development, each of the three Applicants will be entitled to 15,000,000 Mcf of storage capacity. The proposed additional development is pursuant to Amendment No. 5 to the Leidy-Tamarack Transfer and Storage Agreement between the three Applicants, dated March 12, 1965.

The total estimated cost of the proposed facilities is $630,000 which cost, together with the cost of $22,956,000 of facilities heretofore authorized and completed in the Leidy Pool, will be shared under the Transfer and Storage

Agreement in equal one-third shares by the three Applicants. Presently, the costs of the existing constructed facilities are shared by the three parties in proportion to their shares of the developed top storage capacity in said pool. At this time Texas Eastern and Transco are each entitled to 15,000,000 Mcf of top storage capacity and Consolidated is entitled to 10,000,000 Mcf. Consequently, in addition to its one-third share of the cost of the proposed facilities, Consolidated will be obligated in the amount of $1,913,000* for facilities heretofore constructed. Consolidated will finance with such cost from cash on hand.

The proposed increased storage capacity will be used to meet the normal growth in Consolidated's winter market requirements. No new sale or service is proposed in this proceeding.

Petitions to intervene have been filed herein by two distributor companies. In each case, the burden of such filings has been that the petitioners did not request formal hearing in this proceeding and did not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said intervention petitions appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation and a "natural-gas company" within the meaning of the Natural Gas Act, was merged into Hope Natural Gas Company and the name of Consolidated Gas Supply Corporation substituted for that of Hope Natural Gas Company by Commission order issued February 2, 1965 (33 FPC 150).

(2) Consolidated Gas Supply Corporation, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 2, 1965 (33 FPC 150).

(3) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 11, 1947, in Docket No. G–880 (6 FPC 148).

(4) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(5) The further development and operation of additional underground top storage capacity and the construction and operation of facilities in connection therewith hereinbefore described, as more fully described in the joint application in this proceeding, for use in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

* This amount is equal to $\frac{1}{12}$ ($\frac{1}{3}$ less $\frac{10}{40}$) of the $22,956,000 net cost of existing facilities.

(6) The proposed construction and operation of the subject facilities and the proposed further development and operation of additional underground top storage capacity by Applicants are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Consolidated Gas Supply Corporation, Texas Eastern Transmission Corporation and Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities for the further development and operation of additional underground top storage capacity, as hereinbefore described, all as more fully described in the joint application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CUSHING GAS TRANSMISSION COMPANY, DOCKET NO. CP65-328

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ACCEPTING NOTICE OF CANCELLATION

(Issued June 3, 1965)

On April 9, 1965, Cushing Gas Transmission Company (Applicant), filed in Docket No. CP65-328 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon facilities consisting of approximately 10 miles of 2-inch pipeline and 1 mile of 3-inch pipeline and service rendered thereby to Cities Service Gas Company (Cities Service), and cancellation of Applicant's Rate Schedule No. 1, to be effective on the date of issuance of the order approving abandonment, all as more fully set forth in the application.

Applicant's sole supplier of natural gas, Inland States Gas Transmission Company (Inland) was authorized to abandon service to Applicant by Commission order issued in Docket No. G-3609, *et al.*, on May 11, 1965.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cushing Gas Transmission Company, an Oklahoma corporation having its principal place of business in Cushing Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 10, 1963 in Docket No. CI63-38.

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities and service is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Notice of Cancellation of Applicant's FPC Rate Schedule No. 1 be accepted for filing to be effective on the date of issuance of this order.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities and service hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant, Cushing Gas Transmission Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities and service as authorized in paragraph (A) above within ten days of such abandonment.

(C) Notice of cancellation of Applicant's FPC Rate Schedule No. 1 be and is hereby accepted for filing effective on the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF ESKRIDGE, KANSAS, DOCKET NO. CP65-241

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 3, 1965)

On February 15, 1965, the City of Eskridge, Kansas, (Applicant) filed in Docket No. CP65-241 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Eskridge, Allen, Admire and Harveyville, Kansas, all as more fully described in the application.

Applicant proposes to construct and operate a municipal natural gas distribution system within its own borders and the distribution facilities in the cities of Allen and Admire. Applicant will also construct and operate lateral pipeline facilities consisting of (a) 24 miles of $5\frac{9}{16}$ inch O.D. and $4\frac{1}{2}$-inch O.D. pipeline extending northward from a point of intersection with Cities Service's main line in Lyon County, Kansas, to Applicant's town border, (b) 3.7 miles of 2½-inch I.D. pipeline extending westward from a point on Applicant's proposed lateral to the City of Allen, and (c) approximately 5.0 miles of 2-inch I.D. pipeline extending westward from Applicant to the Lake Wabaunsee area where several homes and cabins will be served. Lake Wabaunsee is owned by Applicant.

The City of Harveyville will construct and operate a municipal natural gas distribution system within its borders and approximately seven miles of 3½-inch O.D. lateral pipeline extending from its town border to a point of connection with Applicant's lateral in Wabaunsee County.

The total cost of construction of the facilities to be constructed by Applicant is estimated to be $460,000, of which $20,000 will be contributed by Harveyville in consideration of the additional lateral line capacity required. Harveyville's transmission and distribution facilities, including the $20,000 contribution to Applicant's facilities, are estimated to cost $108,000. The financing of Applicant's and Harveyville's facilities will be by means of Municipal Revenue Bonds to be issued separately by each city.

The estimated volumes of natural gas required to supply Applicant's annual and peak day requirements for the initial three years of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	65,500	87,600	109,700
Peak day (Mcf)	845	1,133	1,418

Harveyville will pay Applicant an amount equal to the cost to Applicant of gas purchased from Cities Service for Harveyville, plus a charge of five cents per Mcf for the transportation service.

On March 4, 1965, Cities Service filed a letter with the Commission and stated that it has no objection to providing the requested service.

On March 11, 1965, the State Corporation Commission of the State of Kansas filed a notice of intervention which was withdrawn on April 26, 1965.

Due notice of the filing of the application was filed in the Federal Register on March 4, 1965 (30 F.R. 2831). No other notice of intervention, protest or petition to intervene has been filed.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant is a municipality in the State of Kansas and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its proposed distribution system.

(3) It is necessary and desirable in the public interest that Cities Service be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 1.418 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Cities Service serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and is hereby directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 1,418 Mcf of natural gas per day to Applicant, all as hereinbefore described in the application.

(B) Cities Service Gas Company shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

(C) Applicant shall be prepared to receive natural gas from Cities Service within one year from the date of this order.

(D) Cities Service shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GAS SERVICE, INC., DOCKET NO. CP65-293

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 3, 1965)

On March 23, 1965, Gas Service Inc. (Applicant), of Nashua, New Hampshire, filed in Docket No. CP65-293 an application, as supplemented on April 23, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Tennessee) to make a physical connection of its transmission facilities with Applicant's proposed 6-inch transmission line and to sell and deliver natural gas to Applicant for resale and distribution through Applicant's existing distribution facilities to residential and commercial customers in the Tilton, New Hampshire area, all as more fully described in the application.

Applicant proposes to construct approximately 23 miles of 6-inch transmission line from the proposed interconnection with Tennessee in Concord, New Hampshire, to its existing distribution facilities in the Tilton area. The existing facilities are now being used to provide manufactured gas service to customers in the area.

The estimated volumes of natural gas required to supply Applicant's annual and peak day requirements for the initial three years of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	224,000	238,800	254,200
Peak day (Mcf)	892	990	1,090

The total estimated cost of Applicant's proposed facilities is stated to be $424,496, which will be financed by the sale of bonds.

The Public Utilities Commission of New Hampshire has authorized Applicant to serve the proposed area.

On March 31, 1965, Tennessee filed its answer with the Commission and stated that it has no objections to providing the requested service should the Commission find it to be in the public interest and that it can adequately fulfill the proposal without impairment of existing service to its customers.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on April 8, 1965 (30 F.R. 4564). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 15, 1947 in Docket No. G–910 (6 FPC 777).

(2) Applicant is a public utility company in the State of New Hampshire and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its distribution system.

(3) It is necessary and desirable in the public interest that Tennessee be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 1,090 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Tennessee serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company be and is hereby directed to establish physical connection of its natural gas transmission system with the facilities of Applicant and to sell and deliver up to 1,090 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Tennessee shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

(C) Applicant shall be prepared to receive natural gas from Tennessee within one year from the date of this order.

(D) Tennessee shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GAS UTILITY DISTRICT NO. 1 OF VERNON PARISH, LOUISIANA, DOCKET NO. CP65–229

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 3, 1965)

On January 29, 1965, Gas Utility District No. 1 of Vernon Parish, Louisiana (Applicant) filed in Docket No. CP65–229 an application, together with supplements thereto filed February 23 and April 5, 1965, respectively, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Tennessee) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in the communities of Pitkin and Cravens, Louisiana, and to citizens of the southeastern section of Vernon Parish, Louisiana, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 6 miles of 2-inch transmission line from Tennessee's facilities to the communities of Pitkin and Cravens, to connect with distribution systems to be constructed and operated in the said communities, and nearby areas. The estimated total cost of the proposed project is $175,000, and will be financed by the issuance of 30-year gas revenue bonds bearing six percent interest; proposed to be purchased by a New Orleans investment firm.

The total estimated volumes of natural gas required to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	19,397	21,397	23,673
Peak day (Mcf)	249	280	306

On March 1, 1965, Tennessee filed an answer to the application filed by the Applicant in this proceeding stating it will render the requested service on order of the Commission.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on February 16, 1965 (30 F.R. 2115). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, Gas Utility District No. 1 of Vernon Parish, Louisiana, a corporate subdivision of the State of Louisiana having its principal place of business in Pitkin, Louisiana, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Tennessee to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Tennessee in accordance with the Commission's Regulations, up to 306 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Tennessee for distribution by Gas Utility District No. 1 of Vernon Parish, Louisiana, within one year from the date of the issuance of this order.

(5) The requirement that Tennessee serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 306 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Tennessee in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Tennessee's presently filed appropriate rate schedule.

(B) Tennessee shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LAKE SHORE PIPE LINE CO., DOCKET NO. CP65-309

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 3, 1965)

On April 2, 1965, Lake Shore Pipe Line Co. (Applicant) filed in Docket No. CP65-309 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of (1) two segments of 4-inch pipeline, 5,300 feet and 11,900 feet, paralleling an existing 4-inch line extending from Applicant's Courtenay Station in an easterly direction, and a metering station in connection therewith, (2) 64,750 feet of 4-inch pipeline and 82,910 feet of 3-inch pipeline and appurtenant facilities to connect (a) 18 completed wells, (b) 20 projected wells by September 1, 1965, and (c) 23 projected wells for the period between September 1965 and September 1966, all in Erie County, Pennsylvania, all as more fully set forth in the application.

Applicant, an operating subsidiary of the Consolidated Natural Gas Company, is expanding its system in Erie County, Pennsylvania, to provide facilities connecting its system with unattached wells, both completed and uncompleted in the areas of production adjacent thereto.

The total estimated cost of the proposed facilities is $665,000, the cost of which will be financed initially from cash on hand to be replaced from debt or capital financing through the Applicant's parent company.

The Commission issued Applicant a temporary certificate on April 30, 1965, authorizing the construction and operation of 17,000 feet of 4-inch pipeline and the necessary 3-inch lines to attach eighteen shut-in wells, subject to final determination of the application for a certificate of public convenience and necessity.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lake Shore Pipe Line Co., an Ohio corporation having its principal place of business in Cleveland, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 13, 1951, in Docket No. G-1236 (10 FPC 22).

(2) The facilities hereinbefore described and as more fully described in the application and exhibits in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Com-

mission, and the construction and operation thereof and the transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly (1) Section 157.7(b)(3) of the Commission's Regulations in connection with the attachment of any of forty-three wells to be drilled by September 30, 1966, and (2) the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Lake Shore Pipe Line Co., authorizing the construction and operation of facilities, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly (1) Section 157.7(b)(3) of the Commission's Regulations in connection with the attachment of any of forty-three wells to be drilled by September 30, 1966, and (2) the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months after September 1966.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MILWAUKEE GAS LIGHT COMPANY, DOCKET NO. CP65-261

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 3, 1965)

On March 1, 1965, Milwaukee Gas Light Company (Applicant) filed in Docket No. CP65-261 an application, as supplemented on April 30, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its transmission facilities with the facilities to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in the unincorporated village of Freedom, Outagamie County, Wisconsin, as more fully described in the application.

Applicant proposes to construct a distribution system in Freedom and proposes that Michigan Wisconsin construct a measuring station and a portion of a 4-inch transmission main from a point on its present facilities to Freedom, which is a distance of approximately 1.6 miles. The portion of the 4-inch line to be constructed by Michigan Wisconsin is to be determined by the application of its "10-cent formula" and is estimated to be approximately 1.2 miles.

The estimated volumes of natural gas required to supply Freedom's annual and peak day requirements for the initial three years of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	31,182	37,158	40,796
Peak day (Mcf)	156	222	256

The total cost of the proposed facilities to be constructed by Applicant is estimated to be $90,394, which will require no special financing.

On April 27, 1965, the Public Service Commission of Wisconsin authorized Applicant to serve the community of Freedom and to construct the proposed facilities, conditioned upon the approval sought by the instant filing. Applicant was granted a franchise by the Freedom Town board on September 29, 1964.

On March 29, 1965, Michigan Wisconsin filed its answer with the Commission and stated that it had no objection (1) to providing the requested service, upon the approval of its application in Docket No. CP65–191, and (2) constructing approximately 1.2 miles of the transmission lateral, within the limits of its "10-cent formula". Michigan Wisconsin's application in Docket No. CP65–191 for a certificate of public convenience and necessity authorizing the expansion during 1965 of the peak day sales capacity of its system by approximately 75,000 Mcf per day was granted by the Commission's order issued in said docket on March 30, 1965.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on March 18, 1965 (30 F.R. 3617). No protest or petition to intervene has been filed.

On April 8, 1965, the Public Service Commission of Wisconsin filed a notice of intervention in these proceedings. The notice of intervention stated that no hearing was requested, but the Public Service Commission wished to be able to participate if a formal hearing was held. No other notice of intervention has been filed.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant is a public utility company in the State of Wisconsin and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the community located on its proposed distribution system.

(3) It is necessary and desirable in the public interest that Michigan Wisconsin be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 256 Mcf of natural gas per day to Applicant as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Michigan Wisconsin serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its natural gas transmission system with the facilities of the Applicant and to sell and deliver up to 256 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Michigan Wisconsin Pipe Line Company shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

(C) Applicant shall be prepared to receive natural gas from Michigan Wisconsin within one year from the date of this order.

(D) Michigan Wisconsin shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-335

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 3, 1965)

On April 21, 1965, Natural Gas Pipeline Company of America (Applicant) filed an application in Docket No. CP65-335 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities for the sale of gas to Iowa Power and Light Company (Iowa Power) for resale, all as more fully set forth in the application.

Applicant proposes to construct and operate the following facilities: (1) One 2-inch side tap, approximately 200 feet of 3-inch lateral and a meter station to sell natural gas to Iowa Power for resale and distribution in the Town of Leighton, Iowa, (2) one 2-inch side tap, approximately 250 feet of 3-inch lateral and a meter station to sell natural gas to Iowa Power for resale and distribution to the Town of St. Charles, Iowa, and (3) one 2-inch side tap, approximately 550 feet of 3-inch lateral and a meter station to sell natural gas to Iowa Power for resale and local distribution in the towns of Lovilia, Bussey and Hamilton, Iowa, and in the unincorporated community of Tracy, Marion County, Iowa.

The total cost of facilities to be constructed by Applicant is estimated to be $53,450, which will be financed with funds on hand.

Iowa Power, an existing customer of Applicant, will provide service in the above communities from the quantities of natural gas which Applicant has heretofore been authorized to sell and deliver to Iowa Power under Applicant's Rate Schedules CD-1 and S-1.

Due notice of the filing of the application was published in the Federal Register on May 5, 1965 (30 F.R. 6296). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP65-50

ORDER REJECTING PETITION FOR RECONSIDERATION

(Issued June 3, 1965)

The Commission by order issued April 30, 1965, 33 FPC 929, denied the petition filed April 14, 1965 by Natural Gas Pipeline Company of America for reconsideration and withdrawal or termination of the order issued April 2, 1965, 33 FPC 666, instituting an investigation under Section 5 of the Natural Gas Act.

On May 19, 1965, Natural filed a petition for rehearing of our order issued April 30, 1965. Under Section 1.34 of the Rules of Practice and Procedure, a petition for rehearing can be filed only after the issuance of a final decision or order by the Commission. Our order issued April 2, 1965, instituting an investigation and requiring the production of cost and revenue reports is merely procedural and interlocutory. The denial of Natural's petition for reconsideration filed April 14, 1965 did not change the procedural or interlocutory nature of our April 2 order. The petition filed May 19, 1965 is in fact a second request for reconsideration of that order.

Neither the Natural Gas Act nor the Rules of Practice and Procedure provide for consecutive petitions for reconsideration. We have consistently rejected petitions for reconsideration of an order denying reconsideration. *Houston Texas Gas and Oil Corporation, et al.*, Docket No. G–9262, *et al.*, issued April 18, 1957, 17 FPC 542; *Trunkline Gas Company, et al.*, Docket No. G–15394, *et al.*, issued March 26, 1961, 21 FPC 394.

The Commission orders:

The petition filed by Natural Gas Pipeline Company of America on May 19, 1965, is hereby rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP64–233

FINDING AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 3, 1965)

On April 10, 1964, as supplemented on June 18 and July 27, 1964, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP64–233 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain replacement facilities on its existing transmission system in Ohio to enable Applicant to provide increased capacity to serve growing requirements of existing markets and to assure adequate market service, all as more fully described in the application, as supplemented, in this proceeding.

Applicant proposes to construct and operate the following facilities in the State of Ohio:

(1) 1.1 miles of 6⅝-inch pipeline in Sandusky County, replacing 2.0 miles of 3½-inch Line D–71 serving Gibsonburg;

(2) 2.6 miles of 12¾-inch pipeline in Sandusky County, replacing a section of 8⅝-inch Line D–74 serving the Port Clinton-Oak Harbor area;

(3) 4.0 miles of 24-inch pipeline in Seneca and Sandusky Counties, extending Line D–415, looping an additional section of Line D–100 serving Toledo and other markets in northwestern Ohio;

(4) 5.7 miles of 8⅝-inch pipeline in Wyandot County, replacing sections of 6⅝-inch Line D–34 serving Upper Sandusky;

(5) 1.1 miles of 5½-inch pipeline in Wayne County, replacing a section of 3½-inch Line V–243 serving Dalton and East Greenville;

(6) 7.1 miles of 12¾-inch pipeline in Carroll and Stark Counties, replacing 8⅝-inch sections of Lines V and V–20 serving the Alliance market area;

(7) 5.4 miles of 20-inch pipeline in Hardin County, extending Line D–500, looping an additional section of Lines D–322 and D–357 serving the Lima market area;

(8) 2.1 miles of 4½-inch pipeline in Marion County, replacing a section of 8½-inch Line D-213 serving Caledonia;

(9) 1.9 miles of 4½-inch pipeline in Pickaway County, replacing a section of 2⅜-inch and 3½-inch Line A-117 serving Williamsport, and

(10) 4.8 miles of 6⅝-inch pipeline in Athens and Hocking Counties, replacing sections of 4½-inch, 5½-inch and 6⅝-inch Line E-76 serving Nelsonville;

Together with valves, fittings and incidental facilities necessary for practical operation.

Applicant states that the replacement facilities proposed are a part of a program to maintain adequate facilities and service and to provide increased capacity needed to serve increasing requirements of existing markets and to assure adequate market service.

Applicant states that of the pipe proposed to be replaced, a section of Line V-20 will be sold to Columbia of Ohio and the remainder will be salvaged or abandoned in place.

The application shows the total estimated cost of the project to be $1,517,000, which cost will be financed by Applicant's parent, The Columbia Gas System, Inc.

By letter dated September 25, 1964, Applicant was issued a temporary certificate authorizing all of the subject proposal except project No. (7) described above.

Applicant states that it believes that the proposed changes will not result in termination of service to any consumer. The authorization hereinafter granted is without prejudice to the existing rights of customers now served from the affected existing gas transmission lines of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G-371 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Ohio Fuel Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities for Applicant's project No. (7) which have not been authorized by temporary certificate shall be constructed and placed in actual operation within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7129

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued June 3, 1965)

By order issued February 14, 1964, 31 FPC 414, in the above-entitled matter, the Commission, pursuant to Section 204 of the Federal Power Act, authorized Pacific Power & Light Company (Applicant) to issue, pursuant to a Credit Agreement of October 1, 1963 between Applicant and eight banks, unsecured Promissory Notes in the aggregate principal amount of $45,000,000 outstanding at any one time upon terms and conditions set forth in the order, which include, among other things, those set forth in the application, filed September 30, 1963, requesting such authorization. The order, by its terms, provided that the Notes were to be dated as of the dates of the borrowings and they were to mature 11 months after date of issue or on September 30, 1965, whichever shall be earlier.

Pursuant to the above-described authorization, Applicant has issued Notes from time to time and as of the date of the application, all outstanding Notes had been paid.

On March 23, 1965, Applicant filed an amendment to its earlier application, informing the Commission that its Credit Agreement of October 1, 1963 has now been supplemented by a Letter Agreement of March 10, 1965 under which it shall continue to have the right to issue Notes up to $45,000,000 outstanding at any one time, under the same terms and conditions with the extension of maturity date from September 30, 1965 to June 30, 1967. By its amendment to application filed on March 23, 1965 Applicant requested that the authorization granted by the above-mentioned order be extended and modified to the extent necessary to provide that Applicant may issue Notes either as original Notes or renewals thereof up to an aggregate principal amount of $45,000,000 at any one time outstanding, each Note to mature 11 months after date of issue or on June 30, 1967, whichever is earlier.

Applicant states that the Notes are to be issued to furnish temporary financing for the Applicant's construction program, the expenditures for which are estimated to be approximately $49,150,000 for 1965, approximately $40,000,000 for 1966 and approximately $23,200,000 for the first half of 1967. The principal items of expenditure for those years are described as follows: $670,000 for construction of additional transportation and mining facilities at the Dave Johnston Steam Plant in 1965; $1,000,000 in 1966 and $700,000 in the first half of 1967 for its Cherokee, Wyoming Steam Plant Unit No. 1; $4,000,000 in 1965 for commencement of construction of the $20,000,000 Keno Hydroelectric project on the Klamath River; $1,000,000 in 1965 for construction of the Iron Gate Spillway improvements; $700,000 in 1965 for construction of a fish hatchery at the Iron Gate Hydroelectric Development; $4,165,000 in 1965 for completion of the 47.4 mile, 230/500 kv transmission line from Malin, Oregon to Indian Springs, California; $1,320,000 in 1965 for completion of the 35 mile, 230 kv transmission line from Malin, Oregon to Klamath Falls, Oregon; $910,000 in 1965 for completion of the 40 mile, 115 kv transmission line from Bly, Oregon to Lakeview, Oregon; $1,696,000 for completion of the 46.1 mile, 115 kv transmission line from Libby, Montana to Trego, Montana; 4,070,000 in 1965 for completion of the 98 mile, 230 kv transmission line from Enterprise, Oregon to Walla Walla, Washington; $1,260,000 in 1966 for completion of the 36 mile, 230 kv transmission line from Wanapum Switchyard, Washington to North Yakima, Washington; $990,000 for completion of the 29 mile, 230 kv transmission line from Sinclair, Wyoming to the Cherokee Steam Plant, Wyoming; $80,000 in 1965, $200,000 in 1966 and $4,320,000 in the first half of 1967 for construction of the 300,000 kva substation at Malin, Oregon; $1,162,000 for construction of the 150,000 kva North Yakima Substation; $800,000 in 1966 for construction of the 100,000 kva substation at Yellowtail, Montana; $854,000 in the first half of 1967 for construction of the 125,000 kva Dave Johnston Substation at Glen Rock, Wyoming; $17,246,000 in 1965, $20,000,000 in 1966 and $10,542,000 in the first half of 1967 for construction of electric distribution facilities; $1,529,000 in 1965, $1,885,000 in 1966 and $1,000,000 in the first half of 1967 for construction of additions to steam heating, water and telephone facilities; and $5,947,000 in 1965, $5,750,000 in 1966 and $2,800,000 in the first half of 1967 for other plant facilities, surveys and investigations.

According to the application, the Notes are to be discharged with the proceeds from permanent financing. Applicant states that the timing and method of sale of such permanent securities are not presently determinable, however, it is expected that the necessary permanent financing will consist of $30,000,000 of First Mortgage Bonds.

Applicant does not request by its amendment any other changes in the authorization heretofore granted in this matter.

As indicated in the previously mentioned order of the Commission, issued February 14, 1964, notice of this proceeding has been given to the Public Utilities Commission of Idaho, the Public Service Commission of Montana, the Utilities and Transportation Commission of Washington, the Public Service Commission of Wyoming, the Public Utility Commissioner of Oregon and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on October 16, 1963 (28 F.R. 11087), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before October 25, 1963, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

Good cause has been shown and it is necessary and appropriate for the purposes of the Act that Paragraph (B) of the Commission's order issued February 14, 1964, be modified as hereinafter provided.

The Commission orders:

(A) Paragraph (B) of the Commission's order issued February 14, 1964, in the above-entitled docket is amended to read as follows:

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant hereto being not later than June 30, 1967.

(B) All other terms and conditions as set forth in Paragraphs (A), (C) and (D) of the aforesaid Commission order issued February 14, 1964, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP65-224

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 3, 1965)

On January 25, 1965, South Georgia Natural Gas Company (Applicant) filed in Docket No. CP65-224 an application, as supplemented on March 5 and March 29, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities, and the transportation and sale of natural gas, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 145.5 miles of high-pressure line varying in diameter from 8 inches to 2 inches, extending from a point of connection with Applicant's existing system near Weston, Georgia, to West Bainbridge, Georgia,[1] together with metering, regulating and related facilities necessary for the proposed service.

The proposed facilities will be utilized to provide increased volumes of natural gas to existing customers, and initial firm service to eight new resale customers,[2] and interruptible service to one direct sale industrial customer, Great Southern Land and Paper Company (Great Southern). Third year estimated firm annual and peak day requirements for the eight municipalities are 334,006 Mcf and 4,169 Mcf respectively. The sale to Great Southern is estimated to total 540,000 Mcf annually. Applicant's total firm peak day sales in the 1967-68 heating season are estimated to be 52,886 Mcf.

Total estimated cost of Applicant's proposed facilities is $2,652,617, and will be financed with proceeds from the issuance and sale of First Mortgage Pipe Line Bonds and with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

---

[1] By order issued February 5, 1965, 33 FPC 185, in Docket No. CP65-156 South Georgia was authorized to construct four miles of 6⅝-inch line from Bainbridge to West Bainbridge, Georgia rendering moot the authorization sought herein for the same facility.

[2] Arlington, Blakely, Colquitt, Cuthbert, Donalsonville, Edison, Ft. Gaines and Shellman, Georgia. By order issued April 12, 1965, 33 FPC 721, in Docket No. CP65-205 South Georgia was authorized to serve Meigs, Georgia rendering moot the authorization sought herein for the same sale.

The Commission finds:

(1) Applicant, South Georgia Natural Gas Company, a Georgia corporation having its principal place of business in Thomasville, Georgia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 3, 1954, in Docket No. G–1915 (13 FPC 666).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, South Georgia Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of South Georgia for firm service to its customers.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the sales of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within 18 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHWEST GAS CORPORATION, DOCKET NO. CP65–333

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 3, 1965)

On April 20, 1965, Southwest Gas Corporation (Applicant) filed in Docket No. CP65–333 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant seeks authority to construct and operate approximately 21 miles of 8⅝ inch O.D. pipeline from a point near Carson City, Nevada, to the north end of Lake Tahoe near the California-Nevada state line for the sale of natural gas to customers of all classes in the States of California and Nevada. The third-year peak day and annual volumes for distribution systems to be served from the proposed facilities are stated to be 4,176 Mcf and 508,000 Mcf, respectively. Shortly following the filing of this application, Applicant proposes to file applications with the state regulatory bodies of California and Nevada for authorization to distribute natural gas in the northern Lake Tahoe area. Estimated cost of the distribution facilities is $1,537,928.

The estimated cost of the proposed facilities is stated to be $727,379, which will be financed from current funds.

Applicant proposes to offer service to its distribution customers under its Schedule G–10, as presently on file with and approved by the Nevada Public Service Commission. These rates will also be offered to the California customers upon approval of this Schedule by the California Public Utilities Commission.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application have been filed.

At a hearing held on May 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southwest Gas Corporation, a California corporation having its principal place of business in Las Vegas, Nevada, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued April 14, 1965, in Docket No. CP65–99 (33 FPC 796).

(2) The proposed construction and operation of facilities, transportation and sale of natural gas in interstate commerce as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction and operation of facilities, transportation and sale of natural gas in interstate commerce as hereinbefore described are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding authorizing the construction and operation of facilities, transportation and sale of natural gas in interstate commerce as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within twelve months of the date on which this order issues.

(D) Southwest Gas Corporation before construction of the facilities authorized hereby shall file with the Commission appropriate evidence of authorization by the regulatory bodies of California and Nevada authorizing the sale and distribution of natural gas in the respective states as proposed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WARREN PETROLEUM CORPORATION (OPERATOR), G–20478, RI63–486*; KERR-MCGEE INDUSTRIES, INC., G–20479, RI63–460*; TEXACO INC., G–20451, RI64–69; CITIES SERVICE OIL COMPANY, RI63–485, RI65–269

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, REQUIRING FILING OF NOTICES OF CHANGE, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued June 3, 1965)

There is before us for consideration an Offer of Settlement filed by Warren Petroleum Corporation, Kerr-McGee Oil Industries, Inc., Texaco Inc., and Cities Service Oil Company (WKTC) pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure in the above-docketed proceedings which concern proposed increased rates under six FPC Gas Rate Schedules for sales of natural gas to Lone Star Gas Company (Lone Star) and Cities Service Gas Company (Cities) from the Garvin County Plants, Garvin County, Oklahoma. These proceedings involve proposed increased rates, collected subject to refund, from a rate of 11.0¢ per Mcf of natural gas at 14.65 psia to 16.8¢ per Mcf in 1960 and to 17.9¢ per Mcf in late 1963 and early 1964.

In summary the settlement proposal as filed by WKTC provides:

(1) a settlement rate of 14.5¢ per Mcf at 14.65 psia under each of the rate schedules for jurisdictional sales of natural gas to Lone Star and Cities;

(2) WKTC waives the right to file for any contractually authorized increases in rates under the subject rate schedules until July 1, 1968, excepting for possible increases occasioned by the tax reimbursement provisions contained therein;

(3) WKTC proposes to refund approximately $1,670,975 of the monies collected subject to refund through March 1, 1964, plus $103,194 interest computed at 7% to June 1, 1964. Additionally, it proposes to refund the difference between the settlement rate and the effective contract rate, with applicable interest, for deliveries subsequent to March 1, 1964.

---

*And Rate Orders of October 12, 1960, Permitting Filing, Providing for Hearing on, and Making Rate Effective Subject to Refund.

WKTC reserves the right to file for increased rates if we should determine as a result of an applicable area rate proceeding that the just and reasonable rate for the area is higher than the settlement rate, and, of course, WKTC agrees that if our determination in such a proceeding is that the proper rate is lower than the settlement rate it agrees to abide promptly with our decision.

WKTC states in its offer that it has since 1954 added substantial volumes of gas for the purpose of meeting its commitments under the subject rate schedules. It had done so by negotiating over 300 new contracts in four counties surrounding the Garvin County Plant complex. In so doing, it has been faced with considerable competition from other purchasers of natural gas. An appreciable portion of such competition has resulted from intrastate consumption beyond the jurisdiction of this Commission. Therefore, WKTC contends that its proposed settlement rate of 14.5¢ per Mcf of natural gas is necessary for it to maintain the deliverability required by its contracts with Lone Star and Cities, and, as a result, avoid a substantial increase in its unit cost of processing gas through the plants. We have considered similar circumstances in the settlement proposal filed by *National Fuels Corporation*, Docket No. G–20426, and in the order issued therein on May 24, 1965, 33 FPC 1048, we stated that such circumstances were sufficiently analogous to those in other settlement proposals wherein we approved rates in excess of the applicable area increased rate ceilings as to require similar treatment. Since the circumstances set forth by WKTC are similar, if not identical, to those considered by us in *National, supra*, we believe that an exception to the applicable area increased rate ceiling is likewise warranted here. However, we do not find good cause to justify a rate above 14.0¢ per Mcf of natural gas, nor do we find any reason not to require refunds of all amounts collected in excess of those which would have been collected at 14.0¢ per Mcf on sales of gas from September 1, 1961, to the date of the issuance of this order with applicable interest thereon.

The data submitted by WKTC show that supplies contracted for prior to 1954 and those contracted for subsequent thereto, as well the supplies required to maintain deliverability in the future, when considered in conjunction with the ceiling prices set forth in the policy statement, support our determination that a rate of 14.0¢ per Mcf of natural gas is in the public interest. Consequently, we shall condition our approval of WKTC's proposal to require each, or any of the co-owners to make appropriate filings to reflect a rate of 14.0¢ per Mcf of natural gas at 14.65 psia.

In regard to refunds, we have utilized cost of service studies and revenues based on contract rates to determine WKTC's revenue-cost relationship in its jurisdictional operation of the Garvin County Plants. Additionally, we have utilized data available to us from company-wide settlements of some of the companies involved (*e.g.*, *Cities Service Production Company*, *et al.*, Docket No. G–9510, *et al.*, 28 FPC 1114; *Texaco Inc.*, Docket No. G–8969, *et al.*, 30 FPC 1631). These data indicate that it is appropriate that we require refunds to be computed for sales made to Lone Star and Cities on and after September 1, 1961, with applicable interest, and we shall condition our approval of the settlement offer to so provide. Accordingly, the amount of monies to be refunded will be approximately $4,800,000, exclusive of applicable interest to be computed to the date of issuance of this order, and WKTC's future revenues will be decreased approximately $1,340,000 annually as a result of the settlement, if each of the co-owners accepts the terms and conditions of this order.

For all of the reasons set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require WKTC to retain the amount of refunds, with interest, ordered herein in trust until further order directing the nature of their disposition and also to submit within 45 days of this order to the Commission and to Lone Star and Cities a detailed report setting out the amount of refund related to the instant rate schedules, the volumes of gas sold thereunder and the period covered. We shall also by separate action direct Lone Star and Cities, within 10 days from the receipt of such reports, to each submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its customers and the names of such customers and amounts of refund each would receive, or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by WKTC (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Lone Star or Cities (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

We find that approval of the proposed settlement, as conditioned herein, would serve the public interest.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by WKTC on May 14, 1964, and as herein conditioned is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by WKTC on May 14, 1964, is hereby approved in accordance with the provisions of this order.

(B) WKTC shall each file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 14.0¢ per Mcf of natural gas rate specified herein. The notices of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) WKTC shall each compute the difference between the rate collected subject to refund and the related settlement rate for the period from September 1, 1961, to the date of this order, together with interest as specified in the above dockets to the date of this order.** WKTC shall each within 45 days from the date of this order submit a report to the Commission, and serve a copy on Lone Star and Cities setting out the amount of refund related to the subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination and the period covered.

(D) WKTC shall retain the refund amounts shown in the report required under paragraph (C) above, subject to further order of the Commission directing the disposition of those amounts.

(E) If WKTC elects to commingle these retained refunds with each of its general assets and use them for each of their corporate purposes, each who so elects shall pay interest thereon at the rate of 6% per annum on all funds thus available from July 15, 1965 to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

**And Rate Orders of October 12, 1960, Permitting Filing, Providing for Hearing on, and Making Rate Effective Subject to Refund.

(F) WKTC shall each tender for filing on or before July 15, 1965, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon Lone Star and Cities. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, each of the Escrow Agreements shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreements shall be entered into between WKTC and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) WKTC, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(G) WKTC shall each, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the requirement that it agree to a filing moratorium upon each of the subject filed rate schedules to July 1, 1968.

(H) Any party to the proceedings having objection to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission (original and one copy) and by serving copies on the other parties.

(I) If as a result of any objections filed pursuant to paragraph (H) hereof, the Commission by subsequent order changes WKTC's duties and obligations hereunder, each of WKTC's acceptance of this settlement order shall not be binding on it without its express agreement.

(J) Upon compliance by WKTC with all the terms and provisions of this order, the Section 4(e) proceedings in Docket Nos. G-20478, RI63-486, G-20479, RI63-460, G-20451, RI64-69, RI63-485 and RI65-269 shall terminate. Additionally, the order of October 12, 1960, Permitting Filing, Providing for Hearing on, and Making Rate Effective Subject to Refund, concerning the sales from the Garvin County Plants shall terminate.

(K) Upon termination of the Section 4(e) proceedings set forth in Paragraph (J) above, the proceedings in Docket Nos. RI63–485 and RI65–269 shall be severed from the consolidated proceedings, Docket No. RP64–9, *et al.*

(L) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by WKTC, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against WKTC or any other companies, person or parties affected by this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GAS BOARD OF THE CITY OF OAKMAN, ALABAMA, DOCKET NO. CP65–297

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 4, 1965)

On March 24, 1965, the Gas Board of the City of Oakman, Alabama (Applicant) filed in Docket No. CP65–297 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Southern) to establish physical connection of its natural gas transmission facilities with the facilities to be constructed by Applicant and sell and deliver natural gas to Applicant for resale and distribution in the City of Oakman, Walker County, Alabama and environs, all as more fully set forth in the application. However, Applicant proposes that the Gas Board of the City of Parrish, Alabama transport natural gas for Applicant from Southern's line to Parrish. By separate order in Docket No. CP65–298 we are directing Southern to connect its facilities with those of Parrish and to render natural gas service to Parrish, *infra*, p. 1217.

Applicant proposes to construct and operate a natural gas distribution system in Oakman, and approximately 5.8 miles of 3-inch transmission line extending therefrom to an interconnection with the Parrish transmission line at the Parrish town border. Oakman's application for an order directing Southern to connect its facilities with those of Oakman is inappropriate. In this order we need only direct Southern to sell gas to Oakman.

Southern filed an answer in this proceeding on April 28, 1965, and a modification thereof on May 6, 1965, stating it had no objection to the granting of the requested order for service.

Applicant's requirements for the initial three-year period are:

	First year	Second year	Third year
Annual (Mcf)	12,010	17,901	24,007
Peak day (Mcf)	146	216	286

Cost of Applicant's proposed construction is $135,000, and will be defrayed from the sale of natural gas revenue bonds.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on April 3, 1965 (30 F.R. 4371). No protest, petition to intervene, or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) Applicant, Gas Board of the City of Oakman, Alabama, having its principal place of business in Oakman, Walker County, Alabama, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Southern to sell natural gas to Applicant for resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Southern for distribution in the City of Oakman, Alabama, within one year from the date of the issuance of this order.

(5) The requirement that Southern serve Applicant, as hereinafter ordered, will not place an undue burden upon it nor to impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Southern Natural Gas Company be and is hereby directed to sell natural gas to Applicant for resale as hereinbefore described.

(B) Southern shall report to the Commission the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GAS BOARD OF THE CITY OF PARRISH, ALABAMA, DOCKET NO. CP65-298

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 4, 1965)

On March 24, 1965, the Gas Board of the City of Parrish, Alabama (Applicant), filed in Docket No. CP65-298 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Southern) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in the City of Parrish, Walker County, Alabama and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Parrish and approximately 5.6 miles of 3-inch and 4-inch transmission line extending therefrom to a proposed point of interconnection with Southern's pipeline at a point near Cordova, Alabama. Applicant also proposes to take delivery of natural gas for the account of Oakman, Alabama, as set forth in the application in Docket No. CP65-297.

Total estimated volumes of natural gas required to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	22,343	33,439	45,073
Peak day (Mcf)	270	401	532

Total estimated cost of Applicant's proposed construction, including transmission facilities and distribution system, is stated to be $250,000, and will be financed with proceeds from the issuance and sale of natural gas revenue bonds to Southern Bond Company of Jackson, Mississippi.

Southern filed an answer in this proceeding on April 28, 1965, and a modification thereof on May 6, 1965, stating it had no objection to the granting of the requested order for service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on April 7, 1965 (30 F.R. 4509). No protest, petition to intervene, or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated October 6, 1942 in Docket No. G–296 (3 FPC 822).

(2) Applicant, Gas Board of the City of Parrish, Alabama, having its principal place of business in Parrish, Walker County, Alabama, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Southern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell natural gas to Applicant for resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Southern for distribution in the City of Parrish, Alabama, within one year from the date of the issuance of this order.

(5) The requirement that Southern serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Southern Natural Gas Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell natural gas to Applicant for resale as hereinbefore described.

(B) Southern shall report to the Commission the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

LOUISIANA NEVADA TRANSIT COMPANY, DOCKET NO. CP65-336

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 4, 1965)

On April 21, 1965, Louisiana Nevada Transit Company (Applicant) filed in Docket No. CP65-336 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing June 1, 1965, and the operation of certain natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The total cost of the proposed facilities will not exceed a maximum of $200,000, and no single project will exceed a cost of $50,000, which costs will be financed from cash on hand.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and existing supplies of natural gas in various producing areas adjacent to its system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 3, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Louisiana Nevada Transit Company, a Nevada corporation having its principal place of business in Ada, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 20, 1942, in Docket No. G-246 (3 FPC 837).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing June 1, 1965, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $200,000, with no single project to exceed a cost of $50,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Louisiana Nevada Transit Company, to construct during the 12-month period commencing June 1, 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing June 1, 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $200,000, with no single project to exceed a cost of $50,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act is hereby granted.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-334

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued June 7, 1965)

On April 21, 1965, Cities Service Gas Company (Applicant), filed in Docket No. CP65-334 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain transmission facilities, all as more fully set forth in the application.

Applicant proposes to: (1) abandon and salvage approximately 5,826 feet of 2-inch and 4,897 feet of 4-inch pipeline in its Greenwich gas pipeline, Sedgwick County, Kansas; (2) abandon by sale to The Gas Service Company (Gas Service) approximately 10,652 feet of its Greenwich 2-inch pipeline in Sedgwick County, Kansas, for use by Gas Service in serving several rural domestic customers in the area; (3) construct and operate meter facilities to measure the gas to be sold to Gas Service from the line to be sold to it; (4) abandon and salvage approximately 1,850 feet of 2-inch, 2,728 feet of 3-inch and 10,538 feet of 4-inch pipeline in its Chase Fuel System in Barton County, Kansas; (5) abandon by sale to Union Gas System, Inc. (Union) approximately 3,814 feet of its Craig Free Gas 2-inch pipeline in Johnson County, Kansas for use as part of Union's general system to serve rural domestic customers in the area; (6) abandon by sale to the City Utilities of Springfield, Missouri, approximately one mile of its Springfield 16-inch pipeline, Greene County, Missouri, in 1965 and another mile of the same line in 1966, all for use in the Springfield distribution system; (7) abandon and salvage approximately 9,000 feet of 8-inch, 825 feet of 7-inch and 5,768 feet of 6-inch pipeline in its Boyer Storage System in Butler County, Kansas.

Applicant proposes abandonment of the designated facilities for the reason that they are either no longer required in order to continue service to its existing customers or they can be more feasibly utilized by the purchasing distribution companies.

The estimated cost of facilities to be salvaged is $7,800, with a salvage credit of $11,800. The facilities to be sold to Gas Service, Union and the City Utilities of Springfield will be sold for a total sum of $57,950. The total estimated cost of the facilities which are to be constructed is $1,050, which sum will be paid for out of treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on June 3, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Cities Service Gas Company, of the facilities hereinbefore described, as more fully described in the application and exhibits filed in this proceeding, are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Cities Service Gas Company authorizing the construction and operation of facilities, and the transportation of natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities hereby authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-275

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 7, 1965)

On March 8, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-275 an application, as supplemented on April 22, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate an additional 4,000 horsepower compressor unit with related facilities at its existing Hugoton Compressor Station in Stevens County, Kansas. The proposed facility is required in order to offset a continuing decline in the Kansas-Hugoton Field pressures, and will permit Applicant to maintain peak day deliverability and to fully utilize yearly allowables of its gas suppy from this area.

Total estimated cost of the proposed facilities is $1,150,000, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 3, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Panhandle Eastern Pipe Line Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP65–165

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 8, 1965)

On December 9, 1964, Florida Gas Transmission Company (Applicant) filed in Docket No. CP65–165 an application, as supplemented February 5, February 23, March 2 and March 26, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale and delivery of natural gas to its existing customers, all as more fully set forth in the application.

Applicant proposes to construct and operate: (1) a total of 15 30-inch mainline loops, aggregating approximately 210 miles, on its transmission pipeline system at various points between its Compressor Station 7 at Eunice, Louisiana, and its Compressor Station 16 at Brooker, Florida; (2) two new compressor stations, one near Juniper Springs, Florida, and the other near Fort Pierce, Florida, totaling 10,500 installed horsepower; (3) additional units at eight existing compressor stations, and turbocharging at two existing compressor stations, which facilities will provide a total of 20,200 installed horsepower; (4) one new 18-inch supply lateral approximately 51 miles in length, extending from East White Lake Field in Southern Louisiana to Applicant's existing 24-inch main pipeline near Fort Barre, Louisiana; (5) approximately 22 miles of 6 and 8-inch line loops on four of its sales laterals in Florida; (6) one new meter and regulator station in East White Lake Field, for the receipt of gas; and (7) miscellaneous additions and changes in its existing sales meter and regulator stations in Florida.

Construction of the proposed facilities will increase Applicant's pipeline system annual average day capacity from 358,930 Mcf to 444,060 Mcf, an increase of 85,130 Mcf.

Applicant proposes to obtain the necessary additional gas from Pan American Petroleum Corporation (Pan American) and Austral Oil Company Incorporated (Austral), pursuant to an agreement between Applicant as buyer and Pan American and Austral as sellers dated November 20, 1964, under which Applicant proposes to purchase an average daily quantity of 80,000 Mcf. Sellers are obligated to provide a maximum daily quantity of 102,000 Mcf.

Total estimated cost of Applicant's proposed construction is $42,690,000, and will be financed by the issuance and sale of $25,150,000 of First Mortgage Pipeline Bonds and $11,000,000 of Debentures, with the balance of $6,540,000 to be financed with cash on hand.

Applicant was issued a limited temporary certificate herein on April 9, 1965, authorizing the construction and operation of facilities for the sale and delivery of additional volumes of natural gas to Swift & Company at its Agricola Drying Plant, Polk County, Florida.

Petitions to intervene herein were filed by Seminole Pipeline Company and the Cities of Homestead and Kissimmee, Florida, on January 13, 1965, and April 19, 1965, respectively. However, on March 11, 1965 and May 24, 1965, respectively, these petitions to intervene were withdrawn. No other interventions have been filed.

At a hearing held on June 3, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits and supplements thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G–9262 and G–9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform

the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation by Applicant of the proposed facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Florida Gas Transmission Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of the aforesaid Regulations, within 18 months from the date on which this order issues.

(D) The grant of the certificate issued hereby shall not be construed as determining for the purpose of any future rate proceeding involving Applicant the matter of the proper costs to be allocated to the sales undertaken pursuant to the authorization granted herein.

(E) The certificate issued hereby is granted on the express condition that Applicant shall not make a filing under Section 4 of the Natural Gas Act to increase its Rate Schedule G rate above the presently effective rate of 57 cents per M^2Btu prior to the expiration of the first three years of operation of the expanded system, or January 1, 1970, whichever is earlier; and provided said 57-cent rate remains in effect, Applicant shall not make a filing under Section 4 of the Act to increase its Rate Schedule I rate above the presently effective rate of 33 cents per M^2Btu prior to the expiration of the first three years of operation of the expanded system, or January 1, 1970, whichever is earlier. The foregoing condition, however, is without prejudice to Applicants' right to file for rate increases due to increases in costs amounting to $100,000 or more annually resulting from increases in tax rates or from the imposition of new taxes on or after April 1, 1965 to which Applicant is determined to be subject.

(F) The condition set forth in paragraph (E) of this order, which Applicant has indicated it is willing to accept, is without prejudice to the Commission's right to undertake at any time such rate proceedings as it may find necessary or appropriate to establish just and reasonable rates for Applicant and issue such orders in connection therewith as found to be necessary to protect the public interest.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP65-284

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 8, 1965)

On March 15, 1965, Florida Gas Transmission Company (Applicant) filed in Docket No. CP65-284 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate a line tap and approximately 500 feet of 4-inch pipe, together with a meter and regulator station, at a point on its 6-inch Avon Park lateral in Highlands County, Florida, for the delivery of natural gas on a preferred interruptible basis to Sebring Utilities Commission (Sebring), Sebring, Florida. Annual and peak day deliveries are estimated to be 650,000 M^2Btu and 2,400 M^2Btu respectively.

Sebring will utilize the gas in its power plant for the production of electricity to be distributed to residential, commercial and industrial customers in and around the City of Sebring, Florida.

Total estimated cost of Applicant's construction is $27,000, and will be financed with cash on hand.

On April 19, 1965, the Cities of Homestead and Kissimmee, Florida filed herein a petition to intervene. However, on May 24, 1965, said petition was withdrawn. No other interventions have been filed.

At a hearing held on June 3, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G–9262 and G–9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation by Applicant of the proposed facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Florida Gas Transmission Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of the aforesaid Regulations, within one year from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligation of Applicant for firm service to its customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP65–288

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 8, 1965)

Florida Gas Transmission Company (Applicant) filed an application on March 16, 1965, in Docket No. CP65–288, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 2.04 miles of 4½-inch lateral pipeline, together with meter and regulator facilities, extending from Applicant's existing 8-inch Sarasota lateral near Pierce, Florida, to the proposed facilities of Consumers Cooperative Association (Consumers), a direct industrial customer, to be located at Green Bay, Polk County, Florida, and the transportation and delivery of natural gas thereto on a preferred interruptible basis, all as more fully set forth in the application.

Applicant proposes to construct and operate the said facilities to deliver to Consumers up to 1550 Mcf of natural gas daily and up to 450,000 Mcf annually on a so-called "preferred interruptible" basis, under the terms of a contract between Applicant and Consumers dated February 11, 1965.[1] The natural gas will be used as fuel in the processing of phosphate-bearing rock and ammonia in the manufacture of phosphatic fertilizer in Consumers plant.

The estimated cost of the facilities necessary to the transportation and delivery of the proposed volumes of natural gas to Consumers is $68,000, which will be defrayed from Applicant's current funds.

The natural gas requirements of Consumers' plant will be subject to curtailment when necessary to meet the Applicant's firm service requirements. An appropriate condition to provide for such curtailment will be attached to the certificate issued in this proceeding.

After due notice the Cities of Homestead and Kissimimee, Florida, filed on April 19, 1965 a joint petition to intervene in this proceeding. On May 24, 1965 the said petition was withdrawn. No other petitions to intervene or notice of interventions or protest to the granting of the application has been filed.

At a hearing held on June 3, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities and transportation of natural gas, as hereinbefore described and as more fully described in the ap-

---

[1] The contract provides for a rate of 36.0 cents per Mcf plus upward adjustment for increases in purchased gas costs or oil prices.

plication and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate be granted on the express condition that the interruptible service authorized herein should be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) The certificate issued in paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER AND ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 10, 1965)*

Syllabus

1. Conventional requirements of public convenience and necessity under Section 7(e) of the Natural Gas Act applicable to proposed sales have been met. P. 1233.
2. *Rejecting* contention that instant proceeding contemplated decision on propriety of Btu adjustment provisions in R-200 rule-making proceeding, Commission *concludes* such determination should be made here. P. 1234.
3. Upward Btu adjustment provisions in issue are reasonably required by public convenience and necessity. P. 1235.
4. Unless pipeline is in position to offer reasonable premium for higher Btu gas, producers will have strong economic interest to extract high Btu hydrocarbons therefrom before delivery. P. 1235.
5. Contracts here containing upward Btu provisions are in-line—such prices are plus or minus appropriate Btu adjustments. P. 1235.
6. Suggestion that guideline prices in Section 2.56(a) of Regulations necessarily constituted outer limit on prices at which producers' sales would be permanently certificated, even where, as here, it is demonstrable that area in-line price is higher, is without merit. P. 1236.
7. 1,000 Btu's is the adjustment base that has gained acceptance in subject areas; any attempt to provide another base would disrupt all contracts there. P. 1236.
8. For purpose of issuing certificates in pricing areas herein, Commission adopts 1,000 Btu base for upward adjustments if permitted by contract. P. 1236.
9. Commission requires proportional downward Btu adjustments where parties provide only for upward adjustment. P. 1237.
10. Record does not justify transportation cost adjustment proposed by some interveners. P. 1237.
11. Transwestern's contracts conditioned to require that in event producers extract higher Btu gases, measurement of Btu content for price determination will be made at plant outlet. P. 1237.
12. Should Btu adjustment provisions ever be used in manner contrary to public interest, Commission can take such action as may be required. P. 1237.
13. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act.

Homer E. McEwen, Jr. and *Dale E. Doty* for Sunray DX Oil Company.

H. L. Hester, Harry S. Littman and *Harold L. Talisman* for Ashland Oil & Refining Company.

Bernard A. Foster, Jr. and *Lewis Carroll* for The Atlantic Refining Company, Champlin Oil & Refining Co., Colorado Oil & Gas Corp. (Operator), *et al.* and Humble Oil & Refining Co.

---

*Initial decision appears on p. 1238. Rehearing denied by order issued July 28, 1965, 34 FPC 129.

Boyd D. Taylor for Cabot Corporation.

O. T. Forde, Jr., Michael J. Shea, Frank P. Saponaro, Jr. and *D. Mackey* for Colorado Interstate Gas Company.

Bruce R. Merrill, Tom Burton and *Joseph C. Johnson* for Continental Oil Co.

John E. Thomason and *Arthur F. Whitt* for Gulf Oil Corporation.

Thomas Moxcey for J. M. Huber Corporation.

Jack T. Conn and *William Amory Underhill* for Kerr-McGee Oil Industries.

Charles V. Shannon, Paul S. Davis and *Louis Flax* for Michigan Wisconsin Pipe Line Company.

Charles McDugald and *Phillip McKinzie* for Natural Gas Pipeline Company of America.

F. Vinson Roach, Jack C. Osborne, Patrick J. McCarthy, Daniel B. O'Brien, Walter E. Gallagher and *Thomas F. Ryan, Jr.* for Northern Natural Gas Company.

Lewis G. Mosburg, Jr. for Oklahoma Independent Petroleum Association.

F. T. Searls, Malcolm H. Forbush and *John B. Gibson* for Pacific Gas & Electric Company.

O. C. Sattinger, John P. Egan and *K. R. Edsall* for Pacific Lighting Gas Supply Company.

J. P. Hammond, William H. Emerson and *Carroll L. Gilliam* for Pan American Petroleum Corp.

Raymond N. Shibley and *William E. LeBuhn* for Panhandle Eastern Pipe Line Co.

Alan R. Squires and *Herbert E. Squires* for Pennsylvania Public Utility Commission.

Charles E. McGee and *James D. McKinney, Jr.* for Pioneer Production Company.

John C. Snodgrass for The Pure Oil Company.

Sherman Chickering, C. Hayden Ames and *Stanley Jewell* for San Diego Gas & Electric Co.

W. E. Notostine for The Shamrock Oil and Gas Corporation.

Oliver L. Stone and *Thomas G. Johnson* for Shell Oil Company.

Angus A. Davidson, Charles E. McGee and *James D. McKinney, Jr.* for Sinclair Oil & Gas Company.

Bradford Ross and *Lewis Carroll* for Skelly Oil Company.

Tom P. Hamill, Robert D. Haworth and *Lamar Smith* for Socony Mobil Oil Company, Inc.

William K. Tell, Jr. and *Dixon Morgan* for Sohio Petroleum Company.

John Ormasa and *K. R. Edsall* for Southern California Gas Co.

Milford Springer, Robert M. Olson and *K. R. Edsall* for Southern Counties Gas Co. of California.

Justin R. Wolf, Charles A. Case, Jr. and *Stanley Wanger* for Standard Oil Company of Texas, a Division of California Oil Company.

John A. Ward, III, Phillip D. Endom, William C. Phelps and *John O'Dean* for Sun Oil Company.

William T. Kilbourne for The Superior Oil Company.

Alfred C. DeCrane, Jr. and *James J. Flood, Jr.* for Texaco Inc.

George D. Horning, Jr., C. Frank Reifsnyder and *Patrick G. Sullivan* for Union Oil Co. of California.

John R. Rebman for Phillips Petroleum Company.

James W. McCartney and *W. H. Drushel, Jr.* for Transwestern Pipeline Company.

Albert D. McClain and *Jesse H. Foster, Jr.* for Humble Oil & Refining Company.

Richard E. Tuttle, J. Calvin Simpson and *John T. Murphy* for People of the State of California and Public Utilities Commission of the State of California.

John W. Scott and *Louis L. DaPra* for Minnesota Valley Natural Gas Company.

Edwin S. Nail for Amerada Petroleum Corporation.

Robert L. Russell and *John J. Keating, Jr.* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

O'CONNOR, *Commissioner:*

This proceeding arises under Section 7(e) of the Natural Gas Act (Act) and is before us on exceptions[1] to Presiding Examiner William C. Levy's initial decision issued November 9, 1964. It involves 233 applications[2] by producers of natural gas for certificates of public convenience and necessity authorizing sales to six pipelines, namely, Michigan Wisconsin Pipe Line Company, Panhandle Eastern Pipe Line Company, Natural Gas Pipeline Company of America, Northern Natural Gas Company, Transwestern Pipeline Company, and Cimarron Transmission Company. The proposed sales are from the Commission's five pricing areas of Kansas, Oklahoma Panhandle, Oklahoma Other, and Texas Railroad Districts Nos. 9 and 10. The areas of Colorado and Utah were included only in the investigatory aspects of the proceeding. A large number of temporary authorizations that have been issued on the sole condition that they are subject to the results reached herein will also be determined.

The order instituting this proceeding[3] resulted from the Commission's proposed rulemaking proceeding in Docket No. R–200, which was instituted by a Notice of Proposed Additions to the Commission's Statement of General Policy, etc.[4] We there proposed to fix standards for determining whether an independent producer's gas is of "pipeline quality." Among other things, this necessitated determining whether and to what extent producer Btu adjustment provisions should be given effect. Following notice of R–200 a large number of pending applications to certificate contracts containing upward Btu adjustment clauses accumulated, and this proceeding was instituted, among other things, to dispose of those applications.

The principal questions presented herein are the necessity, propriety and impact of Btu adjustment provisions contained in producers' contracts, and the effect, if any, to be given such provisions. To permit a broad consideration of such adjustment provisions the order also provided for a general investigation under Section 14 of the Act.

The Examiner found that the conventional requirements of public convenience and necessity under Section 7(e) of the Act applicable to the sales proposed have been met. This determination is not disputed. The Examiner further found that Btu adjustment provisions do not circumvent Commission regulatory policies, and he concluded that upward Btu adjustments are necessary and proper. He would issue permanent certificates allowing such provisions to be fully effective without alteration or condition.

The California interveners agree that producer Btu adjustment provisions generally serve a useful function, but contend that such provisions could have a harmful impact on consumers by permitting the producers' rates to increase above the guideline prices established by our Statement of Policy No. 61–1.[5] Accordingly, these interveners request that such provisions be revised downward from proposed maximum price level standards. Although otherwise supporting the Examiner's decision, Staff recommends a weighted average Btu base for each pricing area. We agree with the Examiner's recommendation and, with only minor modifications, adopt his decision.

---

[1] Exceptions were filed on December 7, 1964, jointly by Southern California Gas Company, Southern Counties Gas Company of California and Pacific Lighting Gas Supply Company; on December 9, 1964, by the Commission's Staff; and on December 10, 1964, by the People of the State of California. Reply exceptions were subsequently filed by the various parties. Unless otherwise noted we shall refer to the above parties (excluding Staff) as the "California interveners."

[2] The following dockets are no longer a part of this proceeding: G–4281; G–15148; G–11122; G–14143; G–16109; G–18630; G–19051; CI61–1201; G–12353; G–17781; G–19239; CI60–361; CI60–578; CI61–439; CI61–771; CI61–794; and CI63–346. Docket No. CP61–77 was omitted from the Examiner's docket listing, and is added thereto.

[3] At 29 FPC 1079 (1963).

[4] Noticed at 18 F.R. 260, 261 (1961).

Scope of the proceeding.—There is a threshold question concerning the scope of this proceeding. The California interveners insist that the order instituting this proceeding contemplated a decision on the propriety of Btu adjustment provisions in the R–200 proceeding and not herein. They further contend that to approve the producer Btu adjustment provisions in this case would predetermine and render ineffectual the producer pricing policy we are presently considering in the R–200 and the area rate proceedings. Accordingly, they request that, if such provisions are to be approved, the producers' certificates should still be subject to such policies as may be approved in those proceedings.

We conclude that for the purpose of issuing permanent certificates under Section 7 the propriety of Btu adjustment provisions should be determined without further delay. The order instituting this proceeding contemplated such a decision, and the record is undoubtedly adequate for this purpose. Essentially, what is involved in the present certificate proceeding is determining whether a particular quality adjustment common to a number of pricing areas is compatible with the public interest and, if so, its relation to the in-line price at which sales should be certificated therein. As to the appropriate area rate proceedings, we can make whatever findings respecting the relationship of Btu adjustment provisions to just and reasonable area rates that the circumstances and policies there involved may require. As to R–200, the investigation herein provides useful information for decision there.

We especially note in this connection the valuable evidence adduced as to potential utility to the pipelines in the areas involved herein and to their customers of an over-all gas stream of more than the generally accepted Btu content for these areas The evidence indicates that with proper pipeline and distribution company engineering, there can be savings under present gas usage conditions both in direct transmission costs and in the amount of gas needed to perform a particular heating function. These savings could be increased still more through improved gas consumption equipment. Despite this significant showing, however, the present record is not adequate for any precise determination of the potential savings, since these depend in part on facts of individual pipeline construction not before us. In any event it would be premature to attempt to draw any policy conclusions from the facts of record here in the absence of a comprehensive study of pipeline tariff practices and other existing operational characteristics of both the pipelines and the distribution companies which are relevant to a determination of whether gas consumers would secure the benefits of an average pipeline Btu content of substantially more than 1,000 Btu per cubic foot.[6]

---

[5] 24 FPC 818 (1960).

[6] We recognize that where a pipeline with a higher than 1,000 Btu average gas content extracts such higher Btu's (or, where extraction activities bring the gas stream below the 1,000 Btu level) the Commission in certification and rate proceedings can require the pipeline to compensate its customers for the shrinkage volumes resulting from the extraction facilities. See *e.g., Mid-America Pipeline Company* v. *F.P.C.*, 330 F. 2d 226 (CADC-1964). And as indicated above, it might in such instances also be appropriate to give consideration to the question of whether bracket provisions in a pipeline tariff permitting a broad range in Btu content above and below 1,000 Btu, without affecting the pipeline's sales price (and thus making possible consistent free extraction of considerable heat value), are necessary or appropriate in the public interest.

The Btu Adjustment Provisions in Issue are Reasonably Required by Public Convenience and Necessity.—The record makes it clear that the Btu adjustment provisions in issue here are in the public interest, performing a useful and indeed essential function in the production and marketing of natural gas.

It is no coincidence that, while downward Btu provisions, usually from a 1,000 Btu base, are found generally in all producing areas, the upwards Btu clause has been limited almost entirely to the five pricing areas involved in the instant certificate proceedings. In these or nearby areas considerable amounts of low Btu gas, ranging as low as 830 Btu per cubic foot, have been discovered and made available for the interstate market. It is essential, if this gas is to be brought up to marketable standards, that it be mixed with higher Btu gas—gas which also is present in considerable quantities in the areas, with Btu ranges of up to approximately 1,200 Btu's. It is clear, however, that unless the pipeline is in a position to offer a reasonable premium for the higher Btu gas, the producers will have a strong economic interest to extract the high Btu hydrocarbons from their gas before delivery to the pipeline. Where the producer is too small to perform this function for itself, it would, where feasible, utilize the extraction facilities of the larger producers. Under these circumstances, an appropriate upward Btu adjustment provides the necessary inducement for producers making it possible for the pipelines to acquire the supply of high Btu gas required for blending without which a large supply of low Btu gas could not be brought into the interstate pipeline system. Accordingly, we hold that the upward clauses here in issue are reasonably required by the public convenience and necessity for these areas.

The contracts in issue here containing upward Btu provisions are in line.—The California interveners, while not disagreeing with the conclusion that provisions calling for higher prices for gas with Btu content in excess of 1,000 are in the public interest, contend that such provisions should be authorized only within a framework under which all Btu adjustments would be kept within the guideline ceilings for the various pricing areas set out in Section 2.56(a) of our Rules, as amended. In essence, they seek a predominantly optimum standard for Btu quality. They contend that the starting point should be the highest Btu level at which significant volumes of gas are offered for sale in the various pricing areas.

This argument misconceives the nature of this certificate proceeding. The question in such proceeding, insofar as maximum price limitations are concerned, is solely what is the in-line price for the areas in question within the meaning of the governing decisions of this Commission and the courts. See *e.g.*, *Atlantic Refining Co.* v. *Public Service Commission of New York* (CATCO), 360 U.S. 378 (1959); *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (CA10-1963); *Atlantic Refining Company* v. *F.P.C.*, 316 F. 2d 677 (CADC-1963). So considered, there can be no serious question but that the in-line prices in the various areas here concerned are plus or minus appropriate Btu adjustments. This result stems from the fact that many of the permanent certificates in these areas upon which the in-line price primarily depends contained such upward Btu adjustment provisions. Under these circumstances, the in-line price in these areas must be held to include such provisions and the suggestions that all Btu adjustments should be downwards from what otherwise would be the appropriate in-line price in the various pricing areas is not a proposal that we hold the line pending the just and reasonable area price determination but that we roll it back.

Of course, to the limited extent that our determination that the upward Btu adjustments are in the public interest as well as in-line will permit producers to charge higher rates than have been authorized under their temporary certificates, or to continue so to charge free of any refund obligations, this will result in some increase in the pipelines' actual or contingent gas purchase costs, although in the case of California, the impact would be so small as to be *de minimis.*[7] However, the suggestion of the California intervenors that the guideline prices set forth in Section 2.56(a) of our Regulations necessarily constituted the outer limit on the prices at which we would permanently certificate producers' sales, even where, as here, it is demonstrable that the in-line price in the area is higher, is without merit. Essentially, the guideline and in-line prices result from entirely separate considerations.

Btu adjustment base.—The parties to this proceeding have proposed three separate bases from which Btu adjustments are to be made effective. The producers urge that a base of 1,000 Btu's per cubic foot be adopted as representing the existing standard in contracts from the pricing areas involved herein. The California interveners seek a base that would approximate 1,200 Btu's and would in effect permit only downward adjustments. Initially, Staff supported a weighted average base to be determined for each pricing area from information in Standard Form 2 filed by pipelines. The proposed bases varied from 976 to 1,081 Btu's. During the proceeding the Commission initiated the Hugoton-Anadarko area rate case, and Staff determined that the average base for the five areas there involved would be 1,020 Btu's. Since this latter figure so closely approximated the traditional base of 1,000 Btu's, Staff, in its brief to the Examiner and subsequently, favored the latter. The Examiner was of the opinion that 1,000 Btu's was the most appropriate base.

The record in this proceeding establishes that, of the several hundred contracts involved herein, all provide for upward adjustments from 1,000 Btu's. Furthermore, permanent certificates in these pricing areas utilize that base. Clearly, 1,000 Btu's is the base that has gained acceptance in the areas now before us, and any attempt to provide another base would disrupt all contracts there. Rather than utilize the artificial standard proposed by the California interveners, we shall adopt the 1,000 Btu base as representing the in-line conditions for areas herein. Thus, we agree with the Examiner and with Staff that it is the base accepted by all contracting parties in the areas herein; that it is not designed to evade Commission pricing policies applicable to producers' sales; and that it is a convenient and ready reference point for purposes of the limited determination we make today. We do not, of course, express any opinion as to the appropriate base for area rate purposes. Furthermore, we do not necessarily intend the 1,000 Btu base as a national standard. For purposes of issuing certificates of public convenience and necessity in the pricing areas herein, we here adopt the 1,000 Btu base for upward adjustments if such adjustments are permitted by contract. Proportional or full percentage adjustments shall be made by multiplying the base price by a factor, the numerator of which is the heating valve of the gas and the denominator 1,000.

It is evident that if we are to permit the contract price paid for natural gas to be adjusted for Btu content of the gas, it is necessary to determine the standard, or basis, for measuring the heat content of the gas. The Commission currently requires that Btu content of gas purchased by pipelines be reported on a "wet" basis in Form 2. We note that this standard is accepted by the American Society for Testing Materials and the Natural Gas Industry. We shall require that the Btu content of the gas to be used in determining price adjustments shall be defined as the total heating value per standard cubic foot, as hereinafter specified.

---

[7] California consumers obtain most of their gas from the Permian Basin, which produces gas of predominantly higher Btu content than that of the Hugoton-Anadarko Basin. The Permian Basin is not involved in this proceeding. Of the areas involved herein, California consumers use only three percent of the total gas produced. Looking only at the upward provisions herein, the immediate impact of such provision on the California consumers would be only $6,690 per year. Based on an average annual consumption of 105 Mcf, this amounts to less than one-tenth of one cent for each general service customer.

Other matters.—We disagree with the Examiner on one further issue. Staff urges that a policy be adopted of requiring proportional downward adjustments where the parties provide only for upward adjustment. Such a requirement would reflect any changes in the Btu content of the gas sold, and it shall therefore be included as a condition in the certificate.

The California interveners propose a transportation cost adjustment to producers' prices under a formula designed to reflect in the price received by the producer the changes in transmission costs that result from changes in Btu content. Although changes in costs are something less than directly proportional, an increase in Btu content tends to decrease the volumes that must be transported to supply the same heating value, and to decrease the transmission costs associated herewith. The converse is also true. The Examiner held that the record in this case does not justify the transportation cost adjustment proposed. We agree. First, it is irrelevant to producer certificate matters because it relates solely to pipeline adjustments. In addition, because of the many variables and differences in pipeline companies and their operations respecting such matters as total mileage, load factor, capacity and the like, it would be administratively infeasible to attempt to lay down a rule or formula of general application in this area. We think that, for the present, this is a matter that is best left to such contractual arrangements as buyer and seller may provide.

The Examiner would condition Transwestern's contract to require that, in the event of extraction by the producers of higher Btu gases in conformity with the contracts, measurement of the Btu content for purposes of determining the price of the gas will be made at the plant outlet. We affirm this action in conformity with the Examiner's discussion.

All other arguments raised on exceptions and reply thereto are without merit, and are hereby rejected.

In conclusion, it is appropriate to observe, as the Examiner did, that should Btu adjustment provisions ever be used in a manner contrary to the public interest, we can take such action as may then be required. The extensive investigation in this proceeding indicates no such action is presently required.

The Commission further finds:

Upon consideration of the entire record in this proceeding, including the evidence adduced, the briefs and exceptions filed, and the Examiner's initial decision, said decision, to the extent not inconsistent herewith, should be adopted as the decision of the Commission in this case and the exceptions thereto should be denied, subject to the modifications indicated hereinafter.

The Commission orders:

(A) The initial decision of the Examiner issued herein on November 9, 1964 is, to the extent not inconsistent herewith, adopted as the decision of the Commission and shall become effective as of the date of issuance of this order.

(B) Contract provisions for upward Btu price adjustments from a base of 1,000 Btu per cubic foot are approved on a proportional or other basis that results in a price which does not exceed that resulting from the use of a proportional adjustment.

(C) The contracts in this proceeding that provide for upward price adjustments for Btu content are approved only on the condition that they also include a proportional downward price adjustment provision from a base no lower than

1,000 Btu, and amendments to be filed, where necessary, consistent with this condition.

(D) The Btu content of the gas used in computing the price adjustments approved herein shall be the number of British thermal units produced by the combustion, at constant pressure, of the amount of the gas which would occupy a volume of 1 cubic foot at a temperature of 60° F. if saturated with water vapor and under a pressure equivalent to that of 30 inches of mercury at 32° F. and under standard gravitational force (980.665 c.m. per sec. sec.) with air of the same temperature and pressure as the gas, when the products of combustion are cooled to the initial temperature of gas and air and when the water formed by combustion is condensed to the liquid state.

(E) The prices approved herein shall not exceed the applicable Statement of Policy No. 61–1 area guideline ceilings, as heretofore amended, as a result of any contractual provision other than the Btu adjustment.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON CONSOLIDATED APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND INVESTIGATION OF BTU ADJUSTMENT PROVISIONS IN PRODUCER CONTRACTS UNDER THE NATURAL GAS ACT

(Issued November 9, 1964)

LEVY, *Presiding Examiner:*

This proceeding is based on an order of the Commission issued May 28, 1963, 29 FPC 1079, consolidating approximately 250 producer certificate applications involving sales of natural gas from producing areas in the State of Oklahoma and adjacent fields, with an investigation under Section 14 of the Natural Gas Act of the impact of Btu adjustment provisions in producer contracts. The reason for the consolidation was described in the order as follows:

> In light of the fact that this large number of proceedings is awaiting disposal and each presents common issues with respect to provisions calling for Btu adjustments in producer contracts, hearings held on these applications on a consolidated record would serve the purpose of affording final disposition to these matters and provide the Commission with a valuable source of information upon which it could predicate some rulings in connection with Docket No. R–200. In order to adduce a complete record and a wide variety of views on the Btu issue from various segments of the industry, we will consolidate with the several producer applications an investigatory proceeding pursuant to Section 14 of the Act and make the pipeline purchasers of the gas subject to the producer applications, parties to this proceeding. (P. 1082.)

On December 4, 1963, 30 FPC 1409, the Commission denied a petition to stay the proceeding filed by Pan American Petroleum Corporation (Pan American) stating in part that its "primary purpose in instituting these proceedings is to dispose of independent producer applications presenting a common issue with respect to provisions calling for upward Btu adjustment in producer contracts." (P. 1410.) The Commission added that since the proceeding was focused solely on the necessity for and the propriety of these Btu provisions, it expected to obtain information of benefit in resolving the gas energy level question raised in Docket No. R–200.[1]

---

[1] A rule making proceeding initiated by the Commission on May 22, 1961 concerning certain proposed additions to the Commission's Statement of General Policy relating to certificate applications, rate filings, pipeline quality gas standards, delivery conditions, and certain price adjustments.

A series of prehearing conferences were held on July 29, 1963, October 1, 1963, and January 29, 1964, for the purpose of defining the issues, adopting a schedule for the service of testimony and the cross-examination of witnesses, and disposing of various motions for additional information and Commission orders relating thereto. Cross-examination of witnesses commenced on April 27, 1964 and concluded on May 15, 1964, with a record of 2,613 pages of transcripts, 50 exhibits, and 4 items by reference. Briefs were filed on behalf of the Producers, Pipelines, Pacific Lighting Companies, California Public Utilities Commission, Pennsylvania Public Utilities Commission and Staff, including individual briefs by Pan American, Superior, Sun Oil, Pioneer Production Sinclair, and six pipeline parties, Transwestern, Natural Gas, Northern Natural, Michigan Wisconsin, Panhandle, and Colorado Interstate.

At the request of the California Interveners, an oral argument was held before the Examiner on October 21, 1964 (Tr. 2648–2772).

The Btu Adjustment in Producer Contracts

The evidence in respect of the evolution of Btu adjustment provisions in producer contracts is in substantial agreement. These provisions are found in the six pricing areas[2] included in this proceeding, and described in the Statement of Policy 61–1. They are concentrated in southwestern Kansas and the Panhandle areas of Texas and Oklahoma. The development of these provisions has been strongly influenced by the low Btu content found in portions of the Hugoton gas field. For more than 30 years pipelines have been negotiating contracts in this area with downward Btu adjustment provisions to reflect the economic disadvantage of low Btu gas, and the necessity of enriching the pipeline stream either by the removal of inert gases or the addition of higher Btu gases or liquefied hydrocarbons. Without such blending or addition of higher Btu gas to achieve an acceptable pipeline gas stream, low Btu gas would be wasted despite its accessibility and availability to established pipeline systems. Upward adjustment provisions began to appear about 20 years ago, and as of January 1, 1963, are found in at least 621 of the 3,412 contracts in the five principal pricing areas involved in these proceedings. Ninety-eight percent of these contracts adjust upward from a base of 1,000 Btu. Seventy-eight percent of the contracts with a downward Btu adjustment use a 1,000 Btu base. While Btu adjustment provisions from a 1,000 Btu base are customary in these areas during the last 20 years, there is no standard or customary type of price adjustment. The most common method, used by five of the seven pipeline parties,[3] is the proportional or percentage type under which there is an upward or downward price adjustment from the specified Btu base level which varies directly with changes in the heating value of the gas.

---

[2] Oklahoma Panhandle, Oklahoma Other, Kansas, Texas Railroad Districts Numbers 9 and 10, Colorado and Utah.

[3] Staff witness Hefferon refers to an example taken from a contract with Panhandle Eastern Pipe Line Co:

> *Adjustment of Price:* If the heating value of the gas delivered to Buyer at any delivery point shall be less than 1,000 BTU per cubic foot, then the price payable for such gas delivered at such delivery point shall be proportionately reduced, and, if the heating value of such gas is greater than 1,000 BTU per cubic foot, then the price for such gas shall be proportionately increased. To determine such increased or reduced price, the applicable price provided for in Article X shall be multiplied by a factor, the denominator of which shall be 1,000 and the numerator of which shall be the heating value of the gas delivered at such delivery point, provided, however, notwithstanding anything herein to the contrary, the factor used in determining such increased price shall not in any event exceed 1.2 even though the heating value of the gas is found to be in excess of 1200 BTU per cubic foot (Tr. 490).

Michigan Wisconsin and Transwestern use a provision calling for a fixed price increment for each Btu above the base Btu level.[4] The actual Btu content of natural gas purchased by the pipeline parties in 1962 varies from a low of approximately 830 Btu's to a high of 1184 Btu's (Tr. 1027).

THE ISSUES

All parties agree generally that the value of natural gas to the consumer varies directly with its heat content measured in Btu's,[5] the thermal unit cost of transporting natural gas varies inversely with its Btu content, and that price adjustments based directly on variations in Btu's are in the public interest. They also agree that condensation due to the relatively high dew points of the heavier hydrocarbon constituents of high Btu gas does not pose a significant operational problem to the pipeline or distribution companies (Staff br. pp. 52–56). There is sharp disagreement, however, as to how, and to what extent, the base price should be adjusted for variations in Btu content. Specifically, the major areas of disagreement are (1) the Btu base from which the price adjustment should be made, and (2) the transportation cost adjustment, if any. There is also disagreement as to the scope of this proceeding and its relationship to R–200 and area rate proceedings.

Position of the Parties

1. The producers contend that a Btu price adjustment on a proportional basis, upward or downward, from a base of 1000 Btu per cu. ft., the most common provision, or such other base as may be specified in the contracts,[6] is in the public convenience and necessity and should be approved. The Staff does not dispute the greater value of higher Btu gas to the producer, pipeline, distributor and consumer, or the need for price adjustments consistent with differences in heating value. It argues, however, that any method of price adjustment must be consistent with Commission regulatory policies and, more particularly, the "hold the line" doctrine enunciated by the Supreme Court in the *CATCO* decision (360 U.S. 378). Consequently, Staff urges a base derived from the weighted average heating value of gas purchased in the particular 61–1 pricing area, rather than a 1000 Btu or any other contractually determined standard. This would provide, in Staff's view, a uniform thermal cost of gas consistent with the in-line price established by the Commission and the actual heating content of gas purchased by interstate pipelines in the particular pricing area.

The method used by the Staff to determine the weighted average Btu of natural gas purchased by the interstate pipeline parties within the pricing areas involved in this proceeding is based upon a compilation of information obtained from annual reports submitted by the pipeline companies (FPC Form No. 2) rather than information supplied by the pipeline parties in this proceeding in response to the Commission's order of May 28, 1963.[7]

---

[4] For an example from a Wisconsin Pipe Line contract:

> A base price of 17¢ per Mcf for gas having 1,000 BTU's per cubic foot plus 1/100¢ per Mcf for each additional BTU per cubic foot in excess of 1,000 to a maximum of 1200 BTU's per cubic foot effective on the date of last determination pursuant to Section 1(e) of Article X hereof. (Tr. 491.)

[5] The term "Btu" or British thermal unit is the amount of heat needed to raise the temperature of one pound of water 1° Fahrenheit (Tr. 2611).

[6] The contracts of six of the seven pipeline buyers designated as respondents in this proceeding include a 1000 Btu base. The seventh, Colorado Interstate, provides for a base of 1000 Btu in about 93 percent of its contracts, with a different and higher base in all of the remainder (Tr. 268). Michigan Wisconsin has the contract right to reject gas with less than 1000 Btu per cubic foot.

[7] This order required the pipeline companies' named respondents therein to provide information pertinent to the heat content of gas they purchased as specified in Appendix A attached to the order, *supra*, p. 1083.

This method, as well as the weighted average Btu standard itself, is attacked as unfair by the Producers on the ground that it will operate only to reduce the contract price. Where the formula justifies a higher than contract price, the Memphis-Mobile doctrine[8] will intervene to prevent collection. The weighted average formula is also criticized as based on inaccurate and insufficient data and basically unworkable. Staff's Btu adjustment formula is coupled with a recommendation that "an investigation be conducted similar to the instant proceeding in order to assure that there is flow-through by the pipelines of the benefits of high Btu gas to the ultimate consumer" (Staff br. p. 63).

A third approach—the so-called gold standard—is proposed by the Pacific Lighting Companies. Their witness Ross suggested that the highest Btu content of any substantial volume of gas sold in the relevant pricing area be designated the gold standard or Btu level entitled to the maximum ceiling price. California Public Utilities Commission's witness Way proposed an 1100 Btu standard for gas sold to the California companies, or a "predominantly optimum" standard similar to witness Ross' gold standard. Under this formula, a producer would receive the area ceiling price for gas equal to or above the gold standard or predominantly optimum Btu level. There would be a proportionate downward adjustment for lower Btu gas regardless of contract provisions or weighted average Btu content.

2. All parties agree that transportation costs may be affected by the Btu content of natural gas, as well as other factors, and that the utilization of higher Btu content gas results in a saving with respect to the transportation cost of heat energy per Mcf. Proceeding from this premise, Staff witness John Roy Johnson proposed a further price adjustment to reflect the alleged transportation cost savings incident to the utilization of higher Btu gas. Mr. Johnson developed a formula for the application of this principle by using the optimum peak-day capacity (volume) and related total unit cost of transportation for certain hypothetical pipelines shown in table 4 of his Exhibit No. 35. This cradle formula[9]—so designated by the producers because of the parabolic pattern of the points plotted on figure 8 of Staff's Exhibit No. 37 showing the percentage change in costs attributable to changes in volume for pipelines of varying diameters—is criticized by the producers as admittedly hypothetical and unrelated to the design or operation of any of the pipeline parties to this proceeding, or their actual circumstances. Pacific Lighting's witness Ross proposed certain modifications to the Staff's cradle formula which are criticized equally by the producers as theoretically unsound and administratively unworkable.

Finally, the Pacific Lighting Companies propose that the issuance of any permanent certificates in this proceeding be conditioned upon the outcome of R-200.

Btu Base and Price Adjustment Provisions

The record is clear that the customary and predominant base in the contracts containing Btu adjustment provisions of the various producer applicants in this proceeding is 1000 Btu. It is equally clear that these provisions, antedating producer price regulation by the Commission, grew out of, and were designed to meet, the wide variations in Btu content found in the Hugoton Field particularly, and the Oklahoma-Anadarko Basin generally, where large, accessible volumes of low Btu gas could be used by adjacent interstate pipelines only if blended with high Btu gas or processed so as to bring their Btu content up to acceptable pipeline levels. There is no evidence that they were designed to evade Commission pricing policy as expressed in 61–1.

---

[8] See *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332, and *United Gas Pipe Line Co.* v. *Memphis Light, Gas and Water Division*, 358 U.S. 103.

[9] $Y = \frac{X^2}{70}$ where Y is the percentage of cost increase and X is the plus or minus change in volume due to change in specific gravity and Btu.

The differences between the parties as to the appropriate Btu standard or base is not derived from any disagreement as to the basic geological, chemical, engineering, or operational facts. As noted in the Pacific Lighting Companies' initial brief, there is a remarkable consistency in the testimony presented.

> * * * all parties agree that the value of natural gas to the ultimate consumer is based on its heating value, that variations in Btu content of gas affect costs involved in transporting that gas through a pipeline and that an economic incentive is required to induce the producer to leave the high Btu gases in the pipeline stream instead of extracting and selling them as liquids. Likewise, all parties agreed that it is appropriate and in the public interest for producer prices to be adjusted depending upon the Btu content of the natural gas purchased and sold. (p. 5)

The different conclusions of the parties derive from their views as to the scope and function of this proceeding.

The California interveners reject the 1000 Btu base, or any contractually defined base, on the ground primarily that it is not cost oriented and that price increments for changes in Btu content should be allowed only to the extent that such changes in Btu content produce cost changes. This approach would be relevant if the in-line price from which the Btu adjustment is made were cost determined. This is not the case. As noted recently by Commissioner Ross: "In every single in-line case decided since the autumn of 1961, the Commission has steadfastly refused to consider costs" (Opinion No. 434, 32 FPC 34, *Shell Oil Co.* Dissent, p. 42). This is not an area rate proceeding or a proceeding to determine just and reasonable rates pursuant to Section 4 or 5 of the Natural Gas Act for the producer contracts involved in this proceeding.

The Commission noted in Opinion No. 434, *Shell Oil Company, et al.*, issued July 6, 1964, that:

> Although the underlying purpose of the Natural Gas Act is to underwrite just and reasonable rates to the consumer, the decision by the Supreme Court in *CATCO*[4] makes clear that a Section 7 proceeding does not require a finding that the initial rate itself be "just and reasonable." It is necessary only to find that the proposed sale, at the initial rate, is "required by the present or future public convenience and necessity." Under *CATCO* we are required to scrutinize proposed sales to determine whether the initial rates are "out of line" in which event " * * * the Commission in the exercise of its discretion might attach such conditions as it believes necessary."[5] In defining the "line" so referred to, the Court of Appeals for the Ninth Circuit stated:
>
> > Considered in this light, the "line" referred to in CATCO may properly be referenced to relevant existing producer prices under which substantial amounts of natural gas move in interstate commerce * * *
>
> Existing producer prices are relevant for comparative purposes only if they pertain to gas production in the same or analogous area and if other principal features of the contract are fairly comparable. * * * Disparate provisions relative to facilities to be provided and other services to be rendered should be given effect as well in determining the propriety of the analogy to rates under other existing contracts.[6] [Footnotes omitted]

Relative prices and contract provisions in related certificated contracts or comparability, not cost, is the appropriate standard, absent a conflict with or violation of regulatory policy. The in-line price as defined in the *CATCO* decision has already been determined for many of the pricing areas involved in this proceeding.[10] That determination was made by comparing contract prices with other relevant certificated sales. The relevant existing contract prices included the Btu adjustment clause within the bundle of considerations determining the ultimate contract price. The evidence in this proceeding clearly establishes that at the time Statement of General Policy No. 61-1 was adopted by the Commission, upward and downward Btu adjustments clauses were a customary and established price feature of these contracts under which substantial amounts of gas were moving in interstate commerce. The guide line prices were fixed with full knowledge of the existence and nature of these adjustment provisions, and specifically contemplated the possibility of price adjustments to "the basic contract price * * * as it becomes apparent that certain adjustments have general applicability in a specific area." The Statement of General Policy No. 61-1 reads in pertinent part as follows:

> Of necessity, we have not set forth the adjustments to these prices which must be made to take into account every possible provision of every contract which may affect the actual price, such as Btu adjustments, conditions of delivery, etc. The relevance of such adjustments to the basic contract price and the appropriate established price standard must be considered as each filing is made. *As it becomes apparent that certain adjustments have general applicability in a specific area, the area price standard will be revised and set forth in greater detail with regard to the exact sale conditions to which the rate applies.* [Emphasis added.]

The evidence is undisputed that Btu price adjustment provisions have general applicability in the pricing areas involved in this proceeding.

The California gold standard concept was originally presented in the Permian area rate proceeding (Docket No. AR61-1 *et al.*, 34 FPC 159) by witnesses Frazier and Jensen. However, there it represented a one or one and one-half cent premium above the average price for superior quality and value gas. Consequently, it is superior to pipeline quality gas which, as defined by the Examiner, is "gas that the pipeline can take into its system without material additional treating or compression" (34 FPC, p. 366). The price line envisaged by the Commission's Statement of Policy 61-1 is a price line applicable to pipeline not premium or optimum quality gas. The Commission specifically noted: "We should, however, make it clear that these present price standards apply to pipeline quality gas as that term is generally understood in each area * * *." The guide line or in-line price, is therefore, not a price for premium, gold standard, or optimum gas any more than it is a price for substandard gas below pipeline quality by reason of low Btu content, the presence of inerts, sulphur, water, or any other reason rendering it unacceptable for pipeline use without further cost and expense to the pipeline.

Thus, whatever the merits of the gold standard concept in a rate or rule making proceeding, it is not applicable or useful in a Section 7 determination of initial prices designed to afford standby protection pending rate adjudication consistent with the public convenience and necessity.

The Staff's weighted average concept is consistent with the philosophy of the *CATCO* decision which is designed to hold the price line generally at the price level under which comparable substantial volumes of gas were moving in interstate commerce at the time these contracts were negotiated. However, it presents serious administrative difficulties, discussed below, which must be evaluated carefully before it can be adopted and utilized as an operative regulatory standard. The price line *CATCO* concept is not confined to the base price, or the Btu adjustment, or to any other single element or component of the price package.

---

[10] These range generally from 15 cents in "Other" Oklahoma, to 17 cents in the Oklahoma Panhandle.

It represents the total consideration passing between buyer and seller. Nor does the price line represent the highest or lowest price obtained, but as previously indicated by the 9th Circuit Court of Appeals in *United Gas Improvement Co.* v. *Federal Power Commission*, 283 F. 2d 817, 824 (1960) cert. den., 365 U.S. 881, " * * * the price line is intended to reflect current conditions in the industry. Therefore, comparative prices upon which it is based must be prices under which a substantial amount of natural gas presently moves in interstate commerce."

The record in this proceeding suggests that Btu adjustment provisions, upward and downward, were part of the customary price package and reflected current industry practice and conditions in these pricing areas at the time these contracts were negotiated, and that substantial volumes of gas were, and have been, moving in interstate commerce under similar contracts. These provisions are not illegal, and, in the context presented in this proceeding, do not appear to violate any regulatory policy of the Commission.

The administrative difficulties with the Staff's weighted average formula derive as much from the method by which it is computed as from the way in which it is used. The weighted average is based on pipeline Form 2 reports rather than the Appendix A data furnished in this proceeding. Some of the pipelines measure Btu by well sample at the wellhead, some by calorimeter tests after processing, and others by estimates based on the isotherm line. Absent consistent methods in measuring and reporting, the results obtained are subject to question as inaccurate and of limited usefulness. Morever, the average itself varies widely depending upon the pricing area involved and the time period utilized. Staff averaged the four-year period from 1959–1962, with the following results: Kansas—976 Btu/cu. ft., Oklahoma Other—1081 Btu/cu. ft., Oklahoma Panhandle—1044 Btu/cu. ft., Texas District No. 9—1069 Btu/cu. ft., Texas District No. 10—1025 Btu/cu. ft. The Staff then computes a composite weighted average[11] for all of the pricing areas in this proceeding stating ". . . In view of the Commission's proposal to establish these counties [Hugoton-Anadarko area rate proceeding] as a single pricing area we feel that it would be appropriate to view them as a composite area for fixing a standard BTU level from which to make adjustments for the heat content of gas prior to the establishment of the just and reasonable area rates for the area." (Staff br. pp. 60–61.)

---

[11] See the following table:

AREA WEIGHTED AVERAGES FOR 1959-1962
(Excluding Texas No. 9)

Area	Mcf	Therms	Btu/Cu. Ft.
Total Kansas	1,787,160,714	17,447,560,786	976.3
Okla. Other	667,740,715	7,221,313,528	1,081.4
Okla. Pan	946,917,673	9,887,304,865	1,044.2
Tex. #10	1,877,733,271	19,248,519,607	1,025.1
Total Btu	5,279,552,373	53,804,698,786	1,019.1

AREA WEIGHTED AVERAGES FOR 1959-1962
(Including Texas No. 9)

Area	Mcf	Therms	Btu/Cu. Ft.
Total Kansas	1,787,160,174	17,447,560,786	976.3
Okla. Other	667,740,715	7,221,313,528	1,081.4
Okla. Pan	946,917,673	9,887,304,865	1,044.2
Tex. #9	164,707,149	1,760,296,838	1,068.7
Tex. #10	1,877,733,271	19,248,519,607	1,025.1
Total Btu	5,444,259,522	55,564,995,624	1,020.6

(Staff br. p. 61.)

The composite weighted average is 1019 Btu/cu. ft. excluding Texas Railroad District No. 9, or 1020 Btu/cu. ft. if District No. 9 is included. The weighted average for the area encompassed by the Hugoton-Anadarko area rate proceeding is 1015 Btu cu. ft. This compares with the 1013 Btu content, on a dry basis, of methane, the principal constituent of natural gas. Finally, the Staff concludes:

> In light of the fact that the weighted average BTU for this overall area so closely approximates the traditional BTU adjustment level of 1000 BTU/cu. ft. that has gained acceptance in this area, we feel that any effort to alter this level by the Commission prior to the establishment of just and reasonable rates for the area would not serve any useful purpose and only tend to disrupt hundreds of existing gas purchase contracts that have been negotiated within this area. (Staff br., p. 62.)

The use in these contracts of a Btu base level of 1000 Btu/cu. ft. plus a proportional upward price adjustment (or any other Btu adjustment not in excess thereof) is approved in this proceeding as consistent with the public convenience and necessity.[12] A lower Btu base level is acceptable only where the total price, including Btu adjustment, does not exceed the in-line price or the price that would result from the use of a 1000 Btu base. As noted by the Staff, the 1000 Btu base level[13] has general acceptance in hundreds of existing gas purchase contracts within the areas involved. It is a convenient and ready reference point, consistent with the therm rate (100,000 Btu), or the million Btu rate used by pipelines and distributors. Bearing in mind the stopgap nature of an initial price determination under Section 7, it is concluded that the theoretical merits of a weighted average Btu standard, prior to the determination of a just and reasonable rate, must yield in this proceeding to the practical advantages of the customary contract level of a 1000 Btu base standard.

These remarks nevertheless, are not intended to denigrate the development of weighted Btu average standard in any future proceeding. If the method of measuring and reporting Btu content can be standardized and simplified to the point where an accurate weighted average can be determined without undue hardship or difficulty, the advantages of a weighted average Btu adjustment base in determining a just and reasonable ceiling price or initial price may outweigh the administrative burdens incident to its determination. This is particularly true for pricing areas where the contract base is substantially lower than the weighted average Btu content. In this certificate proceeding, however, the limited significance, utility, and controversial nature of the results obtained are not worth the disruption incident to a departure from the customary 1000 Btu base provided by contract.

The California Interveners agree that the present impact of Btu adjustment provisions are minimal on prices currently being paid by California purchasers.[14] They are deeply concerned, however, with the extension of Btu adjustment provisions to new areas and new contracts and their use as a device to defeat regulatory efforts to hold the price line pending effective rate regulation. The evidence in this proceeding does not support such a finding in the Hugoton-Anadarko area in respect of these contracts where Btu adjustment provisions have been customary prior to the issuance of Statement of Policy No. 61–1. If, however, as feared by the California Interveners, these provisions spread to new areas and new contracts, and their use as a device to pierce the price line becomes apparent, the Commission can give serious consideration to the adoption of weighted average Btu base levels or maximum price adjustments either by amending the Statement of Policy No. 61–1, or in an R–200 proceeding. In such a posture, the advantages of a weighted average Btu adjustment base in holding the price line may well outweigh the administrative burdens and difficulties on the scales of the public interest.

---

[12] The base contract price, however, from which the Btu adjustment is made, cannot exceed the in-line or guide line price fixed by the Commission in Statement 61-1, whichever is lower.

[13] The Commission's Notice of Proposed Rulemaking in Docket No. R-200, issued May 22, 1961, proposed that "pipeline quality gas":

> "shall have a heating value of not less than one thousand (1,000) Btu per cubic foot when saturated with water vapor (*i.e.*, water saturated gas having a heating value per cubic foot of nine hundred seventy-five (975) Btu to one thousand and twenty-five (1025) Btu shall be deemed to comply with this requirement), but in no event shall buyer be required to accept natural gas having a heating value of less than nine hundred fifty (950) Btu per cubic foot."

[14] Less than 3 percent of all gas sold from the six pricing areas goes to California (Tr. 2297).

The Transportation Cost Adjustment

Staff's transportation cost adjustment formula is designed to reflect the transportation cost effect of changes in Btu content. The formula assumes that changes in Btu content will produce inverse changes in transportation costs; the higher the Btu content, the lower the unit cost of transmitting heat energy. Concededly, higher Btu gas will normally increase pipeline efficiency. The difficulty with the Staff's formula, however, lies in its attempt to isolate changes in Btu content from the many other factors that reflect and determine the actual cost of transmitting natural gas, and the inapplicability of the assumptions in the formula to the design and operation of the specific pipelines involved in this proceeding. The effect of changes in Btu content on transportation costs may be entirely offset or negated by changes in specific gravity, pressure, and design and operation of the particular pipeline. This is illustrated, in part, in the following table which shows the effect of changes in specific gravity as well as Btu content on specified gas samples, assuming a 16 cent base price, a 1000 reference Btu content, a reference specific gravity factor of .600, and Staff's assumed transportation cost of 12 cents per Mcf (Tr. 2018).

Price Adjustments

Sample gas	Proposal	Straight Btu adjustment	Transportation cost adjustment	Total adjusted price
		(¢)	(¢)	(¢)
750 Btu	Staff	−4.00	−4.95	7.05
0.600 gravity	Ross	−4.00	−4.00	8.00
950 Btu	Staff	−0.80	−0.91	14.29
0.621 gravity	Ross	−0.80	−0.84	14.36
1000 Btu	Staff		+0.12	16.12
0.581 gravity	Ross		+0.17	16.17
1000 Btu	Staff		−1.20	14.80
0.725 gravity	Ross		−1.10	14.90
1050 Btu	Staff	+0.80	+0.25	17.05
0.631 gravity	Ross	+0.80	+0.29	17.09
1100 Btu	Staff	+1.60	+0.66	18.26
0.663 gravity	Ross	+1.60	+0.59	18.19
1150 Btu	Staff	+2.40	+0.83	19.23
0.685 gravity	Ross	+2.40	+0.90	19.30
1084 Btu*	Staff	+1.34	+0.65	17.99
0.640	Ross	+1.34	+0.58	17.92

*Typical sample of gas sold by Pacific Lighting Companies. (See Br., Section F.)

Staff made no effort to apply its formula to the pipeline design capacity, specific gravity, or operations of any of the pipeline parties in this proceeding. As noted in Staff's brief:

> The record reflects that in this particular area a specific gravity higher than .65 should have been utilized in the various pipeline systems designed; whereas, a specific gravity factor of .6 was used in Exhibit 35 (Tr. 1919, 1953). Also staff witness Ellery Johnson assumed a 90 percent load factor

> in designing the various systems in his Exhibit 35 that were utilized by John Roy Johnson in the development of his formula to show the effect of varying BTU on the cost of transportation. The study submitted by the witness Brooks for a particular system appears to indicate that savings in the cost of transportation attributable to high BTU gas vary substantially with the particular load factor level at which a pipeline operates (Ex. 29, Tr. 1558). There are considerable variations in the load factors of the pipelines delivering gas from this area (Tr. 905, 1023, 1085, 1193).
>
> These deviations from the area norm appear to dampen any prospects of using the transportation cost adjustments in connection with the sales in the instant proceedings (Staff br. p. 23).

The Producers emphasize that a different cost study would be required for each pipeline, and that there is no simple solution to the problem in determining the effect of changes in Btu content on transportation costs. Operational factors may minimize or eliminate the effect of changes in Btu content and specific gravity on transportation costs. These include the utilization of unused compressor capacity and the stabilizing effect of blending the various supply sources into the main stream of the pipeline.

The Pacific Lighting Companies rejected the Staff's so-called cradle formula and developed their own variation described by its witness Ross as follows:

> The percentage derived by the formula proposed would of course vary with every variation in Btu and/or specific gravity, and would have to be computed monthly for every delivery and based on weighted averages for the month, hence the further importance of simplicity. Under the procedure suggested in my original testimony (page 14), and which would be equally applicable under the simplified procedure I now propose, the rolled-in or composite average unit cost of transmission for the entire pricing area would be used uniformly for all producer sales in the area, but multiplied by the percentages derived individually for each sale for each month. The purpose of this rolled-in basis for determining unit transmission cost is to achieve uniformity of adjusted ceiling (or reference) price within each pricing area for a given array of quality conditions. (Tr. 2326)

The Ross variation to the cradle formula is subject to the same limitations as the original formula and, as shown in the above table, produces similar price adjustments. It ignores the effect of pressure and supercompressibility and is not based on actual operating costs of the specific pipeline parties. By averaging transmission costs for all pipelines, it benefits producers with above average costs selling to a long line and penalizes producers with below average costs selling to short lines for local distribution. The formula is extremely complex, requires (so the witness states) a *Seaboard* type allocation to the various supply sources, and, as proposed, would be recomputed on a monthly basis (Tr. 1455–1458). Moreover, it has the inherent defect of being a cost adjustment to a price which is not itself cost determined, assuming the Btu base level is defined by contract or by a weighted average. In summary, the record in this proceeding does not justify the application of a transportation cost adjustment based either on the Staff cradle formula or the Ross variation.

The Transwestern Contracts

The unconditional certification of six Transwestern gas purchase contracts containing upward Btu adjustment clauses included in the consolidated applications[18] is questioned by the California Interveners. Under these contracts the sales take place at the wellhead, and while there is presently no extraction, the Producers reserve the option to process the gas within Transwestern's gathering system and to extract all of the Btu's in excess of 1,000. California Interveners allege that, in the event of extraction, consumers would be paying for Btu's lost in extraction and the producers would be receiving the services of Transwestern's gathering system and metering equipment free of charge. The Producers argue that this is a ghost issue because there is no evidence in this record that a plant will ever be built, that the financial impact on the Interveners is minuscule, and that the total effect of all of the contract provisions may in fact save Transwestern money.

---

[18] The Cabot Corporation, Docket No. CI61–711; Statex Corporation, Docket No. CI61–417; Monsanto Chemical Company, Docket No. CI61–713; Mayflo Oil Company, Docket Nos. CI61–538 and CI61–805; Union Oil Company of California, Docket No. CI61–323.

The contracts do not expressly state at what point the Producers' gas will be measured for Btu content for the purpose of determining Btu price adjustment, and Transwestern takes the position that such measurement is to be made at the tailgate of any extraction plant. It is not necessary in this proceeding to enter the thicket of interpreting the provisions of particular contracts. However, it is desirable to establish a basic policy in respect of upward price adjustment for Btu content; namely, that any upward Btu price adjustment be based on the Btu content of the gas received by the pipeline after any separation or extraction of liquids by the seller. This would require either that the measurement of the Btu content for price determination be made after extraction, or if, by reason of specific contract provisions, it is made at the wellhead, provision be made for the Btu's lost in processing. Accordingly, certification of these Transwestern contracts will be conditioned so as to require, in the event of extraction, that the measurement of the Btu content for price determination will be made at the plant outlet.

Flow Through

Staff is concerned that the benefits of the high Btu gas, paid for by an upward Btu price adjustment and charged to the ultimate consumer as part of the pipeline's purchased gas costs in its cost of service, will not be flowed through to the consumer. In Staff's view, this can occur through a reduction in the thermal content of the gas as a result of extraction of liquids by the pipeline without crediting the liquid revenues received to the pipeline's cost of service. It can also occur through the use of block rates in pipeline tariffs which permit the Btu content of the gas to vary within limits without changing the rate, and as a result of exchange agreements which permit volumes of different Btu level gas to be exchanged without adjustment or recognition of the differences in the Btu level of the gas streams exchanged. Accordingly, Staff recommends that an investigation be concluded similar to the instant proceeding in order to assure that there is flow through by the pipelines of the high Btu gas to the ultimate consumer (Staff br. p. 63).

Staff agrees that a credit of revenues from extraction to the pipeline's cost of service is tantamount to a flow through of the benefits of higher Btu gas to the pipeline's customers. This was the issue before the Commission in *Panhandle Eastern Pipe Line Company*, Opinion No. 344–A, decided August 20, 1964, 32 FPC 636, where the Commission, following court remand,[16] ruled that Panhandle must credit the net revenues from its mainline processing plants to its cost of service. The application of this principle to any reduction in the Btu content of gas included in the pipeline's cost of service will assure flow through of the benefits of higher Btu gas to the pipeline's customers. However, this determination can best be made not in a general investigation but in the pipeline rate proceeding where the cost impact of the particular pipeline operation, rate structure, and exchange agreements can best be evaluated. Accordingly, a general investigation would not be as useful as an individual rate proceeding, and none is recommended.

---

[16] *Panhandle Eastern Pipe Line Co. v. F.P.C.*, 305 F. 2d 763 (1962).

Similarly, the impact of extraction by the producer rather than the pipeline on Btu price adjustments can be evaluated in an area rate proceeding with greater depth than in a Section 7 certificate proceeding where evidence of production costs and financial requirements may not be admissible. (See *Sun Oil Co.* Opinion No. 445, dec. October 26, 1964, 32 FPC 1183, at p. 1185.)

Scope of the Proceeding

There was considerable confusion during the hearing as to the scope of this proceeding and its relationship to Docket No. R-200 and area rate proceedings. Disagreement has continued through the briefs and oral argument.

The Producers see this as a consolidated certificate proceeding in which the sole issue is the effect to be given to the Btu adjustment provisions. They request unconditional certification of all the consolidated applications.

The California Interveners emphasize the investigative aspects of this proceeding under Section 14 of the Act. They oppose giving unconditional effect to the Btu adjustment provisions in these producer contracts, or any determination now of the propriety of these provisions. They see this proceeding as a source of information for future rulings in R-200 and area rate proceedings, and urge that any certification be conditioned upon a future determination of the ultimate propriety of the Btu adjustment provisions in R-200. The Pennsylvania Public Utilities Commission suggests that specific standards and price adjustments be determined simultaneously with area rates.

The Commission's order of May 28, 1963 provided for both a consolidated certificate proceeding under Section 7 and an investigatory proceeding under Section 14 of the Act. The hearing was intended to afford "final disposition" to the consolidated certificate applications under Section 7 of the Act and, in addition, to provide information of benefit to the Commission in resolving the gas energy level question raised in Docket No. R-200. The hearing has met the investigatory and informational objectives of the Commission's order (See Pacific Lighting br. p. 5). The objective of affording final disposition to the consolidated certificate applications under Section 7 of the Act, however, cannot be achieved by deferring determination of the initial price effect to be given the Btu adjustment provisions in these producer contracts to an R-200 rulemaking determination at some indeterminate future date. R-200 is a far broader proceeding covering rulemaking in respect of all certificate proceedings, rate filings, pipeline quality gas standards, and delivery conditions, as well as price adjustments.

The Commission's 1963 Annual Report states in pertinent part:

> Another significant step in the disposition of producer certificate cases was the institution on May 28, 1963, of an investigation and hearing into the necessity, propriety, and impact of upward Btu price adjustment clauses in producer contracts. In this connection, the Commission set hearings on 247 certificate applications where the main issue was the presence of a Btu price adjustment clause in the related contracts. The resolution of the Btu issue in this investigation will dispose of not only the foregoing applications but also provide guidelines for the disposal of future applications where the upward Btu price adjustment is an issue, eliminate a refund situation, and permit the issue of permanent certificates. (p. 126)

The findings and conclusions in this proceeding, however, are without prejudice to the treatment of Btu adjustment provisions in R-200, or area rate proceedings, or even in future certificate proceedings on a different record. As noted earlier, if it becomes apparent that Btu adjustment provisions are being used as a device to defeat Commission efforts to hold the price line, the Commission may very well amend the Policy Statement 61-1, so as to restrict the price impact of Btu adjustment provisions in producer contracts. Moreover, the Commission is free, particularly in an area rate proceeding, to consider further the utility of establishing a maximum just and reasonable price on the basis of the so-called gold standard or predominantly optimum Btu standard, or to utilize the Staff's weighted average formula as the reference point from which to make Btu price adjustments.

In summary, the Examiner has concluded that the consolidated applications should be certificated provided the six Transwestern contracts containing upward Btu adjustment provisions are conditioned so as to require measurement of the Btu content at the plant outlet in the event of extraction.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding including the pleadings, the evidence adduced, the briefs filed, and the oral argument, it has been found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Each Applicant is a "natural-gas company" within the meaning of the Natural Gas Act and is engaged in the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act, are required by the public convenience and necessity; and a certificate therefor should be issued as hereinafter ordered and conditioned.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal or upon its own motion, as provided by its Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity are hereby issued to the Applicants named in the caption of this decision, on the conditions set forth herein, authorizing the sale of natural gas in interstate commerce for resale for ultimate public consumption, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as more fully described in the applications.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable Rules, Regulations, and orders of the Commission.

(C) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the

Regulations thereunder. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicants or any one of them. Further, the action in this proceeding shall not foreclose or prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts here involved.

(D) The certificates herein issued to The Cabot Corporation, Docket No. CI61–711; Statex Corporation, Docket No. CI61–417; Monsanto Chemical Company, Docket No. CI61–713; Mayflo Oil Company, Docket Nos. CI61–538 and CI61–805; Union Oil Company of California, Docket No. CI61–323, are conditioned so as to require, in the event of extraction, that the measurement of the Btu content for price adjustment will be made at the plant outlet.

WILLIAM C. LEVY,
Presiding Examiner.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65–339

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 11, 1965)

On April 22, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65–339 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Cascade Natural Gas Corporation (Cascade) for transportation to and resale and general distribution in La Conner, Washington and environs, all as more fully set forth in the application.

The proposed sale and delivery of natural gas will be made at the outlet of Applicant's existing Sedro-Wooley Meter Station in Skagit County, Washington. No additional facilities are proposed to be constructed by Applicant.

Applicant proposes sales to Cascade on both a firm and interruptible basis. The third year annual gas requirements of Cascade are estimated to be 27,923 Mcf, with peak day requirements estimated to be 844 Mcf. Cascade will construct approximately 4 miles of pipeline for transportation of the gas from its Sedro-Wooley-Anacartes sales lateral to La Conner, and will construct the necessary distribution facilities in La Conner.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The sale and delivery of natural gas hereinbefore described, as more

fully described in the application in this proceeding, are to be made in interstate commerce, subject to the jurisdiction of the Commission, and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale and delivery of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to sell and deliver natural gas to Cascade Natural Gas Corporation as hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery of natural gas hereby authorized shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within six months from the date on which this order issues.

(D) Before commencing the sale of natural gas authorized herein, El Paso shall file with the Commission appropriate evidence that Cascade has obtained all necessary state and local authorization for its proposed service.

OPINION NO. 458-A

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

OPINION AND ORDER DENYING REHEARING

(Issued June 11, 1965)

Syllabus

1. Commission *rejects* contention it erred in ordering Respondent to file wholesale sales contract in effect on April 16, 1963 [initiation date of show cause proceeding]; Respondent is free to file contracts in effect at an earlier date and is not aggrieved that Commission fixed a later date. P. 1253.
2. On facts of record, April 16, 1963 was a date on which American Electric Power System and Indiana Michigan were operating in manner which made all of latter's wholesale sales jurisdictional. P. 1253.
3. Question of staying compliance with filing requirement of order is completely independent of Respondent's right to challenge its validity; schedules can be filed with reservation fully protecting Respondent's rights in event it prevails on appeal and minimal expense required for

requisite filing could not conceivably constitute irreparable damage within meaning of *Virginia Petroleum Jobbers*. P. 1253.

4. Commission *denies* application for rehearing.

Commissioner Bagge *not participating*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor. Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

Indiana & Michigan Electric Company (IM) on May 14, 1965, filed an application for rehearing of our Opinion No. 458 and Order Determining Jurisdiction, issued April 14, 1965, 33 FPC 739, wherein we determined that IM's sales of electrical energy for resale to certain municipalities and cooperatives in Indiana and Michigan are sales in interstate commerce subject to our jurisdiction under the Federal Power Act. Essentially, IM's application restates points previously raised in its briefs and adequately considered and disposed of in our order. However, in denying its application, the following additional comments are appropriate.

IM's two principal contentions are that in finding its sales are in interstate commerce, the Commission has applied a legalistic and governmental test rather than a scientific and engineering one and that in any event the critical sales in issue are exempt from Commission regulation since they utilize facilities used in local distribution of electrical energy. We have discussed these arguments at length in our initial opinion in this proceeding. We conclude that neither point is well taken and that no useful purpose would be served by their reexamination here.

IM suggests that we were in error in ordering it to file its wholesale sales contract in effect on April 16, 1963, the date on which the show cause proceeding was initiated. It argues that under the law it is required to file the contracts in effect when jurisdiction attaches and that under the Commission's theory of the case they may have occurred sometime in the 1940's. The short answer to this contention is that IM is free to file its contract in effect at any earlier date, and that it is not aggrieved by the fact that the Commission fixed a filing date which may well be later than the date which could have been chosen. On the basis of the facts of this record, April 16, 1963, was a date on which the AEP system and IM were operating in a manner which make all of IM's wholesale sales jurisdictional.

Our opinion of April 14 ordered IM to file its contracts in effect as of April 16, 1963, with each of the 24 municipal and cooperative customers, within 60 days from the date of that decision which would be June 13, 1965. IM has asked that we stay this requirement for a further 60-day period to give it time to perfect an appeal from our opinion and order. We think it clear that the question of staying compliance with the filing requirement is completely independent of IM's right to challenge the validity of the order in the courts. It obviously can file its rate schedules with a reservation which will fully protect its rights in the event it should prevail upon appeal and it is equally clear to us that the minimal expense required in performing the requisite filing requirements could not conceivably constitute irreparable damage to IM within the meaning of *Virginia Petroleum Jobbers Ass'n* v. *F.P.C.*, 259 F. 2d 921 (CADC). However, in view of the fact that most of the original 60-day period has already expired, we shall extend the time for filing these contracts until July 1, 1965. Since IM has been on notice since April 14 of this filing requirement and has not suggested that the mechanics for compliance with the order requires any extension, this period should prove more than adequate.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the application for rehearing filed by IM in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 458 except as specified below.

(2) The time for filing rate schedules as required by our order of March 18, 1965, should be extended as provided below.

The Commission orders:

(A) The application for rehearing filed by IM is hereby denied.

(B) The time for filing rate schedules as provided in paragraph (A) of our order of April 14, 1965, is hereby extended until July 1, 1965.

Commissioner Bagge *not participating.*

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-332

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued June 11, 1965)

On April 19, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-332 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Ancell Gas Company, Inc. (Ancell) for resale as irrigation pump fuel, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate a pipeline tap in Gaines County, Texas, on its 26-inch pipeline which extends from its Hobbs Compressor Station in Lea County, New Mexico, to its Plains Measuring Station in Yoakum County, Texas. Applicant will sell up to 1,170 Mcf of gas per day to Ancell at an initial rate of 23 cents per Mcf. Annual volumes are estimated to be 143,100 Mcf in the third year of service. Pursuant to a contract, dated March 3, 1965, between the parties, gas delivered during the period October 27 to March 27 shall be subject to interruption in whole or in part by Applicant. Volumes delivered during the period March 27 to October 27 shall not be subject to interruption.

The cost of the proposed facilities is estimated to be $260. Of this estimated amount, Ancell will contribute $150.

On April 23, 1965, Applicant tendered for filing its Original Sheet Nos. 102 through 112, inclusive, providing for the proposed sale to Ancell.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed

At a hearing held on June 10, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Applicant's Original Sheet Nos. 102 through 112, inclusive, to its FPC Gas Tariff, Original Volume No. 2 should be accepted for filing to become effective on the date of this order.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) Applicant's Original Sheet Nos. 102 through 112, inclusive, to its FPC Gas Tariff, Original Volume No. 2 are hereby accepted for filing to become effective on the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7223

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued June 11, 1965)

Northern States Power Company (Applicant) filed an application on April 30, 1965 with the Federal Power Commission seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue, from time to time, promissory notes in amounts not exceeding an aggregate of $27,000,000 outstanding at any one time to evidence short-term borrowing from commercial banks.

Applicant, a corporation organized under the laws of the State of Minnesota with its principal business office at Minneapolis, Minnesota, owns and operates utility properties and furnishes electric service at retail in 426 communities and adjacent territories and electric energy at wholesale for resale in 31 additional communities and at wholesale to rural electric cooperative associations and other utility companies located in Minnesota, North Dakota and South Dakota.

According to the application, promissory notes will be issued on various days and for various periods of time, but no note will mature more than twelve months after date of issue or renewal nor shall the maturity date of any note be later than August 31, 1966. Applicant states that the interest rate will be a rate that to the best knowledge and belief of the officers making the borrowings, does not exceed the prime loan interest rate at the time and place of making.

Applicant represents that it is its present intention, if, in the opinion of its directors and officers, market and economic conditions are favorable, to obtain funds for the prepayment of all or substantially all of its promissory notes described above by offering to the holders of its Common Stock in August of 1965 the right to subscribe for one share of Common Stock for each 20 shares held. Applicant expects this rights offering to produce about $27 million of new capital. The Applicant also expects to issue other permanent securities in 1966.

According to the application, the proceeds from the bank borrowings to be evidenced by the promissory notes described above will be added to the general funds of the Applicant to pay in part the expenditures made and to be made in 1965 in connection with the Applicant's construction program. Included among Applicant's principal expenditures for its 1965 construction program are approximately $3 million for construction of its Allen S. King plant in Oak Park Heights, Minnesota, $4.3 million for construction of the 58,000 kw generating plant at Faribault, Minnesota, $2.3 million for the Pathfinder atomic power plant of 66,000 kw capacity near Sioux Falls, South Dakota, $1.2 million for the 100 mile 345 kv transmission line from Red Rock to Adams, Minnesota, and $18.5 million for electric distribution facilities. These expenditures are estimated to amount to $51,600,000.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on May 13, 1965 (30 F.R. 6603), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before May 25, 1965, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 3, 1965, Northern States Power Company, Docket No. E-7202 (33 FPC 942).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $27,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $27,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is sufficient.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $27,000,000 outstanding at any one time, whether an original issue or a renewal note, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all notes to be issued pursuant thereto being not later than August 31, 1966.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP65-301

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 14, 1965)

On March 25, 1965, Central Illinois Public Service Company (Applicant) filed in Docket No. CP65-301 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Alvin, Henning and Bismarck, Vermilion County, Illinois and their environs, all as more fully set forth in the application.

Applicant proposes to construct and operate distribution systems in each of the three towns, plus 7.45 miles of 2- and 4-inch pipeline extending from the requested delivery point of Panhandle to the three communities.

Total estimated volumes of natural gas involved to meet Applicant's annual and peak day requirements in the third year are stated to be:

Town	Annual Mcf	Peak day Mcf
Alvin	14,705	135
Henning	17,765	163
Bismarck	30,555	280
Total	63,025	578

Total estimated cost of Applicant's proposed construction is $189,200, and will be financed with internally generated funds.

Panhandle has filed no objection to the issuance by the Commission of an order as requested by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant is legally authorized to construct and operate the proposed facilities and to engage in the local distribution of natural gas to the public, as proposed, within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver up to 578 Mcf of natural gas per day to Applicant for resale and distribution as hereinbefore described, upon the terms and conditions of this order.

(4) The requirement that Panhandle serve Applicant, as hereinafter ordered, will not place an undue burden upon Panhandle, require it to enlarge its transportation facilities, or impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver up to 578 Mcf of natural gas per day to Applicant as hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) Panhandle shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service from Panhandle as directed herein, within one year from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TOWN OF ECLECTIC, ALABAMA, DOCKET NO. CP65-278

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 14, 1965)

On March 5, 1965, the Town of Eclectic, Alabama (Applicant) filed in Docket No. CP65-278 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Southern) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Eclectic, Elmore County, Alabama and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Eclectic, and approximately 9.3 miles of 4-inch transmission line extending therefrom in a southerly direction to a proposed point of interconnection with Southern's south line.

Applicant's estimated third year annual and peak day requirements are 35,542 Mcf and 471 Mcf, respectively.

The total estimated cost of the proposed project is $283,000, and will be financed through the issuance and sale of revenue bonds.

Southern filed an answer in this proceeding on March 19, 1965, as modified May 6, 1965, stating it had no objection to the granting of the requested order for service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order dated October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) Applicant, the Town of Eclectic, Alabama, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Southern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and to render natural gas service to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Southern, as proposed, within one year from the date on which this order issues.

(5) The requirements that Southern serve Applicant, as proposed, will not place any undue burden upon Southern nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Southern Natural Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to render natural gas service to Applicant, all as hereinbefore described and as set forth in the application.

(B) Southern shall report to the Commission in writing the date of commencement of service to Applicant, within ten days thereof.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Southern, as proposed, within one year from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

ORDER CONSOLIDATING PROCEEDINGS, GRANTING INTERVENTION AND DENYING MOTION TO RESCIND TEMPORARY CERTIFICATE AND TO DISMISS APPLICATION

(Issued June 14, 1965)

By notices of March 2, and April 27, 1965, the matter presented by the above-designated docketed applications were consolidated for a May 11, 1965 hearing. That hearing was subsequently postponed until further notice.

The notices of March 2, and April 27, consolidated the application of El Paso Natural Gas Company (El Paso) filed in Docket No. CP64-211, with those of the above-captioned independent producers. Dates of March 30, and May 25, 1965, were prescribed for petitions to intervene.[1]

A petition for leave to intervene in these consolidated proceedings and in each individual docket with the exception of Docket Nos. CI65-878 and CI65-930 was filed March 29, 1965, by San Diego Gas & Electric Company.

A petition for leave to intervene in these consolidated proceedings and in each individual docket with the exception of Docket No. CI65-878 was filed by Pacific Gas & Electric Company on March 29, 1965.

A petition for leave to intervene and a notice of intervention in these consolidated proceedings and in every individual docket were filed, respectively, by Southern California Gas Company and Southern Counties Gas Company of California, jointly, and by the People of the State of California and the Public Utilities Commission of the State of California.

A petition to intervene in these consolidated proceedings and in only the application in Docket No. CP64-211 was filed by Gulf Pacific Pipeline Company (Gulf Pacific). Phillips Petroleum Company on April 13, Gulf Oil Company on April 16, Dalco Oil Company on April 19, Pure Oil Company on April 20, and Skelly Oil Company on April 23, 1965, filed answers in opposition to intervention in these proceedings by Gulf Pacific.

---

[1] The notice of April 27, concerned material amendments to several of the above-listed independent producer applications filed subsequent to the original notice of March 2, 1965, and the consolidation of the additional filings of George T. Abell and M. B. Rudman, *et al.*, in Docket Nos. CI65-878 and CI65-930. Pursuant to this latter notice persons not having previously intervened on March 30, were requested to do so by May 25, 1965.

Gulf Pacific is an applicant competitive with El Paso in the comparative proceedings in *Transwestern Pipeline Company, et al.*, Docket No. CP63–204, *et al.* Gulf Pacific contends that the facilities for which permanent certification is sought by El Paso in the present proceedings in Docket No. CP64–211 are generally the same as those proposed by El Paso in the aforementioned comparative proceedings.[3] Contending that the filing of duplicate applications by El Paso for essentially the same facilities is improper, Gulf Pacific asserts that not only should the temporary certificate issued December 11, 1964, be rescinded, but that the application itself should be dismissed.

The application of El Paso in the aforementioned competitive proceedings, in Docket No. CP63–204, *et al.*, while including supply facilities generally the same as involved herein are *allegedly* required for two distinct purposes. In the competitive proceedings El Paso proposes construction and operation of these facilities *solely* to indicate an ability to attach reserves to supply up to an additional 575,000 Mcf of natural gas daily to distributors in California. In its present application El Paso asserts a need for substantially the same facilities solely to augment overall system reserves, without any further sales. It is possible, therefore, that in the interval of time from the filing of its application in the comparative proceeding, the alternative need of these same facilities developed. It is a contested matter that should be determined at a formal hearing.

The filing of amendments to applications in the competitive proceeding was barred after November 14, 1963, by Commission order of August 22, 1963, 30 FPC 533, in that proceeding, to offset any disruptive effect there. If capable of substantiation, El Paso's filing of an additional application in Docket No. CP64–211, for generally the same facilities, but for a separate and distinct purpose does not, at this time, appear disruptive of the comparative proceeding. There appears therefore to be no good cause to delay proceedings in this present application until after Commission decision in the latter proceedings.

As a matter of sound administrative procedure, the filing or consideration of two or more applications for the same facilities is generally not proper. El Paso claims, however, that the gas involved in the applications here in issue will be of great value to its system operations regardless of whether it is found to be necessary as part of its gas supply should we decide to certificate its alternative proposal in *Transwestern Pipeline Company, et al.*, Docket No. CP63–204, *et al.* It asserts further that a number of the contracts have provisions which leave the producers free to sell their gas elsewhere if no certificate is granted by December 31, 1965, and that even if the *Transwestern* case *supra* is decided by that date, it is quite possible that such a decision would not involve certification of these sales. We think that in these circumstances a separate hearing on the applications consolidated here is appropriate. We shall require El Paso to show that the need for the facilities and reserves proposed herein is consistent with the market and reserve showing presented by El Paso in the comparative proceeding. El Paso, must also show that the acquisition of reserves and construction and operation of facilities as proposed are consistent with the public convenience and necessity independent of its applications in the *Transwestern* case.

Gulf Pacific also seeks to rescind the temporary certificate issued December 11, 1964, to El Paso for a portion of the facilities involved herein. Gulf Pacific contends that this grant of a temporary certificate was contrary to Section 2.57

---

[3] Hearings in these proceedings have concluded and a briefing period through August 2, 1965, was prescribed by the Presiding Examiner.

of the Rules of Practice and Procedure. The provisions of that section, in relation to the temporary certification granted for the comparatively minor enlargements or extensions, do not require a previous notice or hearing. To preclude any possibility that any interest of Gulf Pacific was or will be adversely affected by the grant of this temporary certificate, or by issuance of any permanent certificate, Gulf Pacific will be granted intervention in all matters involved herein. In addition, Gulf Pacific may renew its motions to rescind the temporary certificate and to dismiss the application at the conclusion of the hearing in these proceedings.

One further application shall be considered herein. On January 30, 1962, El Paso filed an application in Docket No. CP62–176 pursuant to Section 7 of the Natural Gas Act to construct and operate facilities for the purchase and transportation of natural gas in Pecos County, Texas, all as more fully set forth in the application on file with the Commission and open to public inspection. That application is directly related to the matter described above, and therefore that docket is consolidated herein. This application was previously noticed by the Commission on May 24, 1962, 27 F.R. 5157 (1962) (Published June 1, 1962) and a temporary certificate for construction and operation of the facilities therein was issued September 27, 1962. Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426 in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before June 30, 1965. Those parties granted intervention by this order will be considered as intervenors in all the matters in these presently consolidated proceedings. Those parties therefore, need not refile for intervention in the additional and individual docket consolidated by this order unless they desire to do so.

The Commission orders:

(A) The matters involved in the application filed in Docket No. CP62–176 are related to the matters involved in these proceedings and are hereby consolidated for formal hearings.

(B) Good cause has not been shown by Gulf Pacific Pipeline Company for granting its motions to rescind the temporary certificate issued to El Paso Natural Gas Company in Docket No. CP64–211; to dismiss El Paso's application therein; or to delay these proceedings until after Commission decision in the proceedings in *Transwestern Pipeline Company, et al.*, Docket No. CP63–204, *et al.* The motions are denied without prejudice, however, to Gulf Pacific renewing its motions at the conclusion of the hearing in this proceeding. After El Paso Natural Gas Company has submitted the information requested by our staff which is necessary to evaluate the proposal a date for hearing will be fixed by subsequent order of the Commission.

(C) The aforementioned petitioners are hereby permitted to intervene in these consolidated proceedings and in the individual dockets as requested, subject to the rules and regulations of the Commission: *Provided, however*, that the participation of each intervener shall be limited to matters affecting asserted rights and interests as specifically set forth in their petitions for leave to intervene; And, *Provided, further*, that the admission of each intervener shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in these proceedings.

(D) The motions of Gulf Oil Company, Skelly Oil Company, Dalco Oil Company, Pure Oil Company and Phillips Petroleum Company in opposition to the petition of Gulf Pacific Pipeline Company to intervene in these proceedings are denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

HUMBLE OIL & REFINING COMPANY, G-9287, ET AL.; UNITED FUEL GAS COMPANY, RP65-22 AND TEXAS EASTERN TRANSMISSION CORPORATION, RP65-27

ORDER REJECTING APPLICATION FOR REHEARING AND DENYING REQUEST FOR RECONSIDERATION

(Issued June 14, 1965)

Texas Eastern Transmission Corporation (Texas Eastern) and United Fuel Gas Company (United Fuel) filed on May 20 and May 21, 1965 respectively, applications for rehearing of the Commission's "Order Releasing Refunds In Part" issued April 21, 1965, 33 FPC 830, in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.* That order, in carrying out the procedure outlined in the order[1] which approved the settlement of Humble's rate proceedings, directed the release of those portions of the Humble refund which would flow through to the limits of our jurisdictional reach and ordered the retention of the remainder.

Texas Eastern and United Fuel urge in their applications for rehearing that the Commission's order is legally and equitably unsound insofar as it requires their suppliers to retain and defer the flow through of certain funds to them at this time. The parties thus ask that we determine their entitlement to these funds on the basis of their pleadings. Such a procedure was considered and rejected by the Commission in an order[2] denying rehearing of the retention requirement in the United Gas Pipe Line Company settlement. In that order the Commission rejected an application for rehearing by Texas Eastern and stated:

> We do not believe it necessary or appropriate to consider these claims here, since they are all considerations which Texas Eastern can restate and which we will consider in reaching our final determination upon the basis of the factual record made in the hearing to be held in this matter * * *
>
> Texas Eastern will, of course, be fully heard on all relevant claims before we reach any conclusion adverse to its claims to entitlement to the refunds from United. We reiterate that we have not yet determined whether it is or is not entitled to retain any or all of such amounts.
>
> However, Texas Eastern's apparent view that the Commission must decide the validity of its claims on the pleadings and cannot in the exercise of its discretion defer such determination until after it can do so in the light of a full hearing record in an ancillary proceeding in which other interested parties will also have an opportunity to present factual information and legal arguments they may deem material is clearly lacking in merit. Accordingly, since an application for rehearing does not lie under Section 1.34 of our Rules of Practice and Procedure from interlocutory actions of the Commission and Texas Eastern has advanced nothing to persuade us that we should abandon the course of action prescribed or indicated in Paragraphs (C) and (D) of our order of December 23, 1964, we shall reject

---

[1] Order Conditionally Approving Rate Settlement Proposal, Severing and Terminating Proceedings, and Prescribing Refunds, *Humble Oil & Refining Company*, issued July 8, 1964, Docket No. G-9287, *et al.*, 32 FPC 49.

[2] Order Rejecting Application for Rehearing and Denying Request for Reconsideration, issued February 19, 1965, *United Gas Pipe Line Company*, Docket No. RP61-18, *et al.*, 33 FPC 304.

the application for rehearing and deny it, considered as a petition for reconsideration.

The foregoing determination and conclusion apply with equal weight to the instant applications of Texas Eastern and United Fuel.

The Commission orders:

(A) Texas Eastern's and United Fuel's applications for rehearing of our order issued April 21, 1965, are hereby rejected.

(B) Texas Eastern's and United Fuel's pleadings classified as petitions for reconsideration are hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. CP64-255 (PHASE I) AND CP65-188

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 15, 1965)

On April 28, 1965, Northern Natural Gas Company (Applicant) filed in Docket Nos. CP64-255 (Phase I) and CP65-188 an application to amend the orders of the Commission issued in said dockets on December 21, 1964, 32 FPC 1491 and March 31, 1965, 33 FPC 659, respectively, authorizing the construction and operation of facilities for the transportation and sale of natural gas. By the application to amend the Applicant seeks authorization to install and operate a 12,500 Hp turbine compressor unit at its Mullinville, Kansas Compressor Station in lieu of two 3,400 Hp reciprocating units now authorized for the said Station, all as more fully set forth in the application to amend.

The proposed substitution of compressor units will effect a saving of $166,500 in investment as well as in operating costs. Initial investment in the turbine unit will be $1,800,500 as compared with $1,967,000 for two 3,400 Hp units.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on May 12, 1965 (30 F.R. 6554), in Docket No. CP65-188 and on May 14, 1965 (30 F.R. 6666) in Docket No. CP64-255. No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's orders issued in said dockets on December 21, 1964 and March 31, 1965, respectively, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's orders issued December 21, 1964 in Docket No. CP64-255 and March 31, 1965 in Docket No. CP65-188, be and the same are hereby amended by authorizing Applicant to install and operate one 12,500 Hp turbine compressor unit at its Mullinville Compressor Station in lieu of two 3,400 Hp previously authorized in said dockets as stated above.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

DORCHESTER GAS PRODUCING COMPANY, DOCKET NO. G–18671

ORDER GRANTING MOTION FOR PARTIAL RELEASE OF TRUST FUNDS

(Issued June 16, 1965)

Dorchester Gas Producing Company (Dorchester) on May 7, 1959, filed a proposed rate increase from 8¢ to 17.598¢ per Mcf, designated as Supplement No. 5 to its FPC Gas Rate Schedule No. 1, for the sale of gas to Northern Natural Gas Company (Northern) from the Panhandle Field, Carson and Gray Counties, Texas. The proposed rate was suspended in Docket No. G–18671 until November 7, 1959, at which time it was placed in effect subject to refund under a trust agreement.[1] All of the increased revenues collected under the 17.598¢ per Mcf rate have been deposited in trust.

By order issued November 19, 1964, 32 FPC 1339, in Docket No. RI64–749, *et al.*, Dorchester's request for the issuance of an order instituting a general rate investigation was denied. We there indicated, however, that we would give Dorchester some relief by permitting it to file an agreement and undertaking to assure the refund of any excess charges in Docket No. G–18671 in place of the present trust arrangement for those amounts collected between 8¢ and 11¢ per Mcf.

Dorchester on May 11, 1965, filed a motion requesting partial release of those amounts collected between 8¢ and 11¢ per Mcf which are now held in trust. Specifically, Dorchester desires to limit the allowed release of monies in trust to only that part of the total which the holders of the mortgage notes[2] are entitled to receive. Under its proposal the remainder of the monies collected between 8¢ and 11¢ per Mcf, which Dorchester and others than the note holders would be entitled to receive including money which Dorchester would be required to pass on to its royalty owners and co-owners, is to remain in the trust fund. Dorchester requests that, of the $2,129,112.76 now in trust representing collection of the difference between 8¢ and 11¢ per Mcf together with related interest earned, $1,715,929.70 be released and passed on to the noteholders. The remaining $413,183.06 will continue to remain in trust. Dorchester also requests that in the future the trustee under its trust agreement in Docket No. G–18671 be directed to release each month to the trustee for the noteholders the monies which the noteholders are entitled to receive.

The proposal of Dorchester is not inconsistent with the provisions of the November 19, 1964, order, and therefore we deem it appropriate to approve the proposal as hereinafter ordered. There is one minor problem, however, that should be clarified here. The agreement and undertaking submitted by Dorchester with its proposal provides, among other things, for refunds "with interest if required", from April 1, 1965 with respect to amounts collected between 8¢ and 11¢ per Mcf prior to that date. We think it appropriate to specify an interest rate of seven percent from April 1, 1965, with respect to those amounts collected prior to that date in the event it is determined that any portion of the amounts collected from 8¢ to 11¢ per Mcf is not justified.[3] This will avoid any possible confusion on this point in the future.

---

[1] The trust agreement with the First National Bank in Dallas as trustee, was executed on November 25, 1959, and amended on March 30, 1961. Under the policy then in effect, no interest obligation was imposed on Dorchester with respect to any refunds that might be required because the increased amounts were to be placed in trust.

[2] The First National Bank in Dallas is also trustee under the Deed of Trust, Mortgage and Assignment dated July 1, 1954, between the Nalam Corporation and First National Bank in Dallas.

The Commission orders:

(A) The First National Bank in Dallas, as trustee under the trust agreement dated November 29, 1959, as amended March 30, 1961, in Docket No. G-18671, shall release to the First National Bank in Dallas, as Trustee under the Deed of Trust, Mortgage, and Assignment, dated July 1, 1954, between the Nalam Corporation and First National Bank in Dallas, (1) forthwith the amount of $1,715,929.70 and (2) periodically each month, commencing with the month of April 1965, an amount equal to 96 percent of Dorchester's net working interest (but not excluding the portion dedicated to the production payment held by Dorchester Gas Company) in the sum computed by multiplying 3¢ per Mcf times the number of Mcf's sold by Dorchester to Northern for which the trustee received payment in such month. Except as specifically provided herein, the trust agreement in Docket No. G-18671 shall remain in full force and effect.

(B) The agreement and undertaking filed by Dorchester in Docket No. G-18671 to assure the refund of any excess charges that may be determined in such proceeding with respect to those amounts collected between 8¢ and 11¢ per Mcf is hereby accepted for filing.

---

[3] The seven percent interest requirement is applicable only to those amounts collected from 8¢ to 11¢ prior to April 1, 1965, which are released from trust. It is not applicable to those amounts which will remain in trust.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

RESERVE OIL AND GAS COMPANY,[1] DOCKET NO. G-18570, ET AL.[2]

ORDER REJECTING OFFER OF SETTLEMENT

(Issued June 16, 1965)

On March 15, 1965, Reserve Oil and Gas Company (Reserve) filed an offer of settlement, which is amended on May 13, 1965, which we now have before us for consideration. The offer relates to sales of natural gas made under fourteen of Reserve's currently effective FPC Gas Rate Schedules in various fields in Texas Railroad Commission District Nos. 2, 3 and 4. In summary, the settlement proposal as filed by Reserve provides:

(1) elimination of any favored-nation, price redetermination and periodic escalation clauses contained in eleven of its rate schedules with provisions for settlement rates at or below 15¢ per Mcf for the remaining life of the respective contracts, and settlement rates at or below 14.6¢ per Mcf for the other three rate schedules with the right to file for 1.0¢ periodic escalations which are to be contractually authorized every five years commencing November 11, 1968, as detailed in the Appendix hereto;

---

[1] Successor to Producing Properties, Inc.

[2] The additional dockets involved herein are set forth in the Appendix hereto.

(2) that Reserve would make full refund of all amounts collected subject to refund above the settlement rates; and

(3) that it would eliminate a contract provision whereby it could reduce the present maximum delivery pressure requirement of 1200 psig to 600 psig for the last ten years of the contract from four of the rate schedules involved herein.

However, Reserve's FPC Gas Rate Schedule Nos. 1 and 2 are for sales to Union Texas Petroleum, A Division of Allied Chemical Corporation (Union) which gathers and processes the gas, along with other volumes purchased in the area, in its Winnie Gasoline Plant prior to sale of the residue volumes to Texas Eastern Transmission Corporation at a delivery point approximately twelve miles from the plant.

As stated in the order issued in *Clegg & Hunt* (Operator), *et al.*, Docket No. RI60–405, 33 FPC 808 (April 16, 1965) where gas is gathered and processed by the purchaser prior to ultimate sale to a natural gas pipeline company for transmission in interstate commerce, the area price levels set forth in the Statement of General Policy No. 61–1, as amended are applicable to the sale of residue gas after processing, *Foster Petroleum Corporation*, Docket Nos. RI64–17 and RI64–24, 30 FPC 672; *H. N. Burnett*, Docket No. RI64–334, 30 FPC 1384-A (order issued November 22, 1963) and *H. F. Sears*, Docket Nos. G–10494 and G–10752, 31 FPC 585. Here, the area price levels are applicable to sales by Union to Texas Eastern. Consequently, the 14.6¢ settlement rate proposed by Reserve herein under its Rate Schedule Nos. 1 and 2 is not acceptable.

Additionally, it is to be noted that Reserve proposes under its FPC Gas Rate Schedule Nos. 21 and 29 a settlement rate of 15¢ per Mcf of natural gas for sales to Tennessee Gas Transmission Company in Texas Railroad District No. 4, and to delete the favored-nation and price redetermination provisions from the contracts if any be contained. However, examination of the Commission's files reveals that no deliveries of natural gas are presently being made under said rate schedules. Therefore, the provisions of the Second Amendment to the Statement of General Policy No. 61–1, 24 FPC 1107, are inapplicable. Consequently, the proposed settlement rates for these sales are unacceptable. A proper settlement rate for these sales would be 14.0¢; the applicable increased rate ceiling. In its amendment, filed May 13, 1965, Reserve stated that it is "unwilling to sever Rate Schedule Nos. 1 and 2 from its company-wide Offer of Settlement and would be unwilling to accept an order approving such Offer conditioned upon the elimination of Rate Schedule Nos. 1 and 2 therefrom." Therefore, we shall reject Reserve's proposal, even though Reserve's settlement offer is acceptable under the Second Amendment to the Statement of General Policy No. 61–1, as amended, 29 FPC 589, except as to Rate Schedule Nos. 1, 2, 21 and 29. However, Reserve may file, such proposals as it deems fit, which are in accordance with the Statement of General Policy No. 61–1, as amended.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to reject the offer of settlement filed by Reserve, as amended.

The Commission orders:

The offer of settlement filed by Reserve in these proceedings on March 15, 1965, as amended on May 13, 1965, is hereby rejected, without prejudice to the filing of settlement offers as indicated above.

[1] Cents per Mcf at 14.65 psia.

[2] Reserve proposes to delete the periodic escalation provisions. Other price escalation provisions were previously eliminated.

[3] Reserve proposes to delete the periodic escalation provisions and will eliminate a pressure reduction provision which has become effective under the contract.

[4] Reserve proposes to delete the favored-nation and/or price redetermination provisions. Periodic escalations would be rescheduled to provide for 1.0 cent per Mcf every five years commencing November 11, 1968.

[5] Reserve proposes to delete the favored-nation and/or price redetermination and periodic escalation provisions. Rate is subject to a 0.21931 cent dehydration charge deduction.

[6] Non-dehydrated gas. Buyer has deducted 0.21931 cent dehydration charge.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. RI64-273; THE SUPERIOR OIL COMPANY, DOCKET NOS. G-18168,[1] G-20435[1] AND G-20577[2]

ORDER ON REMAND

(Issued June 16, 1965)

By order issued March 9, 1964, 31 FPC 507, in the above-entitled proceedings, the Commission denied Trunkline Gas Company (Trunkline) the relief requested by it in a petition for declaratory order filed on October 25, 1963, as supplemented on November 13, 1963. In its petition, as amended, Trunkline had requested the Commission to determine that The Superior Oil Company's (Superior) favored-nation increases involved here were unlawful and to permit it to pay Superior on the basis of the increased rate ceilings set forth in the policy statement pending determination of Superior's just and reasonable rates. Trunkline was required by that order to recompute and pay to Superior the amounts due, computed on the basis of the increased rates in effect subject to refund herein. By order issued April 15, 1964, 31 FPC 934, the Commission modified the March 9 order so as to require Trunkline to pay interest at 7% to the date of payment on those amounts properly payable but not tendered by Trunkline to Superior. The Commission by order issued June 9, 1964, 31 FPC 1511, refused to require Trunkline to pay interest on the total amount payable to Superior under the increased rates involved here. The Commission ruled that Superior should have accepted Trunkline's unconditional tender of a portion of the total amount due, and in view of its failure to do so no additional interest should be required of Trunkline.

---

[1] Consolidated with the area rate proceeding in Docket No. AR64-2, *et al.*, by order issued November 27, 1963, 30 FPC 1354.

[2] Consolidated with the area rate proceeding in Docket No. AR61-2, *et al.*, by order issued May 10, 1961, 25 FPC 942.

Superior then filed a timely petition for court review (CA5, No. 21796) with respect to the Commission's refusal to order Trunkline to pay interest on the total amounts payable to it. Thereafter, the Commission filed a Motion for Remand of this case to permit it to reconsider its decision in light of the filed rate doctrine. That motion was granted by the Court. In view thereof, we think it appropriate to give Superior, Trunkline and the Commission Staff an opportunity to brief the issues involved on remand, *i.e.* those relating to the filed rate, the propriety of permitting an exception thereto and the precedential effect of permitting such an exception. In connection with the briefs, we note that Superior filed a court brief prior to the remand of this case. Superior, if it so desires, may use its court brief as its initial brief.

The Commission orders:

Initial briefs may be filed herein on or before June 28, 1965 and reply briefs may be filed on or before July 12, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PORTLAND GENERAL ELECTRIC COMPANY, PROJECT NO. 2195

ORDER APPROVING REVISED EXHIBIT L DRAWINGS

(Issued June 17, 1965)

On June 3, 1965, Portland General Electric Company filed for Commission approval revised Exhibit L drawings for its Faraday development, Project No. 2195, located on the Clackamas River in Clackamas County, Oregon. The exhibit was filed pursuant to Article 34 of the license order issued by the Commission on April 23, 1965, 33 FPC 876.

The revised Exhibit L drawings show the results of the studies made by the licensee in order to provide for a concrete gravity diversion dam at the Faraday development in lieu of a concrete arch structure originally authorized by the Commission.

The above mentioned project changes have been reviewed by our staff and have been found to be safe and stable.

The Commission finds:

(1) The following described Exhibit L drawings, conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Faraday Development: Exhibit L

Sheet No.	F.P.C. No. 2195	Showing
27	-88	Faraday Diversion Dam-Plan.
28	-89	Faraday Diversion Dam Elevation and Sections.

(2) The description for the proposed Faraday Development as contained in subparagraph (b) of ordering paragraph (A) in the April 23, 1965 order referred to above, be deleted and amended to read as follows:

> A proposed concrete gravity type dam consisting of an ogee spillway section about 56 feet high with crest at elevation 516 feet surmounted by 2 drumgates each 10 feet high and 125 feet long which may be extended to normal pool elevation 526 feet, a pier between the 2 drum gates 5 feet wide and 12 feet high above the crest, and two short nonoverflow abutment sections with top at elevation 544 feet; a reservoir with a capacity of about 550 acre-feet; a concrete lined tunnel 2,450 feet long; an unlined canal 3,300 feet long leading to a forebay; 6 penstocks supplying 5 generating units totaling 15,250-KW in an indoor powerhouse and one 19,200-KW unit in an outdoor powerhouse; and appurtenant facilities.

The Commission orders:

(A) The revised Exhibit L drawings are hereby approved as part of the license for the project.

(B) The description of the Faraday Development contained in subparagraph (b) of ordering paragraph (A) of the Commission's license order issued April 23, 1965 Project No. 2195 is hereby deleted and amended to read as indicated in finding (2) above.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-294

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued June 17, 1965)

On March 23, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-294 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to abandon (1) in place 1.0 mile of 12-inch pipeline, and (2) by sale 0.5 mile of 12-inch pipeline to United Gas Corporation, downstream from Applicant's Gulfport City Gate in Harrison County, Mississippi, used to serve its parent, United Gas Corporation, the distributor in Gulfport, Mississippi. Upon abandonment approval United Gas Corporation will integrate the portion purchased into its distribution system. Applicant will receive $11,851 representing the depreciated original cost of the portion of the line sold to United Gas Corporation.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on June 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant, United Gas Pipe Line Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-255 (PHASE I)

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 18, 1965)

On May 3, 1965, Northern Natural Gas Company (Applicant), filed in Docket No. CP64-255 (Phase I) an application to amend the order of the Commission issued December 21, 1964, 32 FPC 1491, in Docket No. CP64-255 (Phase I), which among other things authorized Applicant to construct and operate facilities to provide initial natural gas service to the Mesabi Iron Range area of Minnesota. By the application to amend the Applicant seeks authorization to (1) change the routing of the system to avoid crossing taconite deposits, which will lengthen the pipeline to the Erie Mining Plant by three miles, eliminate 2.5 miles of pipeline to Hoyt Lakes, and require the construction and operation of 1.2 miles of pipeline to the Oglebay-Norton Plant near Forbes, make other minor changes in routing, resulting in a net decrease of 3.1 miles of proposed pipeline, and (2) increase the diameter of two segments of pipeline to be constructed, namely (a) approximately 13.6 miles of pipeline from 10-inch to 12-inch, extending in a westerly direction from the terminus of the 20-inch line to the Hibbing take-off, and (b) approximately 9.7 miles of line from 8-inch to 10-inch extending in a general northeasterly direction to the Erie Mining Plant.

The increase in pipe size is necessary to deliver the volumes of gas which are now estimated to be required by the ore processing plants. There will be no increase in the estimated cost of construction by reason of the substitution of the larger diameter pipe.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on May 14, 1965 (30 F.R. 6666). No protest, petition to intervene or notice of intervention has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued December 21, 1964, in Docket No. CP64-255 (Phase I) be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 21, 1964, in Docket No. CP64-255 (Phase I) be and the same is hereby amended so as to authorize the change in routing of pipeline as proposed and an increase in diameter of 13.6 miles of pipeline from 10-inch to 12-inch and 9.7 miles of pipeline from 8-inch to 10-inch as proposed in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBIAN CARBON COMPANY, DOCKET NOS. G-11751 AND RI61-395

ORDER DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued June 21, 1965)

Columbian Carbon Company (Columbian) on May 14, 1965, filed a motion to terminate the above-entitled proceedings which relate to increased rates of 26¢ and 27¢ per Mcf, respectively, for sales under its FPC Gas Rate Schedule No. 1 to Hope Natural Gas Company (Hope) in Mingo, McDowell and Logan counties, West Virginia. Since Columbian was authorized to abandon these sales by order issued December 4, 1962,[1] Docket Nos. G-11751 and RI61-395 cover locked-in periods which involve, according to Columbian, $46,345 in amounts collected subject to refund.

In support of its motion Columbian states, among other things, that the Commission has terminated suspension proceedings involving similar or higher rates in the same area,[2] and claims that it should receive similar treatments.

---

[1] Since that time Columbian has also disposed of all of its other gas and oil properties in the United States.

By order issued December 4, 1962 (which was subsequent to the orders cited by Columbia in purported support of its motion), we refused to grant a similar motion by Columbian to vacate these proceedings. As we have previously indicated,[3] a prior decision does not preclude our analysis of all pertinent factors pertaining to particular proceedings and the continued re-examination of pertinent policies affecting the public interest. In approving settlements we have consistently adhered to the increased rate ceiling level as the proper level for settlement rates, except in special circumstances which are not involved here. No reason has been advanced by Columbian which would justify our approval of a rate in excess of the 25¢ per Mcf increased rate ceiling applicable to sales from this area. We must therefore deny Columbian's motion to terminate.

The Commission orders:

The motion to terminate the above-entitled proceedings filed by Columbian on May 14, 1965, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-291

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 21, 1965)

By Commission order issued in this docket on May 6, 1965, 33 FPC 972, Petitioner was granted a certificate of public convenience and necessity authorizing the sale of natural gas to Intermountain Gas Company (Intermountain) for resale and distribution in Eagle, Star, and Middleton, Idaho and their environs.

On May 25, 1965, Petitioner filed herein a petition to amend said order by deleting therefrom the volumetric limitation of 500 Mcf per day contained in ordering paragraph (A) thereof on page 973.

Petitioner is presently delivering natural gas to Intermountain for resale in communities other than the three involved in this proceeding. The gas for service to those communities is delivered through a single meter station. Petitioner's proposal as set forth in its application was to deliver the gas for service in the three additional communities through the same meter station. The imposition of a volumetric limitation would necessitate the construction by Petitioner of an additional meter station for separate measurement of the volumes of gas for the three communities involved. For this reason the limitation appears inappropriate, and should be removed.

The Commission orders:

(A) The order of the Commission issued on May 6, 1965, in Docket No. CP65-291, is hereby amended by deleting therefrom the volumetric limitation of 500 Mcf per day contained in ordering paragraph (A) thereof on page 973.

(B) In all other respects said order shall remain in full force and effect.

---

[3] See *Ravencliffs Development Company*, Docket No. G-17312, *et al.*, order issued August 21, 1962, 28 FPC 349; *United Carbon Company*, Docket No. RI61-269, order issued November 7, 1961, 26 FPC 715.

Before Commissioners: David S. Black. Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

GULF OIL CORPORATION, RI65-599[1] AND RI65-600; SHELL OIL COMPANY, RI65-475, RI65-476, RI65-477 AND RI65-478; AMERADA PETROLEUM CORPORATION, RI65-552 AND RI65-553

ORDER DENYING MOTIONS TO DISMISS INCREASED RATE FILINGS

(Issued June 21, 1965)

Philadelphia Electric Company (Philadelphia) on May 14, 1965, filed three motions requesting the Commission to dismiss the proposed increased rates filed by Gulf Oil Corporation (Gulf), Shell Oil Company (Shell), and Amerada Petroleum Corporation (Amerada), respectively, which are under suspension in the above-entitled proceedings.

Philadelphia in its motions claims that the increased rate filings involved here should be rejected as not being just and reasonable nor in conformity with the standards established by the Commission's Statement of General Policy No. 61-1 issued September 28, 1960, as amended. These claims are based on certain cost evidence presented in the area rate proceedings in Docket Nos. AR61-1 and AR61-2 in comparison with the average company-wide revenue realizations and the average unit revenues in South Louisiana of each of the three producers involved here.

There is no legal justification for rejecting these producer increases at this time. Even assuming that we had the power to reject a filing without affording the producer an opportunity for hearing, it would not be proper to do so on the basis of a portion of the evidence presented in a case which has not been decided, particularly where conflicting evidence has also been presented. See *Mississippi River Fuel Corp. v. F.P.C.*, 202 F. 2d 899 (CA3).

The Commission orders:

The motions filed by Philadelphia on May 13, 1965, in the above-entitled proceedings are hereby denied for the reasons set forth above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MIDHURST OIL CORPORATION, DOCKET NOS. G-18150, RI62-414 AND RI64-167

ORDER ACCEPTING OFFER OF SETTLEMENT, PERMITTING WITHDRAWAL OF NOTICE OF CHANGE, REQUIRING FILING OF NOTICES OF CHANGE, CONTRACT AMENDMENT AND REFUNDS, AND SEVERING AND TERMINATING PROCEEDINGS

(Issued June 21, 1965)

On May 27, 1965, Midhurst Oil Corporation (Midhurst) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. It supplemented its offer by letter on the same date. The offer involves two sales of natural gas to Texas Eastern Transmission Corporation (TETC). One is a sale made under Midhurst's FPC Gas Rate Schedule No. 12 at a presently effective rate, being charged and collected subject to refund, of 15.6¢ per Mcf in the Mud Flats Field, Aransas County, Texas Railroad Commission District No. 4. The second is being made under Midhurst's FPC Gas Rate Schedule No. 19 at a presently effective rate of 13.8733¢ per Mcf in the Minoak Field, Bee County, Texas Railroad Commission District No. 2. Under its Rate Schedule No. 19, Midhurst has filed for an increased rate of 14.3733¢ which it proposed as the settlement rate. However, in its supplemental letter, Midhurst states that it will accept a settlement rate of 14.1¢ per Mcf under its Rate Schedule No. 19. The price levels set forth in the Statement of General Policy No. 61-1, as amended, for this area apply to sales of dehydrated natural gas with delivery at a central point in the field.[1] Texas Eastern in this area maintains a standard contract differential of 0.5¢ per Mcf for dehydration and central point delivery. The proposed 14.3733¢ rate for the sale of non-dehydrated gas delivered at the wellhead is equivalent to a 14.8733¢ rate when the standard contract differential of 0.5¢ is taken into account, and is therefore on a comparable basis in excess of the 14.6¢ ceiling under the Second Amendment. We shall therefore consider the Midhurst supplemental letter as a withdrawal of its notice of change in rate and shall approve a settlement rate under its Rate Schedule No. 19 of 14.1¢ per Mcf at 14.65 psia.

---

[1] The proceedings listed here are not consolidated.

Additionally, Midhurst proposes to eliminate the periodic price escalation, price redetermination and favored-nation provisions from its Rate Schedule No. 19 and to substitute therefor 0.5¢ per Mcf escalations in rate occurring on the fifth day of February 1968 and 1973.

In regard to its Rate Schedule No. 12, Midhurst proposes a settlement rate of 15.0¢ per Mcf for the remaining life of the contract which expires in 1978. Consequently, it proposes to eliminate the favored-nation and periodic price escalation provision from the subject rate schedule.

Under the settlement proposal, as supplemented, Midhurst's annual revenue will be decreased approximately $500 from the present revenue, and it will refund approximately $1,000, exclusive of interest, to TETC. For all of the reasons set forth in our order issued in Humble Oil & Refining Company, Docket No. G-9287, *et al.*, 32 FPC 49 (order issued July 8, 1964) we shall order Midhurst to retain the refund monies pending further order of the Commission. Comments to the offer of settlement were filed by TETC, The Brooklyn Union Gas Company and Long Island Lighting Company. We have considered them, and our action herein is consistent therewith.

We desire to make it clear that acceptance of Midhurst's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases or periodic increases as provided in its offer of settlement, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Midhurst's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Midhurst on May 27, 1965, as supplemented, is consistent with the Statement of General Policy No. 61-1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

---

[1] Hassie Hunt Trust, *et al.*, Docket No. RI64-58, *et al.*, order issued September 27, 1963, 30 FPC 856.

The Commission orders:

(A) The offer of settlement filed with the Commission by Midhurst May 27, 1965, as supplemented, is approved in accordance with the provisions of this order.

(B) The notice of change in rate to 14.3733¢ per Mcf filed by Midhurst on May 27, 1965, under its FPC Gas Rate Schedule No. 19 is considered withdrawn.

(C) Midhurst shall file, within 30 days of the issuance of this order, notices of change in rate providing for the settlement rates of 15.0¢ per Mcf under its Rate Schedule No. 12, and 14.1¢ per Mcf under its Rate Schedule No. 19.

(D) The contract amendment, designated as Supplement No. 6 to Midhurst's Rate Schedule No. 19, filed by it on May 27, 1965, is accepted for filing.

(E) Midhurst shall file within 30 days from the issuance of this order a contract amendment to its Rate Schedule No. 12 eliminating the favored-nation and periodic price escalation provisions therefrom.

(F) Midhurst shall compute the difference between the rates collected subject to refund and the settlement rate for sales to TETC in Docket Nos. RI62-414 and RI64-167, with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission with a copy to TETC, setting out the amount of refunds (showing separately) the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter a letter from TETC agreeing to the correctness of such amounts.

(G) Midhurst shall retain the amounts shown in the report required under paragraph (F) above, subject to further order of the Commission directing the disposition of those amounts.

(H) If Midhurst elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from August 16, 1965 to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(I) If Midhurst elects to deposit the retained refunds in a special escrow account, Midhurst shall tender for filing on or before August 16, 1965, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon TETC. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Midhurst and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Midhurst, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(J) Upon notification by the Secretary of the Commission that Midhurst has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf under its Rate Schedule No. 12, and the rate and charge of 14.1¢ per Mcf of natural gas under its Rate Schedule No. 19 at 14.65 psia, specified in its offer of settlement, as supplemented, shall be effective as of June 27, 1965, and the above-designated proceedings shall be deemed severed from the Texas Gulf Coast proceedings, Docket No. AR64-2; the proceedings in Docket Nos. RI62-414 and RI64-167 shall terminate, and Midhurst shall be relieved of its refund liability in Docket No. G-18150, all without further order of the Commission.

(K) The acceptance by Commission of Midhurst's offer of settlement, as supplemented, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Midhurst, and is without prejudice to claims or contentions which may be made by Midhurst, the Commission staff, or any affected party hereto, in any proceeding, including area rate or similar proceedings.

OPINION NO. 456-A

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP61-8

OPINION AND ORDER ON REHEARING

(Issued June 23, 1965)*

Syllabus

1. Settlement order required Commission to determine whether Natural should normalize its taxes or flow-through tax effect of liberalized depreciation; determination was made in *Opinion No. 456* that pipeline was properly subject to flow-through—this also involved proper treatment of accumulated deferred taxes. P. 1279.
2. Deferred tax accumulations amount to contributions by pipeline's customers for taxes not actually paid. P. 1279.
3. Under Section 4(e) of the Gas Act Commission is empowered to make rate order effective back to date increased rate became effective subject to refund. P. 1279.
4. Since *Alabama-Tennessee* announced new policy, overruling previous decisions, it was not equitable to make rate order here effective before February 3, 1965 [date of new policy]. P. 1279.
5. It makes a great deal of difference whether all terms of settlement are in one package to be accepted or rejected, as in cited cases, or whether such

---

* Generally affirmed; remanded on one aspect, *City of Chicago* v. *F.P.C.*, —— F. 2d ——, (CADC-1967).

settlement leaves out an issue to be decided by Commission, as here. P. 1280.

6. Argument that pipeline has no duty to reduce rates to reflect flow-through for period beginning January 1, 1965, because it has nothing to flow-through [based on application to Internal Revenue Service to depart that date from liberalized depreciation for tax purposes] represents an attempt to reopen record to introduce new factor in rate case. P. 1280.
7. To give effect to a change in rates resulting from shift to straight-line depreciation, pipeline should make a rate filing in accordance with provisions of Gas Act and Commission Regulations. P. 1280.
8. Settlement agreement does not require that substantive determination here be made retroactive to March 1, 1961 [date increased rates became effective]; nothing in Section 4(e) of Gas Act or cited cases requires Commission to make its orders retroactive to date rate change became effective. P. 1281.
9. Upon rehearing, Commission *confirms* prior decision, with certain modifications.

Commissioner O'Connor *concurs in result.*

Commissioner Black *dissenting in part.*

Commissioner Bagge *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SWIDLER, *Chairman:*

The City of Chicago on April 16, 1965, and Natural Gas Pipeline Company of America on April 19, 1965, have filed applications for rehearing of our Opinion No. 456 and order issued March 18, 1965, 33 FPC 574. The Public Service Commission of Wisconsin adopts Chicago's application. On May 12, 1965, we granted rehearing for the purpose of further consideration.

After the issue of the treatment of liberalized depreciation as permitted by Section 167 of the Internal Revenue Code had been reserved in a settlement, we determined in Opinion No. 456 that Natural was subject to the principles of *Alabama-Tennessee Natural Gas Co.*, 31 FPC 208, issued February 3, 1964, and must pass along to its customers the advantages of liberalized depreciation. Thus we found that Natural must no longer "normalize" its computation of allowable taxes by computing them on the basis of straight-line depreciation, but must "flow through" the advantages of the higher tax deductions to its customers by using the higher liberalized depreciation in computing the tax allowance. We also required that Natural reflect in its rates the deduction of accumulated deferred taxes from its rate base We ordered Natural to file new rate schedules to carry these changes into effect and make refunds from February 3, 1964, the date *Alabama-Tennessee* was issued.

Natural argues that we have inadvertently erred in ordering the rate base reduction because this issue was terminated by the settlement and was thus not reserved by the terms of the agreement. The City of Chicago agrees that it waived the deduction of the deferred taxes in computing the rate base. In making this statement the City of Chicago was arguing that we had departed from the settlement agreement in reaching our conclusion that refunds should be computed from February 3, 1964. In our opinion both parties are in error.

The settlement agreement, quoted at great length in Opinion No. 456 provides in part as follows:

> 2. The question of whether Natural, in computing its cost of service for rate purposes, should compute its federal income tax expense allowance by

> "normalizing" such taxes to eliminate the effect of Section 167 of the Federal Internal Revenue Code, which relates to "accelerated" or "liberalized" depreciation, or by utilizing the principle of "flow-through" of the tax effect of the use of such "accelerated depreciation" deductions for tax purposes, as proposed and defined by the City of Chicago in these proceedings, rather than the "normalization" method, shall be determined by an adjudication by the Commission in these proceedings and this issue shall not be terminated by approval of the settlement proposed hereunder.

We were thus required to determine whether Natural should normalize its taxes or flow-through the tax effect of liberalized depreciation. Accordingly, we determined that Natural was properly subject to flow-through. This also involved, in our opinion, the proper treatment of the accumulated deferred taxes. These have been accumulated by Natural in Account 282 and represent the difference between normalized taxes and the lower taxes actually paid as a result of the high deductions for liberalized depreciation. The deferred taxes so accumulated thus reflect the benefits of liberalized depreciation that had not been flowed through to Natural's customers. In fact these accumulations amount to contributions by Natural's customers for taxes not actually paid. There was thus properly before us the rate effects of both the tax computation and the treatment of the amounts in Account 282. Both of these matters were considered and determined in our Opinion No. 417 in *Alabama-Tennessee*, and therefore we prescribed the same solution here as of the date of *Alabama-Tennessee*.

Natural asserts that under the settlement agreement the deferred taxes were treated as a part of capital and a 1.5 percent rate of return allowed on them. Thus Natural argues that the rate base reduction would give cumulative effect to this facet of Commission policy. Natural here is attempting to look behind the figure for cost of service and the rates agreed to in the settlement. The parties however agreed only upon an overall annual cost of service of $137,014,823, based on the calendar year 1960 as adjusted, and made it clear that the "agreement thereto is not intended to reflect agreement to the amount, percentage or method of derivation of any particular item of such cost of service." (Tr. 2956) It was also provided that (Tr. 2967):

> It is expressly understood and agreed that this Stipulation and Agreement is made solely to effect a settlement of these proceedings. Therefore, although the settlement rates listed in Exhibit A are necessarily based on the cost of service agreed upon, this Stipulation and Agreement and attached Exhibit shall not be deemed, in any other proceeding, as approval, either by Natural, by any intervenor or by any other party, or any method or principle employed in developing such cost of service or the rates resulting therefrom, or of any specific data used in the computation thereof.

Natural argues that, contrary to *Alabama-Tennessee*, we have made a retroactive application of its principles. Of course, under Section 4(e) of the Natural Gas Act we are empowered to make our rate order effective back to the date Natural's increased rates became effective subject to refund. We might have done so here except that in *Alabama-Tennessee* we were announcing a new policy and overruling previous decisions. It was therefore not equitable, contrary to the contentions of Chicago, to make our determination effective before February 3, 1964, but on that date the industry was informed of the new policy, and it was appropriate that refunds should be ordered from then.

Natural contends that in reaching this result we have discriminated against it because in other cases we have permitted later dates, but the cases it cites (with one exception), including those referred to in Opinion No. 456, are settlements. Contrary to Natural's argument we think it makes a great deal of difference whether all the terms of a settlement are in one package to be accepted or rejected as in those cases or whether the settlement leaves out an issue to be decided by us as in this proceeding. The one exception cited is *Midwestern Gas Transmission Company*, 32 FPC 993, Opinion No. 444, Docket Nos. RP61-19 and RP62-7, issued October 13, 1964, but this was a Section 5(a) proceeding where, of course, we were required to make all rate reductions prospective only.

Natural also points out that on March 29, 1965, after the issuance of Opinion No. 456, it filed an application with the Internal Revenue Service to change, as of January 1, 1965, from the use of liberalized depreciation to the straight-line method for Federal income tax purposes. Therefore, it says, it has no duty to reduce its rates to reflect flow-through for the period beginning January 1, 1965, because it has nothing to flow through for that period. Natural's argument represents an attempt to reopen the record to introduce a new factor in a rate case, which already has been decided by the Commission. The cost of service based on the test year 1960 was stipulated subject to certain reserved issues including the question of liberalized depreciation for tax purposes. Specifically, the cost of service was stipulated to be $137,014,823; and the settlement agreement reserved the question whether under Section 167 of the Internal Revenue Code the principle of "flow-through" or "normalization" should be used. The record showed and the stipulation assumed that Natural was making use of liberalized depreciation for income tax purposes. For the company now to state that it proposes to abandon use of liberalized depreciation introduces a new fact and a new issue. To bring the record up to date with respect to this one element would destroy the basis of the settlement and would lead to a one-sided result. Where the record is opened to consider one changed element it should be opened for other elements which may have changed in the meantime. *Cf., City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC), certiorari denied, 352 U.S. 829.

In order for Natural to give effect to a change in rates resulting from a shift to straight-line depreciation, Natural should make a rate filing in accordance with the provisions of the Act and our regulations. We are not contesting Natural's right to make this change for tax purposes, and we do not propose to suspend such a rate increase for more than one day. In this way a new proceeding will be started, in which other elements in Natural's cost of service can, if appropriate, be put in issue and in which Natural will appropriately have the burden of proof under Section 4(e) to show that its increased rates are just and reasonable, including its use of straight-line depreciation in computing its tax allowance for rate purposes. In the present proceeding we shall require that Natural file new rates thirty days after *Alabama-Tennessee* becomes final based on liberalized depreciation, deduction of the deferred taxes from the rate base and flow-through. These rates shall be effective from February 3, 1964, until superseded by other rates, presumably the straight-line rates, filed by Natural. We shall require Natural to make refunds reflecting flow-through and the rate base deduction also from February 3, 1964, until the new straight-line rates become effective. In the new proceeding we can require further refunds if it should be determined that Natural is unjustified in employing straight-line tax depreciation for rate-making purposes.

Chicago argues again that the settlement agreement prevents us from prescribing an effective date for the rate reduction other than March 1, 1961, the date the increased rates became effective. As explained in Opinion No. 456, we are of the opinion that the settlement agreement does not require that our substantive determination here *must* be made retroactive to March 1, 1961. Furthermore, there is nothing in Section 4(e) of the Natural Gas Act or the cases cited by Chicago that require us to make our orders retroactive to the date the rate change became effective. Section 4(e) on this matter, provides only that the Commission may "order such natural-gas company to refund, with interest, the portion of such increased rates or charges by its decision found not justified." *United Gas Pipe Line Co. v. Mobile Gas Service Corp.*, 350 U.S. 332, 341, recognizes our power under Section 4(e) to make our order retroactive to the date the rate change became effective, but it does not require that we do so.

Chicago is correct, however, that our ordering clause (B) is ambiguous and in error, and we accordingly amend it below to clarify it, as well as changing the rate filing and refund provisions to take into account Natural's proposal to abandon liberalized depreciation.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no new facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 456 and order except as specified below.

The Commission orders:

(A) Our Opinion No. 456 and order issued March 18, 1965, is hereby confirmed as the decision of the Commission and requests for modification thereof are hereby denied except as provided herein.

(B) For the purpose of reflecting the matters discussed above, particularly Natural's proposal to abandon the use of liberalized depreciation for tax purposes as of January 1, 1965, the ordering clauses of our order of March 18, 1965, are hereby deleted and the following ordering clauses substituted as of the date of issuance of this order.

(C) Within 30 days of the date that the decision in *Alabama-Tennessee*, Opinion No. 417, becomes final, Natural shall file new rate schedules, effective February 3, 1964, reflecting the lower Federal income tax allowance and the lower rate base referred to above conforming to the stipulation of June 21, 1962, and satisfactory to the Commission. These rates shall remain effective until the date superseding rates filed by Natural become effective.

(D) Within 30 days of the date of issuance of the Commission's order approving the rate filing or filings required by paragraph (C), Natural shall refund to its jurisdictional customers for the period from February 3, 1964, to the date superseding rates become effective, or if there are no superseding rates to the date of refund, the difference between the amounts collected and those which would have been collected for such period under the rate schedules required to be filed by paragraph (C), together with interest at the rate of 7 percent per annum from the date of payment to Natural to the date of refund.

(E) Within 30 days of making the refunds required by paragraph (D), Natural shall report to the Commission in writing and under oath the details of its calculations resulting in the refunds together with copies of releases from each of its jurisdictional customers.

Commissioner O'Connor *concurs in the results only.*

Commissioner Black *dissenting in part.*

Commissioner Bagge *not participating.*

BLACK, *Commissioner, dissenting in part:*

The matters raised on rehearing strengthen my opinion that the majority is in error on both legal and policy grounds in not requiring Natural to refund the excess revenues collected by reason of its normalized treatment of liberalized depreciation for the entire period the inflated rate has been in effect; that is from March 1, 1961, to the present. I agree, however, with the majority that *Alabama-Tennessee* did not restrict us to a prospective application of its principles. Similarly, I agree that, regardless of the unexpressed intentions of the parties, both Natural and the City of Chicago are in error in concluding that, under their settlement agreement, they had waived the deduction of the deferred taxes in computing the rate base.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER CLARIFYING LICENSE AND DENYING MOTION TO EXTEND TIME FOR CONSTRUCTION OF FISH HATCHERY

(Issued June 23, 1965)*

On April 28, 1965, the Pacific Power & Light Company (Pacific) filed a motion to extend the period for construction of a fish hatchery at its Iron Gate Development, Project No. 2082, on the Klamath River in California.

Article 50 of the license for this project requires Pacific to pay the State of California 80 percent of the cost of operating and maintaining the fish hatchery (29 FPC 478, 486). An appeal was taken from the order issuing this license to the United States Court of Appeals for the Ninth Circuit. The Court in *Pacific Power & Light Company* v. *F.P.C.*, 333 F. 2d 689, 697 (1964), said:

> We * * * think * * * that Article 50 of the license is unclear in one respect. Rather than requiring Pacific to pay the full cost of operating and maintaining the hatchery at 80 percent of capacity, it requires that it pay 80 percent of the annual cost of operation and maintenance. Thus, if the Department [of Fish and Game of the State of California (Department)] chose to reject the benefit of full capacity operation (a benefit that the Commission does not claim that it can order the Department to accept) and operates at 80 percent, Pacific would pay only 80 percent of 80 percent. This appears to be inconsistent with the views expressed by the Commission itself. We presume that the Commission intends that, so long as the Department operates the hatchery at at least 80 percent of capacity, Pacific should pay for the cost of operating at 80 percent of capacity, but that in no event should Pacific be required to pay more than actual operating costs.
>
> * * * * * * *
>
> The matter is remanded to the Commission * * * for such clarification of Article 50 as it may desire to make.

Although the capacity of the hatchery is specified in Article 49 of the license (30 FPC 499, 503), Pacific contends that until the Department gives assurance that it will accept twenty percent (20%) of the cost of operation, the hatchery's

---

*Rehearing denied by order issued August 20, 1965, 34 FPC 552. Affirmed, *California Department of Fish and Game* v. *F.P.C.*, 359 F. 2d 165 (CA9–1966), cert. denied 385 U.S. 932 (1966).

capacity, and hence its design specifications, cannot be finally determined. Pacific requests that construction be postponed until this supposed uncertainty concerning the hatchery's capacity is settled.

On May 6, 1965, the Department filed opposition to Pacific's motion. The Department opposes delay of the construction on three grounds. First, it would be detrimental to anadromous fish runs in the Klamath River. Second, since the issue before the Commission relates only to reimbursement for the costs of maintenance and operation, there is no uncertainty as to the size and design of the fish hatchery, which have been stipulated to by Pacific. Third, the State of California will operate the fish hatchery at full capacity whenever the runs of anadromous fish provide the eggs for full capacity operation.

Pacific's motion to extend time for construction of the fish hatchery brings before us the question on remand to the Commission from the Ninth Circuit Court of Appeals as to the meaning of Article 50. We intend by Article 50 of the license that Pacific shall reimburse the State of California for 80 percent of the cost of actual operation and maintenance whether at full capacity or a lesser capacity. This clarification of the Article, and the Department of Fish and Game's statement of its intent to make full use of the fish hatchery, removes any reason that might have existed to review the hatchery's size and capacity. Thus, there is no need to delay construction. We therefore deny Pacific's motion.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791-823) that Pacific Power & Light Company's motion, filed on April 28, 1965, to extend the time for construction of a fish hatchery at its Iron Gate development be denied.

The Commission orders:

The motion filed on April 28, 1965, by Pacific Power & Light Company to extend the time for construction of a fish hatchery at the Iron Gate development of Project No. 2082, hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF PETERSBURG, ALASKA, PROJECT NO. 2432

ORDER ACCEPTING SURRENDER OF PRELIMINARY PERMIT

(Issued June 23, 1965)

Application was filed on April 15, 1965 by the City of Petersburg, Alaska, for surrender of its preliminary permit for proposed Kupreanof Hydroelectric Project No. 2432, to have been located on Towers and Hamilton Creeks within the Tongass National Forest near the Town of Petersburg, Alaska.

The preliminary permit was issued to the permittee by the Commission on June 19, 1964, 31 FPC 1569, for a period of 24 months.

In its application for surrender, the permittee concluded that the project could not be justified since studies made under the permit proved that the permittee's original information, pertaining to rainfall and other precipitation upon which the application for permit was predicated, was invalid, thus rendering the proposed project inadequate to meet the permittee's future needs.

The Commission finds:

Acceptance of surrender of the preliminary permit for proposed Project No. 2432 is appropriate.

The Commission orders:

Surrender of the preliminary permit for proposed Project No. 2432 is hereby accepted, effective as of April 15, 1965, the date upon which the application for surrender was filed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHEASTERN POWER ADMINISTRATION, DOCKET NO. E-7002

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued June 23, 1965)

The Secretary of the Interior, on behalf of the Southeastern Power Administration (SEPA) on February 9, 1965, filed with the Federal Power Commission, pursuant to the provisions of the Flood Control Act of 1944 (58 Stat. 887), a request for a five-year extension of the Commission's current confirmation and approval of the long-term wholesale power rates and charges applicable to power sold from the John H. Kerr and Philpott projects. Approval is requested for the period beginning July 1, 1965 and ending June 30, 1970.

The John H. Kerr project, having a generating capacity of 204,000 kw, is located on the Roanoke River, 20 miles downstream from Clarksville, Virginia and 18 miles upstream from the Virginia-North Carolina state line, and is operated by the Corps of Engineers. The Philpott project, having a generating capacity of 14,000 kw, is located on the Smith River, about 20 miles upstream from Martinsville, Virginia, and is also operated by the Corps of Engineers. The Smith River is a tributary of the Dan River, which flows into the Roanoke River above the Kerr project.

Under the current marketing arrangements two-thirds of the power output of the John H. Kerr project and all of the power output of the Philpott project are marketed through the facilities of Virginia Electric & Power Company (VEPCO). The remaining one-third of the output of the John H. Kerr project is marketed through the facilities of Carolina Power & Light Company (CP&L). Since the Philpott project is not directly connected to the transmission facilities of VEPCO, the Philpott power is delivered to Appalachian Power Company which delivers it to VEPCO pursuant to a contractual agreement between the two companies.

The rate schedules and rates and charges for which extension of the Commission's approval is requested are identical to those previously approved[1] and cover the sale of the total commercial power output of the John H. Kerr and Philpott projects to VEPCO, CP&L and to 32 cooperatives and one municipality. The current Commission approval for all of these rate schedules and contractual rates and charges expires June 30, 1965. The rates and charges are contained in the following three rate schedules and two contracts:

---

[1] The current rates and charges were approved by Commission orders in this docket issued December 21, 1961, 26 FPC 913, April 20, 1962, 27 FPC 823 and January 31, 1964 (letter-order unreported).

1. *Wholesale Firm Power Rate Schedule KP–1*, applicable to the sale of power generated at both the John H. Kerr and Philpott projects to preference customers within the service area of Virginia Electric & Power Company.

2. *Wholesale Dump Energy Rate Schedule KP–2* (*Revised*), applicable to the sale of dump energy from the John H. Kerr and Philpott projects to Virginia Electric & Power Company and Carolina Power & Light Company.

3. *Wholesale Firm Power Rate Schedule JHK–1*, applicable to the sale of power generated at the John H. Kerr project to preference customers within the service area of Carolina Power & Light Company.

4. *The SEPA–VEPCO Contract dated March 24, 1961*, under which VEPCO purchases capacity and energy generated at the John H. Kerr and Philpott projects and contains various subsections specifying rates and charges therefor.

5. *The SEPA–CP&L Contract dated December 7, 1955, as amended by Supplemental Agreement No. 4, dated August 23, 1963*, under which CP&L purchases capacity and energy from the John H. Kerr Project and contains various subsections specifying rates and charges therefor.

A repayment study for the John H. Kerr and Philpott projects commencing with fiscal year 1955, the first year in which all the generating units at the projects were in operation, was prepared by SEPA and filed with the Commission in support of the rate schedules and rates and charges described above. This study shows, among other things, that the anticipated revenues from the proposed rates and charges will be sufficient to pay all production and marketing costs, including interest charges on the investment allocated to power, amortization of the initial power investment within 50 years of commencement of full commercial operation of the projects, and amortization of capital replacement costs over the service lives of the facilities replaced.

Notice of the proposed rates and charges was sent to interested State officials and published in the Federal Register on February 20, 1965 (30 F.R. 2377), stating that any person desiring to make comments or suggestions for the Commission's consideration with respect thereto should submit them on or before March 26, 1965. No comments or suggestions have been received.

The Commission finds:

It is appropriate for the purposes of the Flood Control Act of 1944 that the proposed rates and charges for the sale of power from the John H. Kerr and Philpott projects consisting of: (1) Wholesale Firm Rate Schedule KP–1; (2) Wholesale Dump Energy Rate Schedule KP–2 (Revised); (3) Wholesale Firm Power Rate Schedule JHK–1; (4) the rates, charges and service conditions set forth in the contract dated March 24, 1961 for the sale of power to VEPCO; and (5) the rates, charges and service conditions set forth in the contract dated December 7, 1955, as amended by Supplemental Agreement No. 4 dated August 23, 1963, for the sale of power to CP&L, be confirmed and approved for the period beginning July 1, 1965, and ending June 30, 1970.

The Commission orders:

The rates and charges of the Southeastern Power Administration for the sale of power developed at the John H. Kerr and Philpott projects, consisting of the Rate Schedules described in the above finding and the rates and charges set forth in the contracts described therein, all as referred to above, are hereby confirmed and approved for the period beginning July 1, 1965, and ending June 30, 1970.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

VIRGINIA ELECTRIC & POWER COMPANY, PROJECT NO. 2462

ORDER TERMINATING LICENSE ORDER ON REHEARING

(Issued June 23, 1965)

On May 24, 1965, Virginia Electric & Power Company (Applicant) filed an application for rehearing of the Commission's order issued April 27, 1965, 33 FPC 895, with respect to applicant's Belle Isle Project on the James River in Richmond, Virginia, Project No. 2462. The applicant requests that the Commission abrogate the license order issued for this project.

Applicant states that its current economic analysis of the project shows that continued operation of the project is no longer economically feasible, that it will be operated at a loss and is not justified. It represents that the project is to be forthwith retired from service.

The Commission finds:

It is appropriate and in the public interest to terminate and vacate the license order in Project No. 2462, as hereinafter provided.

The Commission orders:

(A) The Commission's order of April 27, 1965 issuing license to the Virginia Electric & Power Company for Project No. 2462 is hereby vacated on rehearing.

(B) Applicant shall cease power operations within thirty (30) days from the date of issuance of this order.

(C) The project works of Project No. 2462 shall be removed within one (1) year from the date of issuance of this order to the extent necessary to restore the navigable waters to a condition satisfactory to the Chief of Engineers, Department of the Army.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ANNUAL REPORT FORM PRESCRIBED FOR NATURAL GAS COMPANIES—MAIN LINE DIRECT INDUSTRIAL SALES, DOCKET NO. R-243

ORDER NO. 300

AMENDING § 155.1 OF REGULATIONS UNDER THE NATURAL GAS ACT AND ANNUAL REPORT F.P.C. FORM NO. 2

(Issued June 24, 1965)*

This proceeding was initiated by a notice of proposed rulemaking issued July 15, 1963, published in the Federal Register (28 F.R. 7434, July 20, 1963) and mailed to all natural gas companies and other parties, including federal and state agencies, who might be interested in the proposals.

Section 155.1 of the Commission's Regulations Under the Natural Gas Act (18 CFR 155.1) now requires the pipeline companies to furnish currently to the Commission copies of every contract, involving sales of 100,000 Mcf per year or more, in effect for the direct sale of natural gas together with copies of all other writings relative to each such sale. However, no data are available at present on the gas curtailment policies, practices and methods used by the pipeline companies. The notice proposed to require additional information with respect to such sales which the Commission deems essential in order to be advised whether the service being rendered to direct industrial customers conforms to the certificate authorization; whether direct interruptible customers are such only in contract terms; and whether the pipeline's actual operations require modification of the allocation of costs to jurisdictional customers. The new schedule which was proposed in the notice to be added to FPC Report Form No. 2 is intended to supplement information already required by the form. The regulations will supply the Commission with much more complete and meaningful information concerning the direct industrial sales made by natural gas pipeline companies, for use in carrying out its statutory functions.

---

*Published in the Federal Register on June 30, 1965 (30 F.R. 8331).

Following publication of the notice, comments were received from the Independent Natural Gas Association of America, 10 pipeline companies, 1 state commission and a group of distribution companies. Some opposed the proposed regulation for a variety of reasons; others favored the regulation but suggested certain modifications. By this order we are adopting most of the suggestions proposed. The two principal objections to the regulation were (1) the proposals are beyond the authority of the Commission since it has no jurisdiction over the rates at which direct industrial sales are made, and (2) the publication of detailed rate and curtailment data would give other fuel interests an unfair competitive advantage.

The jurisdictional argument is without merit because the Commission's power to prescribe accounting and reporting is not limited to the regulated portion of the overall business activities engaged in by a natural gas company subject to its jurisdiction. It has long been established that the Commission's discretionary power to require periodic reports encompasses the reporting of such non-regulated activities to the extent that they are relevant to the performance of the Commission's regulatory activities. The imposition of a reporting requirement concerning the nonjurisdictional business of a regulated company does not constitute the regulation of that business. Rather, it is action necessary to enable the Commission to properly regulate matters which fall directly within the ambit of its jurisdiction (*Interstate Commerce Commission* v. *Goodrich Transit Company*, 224 U.S. 194 (1911); *Norfolk and Western Railway Company* v. *U.S.*, 287 U.S. 134 (1932)).

The Commission has no rate jurisdiction over direct industrial sales but it does have certificate jurisdiction pursuant to section 7 of the Act to determine whether the transportation and delivery of natural gas to such customers, and the facilities, if any, meet the standards of public convenience and necessity. In order to exercise this jurisdiction intelligently as well as to make proper allocation between jurisdictional and nonjurisdictional operations of a pipeline in fixing the rates for the jurisdictional sales, we believe we must secure reasonable information as to the nature of the pipeline's direct industrial sales.

The comments also urged that the public availability of curtailment data would afford an undue competitive advantage to suppliers of alternative fuels. While the Commission has the responsibility for obtaining meaningful information to discharge its statutory functions and in appropriate proceedings must make such data available to all interested parties (*cf. Federal Communications Commission* v. *Schreiber*, 381 U.S. 279, 33 L.W. 4492, May 24, 1965), we are not obligated in the absence of a proceeding in which the material is relevant to make such business information available to competitors or other parties only indirectly affected by the curtailment practices of the reporting company. Accordingly, we are providing that the new schedule entitled "Curtailments of Main Line Industrial Customers" proposed in paragraph 5(D) of the notice herein, but revised as described below, shall be filed separately from, but concurrently with, Form No. 2 to which it is supplementary. Further, we provide that it, unlike the form itself, will not be open to public inspection but will be available for inspection pursuant to our existing rules relating to the availability to the public of information in the Commission's files (*see* 18 CFR 1.36(e) and the new subparagraph (7) being added by this order to paragraph (d) of § 1.36), or by incorporation in the record of any proceeding pending before the Commission or the courts when such action is determined by the Commission to be in the public interest.

We are making several substantial changes in the amendments proposed in the notice—in connection with the new schedule; with respect to the amendments proposed to be made by paragraph 5(C) of the notice to the existing schedule "Main Line Industrial Sales of Natural Gas" on page 519 of the Form; and to the text of § 155.1. These changes arise out of some of the comments received.

With respect to the new schedule, we are revising the form of the schedule to show both the average daily delivery to direct industrial customers during the system peak period (col. (d)), and the maximum daily delivery during the year (cols. (e) and (f)). This change will make available data from which it will be possible to determine the extent that pipeline capacity is being utilized by jurisdictional interruptible customers and direct industrial customers, and will indicate the extent of the curtailment in relation to the average day and maximum day takes of the particular customer.

Suggestion was made that the rate adjustment information, which under paragraph (d) of the proposed amendment to § 155.1 would be furnished as a special report by May 1 of each year, could be furnished just as well, and in fact preferably, as a part of the existing schedule on page 519 "Main Line Industrial Sales of Natural Gas." This change would eliminate the filing of a special report and would still give the Commission the information it needs. Therefore, in lieu of the proposed § 155.1(d) and the specific amendments to that schedule proposed in paragraph 5(C) of the notice, we are prescribing a revised schedule which makes provision for the inclusion of the information which under the original proposal, would have been included in a special report.

In addition to the deletion of paragraph (d) of the proposed amendments to § 155.1, two other changes are being made in that section, *viz*, the reporting date of the list required by paragraph (c) is changed from November 1 of each year to May 1, and in paragraphs (a) and (c) the figure 100,000 Mcf is changed to 50,000 Mcf, thereby requiring the filing and information with respect to contracts involving transactions between those figures. We are informed that the industry generally keeps records for its own purposes on the basis of the lower figure and, therefore, would have no objection to reporting to us on the same basis. It might be noted that instruction 3 of the existing schedule for reporting "Main Line Industrial Sales" on page 519 provides for the reporting separately of sales of $10,000 or more per year. That figure has been changed to 50,000 Mcf in the revised form prescribed herein.

Finally, in view of our conclusion that the new supplemental schedule for reporting curtailments should not be made available for general public inspection, we are amending § 1.36 of the Rules of Practice and Procedure, relating to public information, by adding to paragraph (d) *Exceptions* a new subparagraph (7) to exempt, in effect, this schedule from public inspection.

The Commission finds:

(1) The amendments herein adopted are necessary and appropriate for the administration of the Natural Gas Act.

The Commission, acting pursuant to the provisions of the Natural Gas Act, as amended, particularly sections 10 and 16 thereof (52 Stat. 826, 830; 15 U.S.C. 717i, 717o), *orders:*

(A) Part 1, Subchapter A, Part 155, Subchapter E, and Part 260, Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations, are amended as follows:

(1) Paragraph (d) of § 1.36 is amended by deleting subparagraph (7) which is now obsolete and inserting in lieu thereof the following:

"§ 1.36 Public information.

* * * * * * *

(d) *Exceptions.* * * *

(7) The schedule entitled "Curtailments of Main Line Industrial Customers" prescribed as a supplement to F.P.C. Form No. 2 by § 260.1 of this chapter."

(2) The existing text of § 155.1 is amended, designated as paragraph (a), and new paragraphs (b) and (c) are added, as follows:

"§ 155.1 Contracts and rate schedules for direct industrial sales.

(a) Every natural gas company shall furnish to the Commission two full and complete copies of every contract and every amendment thereto, presently or hereafter effective, for the direct sale of natural gas to industrial consumers for consumption where such contract involves the sale of 50,000 Mcf or more per year, together with all rate schedules, agreements, leases, writings or other understandings, services and rules and regulations relative to such sale. Such submittals shall include the docket number(s) of the certificate proceeding(s) in which the transportation and delivery were authorized for the particular sale and shall be made within 60 days after issuance of the certificate, or execution of the contract or amendment thereto, whichever occurs later. When any contract now on file or hereafter furnished is renewed or extended on identical terms except as to the period during which it is to be in effect, the natural gas company may, in lieu of furnishing copies of such renewal or extension agreement, within 60 days, notify the Commission of such renewal or extension by letter, in duplicate, stating the date of the renewal or extension agreement and the period during which it is to be in effect.

(b) On or before September 1, 1965, every natural gas company shall furnish to the Commission a list, in duplicate, of every contract theretofore tendered to the Commission pursuant to this Part 155, which is effective as of the date of submittal of the list. Such list shall include the docket number(s) of the certificate proceeding(s) in which the transportation and delivery were authorized for the particular sale, the name of the buyer thereunder and date of the contract. When any of the listed contracts, or any contract subsequently tendered to the Commission pursuant to this Part 155, is cancelled or terminated by its own terms (whether superseded by a new contract or not), the natural gas company shall so advise the Commission within 60 days of such cancellation or termination by letter, in duplicate, identifying the contract being cancelled or terminated and the date of such cancellation or termination.

(c) Every natural gas company shall furnish to the Commission, in duplicate, by May 1 of each year, a list of all direct industrial sale customers using 3,000 Mcf or more during any of the 12 months ended with the preceding calendar year, but less than 50,000 Mcf during the 12 months ended with the preceding calendar year, showing the docket number(s) of the proceeding(s) authorizing the transportation of natural gas and facilities, if any, necessary for each particular sale, name and location of purchaser, type of service such as firm or interruptible, and the maximum monthly use during the 12 months ended with the preceding calendar year."

(3) Paragraph (c) of § 260.1 is amended by inserting, to follow schedule title "Main Line Industrial Sales of Natural Gas," a new title to read "Curtailments of Main Line Industrial Customers (submitted separately)."

(B) The annual report for natural gas companies, F.P.C. Form No. 2, prescribed by paragraph (a) of § 260.1, is amended as follows:

(1) Effective for the reporting year 1965, the schedule "Main Line Industrial Sales of Natural Gas," set out in *Attachment A** hereto, is prescribed for use in lieu of the similarly titled schedule appearing on pages 519–520 of such form.

(C) Effective for the reporting year 1965, a new schedule "Curtailment of Main Line Industrial Customers," as set out in *Attachment B* hereto,* is prescribed as a supplement to F.P.C. Form No. 2. The schedule shall be filed concurrently with Form No. 2 but shall not be included as an integral part thereof and shall not be available for inspection in public files of the Commission except pursuant to § 1.36(e) of this chapter. The Commission may, also, when it finds such action to be in the public interest, authorize such schedules to be made public and incorporated in the record of any proceeding before the Commission or the courts.

* * * * * * *

[Secs. 10, 16, 52 Stat. 826, 830; 15 U.S.C. 717i, 717o.]

(D) The amendments herein made to Parts 1, 155 and 260 and to F.P.C. Form No. 2 shall be effective August 1, 1965.

(E) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBIA RIVER BASIN, HEADWATER BENEFITS INVESTIGATION, DOCKET NO. E–6384

ORDER GRANTING APPLICATION FOR STAY

(Issued June 25, 1965)

This order stays, upon stated conditions, the order of April 30, 1965, 33 FPC 907, determining payments to the United States under subsection 10(f) of the Federal Power Act (16 U.S.C. 803(f)) for benefits provided by its headwater improvements to certain non-Federal projects in the Columbia River basin between January 1, 1957, and August 31, 1961, and directing that the non-Federal parties file a settlement agreement under Section 13.1 of the Regulations under Federal Power Act for benefits provided among themselves for this period. The payments, according to the order, were to be made within sixty days of its issuance, and the filing of a settlement agreement, within ninety days. The Secretary of the Interior on May 28, 1965, filed an application for rehearing and a request for hearing. The Commission on June 22, 1965, granted the Secretary's application and specified that the time for the hearing would be fixed by the Secretary of the Commission. On June 15, 1965, The Montana Power Company, The Washington Water Power Co., PUD No. 1 of Pend Oreille County, PUD No. 1 of Chelan County, and PUD No. 2 of Grant County, which are the non-Federal parties required to make payments to the United States by the order of April 30, 1965, filed application to stay the order of April 30, 1965, until the Commission issues its final order. The Secretary of the Interior on June 24, 1965, filed a response in opposition to this application for stay.

---

*Omitted in printing.

We believe that the stay should be granted, provided the non-Federal parties pay interest of 6% per annum on any amounts to be paid to the United States from the date on which payment was due under the order of April 30, 1965. Any non-Federal party not acknowledging acceptance of this order shall be subject to penalties as provided in subsection 17(b) of the Federal Power Act (16 U.S.C. 810(b)) and subparagraph 11.31(e) of the Regulations under the Federal Power Act.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823), that the order of April 30, 1965, be stayed on the conditions hereinafter provided.

The Commission orders:

(A) The order of April 30, 1965, hereby is stayed until the Commission has issued a final order: Provided, however that interest at a rate of 6% per annum shall be paid from June 29, 1965, until the date of payment of whatever amount ultimately may be required to be paid.

(B) This order is subject to acknowledgment of its acceptance by the above named non-Federal parties within 60 days from its date of issuance.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IRA BOYD HUMPHREYS AND ALBERT E. HUMPHREYS, PROJECT NO. 375

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR NEW LICENSE

(Issued June 25, 1965)

By letter dated April 6, 1965, Ira Boyd Humphreys and Albert E. Humphreys (Applicants) of Denver, Colorado, requested Commission permission to withdraw their application for a new license for minor Project No. 375 filed on August 3, 1964. The last license for the project, which was issued without charge, expired on May 13, 1958.

Applicants advise that the Forest Service has informed them that due to the small size of the project (50 horsepower), a Forest Service Special Use Permit should be obtained for the continued operation of the project affecting National Forest lands rather than another license from the Commission. This is in accord with a 1952 procedural understanding between the Forest Service and the Commission under which the Service would thenceforth issue Special Use Permits for such minor projects.

The Commission orders:

Permission to withdraw the aforesaid application for new license for minor Project No. 375 is hereby granted, effective as of May 13, 1958, and the proceeding on Project No. 375 is hereby closed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, ET AL., DOCKET NO. RP64-9, ET AL.

ORDER APPROVING RATE SETTLEMENT AGREEMENT, PRESCRIBING REFUNDS, TERMINATING PROCEEDING IN PART, ACCEPTING REVISED TARIFF SHEETS FOR FILING, AND PERMITTING THE REVISED TARIFF SHEETS TO BECOME EFFECTIVE

(Issued June 28, 1965)

Cities Service Gas Company (Cities Service), pursuant to the provisions of Section 4 of the Natural Gas Act, on October 21, 1963, tendered for filing revised tariff sheets[1] proposing an annual increase in its rates and charges of $5,296,571 over the rates in effect for the year ended June 30, 1963, as adjusted. By order issued November 22, 1963 in the subject proceedings, the proposed increased rates and charges were suspended until April 23, 1964.

Cities Service, on March 16, 1964, tendered for filing substitute tariff sheets[2] superseding certain of the aforementioned suspended tariff sheets. These substitute tariff sheets reflected the reduction in the Federal income tax rate from 52 percent to 50 percent, and, consequently, reduced the aforementioned pro posed increase in rates and charges from $5,296,571 to $4,786,142. The suspended tariff sheets were permitted to become effective as of April 23, 1964, subject to refund with interest.

During the hearings, Cities Service proposed a recess of the hearings for the purpose of discussing settlement of the proceedings. Upon the concurrence of all parties, the hearings were recessed, and conferences commenced on April 20, 1965, and extended to May 5, 1965. Final agreement was reached by all parties to these proceedings and is contained in the "Stipulation and Agreement", which is attached hereto as Exhibit "A"* and is made a part hereof. The "Stipulation and Agreement" was placed in the record as Exhibit No. 96, on May 19, 1965.

The Presiding Examiner, on May 20, 1965, certified the "Stipulation and Agreement" to the Commission, together with a portion of the transcript of the hearing held on May 19, 1965. The "Stipulation and Agreement" was concurred in by all of the parties participating in the settlement conferences, and no objections thereto have been filed.

The principal provisions of the "Stipulation and Agreement" are summarized, in part, as follows:

(1) The rates and charges from and after April 23, 1964 will be based upon a jurisdictional cost of service of $67,000,000.

(2) Cities Service will make immediate refunds of the amounts collected above the settlement rates, with interest, for the period from April 23, 1964, through April 22, 1965. In addition, the difference between the settlement rates and the

---

[1] Eighth Revised Sheets Nos. 4, 5, 7, 8, 10 and 19; Ninth Revised Sheet No. 12; Tenth Revised Sheet No. 14; Eleventh Revised Sheet No. 16; Third Revised Sheets Nos. 43, 44, 45 and 46; Second Revised Sheet No. 47 and Original Sheet No. 48, all to Cities Service's FPC Gas Tariff, Second Revised Volume No. 1; and Eighth Revised Sheet No. 27 to Cities Service's FPC Gas Tariff, Original Volume No. 2.

[2] Substitute Eighth Revised Sheets Nos. 4, 5, 7, 8, 10 and 19; Substitute Ninth Revised Sheet No. 12; Substitute Tenth Revised Sheet No. 14 and Substitute Eleventh Revised Sheet No. 16 to its FPC Gas Tariff, Second Revised Volume No. 1; and Substitute Eighth Revised Sheet No. 27 to its FPC Gas Tariff, Original Volume No. 2.

*Omitted in printing.

rates billed and collected subsequent to April 22, 1965, will be refunded to the jurisdictional customers through credits in subsequent billing periods.

(3) Additional refunds will be made for the period from April 23, 1965, through December 22, 1965, if Cities Service's actual weighted average cost of purchased gas, based on a post audit for that period, is below 13.57 cents per Mcf—the weighted average cost of purchased gas reflected in this settlement agreement.

(4) Another post-audit computation of Cities Service's actual weighted average cost of purchased gas will be made covering the period from December 23, 1965, until the rates provided by Articles II and VII of the Agreement are superseded. In the event that Cities Service's purchased gas costs for this period are lower than either 13.57 cents per Mcf, or the annualized weighted average cost of purchased gas as of January 1, 1966, then Cities Service will make additional refunds to its jurisdictional customers, as required by Article V.

(5) Cities Service will flow-through the applicable jurisdictional portions of the refunds received by it, including interest, from any of its suppliers who are presently collecting rates that are the subject of pending rate proceedings before this Commission.

(6) Cities Service will compute its annualized weighted average cost per Mcf of gas purchased as of January 1, 1966, and, if the cost so computed is less than 13.57 cents per Mcf, then Cities Service will reduce its jurisdictional rates as provided in Article VII of the Agreement.

(7) Cities Service, pursuant to Commission order, will book depreciation for its depreciable storage and transmission plant at the rate of 3.125 percent, commencing May 1, 1965, and will use and record existing book depreciation rates on all of its other depreciable gas plant. Additionally, Cities Service will adjust its per book depreciation accruals for the period from May 1, 1964, through April 30, 1965, to reflect a depreciation rate of 3.125 percent on its depreciable storage and transmission plant.

(8) Cities Service agrees that (a) it will not file any increase in its jurisdictional rates and charges prior to January 1, 1966; and (b) it will not file any increase in its jurisdictional rates and charges prior to July 1, 1966, unless it has incurred, or will incur within six months from such filing, net increases in jurisdictional costs amounting to at least $1,000,000, arising from purchased gas costs and/or changes in taxes as set forth in Article IX of the Agreement.

(9) The issue relating to the allowance to be included in Cities Service's cost of service for its gas purchases from Continental Gas Producing Company (formerly Cities Service Gas Producing Company) is reserved for future hearing and decision.

(10) The issue of the proper allowance to be included in Cities Service's cost of service for gas purchased from Cities Service Oil Company and Columbian Fuel Corporation and the consolidated dockets pertaining to the rates for sales of natural gas by these affiliates to Cities Service is reserved for future hearing and decision.[3]

Cities Service, on May 20, 1965, tendered for filing the revised tariff sheets[4] required by Article II of the "Stipulation and Agreement". Cities Service requests that upon approval of the proposed settlement the Commission waive the requirements of the Regulations under the Natural Gas Act to the extent necessary to make these revised tariff sheets effective as of April 23, 1964.

---

[3] Certain of Cities Service Oil Company's pending rate increase filings involved herein have been conditionally terminated and severed from these proceedings by order issued June 3, 1965, in *Warren Petroleum Corporation (Operator), et al.*, Docket No. G-20473, *et al., supra*, p. 1212.

[4] Ninth Revised Sheets Nos. 4, 5, 7, 8, 10 and 19; Tenth Revised Sheet No. 12; Eleventh Revised Sheet No. 14; Twelfth Revised Sheet No. 16, all to Cities Service's FPC Gas Tariff, Second Revised Volume No. 1; and Ninth Revised Sheet No. 27 to Cities Service's FPC Gas Tariff, Original Volume No. 2

The Commission finds:

(1) The settlement of the proceedings in Docket No. RP64-9, *et al.*, on the basis of the "Stipulation and Agreement" (identified as Exhibit No. 96), is reasonable, proper, and in the public interest in carrying out the provisions of the Natural Gas Act, and such "Stipulation and Agreement" should be approved and made effective subject to the terms and conditions hereinafter provided and ordered.

(2) The rates and charges contained in Cities Service's revised tariff sheets tendered for filing on October 21, 1963, and March 16, 1964, are not just, reasonable or lawful under the terms and provisions of the Natural Gas Act and should be disallowed and denied as hereinafter provided and ordered.

(3) Good causes exists for the Commission to accept for filing the revised tariff sheets tendered by Cities Service on May 20, 1965, and to waive the notice requirements of the Regulations under the Natural Gas Act in order to allow those tariff sheets to become effective as hereinafter ordered.

The Commission orders:

(A) The increased rates and charges filed by Cities Service on October 21, 1963 and March 16, 1964, in these proceedings, are hereby disallowed and denied.

(B) The settlement of these proceedings, as proposed in the "Stipulation and Agreement" (Exhibit A hereto) is approved and made effective, subject to the terms and conditions hereinafter specified.

(C) The revised tariff sheets tendered by Cities Service on May 20, 1965, are accepted for filing, and the thirty-day notice requirements of Section 154.22 of the Regulations are waived to permit such revised tariff sheets to take effect as of April 23, 1964.

(D) Cities Service shall comply with each of the provisions of the "Stipulation and Agreement".

(E) Within fifteen days of making refunds in accordance with the "Stipulation and Agreement", Cities Service shall report to the Commission, in writing and under oath, the amount of the refund to each customer showing separately the amount of principal and interest so paid, together with a computation showing the manner in which such refund was determined and shall serve a copy of this report upon each customer, and shall submit to the Commission a copy of the release signed by such customer acknowledging receipt of the amount refunded.

(F) The issues pertaining to the proper allowance to be included in Cities Service's cost of service for its purchases from its affiliates, Cities Service Oil Company and Columbian Fuel Corporation (Article XI), shall be heard in accordance with the procedures established by Notice issued herein on May 25, 1965, or any subsequent notices issued therein. The issues relating to the allowance in Cities Service's cost of service for gas purchased from Continental Gas Producing Company (formerly Cities Service Gas Producing Company) are reserved in accordance with Article X of the settlement and subject to notice as provided in Section (3) of that Article.

(G) Cities Service shall adjust its depreciation accruals for the period May 1, 1964, through April 30, 1965, to reflect a depreciation rate of 3.125 percent on its depreciable storage and transmission plant, and commencing May 1, 1965, shall accrue depreciation on such storage and transmission plant at 3.125 percent and shall use existing depreciation rates on all other depreciable plant.

(H) Upon compliance with the terms and conditions of this order, the proceeding in Docket No. RP64-9 is terminated subject to the terms and provisions of the "Stipulation and Agreement".

(I) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, its staff, Cities Service, or any affected party herein in any proceeding now pending, or hereafter instituted by, or against, Cities Service, or any other company or person.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MERCED IRRIGATION DISTRICT, PROJECT NO. 88

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued June 28, 1965)

Application was filed on May 4, 1965 by Merced Irrigation District, of Merced, California, for surrender of its license for major Project No. 88 consisting of Exchequer Dam, Reservoir and Powerhouse located on the Merced River in California.

The application was filed pursuant to paragraph (A) of the Commission's license order issued April 8, 1964 in Project No. 2179 (31 FPC 897, 899). The project works comprising Project No. 88 are being completely displaced by construction of New Exchequer Project No. 2179. According to the application, power production at Project No. 88 ceased at midnight August 19, 1964 to permit the demolition of the power plant of that project.

Notice of the application in Project No. 2179 was given September 20, 1958 (23 F.R. 7362).

The Commission orders:

Surrender of the license for Project No. 88 is hereby accepted, effective as of August 20, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-255

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 28, 1965)

On February 23, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-255 an application, as supplemented April 26 and May 18, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of additional volumes of natural gas to existing customers, all as more fully set forth in the application.

Applicant proposes to construct or install and operate: (1) approximately 196 miles of 30-inch and 36-inch loop pipeline on portions of its main line system in Kansas, Missouri, Illinois, Indiana, Ohio and Michigan; (2) a total of 27,800 horsepower of compression at its Liberal, Kansas, Haven, Kansas, Olpe, Kansas, Louisburg, Kansas, Houstonia, Missouri, Centralia, Missouri, Tuscola, Illinois, and Zionville, Indiana Compressor Stations; (3) 15.4 miles of 10-inch line on its Jefferson City Lateral in Cooper and Moniteau Counties, Missouri; 7.2 miles of 12-inch line on its Columbia Lateral in Boone County, Missouri; 15.6 miles of 22-inch line on its Peoria Lateral in Logan and Tazewell Counties, Illinois; 10.3 miles of 10-inch line on its Lincoln-Clifton Lateral in Logan County, Illinois; 11.5 miles of 12-inch line on its Tipton-Kokomo Lateral in Tipton and Hamilton Counties, Indiana; 6.1 miles of 6-inch line on its Defiance Lateral in Defiance County, Ohio; and 1.1 miles of 8-inch line on its Albion Lateral in Calhoun County, Michigan; (4) additional storage facilities, including production and gathering facilities and a total of 4,700 horsepower of compression at its Waverly Storage Field in Morgan County, Illinois and its Howell Storage Field in Livingston County, Michigan; and (5) necessary appurtenances and related facilities in connection with the above.

The expansion program outlined above will increase the Applicant's peak day capacity by approximately 235,000 Mcf, and will enable it to provide increased volumes of natural gas to its existing resale customers for the 1965–1966 winter season. Each of the 43 customers participating in this expansion has signified its desire to purchase the additional volumes of gas from Applicant.

As stated above, a portion of the facilities for which authorization is sought herein are for the further development of Applicant's Howell Storage Field in Livingston County, Michigan. By Commission order issued July 27, 1962, 28 FPC 211, in Docket No. G–2306, *et al.*, Applicant was issued a certificate of public convenience and necessity in Docket No. CP61–136 authorizing the development of Howell Field for gas storage purposes, and a maximum average storage pressure of 1030 psig was prescribed, not to be exceeded without further Commission authorization. The proposed further development of Howell Field will increase the storage pressure beyond that specified, and accordingly the order of July 27, 1962, will be amended by deleting the pressure limitation contained therein and substituting instead a volume limitation, as hereinafter ordered.

Total cost of Applicant's proposed construction is $40,064,000, and will be financed initially by means of short-term bank loans. Applicant proposes permanent financing through the issuance of approximately $30,000,000 of debentures.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits and supplements thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The proposed construction and operation of facilities and sales of natural gas hereinbefore described, as more fully described in the application in this

proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities and sales of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission issued July 27, 1962, in Docket No. G-2306, *et al.*, be amended by deleting from the examiner's decision adopted thereby the pressure limitation of 1030 psig imposed in Docket No. CP61-136 on Applicant's natural gas storage operations in the Howell Field.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Applicant, Panhandle Eastern Pipe Line Company, authorizing the construction and operation of facilities and sales of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, and the sales of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within 18 months from the date on which this order issues.

(D) The order of the Commission issued on July 27, 1962, in Docket No. G-2306, *et al.*, which order granted a certificate of public convenience and necessity to Applicant in Docket No. CP61-136, is hereby amended by deleting from the examiner's decision adopted thereby the pressure limitation of 1030 psig imposed on Applicant's natural gas storage operations in the Howell Field.

(E) In all other respects the authorization heretofore granted in Docket No. CP61-136 shall remain in full force and effect.

(F) The maximum reservoir gas content in Howell Storage Field is hereby limited to the volume of 23,500,000 Mcf at 14.73 psia.

(G) The certificate issued hereby is granted upon the condition that Applicant submit annual reports on its Howell Field gas storage operations showing the volumes of natural gas injected and withdrawn during each month of the year and the total inventory volume at the end of the injection cycle, the maximum daily injection and withdrawal rates experienced during the year, and the shut-in wellhead pressure of each observation well at the end of the injection cycle and also at the end of the withdrawal cycle. Such reports shall be filed with the Commission by December 31 of each year until further order of the Commission.

(H) The certificate hereby issued is granted on the express condition that the facilities and service thereby authorized shall in no way prejudice any party involved in the proceeding entitled Natural Gas Pipeline Company of America, *et al.*, Docket No. CP62-243, *et al.*, now pending before the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AMERICAN LOUISIANA PIPE LINE COMPANY AND TRUNKLINE GAS COMPANY, DOCKET NO. CP65-382

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 29, 1965)

On May 28, 1965, American Louisiana Pipe Line Company (American), and Trunkline Gas Company (Trunkline), filed in Docket No. CP65-382 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of emergency interconnections between the pipeline systems of the two companies, all as more fully set forth in the application.

The proposed interconnections will be located (1) approximately 400 feet west of the point where Trunkline's 26-inch main line crosses American's 22-inch main line in Elkhart County, Indiana and (2) at a point in Tate County, Mississippi, where Trunkline's 26-inch and 30-inch main lines are adjacent to American's 30-inch main line.

Trunkline and American have entered into a letter agreement which provides for the utilization of the proposed facilities for exchange purposes on a gas-for-gas basis when either company is confronted with an emergency which can be alleviated by the deliveries of natural gas from the other, without impairing their respective service obligations.

The estimated cost of the proposed facilities is $58,620, of which American's share will be $29,620 and Trunkline's share will be $29,000, and which will be financed by the respective companies from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on July 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 1, 1954, Docket No. G-2306 (13 FPC 380).

(2) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(3) The proposed emergency exchange and delivery of natural gas between Trunkline and American, and the construction and operation of facilities as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed emergency exchange and delivery of natural gas, and construction and operation of facilities are required by the public con-

venience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Trunkline and American are able and willing properly to do the acts and to perform the services proposed and to comply with the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Trunkline's and American's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Trunkline and American in this proceeding, authorizing the emergency exchange and delivery of natural gas, and the construction and operation of facilities as hereinbefore described, all as more fully described in the application, and exhibits filed in these proceedings, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above, and the rights granted thereunder are hereby conditioned upon Trunkline and American complying with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 6 months from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BACA GAS GATHERING SYSTEM, INC., DOCKET NO. CP65–57

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 29, 1965)

By Commission order issued January 25, 1965, 33 FPC 102, in Docket No. CP65–57, Baca Gas Gathering System, Inc., (Petitioner) was issued a certificate of public convenience and necessity authorizing the construction and operation of approximately 38 miles of pipeline to gather and transport gas purchased by Petitioner from producers in Baca County, Colorado, and sold to Panhandle Eastern Pipe Line Company in Morton County, Kansas. The cost of the proposed facilities was estimated to be approximately $530,000, including $50,000 for organization expenses.

On April 23, 1965, Petitioner filed herein a petition to amend said order, requesting certain minor modifications in the facilities to be constructed pursuant to the authorization granted therein. Petitioner proposes: (1) a revision in it pipeline design by substitution of sizes and grades of pipe. Its system, as revised, will consist of 11.82 miles of 10-inch line, 8.51 miles of 8-inch line, 3.41 miles of 6-inch line, 4.74 miles of 4-inch line and 12.84 miles of 3-inch line; (2)

modification in the routing of its proposed system which will result in the net addition of 3.32 miles of line; (3) attachment of one new gas well; and (4) the addition of 300 horsepower of compression in order to raise the pressure of approximately 2,000 Mcf per day of casinghead gas to mainline pressure. The cost of this compression will be borne by the producers involved.

The above revisions will not change the estimated aggregate cost of the project, which will remain $530,000.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the petition has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience requires that the order of the Commission issued January 25, 1965, in Docket No. CP65-57 be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued on January 25, 1965, in Docket No. CP65-57, is hereby amended by authorizing the modifications in Petitioner's proposed system hereinbefore described, as more fully described in its petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SHENANDOAH GAS COMPANY, DOCKET NO. CP65-287

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 29, 1965)

On March 16, 1965, as supplemented on May 17, 1965, Shenandoah Gas Company (Applicant) filed in Docket No. CP65-287 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Atlantic Seaboard Corporation (Atlantic) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in the Town of Strasburg, Virginia, and environs, and, pursuant to Section 7(c) of the Act, for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant proposes to construct and operate approximately 1.8 miles of 2-inch and 3-inch approach lateral line from Strasburg to Atlantic's line, together with metering and regulating facilities, as well as the distribution facilities necessary to provide service to Strasburg.

Applicant's total estimated third year peak day and annual natural gas requirements for service to Strasburg are 97 Mcf and 78,100 Mcf, respectively. These volumes assume a heating value of 1,025 Btu per cubic foot; however, Atlantic's tariff permits a minimum heating value of 950 Btu per cubic foot, in which case Applicant's third year peak day requirement would be 105 Mcf.

Applicant requests a certificate of public convenience and necessity authorizing the construction and operation of the above-described metering and regulating facilities and the approach lateral line.

Total estimated cost of the proposed facilities, including the lateral line, metering and regulating facilities and distribution facilities, is $92,800, which cost will be financed by open account advances from Washington Gas Light Company, Applicant's parent.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on June 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Shenandoah Gas Company, a corporation organized and existing under the laws of the Commonwealth of Virginia, is engaged in the business of distributing and selling natural gas in said Commonwealth and in the State of West Virginia.

(2) Applicant, Shenandoah Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 30, 1954, in Docket No. G–1448 (13 FPC 593).

(3) Atlantic Seaboard Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1955, in Docket No. G–6500 (14 FPC 692).

(4) The facilities hereinbefore described, as more fully described in the application for a certificate of public convenience and necessity in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicant is able and willing properly to do the acts and to perform the services proposed in the subject certificate application and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the proposed facilities for which certificate authorization is herein sought by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(8) It is necessary and desirable in the public interest that Atlantic be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver at such connection up to 97 Mcf* of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

---

*This volume assumes a heating value of 1,025 Btu per cubic foot; however, Atlantic's tariff permits a minimum heating value of 950 Btu per cubic foot, in which case Atlantic shall sell and deliver up to 105 Mcf per day to Applicant.

(9) Applicant should be prepared to receive natural gas from Atlantic within one year from the date of issuance of this order.

(10) The requirement that Atlantic serve Applicant, as proposed, will not place any undue burden upon Atlantic nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Applicant, Shenandoah Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application for a certificate in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in paragraph (A) above shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) Atlantic Seaboard Corporation is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver at such connection up to 97 Mcf * of natural gas per day to Applicant, its estimated third year winter firm peak day requirements, all as hereinbefore described and as more fully set forth in the application in this proceeding.

(E) Applicant shall be prepared to receive natural gas from Atlantic within one year from the date of issuance of this order.

(F) Atlantic shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-321

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 29, 1965)

On April 8, 1965, Tennessee Gas Transmission Company (Applicant), filed in Docket No. CP65-321 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an additional submerged pipeline crossing of Lake Borgne, St. Bernard Parish, Louisiana, all as more fully set forth in the application.

The existing 30-inch main line crossing Lake Borgne is submerged. An accumulation of foreign matter within the submerged portion of the line has caused excessive pressure drop in the line. To eliminate the constriction and avoid a possible shut-down of the Delta-Portland line, Applicant proposes to construct and operate approximately 29.83 miles of 36-inch main line loop crossing Lake Borgne, which will enable Applicant to provide uninterrupted service, and make necessary repairs to the existing 30-inch line.

---

*This volume assumes a heating value of 1,025 Btu per cubic foot; however, Atlantic's tariff permits a minimum heating value of 950 Btu per cubic foot, in which case Atlantic shall sell and deliver up to 105 Mcf per day to Applicant.

The proposed additional lake crossing will cost approximately $10,252,000, which will be financed from general funds or from revolving credit.

The Commission on April 30, 1965, issued Applicant a temporary certificate authorizing the proposed facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) The proposed construction and operation of facilities as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Tennessee Gas Transmission Company, authorizing the construction and operation of facilities as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all the applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the Commission Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65-362; PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-370

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 29, 1965)

On May 17, 1965, Transwestern Pipeline Company (Transwestern) filed in Docket No. CP65-362 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas on a short-term basis, all as more fully set forth in the application.

On May 20, 1965, Panhandle Eastern Pipe Line Company (Panhandle) filed in Docket No. CP65-370 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

The above filings are related, and outline a proposal whereby Transwestern proposes the sale to Panhandle of up to 25,000 Mcf of natural gas per day on a short-term basis, pursuant to an agreement between the parties dated May 21, 1965. Delivery will take place at the point where Transwestern's 10-inch Cactus lateral crosses Panhandle's Sunray line in Sherman County, Texas.

The proposed sale is to be undertaken for a limited term ending December 31, 1965 or at such time as Transwestern commences deliveries to Natural Gas Pipeline Company of America pursuant to the exchange program for which authorization is being requested in Docket No. CP65-320, whichever is earlier.

Transwestern and Panhandle propose to construct and operate facilities necessary to effectuate the above-described sale of natural gas. Transwestern proposes to construct and operate a 6-inch tap valve and related facilities at an estimated cost of $1,740; Panhandle proposes to construct and operate a meter station at an estimated cost of $8,000. All construction costs will be financed with general funds.

Transwestern and Panhandle were granted temporary certificates herein by Commission letters dated May 28, 1965, authorizing construction and operation of the above facilities and sale of natural gas.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on June 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G-14871, *et al.* (22 FPC 391).

(2) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by

the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(3) The proposed construction and operation of facilities and sale of natural gas hereinbefore described, as more fully described in the applications in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Transwestern and Panhandle are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Transwestern Pipeline Company, authorizing the construction and operation of facilities and sale of natural gas hereinbefore described, as more fully described in the application in Docket No. CP65–362, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity is hereby issued to Panhandle Eastern Pipe Line Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in Docket No. CP65–370, upon the terms and conditions of this order.

(C) The certificates issued by paragraphs (A) and (B) above and the rights granted thereunder are hereby conditioned upon Transwestern's and Panhandle's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within 30 days from the date on which this order issues.

(E) The authorization hereby granted shall be for the limited term ending December 31, 1965 or at such time as Transwestern commences delivery of natural gas to Natural Gas Pipeline Company of America pursuant to appropriate Commission authorization in Docket No. CP65–320, whichever is earlier.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP65–348

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 30, 1965)

On May 3, 1965, Mountain Fuel Supply Company (Applicant) filed in Docket No. CP65–348 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a pipeline extension from Applicant's existing 10¾-inch line terminating in the State Line Field, Sweetwater County, Wyoming, to the

West Side Canal and Four-Mile Creek fields in Carbon County, Wyoming, and Moffat County, Colorado, respectively, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate approximately 17 miles of 10¾-inch pipeline extending from the end of Applicant's existing 10¾-inch pipeline terminating in the State Line Field to a central delivery point in the West Side Canal Field and approximately 6 miles of 4½-inch pipeline extending from the end of the 10¾-inch line in the West Side Canal Field to a central delivery point in the Four-Mile Creek Field, together with the necessary fittings, valves, meters and other accessories.

Applicant states that the additional gas supply to be connected to its existing transmission facilities as a result of the proposed construction* will increase Applicant's reserve and help to offset the normal decline in deliverability of other reserves committed to its system, and will serve as a safety factor in the event of a failure of supply from its other sources.

The total estimated cost of the proposed facilities is $400,000, which cost will be financed from funds on hand and short term bank borrowings, as required.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 15, 1940, in Docket No. G-154 (2 FPC 288).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Applicant, Mountain Fuel Supply Company, to construct and operate the

*By Commission order issued June 30, 1965, Pan American Petroleum Corporation (Operator), *et al.*, in Docket No. CI65-1025 and Kirby Royalties, Inc. (Operator), *et al.*, in Docket No. CI65-1217 were authorized to sell natural gas to Applicant from the Four Mile Creek and West Side Canal Fields, respectively. By Commission order issued June 2, 1965, Pan American Petroleum Corporation in Docket No. CI65-1027 was authorized to sell natural gas to Applicant from the West Side Canal Field.

proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 14 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–228

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 30, 1965)

On May 3, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP64–228 an application to amend the order of the Commission issued in said docket on March 9, 1965, 33 FPC 501, which order authorized Applicant to construct and operate certain natural gas facilities and to deliver up to 14,000 Mcf per day of natural gas to Consumers Cooperative Association (Consumers), all as more fully set forth in the application to amend.

Applicant seeks authorization for the construction and operation of two 4,000 horsepower compressor units at Applicant's Clifton, Kansas, compressor station in order to deliver an additional 7,000 Mcf per day to Consumers. The total contract demand of 21,000 Mcf per day is necessitated by Consumers' decision to build a 600 ton per day anhydrous ammonia fertilizer plant near Fort Dodge, Iowa, rather than the 400 ton per day plant previously proposed.

Applicant estimates the cost of the additional compressor facilities to be $2,390,100, which will be financed from cash on hand, reserve accruals and retained earnings.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on May 14, 1965 (30 F.R. 6666). No protest or petition to intervene has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 9, 1965, in Docket No. CP64–228 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 9, 1965, in Docket No. CP64–228 is hereby amended by authorizing Northern to construct and operate two 4,000 Hp compressor units at its Clifton Compressor Station and deliver an additional 7,000 Mcf of natural gas on a firm basis to Consumers, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2479

ORDER ISSUING MINOR-PART LICENSE (TRANSMISSION LINE)

(Issued June 30, 1965)

Application was filed on June 29, 1964 and amended on August 7, 1964, by Pacific Gas & Electric Company (Applicant) of San Francisco, California, for a license under Section 4(e) of the Federal Power Act for proposed transmission line Project No. 2479 to be constructed in Eldorado and Placer Counties, California, and affecting lands of the United States within Eldorado and Tahoe National Forests. The only other lands to be occupied by the lines are either owned by Applicant or subject to easements which the latter has obtained thereon.

The proposed project consists of two transmission lines to extend from power plants of Placer County Water Agency's partly constructed hydroelectric Project No. 2079 which will connect with Applicant's interconnected transmission facilities at Gold Hill and Applicant's transmission system at Forest Hill. The lines are to be constructed by Applicant for the sole purpose of transmitting the power output of Project No. 2079 as contemplated by the license for Project No. 2079 (29 FPC 460, 461). No transmission lines were included under the license for Project No. 2079. The license for the latter project will expire on February 28, 2013.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over Eldorado and Tahoe National Forests, has recommended for inclusion in any license for the transmission line project certain conditions to prevent, make advance preparations for suppression, and suppress fire on the lands to be occupied or used under the license and to minimize soil erosion and damage to aesthetic values. Applicant suggested certain modifications to the recommended conditions which were acquiesced in by the Forest Service. The modified conditions are included herein as Articles 15, 16 and 17.

According to the application, Applicant desires to complete construction by about February 1, 1966. By Article 19 herein, we are requiring commencement of construction not later than July 1, 1965 and completion not later than March 1, 1966, the date the Ralston and Middle Fork generating units of Placer County Water Agency's Project No. 2079 are expected to be operative.

We are not approving Exhibits J and K-1 (FPC No. 2479-2) filed as part of the application since they do not conform to the Commission's Rules and Regulations and should be revised. By Article 20 herein we are requiring the filing of these exhibits at a future date in conformance with the Commission's Rules and Regulations. Until such filing we are unable to fix herein the amount of annual charges to be paid under the license for the occupancy by the transmission lines of the National Forest lands involved.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of California and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(2) There is no conflicting application before the Commission.

(3) The proposed project will not affect a Government dam, nor will the issuance of a minor-part license therefore, as hereinafter provided, affect the

development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a license for the proposed project, as hereafter provided, will not interfere or be inconsistent with the purposes for which Eldorado and Tahoe National Forests were created or acquired.

(5) The proposed transmission lines, described in the application as the French Meadows-Forest Hill 60-kv line and the Middle Fork-Gold Hill 230-kv line, are primarily lines as defined in Section 3(11) of the Federal Power Act, and are, therefore, subject to the licensing authority of the Commission.

(6) Exhibit M filed as part of the application and described in paragraph (B) below conforms to the Commission's Rules and Regulations and should be approved as part of this license.

(7) The proposed transmission lines are a minor part only of a complete project within the provisions of Section 10(i) of the Act.

(8) It will be in the public interest to waive the following terms and conditions of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a), 10(c), insofar as it relates to depreciation reserves; 10(d), 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 18; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This minor-part license is hereby issued under Sections 4(e) and 10(i) of the Federal Power Act (Act) to Pacific Gas & Electric Company (Licensee) for a period effective as of June 1, 1965 and terminating February 28, 2013, for the construction, operation and maintenance of transmission line Project No. 2479, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Transmission line Project No. 2479 consists of:

(i) lands of the United States constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) such portions of the following projects works as are located thereon:

(i) A 60-kv wood-pole transmission line extending approximately 27.7 miles from the Placer County Water Agency's French Meadows Powerhouse to the Applicant's transmission system at its Forest Hill substation with taps to the Agency's Middle Fork, Ralston, and Oxbow plants; and (ii) a 230-kv wood-pole, H-frame transmission line extending approximately 39.6 miles from the Placer County Water Agency's Middle Fork Powerhouse to the Applicant's transmission system at its Gold Hill Substation; and

(iii) all other structures, equipment, or facilities used or useful in the maintenance and operation of the project and located on the project area;

which project works are more specifically described by the following exhibit which formed part of the application and which is designated and described as:

Exhibit M: Two typewritten sheets entitled, "General Descriptions and Specifications of the Transmission Lines", filed in the Commission June 29, 1964, as amended by Applicant's filing of August 7, 1964.

(C) This license is subject also to the terms and conditions set forth in Form L-8 (December 15, 1953) entitled "Terms and Conditions of License for Minor-

Part Project (Transmission Line) Affecting Lands of the United States" (14 FPC 974) which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof, except for Article 9 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 15. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon request of the officers of the agency concerned, to prevent, make advance preparations for suppression, and suppress fire on the lands to be occupied or used under the license. The Licensee shall be liable for, and pay the costs incurred by the United States in suppressing fires caused from construction, operation or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 16. Chipping of slash (limbs, small trees, tops of trees, and other such material having a main stem diameter of up to four inches) will be required in those portions of the following sections where, in the judgment of the Forest Service, such treatment is practicable and is necessary in order to assure adequate reduction of slash without fire damage to young trees and commercial timber stands not to be cleared in or adjacent to the project area:

T. 14 N., R. 14 E., Sections 16 and 17;
T. 14 N., R. 13 E., Sections 23, 24, 26, 27, 32 and 33; and
T. 13 N., R. 12 E., Sections 1, 2, 3 and 9.

Article 17. In order to minimize soil erosion, or other watershed disturbances, and damage to aesthetic values, powerline construction shall be by helicopter, by hand, or by other means specifically approved by the Forest Supervisor to accomplish these objectives, on the following portions of the project on National Forest land:

(i) The Oxbow-Forest Hill 60-kv line and the Ralston 60-kv tap; and

(ii) On steep canyon slopes in the Eldorado National Forest near Middle Fork and Ralston powerhouses.

Provided consideration shall be given to the necessity of providing access to project structures for emergency repair and maintenance purposes, to safety in construction practices, and to timely completion of the project.

Article 18. The Licensee shall commence construction of the minor-part project on or before July 1, 1965, and shall complete construction of the minor-part project on or before March 1, 1966.

Article 19. The Licensee shall pay to the United States the following annual charges effective June 1, 1965:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $5.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands used for transmission line right-of-way, an amount to be determined hereafter.

Article 20. The Licensee shall, within one year from the effective date of this license, file with the Commission revised Exhibits F, J and K in accordance with the Commission's Rules and Regulations.

(D) Exhibit M described in paragraph (B) above is hereby approved as part of this license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license.

In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WATER DISTRICT NO. 97 OF KING COUNTY, WASHINGTON, PROJECT NO. 2316

ORDER EXTENDING PERIOD OF PRELIMINARY PERMIT

(Issued June 30, 1965)

Application was filed on April 12, 1965, by Water District No. 97 of King County, Washington for a one-year extension of its preliminary permit for proposed Project No. 2316 to April 30, 1966. The original permit was issued for a period of two years, effective as of May 1, 1963.

Project No. 2316, known as the North Fork of the Snoqualmie River Water Supply Project, would be located in King County, near Carnation and North Bend, Washington, on the North Fork of Snoqualmie River, Lake Hancock, Calligan Lake, and Beaver and Griffin Creeks affecting lands of the United States within Snoqualmie National Forest. Applicant has established stream gages, made test borings, conducted geological and geophysical exploration, and has cooperated with State, county and Federal agencies under the permit.

Applicant requests a one-year extension of the preliminary permit in order to obtain additional streamflow data, to study the market for electric power, and to further coordinate the project with water supply, flood control efforts by King County, and the U.S. Corps of Engineers.

An extension of the period of the permit for the requested additional year would not exceed the three year limit fixed by Section 5 of the Federal Power Act.

The Commission finds:

It is not inconsistent with the public interest to extend the permit as hereinafter provided.

The Commission orders:

The period of the preliminary permit for proposed Project No. 2316 is hereby extended to and including April 30, 1966.

[illegible] it shall be [illegible] for the [illegible] days from the date of [illegible]
